Angela Calvillo  
Clerk of the Board of Supervisors  
City Hall, Room 244  
San Francisco, CA 94102-4689

Re: Appeal of Certification of the Final Subsequent Environmental Impact Report ("FSEIR") for the Golden State Warriors Event Center and Mixed-Use Development Project at Mission Bay South Blocks 29-32, an Environmental Leadership Development Project (Office of Community Investment and Infrastructure ("OCII") Resolution No. 69-2015)

Dear Ms. Calvillo:

OCII is in receipt of an appeal dated November 13, 2015 regarding the Commission on Community Investment and Infrastructure certification of the FSEIR for the above-referenced project (the "Appeal"). OCII received this Appeal on November 13, 2015 before the close of business. OCII has determined that the Appeal has been filed in a timely manner and that the Appeal complies with the requirements of the procedures established by the Commission on Community Investment and Infrastructure Resolution No. 33-2015 for the appeal of a Final Environmental Impact Report certification of an Environmental Leadership Development Project, as defined under the California Public Resources Code section 21183.

OCII requests that a public hearing be set for the Appeal referenced above before the Board of Supervisors. Attached for your reference are a copy of the Appeal letter and a list of individuals and organizations that have requested notices regarding this Project.

**Re: Notice of Appeal and Appeal of Commission on Community Investment and Infrastructure Resolution 69-2015, certifying the Final Subsequent Environmental Impact Report for the Warriors Arena Project, and Resolution 70-2015, adopting CEQA Findings for the Warriors Arena Project, both approved on November 3, 2015.**

Dear Ms Bohee:

This office represents the Mission Bay Alliance ("Alliance"), an organization dedicated to preserving the environment in the Mission Bay area of San Francisco, regarding the project known as the Event Center and Mixed Use Development at Mission Bay Blocks 29-32 ("Warriors Arena Project" or "Project").

The Mission Bay Alliance hereby appeals

1. Resolution 69-2015, approved by the Commission on Community Investment and Infrastructure on November 3, 2015, certifying the Final Subsequent Environmental Impact Report for the Warriors Arena Project, attached hereto as Exhibit 1.
2. Resolution 70-2015, approved by the Commission on Community Investment and Infrastructure on November 3, 2015, making CEQA Findings included in Resolution 70-2015, attached hereto as Exhibit 2.

This appeal is brought pursuant to Public Resources Code section 21151(c),<sup>1</sup> OCII Resolution 33-2015 (approved June 2, 2015), the Memorandum entitled "Appeal Filing to the Board of Supervisors In Its Capacity as Governing Body of the Successor Agency" (attached hereto as Exhibit

---

<sup>1</sup>"If a nonelected decisionmaking body of a local lead agency certifies an environmental impact report, approves a negative declaration or mitigated negative declaration, or determines that a project is not subject to this division, that certification, approval, or determination may be appealed to the agency's elected decisionmaking body, if any."

Ms Tiffany Bohee

Executive Director. OCII

November 13, 2015

Page 2

3), and San Francisco Ordinance 25-12 (File No. 120898).

The grounds for this appeal are set forth below. The MBA intends this appeal to include all of the grounds it submitted to OCII in its many written and oral comments on the SEIR and Project, including but not limited to the grounds specifically listed in this letter. (See also, July 27, 2015, letter from the Alliance to OCII at FSEIR, Vol. 6, p. Com-37.)

Regarding the written and oral comments where these grounds were raised to OCII, each topic includes an index of said documents, and where helpful to clarify where a ground was so raised, certain grounds are followed by more specific references to the documentary record.

**A. PUBLIC COMMENT.**

1. The OCII thwarted public comment on the SEIR.

The October 23, 2015, notice of publication of the Response to Comments informed the public they would have no further opportunity to comment on the FSEIR/RTC. But the OCII hearing agenda for November 3, 2015, published on October 29, 2015, suggested that public comment on the FSEIR/RTC would be heard at the hearing, and in fact, it was. The October 23, 2015, notice of publication is inconsistent with CEQA section 21177(a), which contemplates public comment on EIRs up to the end of the hearing at which the project is approved. Therefore, the October 23, 2015, notice of publication has frustrated the ability of the public to comment. The City and OCII should remedy this misstep by recirculating the FSEIR with full disclosure that the public may comment on the FSEIR/RTC.

- November 2, 2015, letter from Thomas Lippe to OCII and Planning Department re: Comments on Final Subsequent Environmental Impact Report for the Warriors Arena Project Re Air Quality, Transportation, Hydrology, Water Quality, Biological, and Noise Impacts (“Nov 2 Lippe FSEIR”).

**B. PROJECT DESCRIPTION.**

1. The SEIR presents a shifting and inconsistent project description that thwarts informed decision-making and public participation about the project.

- July 26, 2015 letter from Soluri Meserve at FSEIR, Vol. 6, pp. Com-63-65;
- November 2, 2015 letter from Soluri Meserve, pp. 5-7

**C. TIERING.**

1. The SEIR attempts to rely on and tier from EIRs prepared in 1990 and 1998 for Mission Bay

Ms Tiffany Bohee

Executive Director. OCII

**Re: Notice of Appeal and Appeal of OCII Resolutions 69-2015 and 70-2015 Re Warriors Arena Project**

November 13, 2015

Page 3

Redevelopment planning efforts, yet tiering is not permissible because the Project is different than the project described in the prior EIRs.

- (a) Reliance on the 1990 and 1998 EIRs for analysis of the impact areas excluded from consideration in the SEIR was impermissible because new information and/or changes in circumstances rendered the prior analyses inapplicable to the currently proposed Project.
  - (b) The Record contains substantial evidence supporting a fair argument that the Project will result in potentially significant impacts associated with the resource areas excluded from consideration in the SEIR or, alternatively, supplemental review is required under Public Resources Code section 21166 for those same resource areas.
  - (c) The SEIR's approach to environmental review, including relying on environmental documents almost two decades old as well as numerous subsequently prepared reports and other documents prepared outside of the CEQA process fails to provide a cohesive, understandable document meeting CEQA's mandates for adequacy, completeness, and a good faith effort at full disclosure.
- June 30, 2015, oral comments by Osha Meserve at FSEIR, Vol. 6, p. PH-45;
  - July 26, 2015, letter from the Brandt-Hawley Law Group, pp. 1-2;
  - July 26, 2015, letter from the Mission Bay Alliance, by Thomas Lippe, Susan Brandt-Hawley, Patrick Soluri, and Osha Meserve, to OCII and Planning Department regarding EIR tiering, at FSEIR, Vol. 6, p. 33;
  - June 30, 2015, oral comments by Osha Meserve at FSEIR, Vol. 6, p. PH-45;
  - November 2, 2015, letter from Soluri Meserve, pp. 1-3.

**D. AB900 AND ADMINISTRATIVE RECORD.**

1. OCII has failed to comply with applicable requirements to compile and maintain a complete and adequately indexed Record, and also failed to timely make the Record made available online at the time of release of the DSEIR. Therefore, the Project may not rely on AB 900 litigation fast tracking.. (See Resolution 70-2015, CEQA Findings, pp. 14, 17.)

- July 9, 2015, letter from Soluri Meserve at FSEIR, Vol. 6, p. Com-30;
- July 26, 2015, letter from the Mission Bay Alliance, by Thomas Lippe, Susan Brandt-Hawley, Patrick Soluri, and Osha Meserve to OCII and Planning Department regarding litigation streamlining

November 13, 2015

Page 4

under AB 900 at FSEIR, Vol.6, p. Com-35;

- November 2, 2015, letter from Soluri Meserve, p. 3.

**E. ALTERNATIVES.**

1. The Draft SEIR fails to adequately address and the Final SEIR fails to adequately respond to comments regarding the inadequacy of EIR analysis of the No Project alternative.

- July 26, 2015, DSEIR comment letter from Susan Brandt-Hawley, at FSEIR, Vol.6, p. COM-44, ALT-2.

2. The Draft SEIR fails to adequately address and the Final SEIR fails to adequately respond to comments regarding the failure to consider a potentially-feasible off-site alternative.

- July 26, 2015, DSEIR comment letter from Susan Brandt-Hawley, at FSEIR, Vol.6, p. Com-44-45, ALT-3.

3. The OCII findings regarding the feasibility of alternatives are not supported by substantial evidence, including the findings regarding the off-site alternative proposed by the Alliance near Pier 80.

- November 3, 2015, letter to OCII from Susan Brandt-Hawley.
- October 13, 2015, letter to OCII from Susan Brandt-Hawley.

**F. THE SEIR IS NOT SUFFICIENT AS AN INFORMATIONAL DOCUMENT WITH RESPECT TO AIR QUALITY IMPACTS.**

1. The Alliance's Air Quality related grounds for appeal are set forth in detail in the following documents:

- July 26, 2015, letter from Thomas Lippe to OCII and Planning Department re Air Quality Impacts including all exhibits identified in and attached to said letter ("July 26 Lippe") at FSEIR, Vol.6, p. Com-86;
- July 19, 2015, letter from Greg Gilbert of Autumn Wind Associates ("July 19 Gilbert") at FSEIR, Vol.6, p. Com-96;
- July 20, 2015, letter from Paul Rosenfeld and Jessie Jaeger of SWAPE ("July 20 SWAPE") at FSEIR, Vol.6, p. Com-104;

2. The City cannot use the SEIR's thresholds of significance for criteria air pollutants until it formally adopts them in a rule-making procedure. (July 26 Lippe, p. 3; July 19 Gilbert, p. 14.)

3. The SEIR's numerical construction and operational thresholds of significance for criteria pollutants (ozone precursors, PM10, PM2.5), toxics air contaminants, and health risk and its analysis of the significance of the Project's incremental and cumulative impacts from these pollutants for both construction and operation are invalid, based on legal errors and not supported by substantial evidence. (July 26 Lippe; July 19 Gilbert; July 20 SWAPE; Nov 2 Lippe FSEIR; October 30 Gilbert; Nov 2 Farrow FSEIR, Nov 2 SWAPE.)

(a) Air quality thresholds of significance for ozone precursors used in the SEIR are borrowed from another agency and not supported by substantial evidence. (July 26 Lippe, pp. 4-9; July 19 Gilbert, pp. 3-6; October 30 Gilbert, pp. 2-6.)

(b) Air quality thresholds of significance for ozone precursors used in the SEIR are based on inapplicable, outdated, non-scientific New Source Rule ("NSR") values. (July 26 Lippe, pp. 4-9; July 19 Gilbert, pp. 3-6; October 30 Gilbert, pp. 2-6.)

(c) The DSEIR's impact assessments for construction related criteria pollutants (ozone precursors, PM10, PM2.5) and TAC emissions are invalid. (July 26 Lippe, pp. 9-10; July 19 Gilbert, pp. 6-7);

(1) The SEIR underestimates the Project's construction related emissions by incorrectly using a default hauling trip length of 20-miles, provided by the California Emissions Estimator Model ("CalEEMod"), rather than actual trip length, to determine the on-road hauling emissions that would occur during construction. (July 26 Lippe, p. 10; July 20 SWAPE, 2-6.)

(d) The DSEIR's impact assessments for operational criteria pollutants (ozone

---

Ms Tiffany Bohee

Executive Director. OCII

**Re: Notice of Appeal and Appeal of OCII Resolutions 69-2015 and 70-2015 Re Warriors Arena Project**

November 13, 2015

Page 7

precursors, PM10, PM2.5) and TAC emissions are invalid. (July 26 Lippe, pp. 10-11; July 20 SWAPE, 2-6.)

- (1) The SEIR fails to include vehicle emissions from Warriors game traffic in its analysis of operational emissions. (July 26 Lippe, p. 11; July 19 Gilbert, p. 10; October 30 Gilbert, pp. 6-10.)

The DSEIR's impact assessment for operational ozone precursor emissions is also misleading because it omits from its quantitative tally of criteria pollutants the emissions the Project will generate in San Francisco and the Mission Bay neighborhood from basketball game-associated "vehicle miles traveled" (DSEIR, p. 5-37.) The DSEIR's rationale for this startling omission is that moving the Warriors games from Oakland to San Francisco will reduce the same number of "vehicle miles traveled" in Oakland that the Project will generate in San Francisco and the Mission Bay neighborhood.

This rationale is based on the unstated, but incorrect, assumption that the environmental setting at Oracle Arena and the Mission Bay site are identical. These settings are very different, in many crucial respects. First and foremost, the Mission Bay neighborhood and the surrounding areas of San Francisco are populated by San Franciscans, not Oaklanders. The residents, citizens, and registered voters of San Francisco are entitled to know what the Project's air quality impacts will be *on them*, regardless of whether the residents, citizens, and registered voters of Oakland will experience an air quality benefit as a result of the move. (July 26 Lippe, pp. 10-11.)

- (2) To the extent the SEIR's thresholds of significance are invalid, Mitigation Measure M-AQ-2b fails to reduce ozone precursor emissions to less-than-significant levels and SEIR does not consider the feasibility or effectiveness of more robust mitigation strategies that could reduce ozone precursor emissions further below the (invalid) thresholds. (See DSEIR, p. 5.4-39, Table 5.4-9, "Estimated Emissions Reduction Required".) (July 26 Lippe, p. 12.)

4. Mitigation Measure M-AQ-1 does not comply with CEQA's legal requirements.

(a) The SEIR attempts to mitigate the Project's criteria air pollutant emissions by limiting the offroad equipment used during construction to machinery equipped with, at a minimum, Tier 2 engines with 40 percent NOx verified diesel emission control strategies (VDECS), and at a maximum, Tier 4 or Tier 4 interim engines (Volume 2, p. 5.4-32). However, the SEIR does not demonstrate the feasibility of this proposed measure. The

Ms Tiffany Bohee

Executive Director. OCII

**Re: Notice of Appeal and Appeal of OCII Resolutions 69-2015 and 70-2015 Re Warriors Arena Project**

November 13, 2015

Page 8

Project will need to acquire approximately 195 pieces of equipment outfitted with Tier 2 and/or Tier 4 engines. Due to the limited supply of cleaner-burning off-road equipment, the implementation of this measure, in its entirety, is highly unrealistic. As a result, the proposed Project should not rely on this mitigation measure to reduce emissions; rather the Project should pursue additional, feasible mitigation measures other than Tier 2/Tier 4 construction equipment to reduce the Project's criteria air pollutant emissions. (July 26 Lippe, p. 9; July 20 SWAPE, 6-8; October 30 Gilbert, pp. 10-14.)

(b) M-AQ-1 includes a limit on idling time of two minutes, and provides exceptions to this limit as provided in state law (DSEIR, p. 5.4-36), but fails to describe what these exceptions are. The DSEIR must fully describe this measure in order for the public and City decision makers to assess its effectiveness. (July 26 Lippe, p. 10.)

(c) M-AQ-1 is unenforceable and places inappropriate reliance on project sponsor for interpretation and compliance determinations. (July 26 Lippe, p. 10; July 19 Gilbert, pp. 7-10; October 30 Gilbert, pp. 14-16.)

(d) The Response to Comment AQ-6a is Inadequate. (Nov 2 Lippe FSEIR, pp. 2-3; October 30 Gilbert, p. 11.)

(e) The Response to Comment AQ-6e is Inadequate. (Nov 2 Lippe FSEIR, pp. 3-5; October 30 Gilbert, pp. 14-16.)

5. Mitigation Measure M-AQ-2b does not comply with CEQA's legal requirements and the response to this comment is Inadequate. (Nov 2 Lippe FSEIR, pp. 5-6; October 30 Gilbert, pp. 17-19; 19-21.)

(a) The per ton charge for emission offsets is too low to achieve complete offset of the Project's emissions (Comment AQ-7). (July 26 Lippe, pp. 11-12; October 30 Gilbert, pp. 17-19.)

(b) Mobile-based emission offsets sources are too short lived to completely offset Project generated emissions. (July 26 Lippe, pp. 12-13; July 19 Gilbert 14-15; October 30 Gilbert, pp. 19-21.)

6. The SEIR's cancer and health risk assessment for toxic air contaminants is invalid, based on legal errors and not supported by substantial evidence.

(a) The City's reliance on the EPA's judgment of "acceptable" cancer risk is legally flawed for several reasons. First, the City relies on a simplistic misrepresentation of actual EPA policy. Second, even if EPA policy is what the City implies it is, the DSEIR errs as a

Ms Tiffany Bohee

Executive Director. OCII

**Re: Notice of Appeal and Appeal of OCII Resolutions 69-2015 and 70-2015 Re Warriors Arena Project**

November 13, 2015

Page 9

matter of CEQA law by using the EPA's judgment of "acceptable" cancer risk to determine the significance of the Project's impacts. (July 26 Lippe, pp. 13-18.)

(b) The SEIR does not assess the Project's individual excess cancer risk to the Bay Area Air Quality Management District's (BAAQMD) 10 in one million significance threshold. Rather, it determines the Project's significance by comparing the cumulative cancer risk (background risk plus Project risk) to BAAQMD's cumulative risk threshold of 100 in one million. (July 26 Lippe, pp. 13-18.)

(c) The DSEIR fails to utilize BAAQMD's cumulative PM2.5 threshold of 0.8  $\mu\text{g}/\text{m}^3$ . (July 26 Lippe, pp. 18-19; July 20 SWAPE, pp. 10-11.)

(d) The FSEIR fails to provide a project-specific health risk assessment for the Project. The thresholds of significance and the analysis in the FSEIR provide only a cumulative impact analysis. Thus, the FSEIR fails to consider whether the Project's toxic air contaminant (TAC) emissions are, by themselves, a significant impact. Although the FSEIR fails to identify a threshold of significance for project-specific effects, Project-caused excess TAC cancers are more than four times the threshold used by most California air districts to determine the significance of an individual project's impacts. (Nov 2 Farrow FSEIR, pp. 1-3; July 20 SWAPE, pp. 8-10; Nov 2 SWAPE, pp. 2-4.)

(e) The SEIR's assessment of cumulative TACs is invalid because it fails to include all sources of related impacts. The FSEIR fails to include all foreseeable sources of TAC emissions in its cumulative impact analysis, as it omits foreseeable future construction and operation of developments approved in the vicinity of the Project. The health risk assessment should be revised to include TAC emissions from these sources, as they could potentially result in a significant cumulative impact. (Nov 2 Farrow FSEIR, p. 3; Nov 2 SWAPE, pp. 4-12.)

(f) Project health risks are underestimated using older standards. The FSEIR fails to incorporate updated child breathing rates, set forth by OEHHA, in its health risk assessment. Even though OEHHA published these higher breathing rates for children in 2012 and recommends that TAC analyses use these rates, and even though comments requested that the FSEIR provide an updated analysis using these breathing rates, the FSEIR failed to do so. (July 19 Gilbert, pp. 13-14; Nov 2 Farrow FSEIR, pp. 4-5; Nov 2 SWAPE, pp. 12-15.)

7. The SEIR's impact assessment for construction-related dust pollution is based on legal errors or is not supported by substantial evidence. (July 26 Lippe, pp. 1-3.)

8. Construction and operational mitigation options have not been thoroughly reviewed for diesel alternatives. (July 19 Gilbert, pp. 6-7; October 30 Gilbert, p. 16-17.)

Page 10

9. Operational mitigation measure for electrical outlets is vague and unenforceable. (July 19 Gilbert, p. 10.)
10. Construction emissions from wastewater improvements have not been adequately Reviewed in the SEIR. (See July 24, 2015, letter from Thomas Lippe to OCII re Hydrology, Water Quality and Biological Impacts, pp. 1-4; July 19 Gilbert, pp. 2-3.)
11. Changes to the project since publication of the DSEIR require recirculation of a revised DSEIR due to new and more severe significant impacts. (Lippe Nov 2 FSEIR, pp. 6-7.)
12. New Information regarding Mitigation Measure M-AQ-2b since publication of the DSEIR require recirculation of a revised DSEIR. ((Lippe Nov 2 FSEIR, pp. 5-6; October 30 Gilbert, pp. 17-18; Oral testimony of Thomas N. Lippe at November 3, 2015, OCII hearing).

By letter dated November 2, 2015, to the OCII, the Bay Area Air Quality Management District announced that it would not participate in Mitigation Measure M-AQ-2b's offset plan because the City and Project Sponsor refuse to agree to BAAQMD's offset fees.

The City cannot find that "Impact AQ-4: Potential conflicts with BAAQMD's 2010 Clean Air Plan" is less than significant with mitigation because the City and Project Sponsor refuse to agree to BAAQMD's offset fees per Mitigation Measure M-AQ-2b. (See Exhibits 4 and 5.)

There is also no evidence that the "Option 2" offset within Mitigation Measure M-AQ-2b is feasible. There are too many unanswered questions regarding Option 2, including lack of assured verification of offsets to ensure their effectiveness, and lack of assurance that offset sources are available in the quantity required. BAAQMD's offset program at least answers some, if not all, of these questions.

The City cannot find that all feasible mitigation measures that would substantially reduce "Impact AQ-1: Impacts of Criteria Air Pollutants from Construction" have been adopted as required by CEQA section 21081, because there is no evidence that paying the offset fees demanded by BAAQMD is infeasible. Also, as discussed above, there is no evidence that the "Option 2" offset idea within Mitigation Measure M-AQ-2b is feasible; therefore, it is not an adequate substitute for BAAQMD's offset program. This also applies to Impact AQ-2 [Impacts of Criteria Air Pollutants from Project Operations]; and Impact C-AQ-1 [Project Contribution to Regional Air Quality Impacts].

**G. THE SEIR IS NOT SUFFICIENT AS AN INFORMATIONAL DOCUMENT WITH RESPECT TO TRANSPORTATION IMPACTS.**

Ms Tiffany Bohee

Executive Director. OCII

**Re: Notice of Appeal and Appeal of OCII Resolutions 69-2015 and 70-2015 Re Warriors Arena Project**

November 13, 2015

Page 11

1. The Alliance's Transportation-related grounds for appeal are set forth in detail in the following documents:

- July 27, 2015, letter from Thomas Lippe to OCII and Planning Department re Transportation Impacts ("July 27 Lippe") at FSEIR, Vol. 6, p. Com-117, , including all exhibits listed on page 20 thereof, including:
- Exhibit 1 thereto, July 23, 2015, letter to Tom Lippe from traffic engineer Dan Smith ("July 23 Smith") at FSEIR, Vol. 6, p. Com-127; and
- Exhibit 2 thereto, July 21, 2015, letter to Tom Lippe from traffic engineer Larry Wymer ("July 21 Wymer") at FSEIR, Vol. 6, p. Com-141;
- Nov 2 Lippe FSEIR, including:
- As Exhibit F thereto, a November 2, 2015, letter from Dan Smith ("Nov 2 Smith FSEIR")
- As Exhibit G thereto, a November 2, 2015, letter from Larry Wymer ("Nov 2 Wymer FSEIR").
- November 10, 2015, letter from Dan Smith to Tom Lippe re Emergency Access, which is attached hereto as Exhibit 4 ("Nov 10 Smith FSEIR Access").
- November 10, 2015, letter from Dan Smith to Tom Lippe re Port Parking Facilities, which is attached hereto as Exhibit 5 ("Nov 10 Smith FSEIR Port").
- November 13, 2015, letter from Dan Smith to Tom Lippe re King Street Electrical Work, which is attached hereto as Exhibit 6 ("Nov 13 Smith FSEIR King St").

2. The SEIR fails to assess the Project's traffic impacts on the entire affected environment.

(a) The City's selections of intersections (and freeway ramps) studied in the DSEIR excludes intersections it knew or should have known would potentially be significantly impacted by the project.

- July 27 Lippe, p. 1; July 23 Smith, p. 8; July 21 Wymer, pp. 1-12; Nov 2 Smith FSEIR pp. 5-8; Nov 2 Wymer FSEIR.

3. The SEIR fails to disclose the severity of the Project's impacts on intersections and freeway ramps which the project will cause to deteriorate to Level of Service (LOS) F.

- July 27 Lippe, p. 3; July 23 Smith, p. 11; July 21 Wymer, p. 12-13; Nov 2 Smith FSEIR p. 16-18.

Ms Tiffany Bohee

Executive Director. OCII

**Re: Notice of Appeal and Appeal of OCII Resolutions 69-2015 and 70-2015 Re Warriors Arena Project**

November 13, 2015

Page 12

4. The SEIR fails to identify the significance and severity of the Project's impacts on intersections where the Project will use Parking Control Officers.

- July 27 Lippe, p. 4; July 23 Smith, p. 11; Nov 2 Smith FSEIR pp. 16-18.

5. The SEIR's analysis of the project's construction-related traffic congestion and delay impacts is legally flawed because it is based on invalid criteria, it fails to lawfully assess the Project's cumulative construction period impacts, and it improperly defers the development of mitigation measures to reduce the Project's construction-related traffic impacts to less than significant.

- July 27 Lippe, pp. 5-7; July 23 Smith, p. 15; Nov 2 Smith FSEIR p. 22.

6. The SEIR's Analysis of the Project's Operational Traffic and Transit Congestion and Delay Impacts Is Legally Flawed.

(a) The SEIR understates traffic and transit volumes in the PM peak period of 4:00 to 6:00 PM by using "time of arrival" at the Arena as a proxy measurement for "time of travel."

- July 27 Lippe, p. 7; July 23 Smith, p. 1; July 21 Wymer, p. 12-13; Nov 2 Smith FSEIR p. 13-16.

(b) The DSEIR only analyzes impacts of weeknight basketball games that start at 7:30 PM, not at other start times closer to the PM peak.

- July 23 Smith, p. 5; July 21 Wymer, pp. 12-13; Nov 2 Smith FSEIR pp. 3-5.

7. The SEIR's Analysis of the Project's Cumulative Impacts Does Not Comply With CEQA.

(a) The 5% threshold of significance for impacts at intersections and freeway ramps operating at LOS E or F violates CEQA.

- July 27 Lippe, p. 11.

(b) The year 2040 baseline for assessing the significance of the Project's cumulative impacts violates CEQA and the SEIR's excessively distant time frame and massive development assumptions masks significance of project's nearer term cumulative impacts.

- July 27 Lippe, p. 12; July 23 Smith, pp. 25-26; Nov 2 Smith FSEIR pp. 20-22.

(c) The SEIR's use of a "projection" based approach to the Project's cumulative impacts is misleading.

Ms Tiffany Bohee

Executive Director. OCII

**Re: Notice of Appeal and Appeal of OCII Resolutions 69-2015 and 70-2015 Re Warriors Arena Project**

November 13, 2015

Page 13

- July 27 Lippe, p. 13.

(d) The SEIR's cumulative analysis fails to consider and analyze the project in the context of the City's proposal to remove the northern portion of I-280 as far south as the Mariposa Street interchange.

- July 23 Smith, p. 13.

8. The SEIR's methodology for analyzing project impacts on the transit system is legally flawed. The SEIR's use of transit screenline and route capacities is misleading and unsupported, so the City's process for evaluating a project's impacts on public transit evades disclosure of significant impacts. The SEIR's use of a project specific threshold of significant impact of 100 percent of screenline capacity rather than the normal 85 percent of screenline capacity exacerbates overcrowding impacts on the regular user community of and is unsupported and unwarranted.

- July 27 Lippe, p. 14; July 23 Smith, pp. 5-8; Nov 2 Smith FSEIR p. 18-20.

9. The SEIR Unlawfully Defers the Development of Mitigation Measures.

- Mitigation Measure M-TR-2b: Additional Strategies to Reduce Transportation Impacts. (DSEIR, p. 1-15.)
- Mitigation Measure E.47: Transportation System Management Plan. (DSEIR, p. 1-17.)
- Mitigation Measure M-TR-5a: Additional Caltrain Service. (DSEIR, p. 1-18.)
- Mitigation Measure M-TR-5b: Additional North Bay Ferry and/or Bus Service. (DSEIR, p. 1-19.)
- Mitigation Measure M-TR-9a: Crane Safety Plan for Project Construction. (DSEIR, p. 1-20.)
- Mitigation Measure M-TR-9d: Event Center Exterior Lighting Plan. (DSEIR, p. 1-21.)
- Mitigation Measure M-TR-11b: Participation in the Ballpark/Mission Bay Transportation Coordinating Committee. (DSEIR, p. 1-22.)
- Mitigation Measure M-TR-11c: Additional Strategies to Reduce Transportation Impacts of Overlapping Events. (DSEIR, p. 1-23.)
- Mitigation Measure M-TR-13: Additional Muni Transit Service during Overlapping Events. (DSEIR, p. 1-24.)

Ms Tiffany Bohee

Executive Director. OCII

**Re: Notice of Appeal and Appeal of OCII Resolutions 69-2015 and 70-2015 Re Warriors Arena Project**

November 13, 2015

Page 14

- Mitigation Measure M-TR-14: Additional BART Service to the East Bay during Overlapping Events. (DSEIR, p. 1-24.)

- Mitigation Measure M-TR-18: Auto Mode Share Performance Standard and Monitoring. (DSEIR, p. 1-25.)

- July 27 Lippe, p. 16; July 23 Smith, pp. 17-25.

10. Mitigation measures are vague, insubstantive, unresponsive to the impact purportedly addressed or do not qualify as mitigation under ceqa.

- Improvement Measure I-TR-1

- Mitigation Measure M-TR-2a

- Mitigation Measure M-TR-2b

- Impact and Mitigation Measure TR-5a

- Impact and Mitigation Measure TR-5b

- July 23 Smith, pp. 17-25.

11. The SEIR impermissibly characterizes mitigation measures for the Project's transportation impacts as elements or components of the Project thereby failing to adequately analyze and disclose the Project's potentially significant impacts separate from the analysis of the feasibility and effectiveness of proposed mitigation measures.

- November 3, 2015, letter from Soluri Meserve to SFMTA, pp. 1-3;

• July 26, 2015, letter from Dan Smith of Smith Engineering & Management at FSEIR, Vol. 6, pp. Com-135-139;

- July 27 letter from Thomas Lippe at FSEIR, p. Com-126.

12. By characterizing mitigation measures for the Project's transportation impacts as elements or components of the Project, the SEIR fails to set forth enforceable mitigation.

- November 3, 2015, letter from Soluri Meserve to SFMTA, pp. 1-3;

• July 26, 2015, letter from Dan Smith of Smith Engineering & Management at FSEIR, Vol. 6, pp.

Ms Tiffany Bohee

Executive Director. OCII

**Re: Notice of Appeal and Appeal of OCII Resolutions 69-2015 and 70-2015 Re Warriors Arena Project**

November 13, 2015

Page 15

Com-135-139;

- July 27 letter from Thomas Lippe at FSEIR, p. Com-126.

13. The SEIR relies on the Project's contribution to a fair-share fee program to mitigate the Project's transportation impacts without adequately disclosing the required information about such mitigation.

- November 3, 2015, letter from Soluri Meserve to SFMTA, pp. 1-4;
- November 2, 2015, letter from Dan Smith of Smith Engineering & Management, pp. 2-3.  
Urban Decay

14. The Transit Analysis understates impacts because it relies on stale transit baseline data.

- July 23 Smith, p. 9; Nov 2 Smith FSEIR pp. 9-13.

15. The Traffic Analysis understates impacts because it relies on stale traffic baseline data.

- July 23 Smith, p. 10; Nov 2 Smith FSEIR pp. 9-13.

16. The SEIR's discussion of transportation impacts is incomplete.

- July 27 Lippe, p. 18; Nov 2 Smith FSEIR p. 1-3;

17. Complex interrelated issues are not addressed in the SEIR

- July 23 Smith, p. 12.

18. There is no evidence the DSEIR considered the disruptive impacts of the at-grade rail crossing of 16th Street on intersection LOS at the intersections of 16th and 3rd and 16th and 7th Streets.

July 23 Smith, p. 14.

19. The Project's truck loading and truck staging provisions are inadequate.

- July 23 Smith, p. 14; Nov 2 Smith FSEIR p. 22.

20. The SEIR concludes, without adequate foundation, that the project would not have an adverse impact on emergency access to UCSF hospitals.

Ms Tiffany Bohee

Executive Director. OCII

**Re: Notice of Appeal and Appeal of OCII Resolutions 69-2015 and 70-2015 Re Warriors Arena Project**

November 13, 2015

Page 16

- July 23 Smith, p. 16; Nov 2 Smith FSEIR p. 22; Nov 10 Smith FSEIR Access.

21. New information since publication of the DSEIR require recirculation of a revised DSEIR because the omission of this information from the DSEIR rendered public comment meaningless.

Section 13.11.6 – Response TR-5 of the FSEIR/RTC responds to comments by BART (Comments A-BART-1, -4, -5, -7, -8, and -9) and the Alliance (O-MBA10L4-19) supplying a station-level analysis of impacts on BART that was critically missing in the DSEIR. This station-level analysis provides completely new information, including Table 13.11-2, and conclusions that were previously missing. Consequently, the information should be available for review for the full 45 day review period in Recirculated Draft status under CEQA.

- Nov 2 Smith FSEIR p. 22.

22. Changes to the project since publication of the DSEIR require recirculation of a revised DSEIR due to new and more severe significant impacts. The new project variant will dig up King Street for six months and Third Street for fourteen months. (FSEIR, pp. 12-11, 12-25.) This will exacerbate construction phase impacts on traffic, either creating new significant impacts not previously identified in the SEIR.

- Nov 13 Smith FSEIR King St.

**H. THE SEIR IS NOT SUFFICIENT AS AN INFORMATIONAL DOCUMENT WITH RESPECT TO HYDROLOGY, WATER QUALITY, AND BIOLOGICAL IMPACTS.**

1. The Alliance's Hydrology, Water Quality, and Biological Impacts related grounds for appeal are set forth in detail in the following documents:

- July 24, 2015, letter from Thomas Lippe to OCII and Planning Department re Impacts on Hydrology, Water Quality, and Biological Resources ("July 24 Lippe") at FSEIR, Vol. 6, p. Com-147, including:
- July 21, 2015, letter to Thomas Lippe from Matt Hageman ("July 21 Hageman") at FSEIR, Vol. 6, p. Com-155;
- July 21, 2015, letter to Thomas Lippe from Erik Ringelberg and Kurt Balasek ("July 21 Ringelberg") at FSEIR, Vol. 6, p. Com-159;
- July 22, 2015, letter report by geotechnical engineer Martin Cline and Kurt Balasek, regarding Hazardous Materials ("July 22 Cline"), at FSEIR, Vol. 6, p. Com-70 (attached as Exhibit B to July

Ms Tiffany Bohee

Executive Director. OCII

**Re: Notice of Appeal and Appeal of OCII Resolutions 69-2015 and 70-2015 Re Warriors Arena Project**

November 13, 2015

Page 17

26, 2015 Soluri Meserve letter to OCII re DSEIR at FSEIR, Vol. 6, p. Com-48.)

- Nov 2 Lippe FSEIR;
- As Exhibit H thereto, November 2, 2015, letter to Thomas Lippe from Matt Hageman (“Nov 2 Hageman”).
- As Exhibit I thereto, a November 2, 2015, letter from Erik Ringelberg and Kurt Balasek of BSK Associates (“Nov 2 BSK”)
- As Exhibit J thereto, a November 2, 2015, letter from Erik Ringelberg (“Nov 2 Ringelberg”).
- As Exhibit K thereto, a July 16, 2015, BSK Technical Memorandum Regarding the Proposed Warrior Arena Wetland Features by Erik Ringelberg and Kevin Grove (“July 16 BSK Wetland”).
- As Exhibit L thereto, an October 29, 2015, Draft Waters and Wetland Delineation Report Proposed Mission Bay Development, Blocks 29-32 San Francisco, California, by Erik Ringelberg and Kevin Grove of BSK Associates (“Oct 29 BSK Wetland”).

2. The DSEIR is not sufficient as an informational document with respect to the project’s wastewater treatment infrastructure impacts, and the Response to this comment (UTIL-3) is inadequate.

- July 26 Lippe, pp. 1-4; Nov 2 Lippe FSEIR, pp. 8-10;

3. The DSEIR is not sufficient as an informational document with respect to the Project’s contaminated wastewater (i.e. combined sewage and stormwater) impacts on San Francisco Bay water quality or biological resources (including from inadequately treated sewage and toxic chemicals (e.g., PCB’s and metals), and the FSEIR’s Response to these comments (Hyd-3 - Hyd-6) are inadequate.

- July 26 Lippe, pp. 4-10; Nov 2 Lippe FSEIR, pp. 10-12; July 21 Hageman; Nov 2 Hageman; Nov. 2 BSK; July 22 Cline, pp. 1-15.

4. The DSEIR is not sufficient as an informational document with respect to project impacts on biological resources, including wetlands and wildlife.

- (a) The SEIR’s exclusion of the Project’s impacts on biological resources is erroneous because there is substantial evidence supporting a fair argument the Project may have a significant effect by destroying the on-site wetland. And even if CEQA section 21166 applies, CEQA requires including this issue in the subsequent EIR because the presence of

Ms Tiffany Bohee

Executive Director. OCII

**Re: Notice of Appeal and Appeal of OCII Resolutions 69-2015 and 70-2015 Re Warriors Arena Project**

November 13, 2015

Page 18

the wetland is a change in circumstances since certification of the 1998 FSEIR that gives rise to the potential for new significant effects not previously identified.

(b) The SEIR's exclusion of the Project's impacts on biological resources is erroneous because the lead agency failed to prepare any CEQA document that adequately describes the Project's environmental setting to allow an assessment of the Project's impacts on biological resources.

(c) The SEIR's failure to analyze wetland resources on the Project site resulted in the failure to disclose the Project's need for a federal Clean Water Act section 404 fill permit, as well as a consistency determination under the Coastal Zone Management Act.

- July 26 Lippe, pp. 11-15; July 16 BSK Wetland; July 21 Ringelberg; Oct 29 BSK Wetland; Nov 2 Lippe FSEIR, pp. 10-15; Nov 2 BSK; Nov 2 Ringelberg; October 7, 2015, letter to OCII from Soluri Meserve regarding Clean Water Act 404 and CZMA Consistency.

5. The SEIR fails to include all feasible mitigation measures to lessen or mitigate impacts to state and/or federal jurisdictional wetland features.

- July 26 Lippe, pp. 11-15; July 16 BSK Wetland; July 21 Ringelberg; Oct 29 BSK Wetland; Nov 2 Lippe FSEIR, pp. 12-13; Nov 2 BSK; Nov 2 Ringelberg.

6. The SEIR fail to include all feasible mitigation to lessen or mitigate the significant and unavoidable cumulative impact associated with exceeding of the capacity of the Mariposa Pump Station.

- July 26 Lippe, pp. 1-10; Nov 2 Lippe FSEIR, pp. 8-12; Nov 2 BSK; Nov 2 Ringelberg.

7. The DSEIR is not sufficient as an informational document with respect to the Project's flooding risk and inundation impacts.

- July 26 Lippe, pp. 15-16.

**I. THE SEIR IS NOT SUFFICIENT AS AN INFORMATIONAL DOCUMENT WITH RESPECT TO NOISE IMPACTS.**

1. The Alliance's Noise related grounds for appeal are set forth in detail in the following documents:

- July 25, 2015, letter from Thomas Lippe to OCII and Planning Department re Noise Impacts ("July 25 Lippe"), at FSEIR, Vol. 6, p. Com-109, including all the exhibits attached thereto,

Ms Tiffany Bohee

Executive Director. OCII

**Re: Notice of Appeal and Appeal of OCII Resolutions 69-2015 and 70-2015 Re Warriors Arena Project**

November 13, 2015

Page 19

including:

- July 24, 2015, letter to Thomas Lippe from acoustic engineer Frank Hubach (“July 24 Hubach”) at FSEIR, Vol. 6, p. Com-113,
- Nov 2 Lippe FSEIR, including
- As Exhibit S thereto, November 2, 2015, letter to Thomas Lippe from acoustic engineer Frank Hubach (“Nov 2 Hubach”)

2. The SEIR rigidly adheres to the regulatory scheme of the San Francisco Noise Ordinance in assessing the significance of Project generated noise, and this is true of both impact and non-impact equipment to be sued in construction and operational noise sources such as crowds and traffic. This is an error of law, because it injects the question of what is “allowed” into the determination of “significance.” The question of what is allowed is the final step in the CEQA process, and involves weighing considerations relating to the social and economic benefits of the Project.

Injecting consideration of what is “allowed” into the first step subverts the integrity of the entire analysis. For projects for which an EIR has been prepared, both the EIR and the mandatory findings required by CEQA section 21081, the analysis starts with whether an impact is significant.

A finding of significance triggers the obligation to identify and adopt feasible mitigation measures that are effective in substantially reducing the significant impact. Once all feasible and effective mitigation measures have been identified and adopted, if the impact remains significant, the agency may approve the project if it finds that social or economic considerations outweigh environmental harm. Each of these steps in the analysis is distinct.

The RTC’s responses to comments conflate and confuse these steps, and thereby undermine the integrity of the analysis. This conflation of the distinct steps in the analysis explains why the FSEIR/RTC’s insistence on using the San Francisco Police Code’s regulatory requirements (i.e., the City’s final resolution of what is allowed and what is not allowed) as thresholds of significance is inconsistent with CEQA. The Police Code’s regulatory requirements reflect the City’s effort to balance the protection of people from harmful noise against the need for social and economic activity. That balance does not necessarily reflect the point at which impacts become significant. Under CEQA, such balancing is also required, but not where significance is determined. In short, even where the lead agency believes an activity should be “allowed” because the social or economic considerations outweigh the environmental harm, the EIR must still disclose whether the impact is significant.

- July 25 Lippe; July 24 Hubach, Nov 2 Lippe FSEIR, pp. 1-2, 14-15; Nov 2 Hubach.

Ms Tiffany Bohee

Executive Director. OCII

**Re: Notice of Appeal and Appeal of OCII Resolutions 69-2015 and 70-2015 Re Warriors Arena Project**

November 13, 2015

Page 20

3. The SEIR uses “ambient plus increment” thresholds of significance for all noise impacts. This is a legal error because as described by Mr. Hubach in the context of operational noise impacts (Impact NO-5), the DSEIR uses a series of “ambient plus increment” thresholds. As discussed by Mr. Hubach, using “ambient plus increment” thresholds where existing noise levels are already high:

disregards the fact the Project will make severe conditions worse. In addition, using these “ambient plus increment” thresholds for operational noise results in an unsustainable gradual increase in ambient noise. It is a formula for ever-increasing noise levels because each new project establishes a new, higher, baseline; then when the next project is approved, the incremental change will be added to the new baseline.

(July 24 Hubach, p. 5.)

By ignoring the severity of existing noise levels and only looking to the “de minimis” nature of the Project’s incremental effect, the DSEIR’s noise impact determinations violate CEQA. (See *Communities for a Better Environment v. California Resources Agency* (2002) 103 Cal.App.4th 98, 120 (“CBE”) “[T]he relevant question”... is not how the effect of the project at issue compares to the preexisting cumulative effect, but whether “any additional amount” of effect should be considered significant in the context of the existing cumulative effect. [footnote omitted] In the end, the greater the existing environmental problems are, the lower the threshold should be for treating a project’s contribution to cumulative impacts as significant. [footnote omitted]”).<sup>9</sup> *Communities* and *Kings County* teach that the significance of a cumulative impact depends on the environmental setting in which it occurs, especially the severity of existing environmental harm.

- July 25 Lippe; July 24 Hubach, Nov 2 Lippe FSEIR, pp. 1-2, 14-15; Nov 2 Hubach.

4. The SEIR fails to use thresholds of significance based on human health and welfare (e.g., the thresholds stated in San Francisco Police Code section 2909(d) without the narrow regulatory constraints of that ordinance, or the World Health Organization (WHO) standards referenced in the Alliance’s comment letter.

---

<sup>9</sup>*Kings County Farm Bureau v. City of Hanford* (1990) 221 Cal.App.3d 692, 720-21 [“They contend in assessing significance the EIR focuses upon the ratio between the project’s impacts and the overall problem, contrary to the intent of CEQA.... We find the analysis used in the EIR and urged by GWF avoids analyzing the severity of the problem and allows the approval of projects which, when taken in isolation, appear insignificant, but when viewed together, appear startling. Under GWF’s ‘ratio’ theory, the greater the overall problem, the less significance a project has in a cumulative impacts analysis. We conclude the standard for a cumulative impacts analysis is defined by the use of the term ‘collectively significant’ in Guidelines section 15355 and the analysis must assess the collective or combined effect of energy development”].)

Ms Tiffany Bohee

Executive Director. OCII

**Re: Notice of Appeal and Appeal of OCII Resolutions 69-2015 and 70-2015 Re Warriors Arena Project**

November 13, 2015

Page 21

- July 25 Lippe, pp. 4-7; July 24 Hubach, pp. 3-6, Nov 2 Lippe FSEIR, pp. 1-2, 14-15; Nov 2 Hubach.

**J. THE SEIR IS NOT SUFFICIENT AS AN INFORMATIONAL DOCUMENT WITH RESPECT TO GREENHOUSE GAS EMISSION IMPACTS.**

1. The SEIR's conclusion that greenhouse gas ("GHG") emissions are less than significant is not supported by substantial evidence.

- June 30, 2015, oral comments by Osha Meserve and Susan Vaughn at FSEIR, Vol. 6, PH-44 - PH-45;
- July 26, 2015, letter from Soluri Meserve, pp. 2-6;
- July 27, 2015, letter from Susan Vaughn, Sierra Club, FSEIR, Vol. 6, COM-180 - COM 181;
- July 20, 2015, letter report by air quality professionals Patrick Sullivan, CPP, REPA, and John Henkelman, regarding Greenhouse Gas Emissions, pp. 1-34 (Exhibit A to July 26, 2015 Soluri Meserve letter);
- November 2, 2015, letter from Soluri Meserve, pp. 3-6;
- November 2, 2015, letter report by air quality professionals Patrick Sullivan, CPP, REPA, and John Henkelman, regarding Greenhouse Gas Emissions, pp. 1-4 (Exhibit 1 to November 2, 2015 Soluri Meserve letter).

2. Recirculation is required due to the FSEIR's change in approach to GHG analysis from the quantitative analysis described in the DSEIR that relied on the faulty GHG inventory prepared for AB 900 Leadership Development Project certification concluding there would be "no net emissions" to a "qualitative" analysis stating GHG emissions would be less than significant based on the Project's consistency with the local GHG reduction plan.

- November 2, 2015, letter from Soluri Meserve, pp. 3-6;
- November 2, 2015, letter report by air quality professionals Patrick Sullivan, CPP, REPA, and John Henkelman, regarding Greenhouse Gas Emissions, pp. 1-4 (Exhibit 1 to November 2, 2015 Soluri Meserve letter).

3. As quantitative methods of assessing Project-level GHG emissions are available, the EIR's lack of quantification of the impact was a failure to proceed in the manner provided by law.

Ms Tiffany Bohee

Executive Director. OCII

**Re: Notice of Appeal and Appeal of OCII Resolutions 69-2015 and 70-2015 Re Warriors Arena Project**

November 13, 2015

Page 22

November 13, 2015

Page 27

impact.

- November 2, 2015, letter from Soluri Meserve, p. 8.

**O. THE SEIR IS NOT SUFFICIENT AS AN INFORMATIONAL DOCUMENT WITH RESPECT TO RECREATION IMPACTS.**

1. A fair argument exists that the Project will accelerate substantial deterioration of Bayfront Park thereby requiring analysis in the SEIR.

- July 26, 2015, letter from Soluri Meserve at FSEIR, Vol. 6, pp. Com-60-61;
- November 2, 2015, letter from Soluri Meserve, pp. 8-9.

2. Even if consistent with the 1998 SEIR, the proposed Project represents a major revision that will result in a significantly more significant impact to deterioration of Bayfront Park than previously analyzed in 1998.

- July 26, 2015, letter from Soluri Meserve at FSEIR, Vol. 6, pp. Com-60-61;
- November 2, 2015, letter from Soluri Meserve, pp. 8-9.

3. The FSEIR fails as an informational document regarding impacts to recreation because it improperly excludes analysis of environmental impacts associated with development of Bayfront Park.

- July 26, 2015, letter from Soluri Meserve at FSEIR, Vol. 6, pp. Com-60-61;
- November 2, 2015, letter from Soluri Meserve, pp. 8-9.

4. Even if construction of Bayfront Park was previously analyzed at a programmatic level in the 1998 EIR, new information and changed circumstances results in a new and more severe significant impacts related to hazardous material exposure to residents of Bayfront Park than previously analyzed in 1998 and require analysis in a recirculated SEIR.

- July 26, 2015, letter from Soluri Meserve at FSEIR, Vol. 6, pp. Com-60-61;
- November 2, 2015, letter from Soluri Meserve, pp. 8-9.
- The FSEIR failed to adequately respond in good faith to comments about the Project's impacts to recreational facilities.

Ms Tiffany Bohee

Executive Director. OCII

November 13, 2015

Page 28

- November 2, 2015, letter from Soluri Meserve, pp. 8-9.

**P. THE SEIR IS NOT SUFFICIENT AS AN INFORMATIONAL DOCUMENT WITH RESPECT TO UTILITIES IMPACTS.**

1. The FSEIR fails as an informational document regarding water supply infrastructure because it impermissibly defers analysis of the impacts associated with constructing water supply infrastructure.

- July 26, 2015, letter from Soluri Meserve at FSEIR, Vol. 6, pp. Com-58-59.

2. The FSEIR may not rely on the 1998 SEIR regarding analysis of water supply infrastructure because new information and/or changed circumstances results in new and more severe significant impacts associated with constructing these facilities that were not previously disclosed.

- July 26, 2015, letter from Soluri Meserve at FSEIR, Vol. 6, pp. Com-58-59.

3. New information and/or changed circumstances prohibit the SEIR from relying on the Water Supply Assessment prepared for another project in 2013.

- July 26, 2015, letter from Soluri Meserve at FSEIR, Vol. 6, pp. Com-58-59.

4. The FSEIR fails as an informational document with respect to its discussion of stormwater treatment facilities and the Project's impact.

- July 26, 2015, letter from Soluri Meserve at FSEIR, Vol. 6, pp. Com-59-60.

5. The FSEIR fails as an informational document by not including a detailed statement of the Project's energy demand in the DSEIR that was circulate for public review. The information contained in the FSEIR RTC constitutes new information that requires recirculation.

- July 26, 2015, letter from Soluri Meserve at FSEIR, Vol. 6, pp. Com-61-62.

**Q. THE SEIR IS NOT SUFFICIENT AS AN INFORMATIONAL DOCUMENT WITH RESPECT TO LAND USE IMPACTS.**

1. The Draft SEIR fails to address and the Final SEIR fails to adequately respond to comments regarding the inconsistency of the Warriors Arena Project with the primary and secondary uses encompassed in and allowed by the Mission Bay South Redevelopment Plan. The OCII findings on land use consistencies are not supported by substantial evidence.

Ms Tiffany Bohee

Executive Director. OCII

- November 2, 2015, letter to OCII from Susan Brandt-Hawley re FSEIR/RTC.
- Testimony at November 3, 2015, OCII public hearing by Susan Brandt-Hawley.

2. The Draft SEIR fails to address and the Final SEIR fails to adequately respond to comments regarding the inconsistency of the Warriors Arena Project with land use policies established by the Mission Bay South Redevelopment Plan and the Design for Development.

- July 26, 2015, DSEIR comment letter from Susan Brandt-Hawley, at FSEIR, Vol.6, p. COM-41, PP-1.

3. The Draft SEIR fails to address and the Final SEIR fails to adequately respond to comments regarding the inadequacy of the EIR's analysis of changing the land use planned for the Mission Bay South area by changing the planned community character as a biotechnology and medical hub with the Event Center.

- July 26, 2015, DSEIR comment letter from Susan Brandt-Hawley, at FSEIR, Vol.6, p. COM-43, LU-1.

**R. THE SEIR IS NOT SUFFICIENT AS AN INFORMATIONAL DOCUMENT WITH RESPECT TO CULTURAL RESOURCE IMPACTS.**

1. The Draft SEIR fails to adequately address and the Final SEIR fails to adequately respond to comments regarding the inadequacy of the EI's project specific analysis and mitigation of cultural resources, and failure to provide an updated investigation of resources as part of the environmental setting.

- July 26, 2015, DSEIR comment letter from Susan Brandt-Hawley, at FSEIR, Vol.6, p. COM-45-46, CULT-1.

**S. THE OCII'S CEQA FINDINGS AND STATEMENT OF OVERRIDING CONSIDERATIONS ARE PREMATURE AND UNSUPPORTED.**

1. The CEQA Findings adopted by the OCII are premature and unsupported, as explained in the Alliance's comments on the SEIR. The SEIR is defective and cannot be relied upon as an informational document with respect to the analysis and public disclosure of impacts and mitigation measures regarding transportation under CEQA.

Ms Tiffany Bohee

Executive Director. OCII

**Re: Notice of Appeal and Appeal of OCII Resolutions 69-2015 and 70-2015 Re Warriors  
Arena Project**

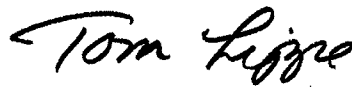

November 13, 2015

Page 30

2. Similarly, the Statement of Overriding Considerations is also premature and unsupported, because the OCII's CEQA findings adopted by are premature and unsupported, and without a legally adequate description of the nature and extent of the Project's environmental harm, the OCCI and the City cannot properly weigh whether the Project's benefits outweigh that harm.

Thank you for your attention to this matter.

Very Truly Yours,

Thomas N. Lippe

**COMMISSION ON COMMUNITY INVESTMENT AND INFRASTRUCTURE**

**RESOLUTION NO. 69-2015**

*Adopted November 3, 2015*

**CERTIFYING THE FINAL SUBSEQUENT ENVIRONMENTAL IMPACT REPORT  
FOR THE GOLDEN STATE WARRIORS EVENT CENTER AND MIXED-USE  
DEVELOPMENT ON BLOCKS 29-32 IN MISSION BAY SOUTH UNDER THE  
CALIFORNIA ENVIRONMENTAL QUALITY ACT ("CEQA") AND THE CEQA  
GUIDELINES; MISSION BAY SOUTH REDEVELOPMENT PROJECT AREA**

WHEREAS, The Commission on Community Investment and Infrastructure, ("Commission"), the successor agency to the San Francisco Redevelopment Agency ("Successor Agency"), takes the following certification action in compliance with the California Environmental Quality Act ("CEQA"), the California Public Resources Code Sections 21000 et seq., and the CEQA Guidelines, 14 Cal. Code Reg. Sections 15000 et seq. ("CEQA Guidelines") and acting in its capacity as lead agency under CEQA Section 21067; and,

WHEREAS, On September 17, 1998, the Commission of the former Redevelopment Agency of the City and County of San Francisco ("Redevelopment Commission") by Resolution No. 182-98, and the San Francisco Planning Commission, by Resolution No. 14696, together acting as co-lead agencies for conducting environmental review for the Redevelopment Plans for the Mission Bay North Redevelopment Project Area and the Mission Bay South Redevelopment Project Area (the "Plans"), the Mission Bay North Owner Participation Agreement ("North OPA") and the Mission Bay South Owner Participation Agreement ("South OPA"), and other permits, approvals and related and collateral actions (the "Mission Bay Project"), certified the Final Subsequent Environmental Impact Report ("Mission Bay FSEIR") (State Clearinghouse Number 97092068), as a program EIR for Mission Bay North and South pursuant to CEQA and CEQA Guidelines Sections 15168 (Program EIR) and 15180 (Redevelopment Plan EIR). The Mission Bay FSEIR document provided programmatic environmental review of the overall Mission Bay Redevelopment Plan (consisting of the approximately 300-acre Mission Bay North and South Redevelopment Plan Areas); and,

WHEREAS, On the same day, the Redevelopment Commission adopted Resolution No. 183-98, which adopted environmental findings, including a mitigation monitoring and reporting program ("MMRP") and a statement of overriding considerations, in connection with the approval of the Plans and other Mission Bay Project approvals, and adopted Resolution No. 190-98, approving the Redevelopment Plan for the Mission Bay South Redevelopment Project Area ("Plan") and Resolution No. 193-98 authorizing execution of the South OPA and related documents between the Redevelopment Agency and the Mission Bay Master Developer (originally Catellus Development Corporation and now FOCIL-MB, LLC, the successor to Catellus Development Corporation); and,

WHEREAS, On October 19, 1998, the Board of Supervisors adopted Motion No. 98-132 affirming certification of the Mission Bay FSEIR by the Planning Commission and the Redevelopment Agency, and Resolution No. 854-98 adopting environmental findings, including an MMRP and a statement of overriding considerations, for the Mission Bay Project. On November 2, 1998, the San Francisco Board of Supervisors ("Board of Supervisors"), by Ordinance No. 335-98, adopted the Plans; and,

WHEREAS, On February 1, 2012, state law dissolved the Former Redevelopment Agency and required the transfer of certain of its assets and obligations to the Successor Agency, and on June 27, 2012, state law clarified that successor agencies are separate public entities, Cal. Health & Safety Code §34170 et seq. ("Redevelopment Dissolution Law"); and,

WHEREAS, Redevelopment Dissolution Law required creation of an oversight board to the successor agency and provided that with approval from its oversight board and the State Department of Finance ("DOF"), a successor agency may continue to implement "enforceable obligations" such as existing contracts, bonds and leases, that were executed prior to the suspension of redevelopment agencies' activities. On January 24, 2014, DOF finally and conclusively determined that the Mission Bay North and South Owner Participation Agreements and Mission Bay Tax Increment Allocation Pledge Agreements are enforceable obligations pursuant to Health and Safety Code Section 34177.5(i); and,

WHEREAS, On October 2, 2012, the Board of Supervisors of the City, acting as the governing body of the Successor Agency, adopted Ordinance No. 215-12 (the "Implementing Ordinance"), which Implementing Ordinance was signed by the Mayor on October 4, 2012, and which, among other matters: (a) acknowledged and confirmed that the Successor Agency is a separate legal entity from the City, and (b) established this Commission and the Office of Community Investment and Infrastructure ("OCII") and delegated to the Commission the authority to (i) act in place of the Redevelopment Agency Commission to, among other matters, implement, modify, enforce and complete the Redevelopment Agency's enforceable obligations, (ii) approve all contracts and actions related to the assets transferred to or retained by the Successor Agency, including, without limitation, the authority to exercise land use, development, and design approval, consistent with applicable enforceable obligations, and (iii) take any action that the Redevelopment Dissolution Law requires or authorizes on behalf of the Successor Agency and any other action that this Commission deems appropriate, consistent with the Redevelopment Dissolution Law, to comply with such obligations; and,

WHEREAS, The Board of Supervisors' delegation to this Commission includes the authority to act as the lead agency that administers environmental review for private projects in Mission Bay North and South Redevelopment Plan Areas in compliance with the requirements of CEQA and the CEQA Guidelines, including CEQA Section 21067; and,

WHEREAS, The proposed project is the Golden State Warriors Event Center and Mixed-Use Development at Mission Bay South Blocks 29-32, with the MUNI UCSF/Mission Bay Station Variant and the Third Street Plaza variant, and related actions ("Event Center Project" or "Project"), as described in Chapter 3 of the Final Subsequent Environmental Impact Report ("FSEIR"). The Project Sponsor is GSW Arena LLC ("GSW"), an affiliate of the Golden State Warriors, LLC, which owns and operates the Golden State Warriors National Basketball Association team. GSW proposes to construct a multi-purpose event center and a variety of mixed uses, including office, retail, open space, and structured parking on an approximately 11-acre site on Blocks 29-32. The Project site is bounded by South Street on the north, Third Street on the west, 16th Street on the south, and by the future planned realigned Terry A. Francois Boulevard on the east; and

WHEREAS, In compliance with CEQA and the CEQA Guidelines, OCII determined that the Project required preparation of a Subsequent Environmental Impact Report and OCII provided public notice of that determination to governmental agencies and organizations and persons interested in the proposed project on November 19, 2014, initiating a 30-day public scoping period, which ended on December 19, 2014 and included a public scoping meeting on December 9, 2014.

WHEREAS, On June 5, 2015, OCII published and circulated the Draft Subsequent Environmental Impact Report (hereinafter "GSW DSEIR") to local, state, and federal agencies and to interested organizations and individuals. In addition, electronic copies of the GSW DSEIR were made available for public review on the OCII website and paper copies of the GSW DSEIR were made available for public review at OCII (1 South Van Ness Avenue, 5th Floor), the San Francisco Planning Department (1660 Mission Street, 1st Floor, Planning Information Counter), the San Francisco Main Library (100 Larkin Street) and San Francisco Library, Mission Bay Branch (960 4th Street).

WHEREAS, Notices of availability of the GSW DSEIR and of the date and time of the public hearing were posted near the project site and published in a newspaper of general circulation in San Francisco on June 5, 2015.

WHEREAS, On October 23, 2015, OCII published the Final Subsequent Environmental Impact Report ("FSEIR") for the Event Center Project consisting of the GSW DSEIR, the comments received during the review period, any additional information that became available after the publication of the GSW DSEIR, and the Responses to Comments document, all as required by law, copies of which are available through the Secretary of the Commission and at [www.gsweventcenter.com](http://www.gsweventcenter.com), and are incorporated herein by reference; and,

WHEREAS, The administrative record that contains the GSW DSEIR, the FSEIR and all documents related to, or relied on in the preparation thereof has been prepared by OCII in accordance with the Jobs and Economic Improvement through Environmental Leadership Act (AB 900). Governor Jerry Brown certified the proposed project as an environmental leadership development project under this Act on April 30, 2015, and on May 27, 2015, the Joint Legislative Budget

Committee concurred with this certification. Therefore, this project is eligible for streamlined judicial review. Project EIR files have been made available for review by the Commission and the public. These files are available for public review at OCII at 1 South Van Ness Avenue, 5th Floor, can be found at [www.gsweventcenter.com](http://www.gsweventcenter.com) and are part of the record before the Commission; now therefore be it,

RESOLVED, The Commission hereby certifies the Final Environmental Impact Report identified as OCII Case No. ER-2014-919-97 (also identified as Planning Department Case No. 2014.1441E and State Clearinghouse No. 2014112045), Event Center and Mixed-Use Development at Mission Bay Blocks 29-32 (hereinafter "Project"), based upon the following findings:

1. The Commission has reviewed and considered the FSEIR and hereby does find that the contents of said report and the procedures through which the FSEIR was prepared, publicized, and reviewed comply with the provisions of CEQA and the CEQA Guidelines.
2. The Commission hereby does find that the FSEIR concerning Case No. ER-2014-919-97, Event Center and Mixed-Use Development at Mission Bay Blocks 29-32, reflects its independent judgment and analysis, is adequate, accurate and objective, and that the Comments and Responses document contains no significant revisions to the GSW DSEIR, and hereby does certify the completion of said FSEIR in compliance with CEQA and the CEQA Guidelines.
3. The Commission, in certifying the completion of said FSEIR, hereby does find that the Project:
  - A. Will have a significant and unavoidable project-specific effect on the environment in the following areas:
    - 1) On days without a SF Giants game at AT&T Park:
      - a) Increased traffic congestion and traffic impacts at seven intersections that would operate at LOS E or LOS F.
      - b) Increased traffic congestion and traffic impacts at one freeway ramp location that would operate at LOS E or LOS F.
      - c) A substantial increase in transit demand that could not be accommodated by regional transit capacity that would result in a significant impact to North Bay and South Bay regional transit service (Caltrain, Golden Gate Transit and Water Emergency Transportation Authority (WETA)).
    - 2) On days with overlapping evening events at the project site and at

AT&T Park:

- a) Increased traffic and traffic impacts at ten additional intersections that would operate at LOS E or LOS F.
  - b) Increased traffic and traffic impacts at three freeway ramp locations that would operate at LOS E or LOS F.
  - c) A substantial increase in transit demand that could not be accommodated by regional transit capacity would result in a significant impact to East Bay, North Bay and South Bay regional transit service (Bay Area Rapid Transit, Caltrain, Golden Gate transit and WETA).
- 3) Without implementation of the Muni Special Event Transit Service Plan:
- a) Increased traffic congestion and traffic impacts at nine intersections that would operate at LOS E or LOS F.
  - b) Increased traffic congestion and traffic impacts at three freeway ramp locations that would operate at LOS E or LOS F.
  - c) Transit service operation impacts on the Muni T Third light rail line and the 22 Fillmore bus route.
  - d) Capacity utilization standard exceedances for Caltrain, Golden Gate Transit and WETA.
- 4) Increased ambient noise levels due to increased vehicular traffic along local roadways in the project vicinity and to crowd noise associated with events at the event center.
- 5) Construction-related emissions of criteria air pollutants (reactive organic gases and nitrogen oxides) that would exceed applicable significance thresholds.
- 6) Long-term operational emissions of criteria air pollutants (ROG and NOx) that would exceed applicable significance thresholds in connection with project operations, from sources including new vehicle trips, maintenance and operation of standby diesel generators, boilers and area sources such as landscape equipment and use of consumer products.
- B. Will result in unavoidable cumulatively considerable contributions to the following significant cumulative effects on the environment:
- 1) During peak hours, cumulative increased traffic congestion and

traffic impacts at 16 intersections that would operate at LOS E or LOS F.

- 2) Cumulative increased traffic congestion and traffic impacts at three freeway ramp locations that would operate at LOS E or LOS F.
  - 3) Cumulative capacity utilization exceedances for BART, Caltrain, Golden Gate Transit and WETA.
  - 4) Increased cumulative roadway traffic noise in the project vicinity.
  - 5) Increased cumulative construction-related and operational emissions of criteria air pollutants that would exceed applicable significance thresholds.
  - 6) Cumulative wastewater flows that could exceed the capacity of the Mariposa Pump Station and associated force mains and conveyance piping, and construction impacts resulting from future construction of improvements to the Mariposa Pump Station and associated facilities to expand wastewater treatment capacity.
4. The Commission has reviewed and considered the information contained in the FSEIR prior to approving the Project.

I hereby certify that the foregoing resolution was adopted by the Commission at its meeting of November 3, 2015.

Commission Secretary

## EXHIBIT 2

**COMMISSION ON COMMUNITY INVESTMENT AND INFRASTRUCTURE**

**RESOLUTION NO. 70-2015**

*Adopted November 3, 2015*

**ADOPTING ENVIRONMENTAL REVIEW FINDINGS UNDER THE CALIFORNIA ENVIRONMENTAL QUALITY ACT ("CEQA") AND THE CEQA GUIDELINES, INCLUDING THE ADOPTION OF A MITIGATION MONITORING AND REPORTING PROGRAM AND A STATEMENT OF OVERRIDING CONSIDERATION IN CONNECTION WITH THE DEVELOPMENT OF THE GOLDEN STATE WARRIORS EVENT CENTER AND MIXED-USE DEVELOPMENT AT MISSION BAY SOUTH BLOCKS 29-32; MISSION BAY SOUTH REDEVELOPMENT AREA**

WHEREAS, The Commission on Community Investment and Infrastructure, ("Commission"), the successor agency to the San Francisco Redevelopment Agency ("Successor Agency"), makes the following findings in compliance with the California Environmental Quality Act ("CEQA"), the California Public Resources Code Sections 21000 et seq., and the CEQA Guidelines, 14 Cal. Code Reg. Sections 15000 et seq. ("CEQA Guidelines") and acting in its capacity as lead agency under CEQA Section 21067; and,

WHEREAS, On September 17, 1998, the Commission of the former Redevelopment Agency of the City and County of San Francisco ("Redevelopment Commission") by Resolution No. 182-98, and the San Francisco Planning Commission, by Resolution No. 14696, together acting as co-lead agencies for conducting environmental review for the Redevelopment Plans for the Mission Bay North Redevelopment Project Area and the Mission Bay South Redevelopment Project Area (the "Plans"), the Mission Bay North Owner Participation Agreement ("North OPA") and the Mission Bay South Owner Participation Agreement ("South OPA"), and other permits, approvals and related and collateral actions (the "Mission Bay Project"), certified the Final Subsequent Environmental Impact Report ("Mission Bay FSEIR") (State Clearinghouse Number 97092068), as a program EIR for Mission Bay North and South pursuant to CEQA and CEQA Guidelines Sections 15168 (Program EIR) and 15180 (Redevelopment Plan EIR). The Mission Bay FSEIR document provided programmatic environmental review of the overall Mission Bay Redevelopment Plan (consisting of the approximately 300-acre Mission Bay North and South Redevelopment Plan Areas); and,

WHEREAS, On the same day, the Redevelopment Commission adopted Resolution No. 183-98, which adopted environmental findings, including a mitigation monitoring and reporting program ("MMRP") and a statement of overriding considerations, in connection with the approval of the Plans and other Mission Bay Project approvals, and adopted Resolution No. 190-98, approving the Redevelopment Plan for the Mission Bay South Redevelopment Project Area ("Plan") and Resolution No. 193-98 authorizing execution of the South OPA and related

documents between the Redevelopment Agency and the Mission Bay Master Developer (originally Catellus Development Corporation and now FOCIL-MB, LLC, the successor to Catellus Development Corporation); and,

WHEREAS, On October 19, 1998, the Board of Supervisors adopted Motion No. 98-132 affirming certification of the Mission Bay FSEIR by the Planning Commission and the Redevelopment Agency, and Resolution No. 854-98 adopting environmental findings, including an MMRP and a statement of overriding considerations, for the Mission Bay Project. On November 2, 1998, the San Francisco Board of Supervisors ("Board of Supervisors"), by Ordinance No. 335-98, adopted the Plans; and,

WHEREAS, On February 1, 2012, state law dissolved the Former Redevelopment Agency and required the transfer of certain of its assets and obligations to the Successor Agency, and on June 27, 2012, state law clarified that successor agencies are separate public entities, Cal. Health & Safety Code §34170 et seq. ("Redevelopment Dissolution Law"); and,

WHEREAS, Redevelopment Dissolution Law required creation of an oversight board to the successor agency and provided that with approval from its oversight board and the State Department of Finance ("DOF"), a successor agency may continue to implement "enforceable obligations" such as existing contracts, bonds and leases, that were executed prior to the suspension of redevelopment agencies' activities. On January 24, 2014, DOF finally and conclusively determined that the Mission Bay North and South OPAs and Mission Bay Tax Increment Allocation Pledge Agreements are enforceable obligations pursuant to Health and Safety Code Section 34177.5(i); and,

WHEREAS, On October 2, 2012, the Board of Supervisors of the City, acting as the governing body of the Successor Agency, adopted Ordinance No. 215-12 (the "Implementing Ordinance"), which Implementing Ordinance was signed by the Mayor on October 4, 2012, and which, among other matters: (a) acknowledged and confirmed that the Successor Agency is a separate legal entity from the City, and (b) established this Commission and the Office of Community Investment and Infrastructure ("OCII") and delegated to the Commission the authority to (i) act in place of the Redevelopment Agency Commission to, among other matters, implement, modify, enforce and complete the Redevelopment Agency's enforceable obligations, (ii) approve all contracts and actions related to the assets transferred to or retained by the Successor Agency, including, without limitation, the authority to exercise land use, development, and design approval, consistent with applicable enforceable obligations, and (iii) take any action that the Redevelopment Dissolution Law requires or authorizes on behalf of the Successor Agency and any other action that this Commission deems appropriate, consistent with the Redevelopment Dissolution Law, to comply with such obligations; and,

WHEREAS, The Board of Supervisors' delegation to this Commission includes the authority to act as the lead agency that administers environmental review for projects in Mission Bay North and South Redevelopment Plan Areas in compliance with the

requirements of CEQA and the CEQA Guidelines, including CEQA Section 21067; and,

WHEREAS, The proposed project is the Golden State Warriors Event Center and Mixed-Use Development at Mission Bay South Blocks 29-32, with the MUNI UCSF/Mission Bay Station Variant and the Third Street Plaza variant, and related actions (“Event Center Project” or “Project”), as described in Chapter 3 of the Final Subsequent Environmental Impact Report (“FSEIR”). The Project Sponsor is GSW Arena LLC (“GSW”), an affiliate of the Golden State Warriors, LLC, which owns and operates the Golden State Warriors National Basketball Association team. GSW proposes to construct a multi-purpose event center and a variety of mixed uses, including office, retail, open space, and structured parking on an approximately 11-acre site on Blocks 29-32. The Project site is bounded by South Street on the north, Third Street on the west, 16th Street on the south, and by the future planned realigned Terry A. Francois Boulevard on the east; and

WHEREAS, To implement the project, the Commission must take several actions including the approval of a new Major Phase, Basic Concept Design, and Schematic Design for Blocks 29-32; and amendments to the Mission Bay South Design for Development, Streetscape Plan and Signage Master Plan; and,

WHEREAS, The Executive Director also must take approval actions related to the project, including, without limitation, the approval of secondary use determination, approval of minor infrastructure plan amendments, and finding the subdivision map and irrevocable offer/easement vacations are consistent with the Mission Bay South Plan; and,

WHEREAS, OCII issued a Notice of Preparation, including an Initial Study on November 19, 2014; and,

WHEREAS, On June 5, 2015, OCII released for public review and comment the Draft Subsequent Environmental Impact Report for the Project, (OCII Case No. ER 2014-919-97, Planning Department Case No. 2014.1441E, State Clearinghouse No. 2014112045, the “GSW DSEIR”), which tiers from the Mission Bay FSEIR as provided by CEQA Guidelines Section 15168(c); and

WHEREAS, The Commission held a public hearing on the GSW DSEIR on June 30, 2015, and received written public comments until 5:00 pm on July 27, 2015, for a total of 52 days of public review; and

WHEREAS, On October 23, 2015, OCII published the FSEIR for the Event Center Project consisting of the GSW DSEIR, the comments received during the review period, any additional information that became available after the publication of the GSW DSEIR, and the Draft Summary of Comments and Responses, all as required by law, copies of which are available through the Secretary of the Commission and at [www.gsweventcenter](http://www.gsweventcenter), and are incorporated herein by reference; and,

WHEREAS, The administrative record that contains the GSW DSEIR, the FSEIR and all documents related to, or relied on in the preparation thereof has been prepared by OCII in accordance with the Jobs and Economic Improvement through Environmental Leadership Act (AB 900). Governor Jerry Brown certified the proposed project as an environmental leadership development project under this Act on April 30, 2015, and on May 27, 2015, the Joint Legislative Budget Committee concurred with this certification. Therefore, this project is eligible for streamlined judicial review. Project EIR files have been made available for review by the Commission and the public. These files are available for public review at OCII at 1 South Van Ness Avenue, 5th Floor, can be found at [www.gsweventcenter.com](http://www.gsweventcenter.com) and are part of the record before the Commission, and are incorporated in this resolution by this reference; and

WHEREAS, On November 3, 2015, the Commission reviewed and considered the FSEIR and, by Resolution No. 69-2015, which is incorporated in this resolution by this reference, found that the FSEIR was prepared, publicized and reviewed in compliance with CEQA and the CEQA Guidelines, reflects its independent judgment and analysis, is adequate, accurate and objective, and the Comments and Responses document contains no significant revisions to the DSEIR; and certified the FSEIR in compliance with CEQA; and,

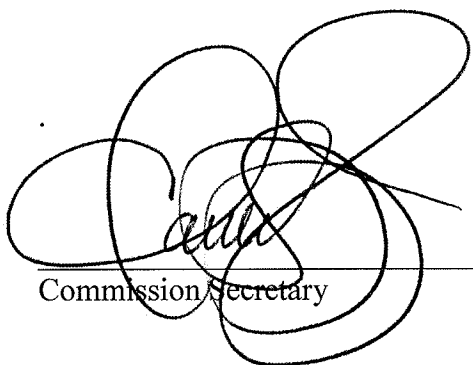

WHEREAS, OCII has prepared proposed Findings, as required by CEQA, regarding the alternatives, mitigation measures and significant environmental impacts analyzed in the FSEIR, overriding consideration for approving the Project, denoted as Exhibit A, and a proposed mitigation monitoring and reporting program denoted as Exhibit B, on file with the OCII Secretary and the San Francisco Planning Department under Case No. 2014.1441E, attached and incorporated in this resolution by this reference; now therefore be it

RESOLVED, That the Commission has reviewed and considered the FSEIR in relation to the Project actions associated with the Event Center Project that are before it and hereby adopts the Project CEQA Findings attached hereto as Exhibit A, including a statement of overriding considerations and the rejection of infeasible alternatives, and including as Exhibit B, the Mitigation Monitoring and Reporting Program; and,

RESOLVED, That the Executive Director is authorized to take any and all actions necessary to implement the Mitigation Monitoring and Reporting Program, attached hereto as Exhibit B, including, but not limited to, entering into agreements with the City and County of San Francisco to provide services assisting OCII with implementation duties.

I hereby certify that the foregoing resolution was adopted by the Commission at its meeting of November 3, 2015

Commission Secretary

Exhibit A: Environmental Review Findings

Exhibit B: Mitigation Monitoring and Review Program

## **EXHIBIT A**

### **Mission Bay Blocks 29-32 – Event Center and Mixed-Use Development**

#### **CALIFORNIA ENVIRONMENTAL QUALITY ACT FINDINGS: FINDINGS OF FACT, EVALUATION OF MITIGATION MEASURES AND ALTERNATIVES, AND STATEMENT OF OVERRIDING CONSIDERATIONS**

##### **COMMISSION ON THE COMMUNITY INVESTMENT AND INFRASTRUCTURE**

In determining to approve the Mission Bay Blocks 29-32 – Event Center and Mixed-Use Development Project (“Project”), the San Francisco Office of Community Investment and Infrastructure’s (“OCII”) Commission on Community Investment and Infrastructure (“OCII Commission”) makes and adopts the following findings of fact and decisions regarding mitigation measures and alternatives, and adopts the statement of overriding considerations, based on substantial evidence in the whole record of this proceeding and under the California Environmental Quality Act (“CEQA”), California Public Resources Code Sections 21000 et seq., particularly Sections 21081 and 21081.5, the Guidelines for Implementation of CEQA (“CEQA Guidelines”), 14 California Code of Regulations Sections 15000 et seq., particularly Sections 15091 through 15093, and Agency adopted CEQA Guidelines.

This document is organized as follows:

**Section I** provides a description of the Project proposed for adoption, the environmental review process for the Project, the approval actions to be taken and the location of records;

**Section II** identifies the impacts found not to be significant that do not require mitigation;

**Sections III and IIIA** identify potentially significant impacts that can be avoided or reduced to less-than-significant levels through mitigation and describe the disposition of the mitigation measures;

**Sections IV and IVA** identify significant impacts that cannot be avoided or reduced to less-than-significant levels and describe any applicable mitigation measures as well as the disposition of the mitigation measures;

**Section V** evaluates the different Project alternatives and the economic, legal, social, technological, and other considerations that support approval of the Project and the rejection of the alternatives, or elements thereof, analyzed; and

**Section VI** presents a statement of overriding considerations setting forth specific reasons in support of the OCII Commission’s actions and its rejection of the alternatives not incorporated into the Project.

The Mitigation Monitoring and Reporting Program (“MMRP”) for the mitigation measures that have been proposed for adoption is attached with these findings as **Exhibit B**. The MMRP is required by CEQA Section 21081.6, subdivision (a)(1), and CEQA Guidelines Sections 15091, subdivision (d), and 15097. **Exhibit B** provides a table setting forth each mitigation measure listed in the Final Subsequent Environmental Impact Report for the Project (“FSEIR”) that is required to reduce or avoid a significant adverse impact. **Exhibit B** also specifies the agency responsible for implementation of each measure. Where the Project Sponsor, GSW Arena LLC (“GSW” or “Project Sponsor”), an affiliate of Golden State Warriors, LLC, which owns and operates the Golden State Warriors National Basketball Association (“NBA”) team, is required to participate in the implementation of a mitigation measure, **Exhibit B** also states this requirement. **Exhibit B** also sets forth agency monitoring actions and a monitoring schedule for each mitigation measure. Where particular mitigation measures must be adopted and/or implemented by particular responsible agencies such as the City and County of San Francisco or one of its departments or commissions, the MMRP clearly identifies the agencies involved and the actions they must take. All of OCII’s specific obligations are also clear. The full text of each mitigation measure summarized or cited in these findings is set forth in **Exhibit B**. As explained further in the MMRP, in addition to listing mitigation measures, for the purposes of public disclosure and to assist in implementation and enforcement, the MMRP also lists “improvement measures,” “applicable regulations,” and the Project Transportation Management Plan (“TMP”).

These findings are based upon substantial evidence in the entire record before the OCII Commission. The references set forth in these findings to certain pages or sections of the Draft Subsequent Environmental Impact Report (“GSW DSEIR”) or the Responses to Comments document (“RTC”), which together constitute the FSEIR, are for ease of reference and are not intended to provide an exhaustive list of the evidence relied upon for these findings. A full explanation of the substantial evidence supporting these findings can be found in the FSEIR, and these findings hereby incorporate by reference the discussion and analysis in those documents supporting the FSEIR’s determinations regarding the Project’s impacts and mitigation measures designed to address those impacts. Reference to the GSW SEIR is intended as a general reference to information that may be found in either or both the GSW DSEIR or RTC.

## **I. APPROVAL OF THE PROJECT**

### **A. Project Description**

By this action, the OCII Commission adopts and takes action to implement substantially the Project identified in Chapter 3 of the FSEIR as modified by Chapter 14 of the FSEIR and the Muni University of California at San Francisco (“UCSF”)/Mission Bay Station Variant as described in Chapter 12 of the FSEIR with the option of the Third Street Plaza Variant. GSW proposes to construct a multi-purpose event center and a variety of mixed uses, including office, retail, open space and structured parking on an approximately 11-acre site on Blocks 29-32 within the Mission Bay South Redevelopment Plan Area of San Francisco.

The project site is bounded by South Street on the north, Third Street on the west, 16th Street on the south, and by the future planned realigned Terry A. Francois Boulevard on the east. The proposed event center would host the Golden State Warriors basketball team during the NBA season, and provide a year-round venue for a variety of other assembly and entertainment uses, including concerts, family shows, other sporting events, cultural events, conferences, and conventions.

The proposed roughly circular-shaped event center building would be located in the central-east portion of the site. The event center building would be approximately 135 feet at its roof peak, and would include multiple levels of varying elevations. The event center would be approximately 775,000 gross square feet ("gsf") and would be programmed with a capacity of 18,064 seats for basketball games, but could be reconfigured for concerts for a maximum capacity of about 18,500. The performance and seating areas could also be reconfigured in a cut-down configuration to create a smaller venue space.

Two office and retail buildings would be located on the west side of the project site. Specifically, one would be located at the northwest corner of site at Third and South Streets ("South Street office and retail building"). The other would be located at the southwest corner of the site at Third and 16th Streets ("16th Street office and retail building"). The South Street office and retail building would be approximately 345,000 gsf, and the 16th Street office and retail building would be approximately 300,000 gsf. Both buildings would be 11 stories (160 feet tall at building rooftop); each office and retail building would consist of a podium ground level plus 5 podium levels (90 feet tall), with a 5-story (70-foot tall) tower (with smaller floorplate than the podium) above. These buildings could serve a variety of office and/or research and development uses, with retail uses on the lower floor(s).

Additional retail uses would front on South Street and Terry A. Francois Boulevard, including an approximately 32,000 gsf 3-story, 41-foot high "food hall" located at the corner of Terry A. Francois Boulevard and South Street. An approximately 11,550 gsf 2-story, 38-foot high "gatehouse" building would be located mid-point along Third Street and would provide retail uses and house elevators/escalators connecting to parking facilities on lower floors.

Approximately 3.2 acres of open space would be designed within the site, including a proposed Third Street Plaza (elevated at approximately 8 to 12 feet above Third Street) on the west side of the project site between the event center and Third Street, and a proposed ground-level Southeast Plaza in the southeastern corner of the site.

Three levels of enclosed onsite parking (two below grade: Lower Parking Levels 1 and 2, and one at street level: Upper Parking Level) would be located below the office and retail buildings

and plaza areas. A total of 950 vehicle parking spaces are proposed on-site, including spaces for Fuel Efficient Vehicles (“FEV”) and carpool vehicles. The Project also includes use of 132 existing off-site parking spaces in the 450 South Street parking garage, primarily accessed from South Street directly north of the project site, to provide additional parking to serve the Project employees. The Project would also have 30 commercial loading spaces serving the Project uses, including 13 on-site below grade loading spaces and 17 on-street commercial loading spaces provided on South Street (8 spaces), Terry A. Francois Boulevard south of South Street (8 spaces), and 16th Street (1 space).

#### **1. Muni UCSF/Mission Bay Station Variant**

The Project incorporates the Muni UCSF/Mission Bay Station Variant, which is a minor variation of the Project in which, rather than extending the northbound platform only, the existing high-level northbound and southbound passenger platforms at the UCSF/Mission Bay light rail stop would be removed and replaced with a single high-level center platform to accommodate both northbound and southbound light rail service passengers. The new center platform would be located between the northbound and southbound light rail tracks in the general location of the existing UCSF/Mission Bay Station southbound platform. The platform would be approximately 320 feet long by 17 feet wide (the existing side platforms are about 160 feet long by 9 feet wide) and would allow for two two-car light rail trains to simultaneously board or alight passengers along the platform.

#### **2. Third Street Plaza Variant**

The Third Street Plaza variant is a minor variation of the Project. Under this variant, the area of the proposed Third Street Plaza would be modified to be consistent with the design standards of the UCSF view easement on the project site. Consequently, the “gatehouse” building, located mid-block along Third Street under the Project, would be relocated and the elevated main plaza would be replaced with an at-grade “event space” with no above-grade structural development. As a result, the variant would not require approval by UCSF for termination of their view easement that extends east from Third Street onto the project site. This variant may be implemented at the election of the developer. The Project impacts and mitigation discussed below would not be affected by this election.

### **B. Project Area**

#### **1. Mission Bay**

The approximate 300-acre Mission Bay Redevelopment Plan Area is located along San Francisco's central Bay waterfront, straddling Mission Creek Channel. In general, the Plan Area is bounded by Townsend Street to the north, Interstate 280 and Seventh Street to the west, Mariposa Street to the south, and San Francisco Bay to the east.

Before 1998, Mission Bay was characterized by low-intensity industrial development and vacant land. Since adoption of the North and South Plans in 1998, Mission Bay has undergone redevelopment into a mixture of residential, commercial (light industrial, research and development, labs and offices), retail, and educational/institutional uses and open space. As of 2014, 4,067 housing units (including 822 affordable units) of the planned 6,400 housing units within Mission Bay (roughly 64 percent) were complete, with another 900 (including 150 affordable units) under construction. Regarding office and laboratory space, approximately 1.7 million square feet of the 4.4 million square feet in the Mission Bay Plan Area (approximately 39 percent) was complete.

Approximately 82 percent of the previously-approved 2.65 million-square-foot UCSF North Campus has been developed, including six research buildings, an academic/office building, a campus community center, and a university housing development. The first phase of the UCSF Mission Bay Medical Center opened in early 2015. In addition, in November 2014, UCSF approved the Final UCSF 2014 Long Range Development Plan, which provides for additional planned development on the UCSF campus at Mission Bay through 2035. The City's new Public Safety Building at Third and Mission Rock Streets also became operational in April 2015. More than 15 acres of new non-UCSF parks and open space within Mission Bay have also been completed.

## **2. Project Site**

No buildings are currently located on the site. Portions of the site are unutilized, including a depressed area (measuring approximately 320 feet by 280 feet) created by an excavation and backfill associated with a prior environmental cleanup on the site. Other portions of the site are currently used for surface parking. Specifically, paved surface metered parking facilities are located in the west and north portions of the site. The existing surface parking facilities are accessed from 16<sup>th</sup> Street and South Street and include a total of 605 parking spaces. Chain link fencing is installed on the perimeter of the project site.

## **3. Surrounding Uses**

The UCSF Mission Bay campus is located west, northwest, southwest, and partially south of the project site. Fronting on Third Street directly west of the project site is an eight-story UCSF parking structure ("Third Street Garage"), and the UCSF Global Health and Clinical Sciences Building ("Mission Hall"). To the northwest of the project site fronting along Third Street is UCSF Hearst Tower, a 14-story building containing student housing; and to the north of that is the UCSF Helen Diller Family Cancer Research building. To the southwest of the project site fronting along Third Street is a complex containing the UCSF Energy Center, Betty Irene Moore Women's Hospital, Bakar Cancer Hospital, and Benioff Children's Hospital, which opened in February 2015. The UCSF Benioff Children's Hospital helipad, located atop the roof of the UCSF Ron Conway Gateway Medical Building at 1825 4th Street, also began operating in

February 2015. Directly south of the project site across 16th Street, between Third Street and Illinois Street, is a vacant lot recently acquired by UCSF (Blocks 33 and 34), which is planned for office space and possible outpatient clinical use development starting in 2016.

Directly south of the project site across 16th Street, between Illinois Street and Terry A. Francois Boulevard, is a recently-constructed six-story office building (409 Illinois Street) housing FibroGen Life Science and other biotech/high tech companies, and south of that is another recently-constructed six-story office building (499 Illinois Street) with biotech and UCSF clinical uses.

Directly north of the project site across and fronting on South Street are (from west to east) a vacant lot (recently acquired by Uber Technologies and Alexandria Real Estate Equities) and planned for development of office space, a six-story parking garage (450 South Street), and a six-story office building housing the Old Navy corporate headquarters.

Immediately east of the project site and west of Terry A. Francois Boulevard are City-owned parcels containing covered stockpiled materials. The planned Bayfront Park is located on Mission Bay Plan parcels P21 through P24, located northeast, east, and partially south of the project site. The north portion of the park (P21, located east of Terry A. Francois Boulevard, between Mission Bay Boulevard South and just south of Pierpoint Lane) is complete, and includes a landscaped parking lot and boat launch. The currently undeveloped central portion of the Bayfront Park is located east of the project site across Terry A. Francois Boulevard (on P22, from just south of Pierpoint Lane to just south of 16th Street). This portion of the park presently includes a paved trail (which constitutes a segment of the Bay Trail), surface parking lot, and unimproved open space. Construction of the south portion of Bayfront Park (on P23 and P24), located west of Terry A. Francois Boulevard between 16th Street and Mariposa Street, is currently underway in 2015 and scheduled for completion in 2016.

### **C. Project Objectives**

Consistent with Section 103 of the Mission Bay South Redevelopment Plan and as presented in the *Mission Bay Final Subsequent Environmental Impact Report* ("Mission Bay FSEIR"), certified in September 1998, the primary objectives of the Mission Bay Redevelopment Plan are:

- Eliminating blighting influences and the correction of environmental deficiencies in the Project Area, including, but not limited to, abnormally high vacancies, abandoned buildings, incompatible land uses, depreciated or stagnant property values, and inadequate or deteriorated public improvements, facilities, and utilities.
- Retaining and promoting, within the City and County of San Francisco, academic and research activities associated with the University of California San Francisco, which seeks to provide space for existing and new programs and consolidate academic and support units from many dispersed sites at a single major new site which can

accommodate the 2,650,000-gross sq. ft. program analyzed in the UCSF 1996 Long Range Development Plan (“LRDP”).

- Assembling of land into parcels suitable for modern, integrated development with improved pedestrian and vehicular circulation in the Project Area.
- Replanning, redesigning, and developing of undeveloped and underdeveloped areas which are improperly utilized.
- Providing flexibility in the development of the Project Area to respond readily and appropriately to market conditions.
- Providing opportunities for participation by owners in the redevelopment of their properties.
- Strengthening the community’s supply of housing by facilitating economically feasible, affordable housing through the installation of needed site improvements and expansion and improvement of the housing supply by the construction of approximately 6,090 market-rate units, including 1,700 units of very low-, low- and moderate-income housing.
- Strengthening the economic base of the Project Area and the community by strengthening retail and other commercial functions in the Project Area through the addition of approximately 1.5 million gross sq. ft. of retail space, a major hotel, and about 5,557,000 gross sq. ft. of mixed office, research and development, and light manufacturing uses.
- Facilitating emerging commercial-industrial sectors, including those expected to emerge or expand due to their proximity to the UCSF new site, such as research and development, biotechnical research, telecommunications, business service, multi-media services, and related light industrial through improvement of transportation access to commercial and industrial areas, improvement of safety within the Project Area, and the installation of needed site improvements to stimulate new commercial and industrial expansion, employment, and economic growth.
- Facilitating public transit opportunities to and within the Project Area to the extent feasible.
- Providing land in an amount of approximately 47 acres for a variety of open spaces.
- Achieving the objectives described above in the most expeditious manner feasible.

Consistent with the overall objectives of the Mission Bay Redevelopment Plan, GSW’s objectives for the proposed Event Center and Mixed-Use Development at Blocks 29-32 are to:

- Construct a state-of-the-art multi-purpose event center in San Francisco that meets National Basketball Association (NBA) requirements for sports facilities, can be used year-round for sporting events and entertainment and convention purposes with events

ranging in capacity from approximately 3,000-18,500, and expands opportunities for the City's tourist, hotel and convention business.

- Provide sufficient complementary mixed-use development, including office and retail uses, to create a lively local and regional visitor-serving destination that is active year-round, promotes visitor activity and interest during times when the event center is not in use, provides amenities to visitors of the event center as well as the surrounding neighborhood, and allows for a financially feasible project.
- Develop a project that meets high-quality urban design and high-level sustainability standards.
- Optimize public transit, pedestrian and bicycle access to the site by locating the project within walking distance to local and regional transit hubs, and adjacent to routes that provide safe and convenient access for pedestrians and bicycles.
- Provide adequate parking and vehicular access that meets NBA and project sponsor's reasonable needs for the event center and serves the needs of project visitors and employees, while encouraging the use of transit, bicycle, and other alternative modes of transportation.
- Provide the City with a world class performing arts venue of sufficient size to attract those events which currently bypass San Francisco due to lack of a world class 3,000-4,000 seat facility.
- Develop a project that promotes environmental sustainability, transportation efficiency, greenhouse gas reduction, stormwater management using green technology, and job creation consistent with the objectives of the California Jobs and Economic Improvement Through Environmental Leadership Act (AB 900),<sup>1</sup> as amended.

## **D. Environmental Review**

### **1. Preparation of the FSEIR**

As noted above, the EIR prepared for the Project is a Subsequent EIR ("SEIR"), tiered from the certified *Mission Bay Final Subsequent Environmental Impact Report* ("Mission Bay FSEIR"), which provided programmatic environmental review of the overall Mission Bay Redevelopment Plan (consisting of the Mission Bay North Redevelopment Plan and Mission Bay South Redevelopment Plan). The Mission Bay FSEIR evaluated the potential environmental effects of the overall development of the approximately 300-acre Mission Bay Plan Area.

---

<sup>1</sup> AB 900, effective January 1, 2012, provides streamlining benefits under CEQA for privately-financed projects located on an infill site that has been determined to generate thousands of jobs and include state-of-the-art pollution reductions.

The Project at Blocks 29-32 is a subsequent activity allowed under, and consistent with, the Mission Bay South Redevelopment Plan. Consistent with the major redevelopment objectives in the Mission Bay South Redevelopment Plan, the Project would further diversify the economic base of the Mission Bay South Redevelopment Plan Area and add retail and entertainment amenities to the area. The Project would also provide Mission Bay employees and residents with additional opportunities to engage in recreational activities near their homes and jobs. The Project also promotes the Plan Bay Area's objective to create "neighborhoods where transit, jobs, schools, services and recreation are conveniently located near people's homes." (See Association of Bay Area Governments ("ABAG") / Metropolitan Transportation Commission ("MTC") Plan Bay Area, p. 42.)

On November 19, 2014, OCII, as lead agency responsible for administering the environmental review for private projects in the Mission Bay North and South Redevelopment Plan Area of San Francisco, issued a Notice of Preparation ("NOP") to notify and inform agencies and interested parties about the Project and to initiate the CEQA environmental review process for the Project. The NOP included an Initial Study, which described and analyzed environmental resource areas that would not be significantly affected by the Project and included mitigation measures to reduce certain impacts to less than significant levels. The Initial Study determined that the following topics were adequately analyzed in the Mission Bay FSEIR such that the Project would have no new significant impacts or no substantially more severe impacts previously found significant on these resources: Land Use; Population and Housing; Cultural and Paleontological Resources; Recreation; Air Quality (odors); Utilities and Services Systems (water supply and solid waste); Public Services (schools, parks, and other services); Biological Resources; Geology and Soils; Hydrology and Water Quality (groundwater, drainage, flooding, and inundation); Hazards and Hazardous Materials; Mineral and Energy Resources; and Agricultural and Forest Resources. As discussed further in the Initial Study and the RTC in the FSEIR, the Project as mitigated in the Initial Study will result in a less than significant impacts with respect to each of the above-listed topics.

During a 30-day public scoping period that ended on December 19, 2014, OCII accepted comments from agencies and interested parties identifying environmental issues that should be addressed in the SEIR. In addition, a public scoping meeting was held on December 9, 2014, to receive oral comments on the scope of the SEIR. OCII has considered the comments made by the public and agencies in preparing the SEIR on the Project.

The GSW DSEIR for the Project was published on June 5, 2015, and circulated to local, state, and federal agencies and to interested organizations and individuals for review from June 5, 2015, through July 27, 2015, for a total public comment period of 52 days. Paper copies of the GSW DSEIR were made available for public review at the following locations: (1) OCII, at 1 South Van Ness Avenue 5th Floor, San Francisco, California; (2) San Francisco Planning Department, 1660 Mission Street, 1st Floor, Planning Information Counter, San Francisco, California; (3) San Francisco Main Library, 100 Larkin Street, San Francisco, California; and

(4) San Francisco Library, Mission Bay Branch, 960 4th Street, San Francisco, California.<sup>2</sup> On June 5, 2015, the Planning Department also distributed notices of availability of the GSW DSEIR, published notification of its availability in a newspaper of general circulation in San Francisco, and posted notices at the project site.

During the public review period, OCII conducted a public hearing to receive oral comments on the GSW DSEIR. The public hearing was held before the OCII Commission on June 30, 2015, at San Francisco City Hall. A court reporter present at the public hearing transcribed the oral comments verbatim and prepared a written transcript. During the GSW DSEIR public review period, OCII received comments from approximately nine public agencies, 11 non-governmental organizations, and 155 individuals. See Chapter 11 of the FSEIR for a complete list of persons commenting on the GSW DSEIR.

The GSW DSEIR addressed environmental resource areas upon which the Project could result in potentially significant, physical environmental impacts as well as identified and analyzed alternatives to the Project. Specifically, the GSW DSEIR analyzed impacts to the following resources: Transportation and Circulation; Noise and Vibration; Air Quality; Greenhouse Gas Emissions; Wind and Shadow; Utilities and Service Systems (wastewater and stormwater); Public Services (police and fire services); and Hydrology and Water Quality (wastewater, stormwater, and flood hazards).

On October 23, 2015, OCII published the FSEIR, consisting of the GSW DSEIR, the comments received during the review period, any additional information that became available after the publication of the GSW DSEIR, and the RTC in fulfillment of requirements of CEQA and consistent with CEQA Guidelines Section 15132.

## **2. CEQA Streamlining**

In addition to tiering from the Mission Bay FSEIR and focusing the environmental analysis on potentially significant impacts of the Project as identified in the Initial Study (see, e.g., GSW DSEIR, pp. 2-2 to 2-8; RTC, pp. 13.3-22 to 13.3-31), the GSW SEIR utilizes CEQA streamlining provisions set forth in Public Resources Code section 21099.

Public Resources Code Section 21099(d), effective January 1, 2014, provides that, “aesthetics and parking impacts of a [1] residential, mixed- use residential, or employment center project on an [2] infill site [3] located within a transit priority area shall not be considered significant impacts on the environment.” The Project meets all three of the criteria set forth in Public

---

<sup>2</sup> Electronic copies of the GSW SEIR and the administrative record could be accessed through the internet on the OCII website, Mission Bay webpage starting on June 5, 2015 at the following address: <http://www.sfocii.org/index.aspx?page=61>, and on the Planning Department website, Environmental Impacts and Negative Declarations webpage at the following address: <http://www.sf-planning.org/index.aspx?page=1828>.

Resources Code Section 21099(d). The Project qualifies as an employment center project because the project site is designated Commercial Industrial / Retail within the Mission Bay South Redevelopment Plan and the Project includes a floor area ratio that exceeds 0.75. (Pub. Resources Code, § 21099, subd. (a)(1).) The project site constitutes an infill site because, among other reasons, the site is located in an urban area within the City of San Francisco and was previously developed with industrial and commercial uses. (Pub. Resources Code, § 21099, subd. (a)(2).) Finally, the Project is located within a transit priority area because, among other reasons, the project site is located within one-half mile of several transit routes, including San Francisco Municipal Transportation Agency (SFMTA) Muni Metro stops connecting two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods. (Pub. Resources Code, §§ 21064.3, 21099, subd. (a)(7).) Thus, CEQA does not require the GSW SEIR to consider either aesthetics or the adequacy of parking in determining the significance of Project impacts.

Public Resources Code Section 21099(d) states that a Lead Agency maintains the authority to consider aesthetic impacts pursuant to local design review ordinances or other discretionary powers. Consistent with OCII's normal procedures, the design review process considers relevant design and aesthetic issues. Furthermore, for informational purposes, Chapter 3 of the GSW DSEIR, Project Description, includes graphic depictions of the Project and Chapter 5, Section 5.2, of the GSW DSEIR, Transportation and Circulation, presents a parking demand analysis and considers any secondary physical impacts associated with constrained supply (e.g., queuing by drivers waiting for scarce onsite parking spaces that affects the public right-of-way) as applicable in the transportation analysis.

### **3. Recirculation**

Under section 15088.5 of the CEQA Guidelines, recirculation of an EIR is required when "significant new information" is added to the EIR after public notice is given of the availability of the Draft EIR for public review but prior to certification of the Final EIR. The term "information" can include changes in the project or environmental setting, as well as additional data or other information. New information added to an EIR is not "significant" unless the EIR is changed in a way that deprives the public of a meaningful opportunity to comment upon a substantial adverse environmental effect of the project or a feasible way to mitigate or avoid such an effect (including a feasible project alternative) that the project's proponents have declined to implement. "Significant new information" requiring recirculation includes, for example, a disclosure showing that:

- (1) A new significant environmental impact would result from the project or from a new mitigation measure proposed to be implemented.
- (2) A substantial increase in the severity of an environmental impact would result unless mitigation measures are adopted that reduce the impact to a level of insignificance.

- (3) A feasible project alternative or mitigation measure considerably different from others previously analyzed would clearly lessen the significant environmental impacts of the project, but the project's proponents decline to adopt it.
- (4) The DEIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded.

(CEQA Guidelines, § 15088.5, subd. (a).)

Recirculation is not required where the new information added to the EIR merely clarifies or amplifies or makes insignificant modifications in an adequate EIR. The above standard is “not intend[ed] to promote endless rounds of revision and recirculation of EIRs.” (*Laurel Heights Improvement Assn. v. Regents of the Univ. of Cal.* (1993) 6 Cal.4th 1112, 1132 (*Laurel Heights*)). “Recirculation was intended to be an exception, rather than the general rule.” (*Ibid.*)

OCII recognizes that minor changes have been made to the Project and additional evidence has been developed after publication of the GSW DSEIR. Specifically, as discussed in the RTC, after publication of the GSW DSEIR, the Project Sponsor proposed Project refinements that are described in Chapter 12 of the FSEIR. The Project refinements constitute minor Project changes (generator relocation, project design to reduce wind hazards, transportation improvements, revised construction tower crane plan, modification of certain construction techniques, and modification of sources of electricity during construction). As described in the FSEIR, these refinements would result in either no changes to the impact conclusions or a reduction in the severity of the impact presented in the GSW DSEIR.

Chapter 12 of the FSEIR also includes an additional Project variant. Like the Project refinements, the variant constitutes a minor change to the Project. The variant would generally have the same impacts as those identified for the Project in the GSW DSEIR and all impact significance determinations would be the same.

Finally, the FSEIR includes supplemental data and information that was developed after publication of the GSW DSEIR to further support the information presented in the GSW DSEIR. None of this supplemental information affects the conclusions or results in substantive changes to the information presented in the GSW DSEIR or to the significance of impacts as disclosed in the GSW DSEIR. The OCII Commission finds that none of the changes and revisions in the FSEIR substantially affects the analysis or conclusions presented in the GSW DSEIR; therefore, recirculation of the GSW DSEIR for additional public comments is not required.

CEQA case law emphasizes that “[t]he CEQA reporting process is not designed to freeze the ultimate proposal in the precise mold of the initial project; indeed, new and unforeseen insights may emerge during investigation, evoking revision of the original proposal.” (*Kings County Farm Bureau v. City of Hanford* (1990) 221 Cal.App.3d 692, 736-737; see also *River Valley Preservation Project v. Metropolitan Transit Development Bd.* (1995) 37 Cal.App.4th 154, 168, fn. 11.) “CEQA compels an interactive process of assessment of environmental impacts and responsive project modification which must be genuine. It must be open to the public, premised upon a full and meaningful disclosure of the scope, purposes, and effect of a consistently described project, with flexibility to respond to unforeseen insights that emerge from the process.’ [Citation.] In short, a project must be open for public discussion and subject to agency modification during the CEQA process.” (*Concerned Citizens of Costa Mesa, Inc. v. 33rd Dist. Agricultural Assn.* (1986) 42 Cal.3d 929, 936.) Similarly, additional studies included in a Final EIR that result in minor modifications or additions to analysis concerning significant impacts disclosed in a Draft EIR does not constitute “significant new information” requiring recirculation of an EIR. (See *Mount Shasta Bioregional Ecology Center v. County of Siskiyou* (2012) 210 Cal.App.4th 184, 221 [incorporation of technical studies in a Final EIR disclosing additional locations affected by a significant noise impact identified in the Draft EIR did not require recirculation].) Here, the changes made to the Project and the additional evidence relied on in the FSEIR are exactly the kind of information and revisions that the case law recognizes as legitimate and proper and does not trigger the need to recirculate the GSW DSEIR. In fact, OCII requested many of the Project refinements and the performance of additional analysis based on comments received from the Mission Bay Citizens Advisory Committee, the UCSF Chancellor’s Office, neighborhood organizations in the vicinity of the Event Center, and other community stakeholders.

#### **E. AB 900**

The Project Sponsor applied to the Governor of California for certification of the Project as a leadership project under AB 900, and the application was subject to public review from March 2, 2015, through April 1, 2015. On March 21, 2015, the California Air Resources Board (CARB) issued Executive Order G-15-022, determining that the Project would not result in any net additional greenhouse gases (GHGs) for purposes of certification under AB 900. On April 30, 2015, Governor Edmund G. Brown Jr. certified the Project as an eligible project under AB 900, and the Governor’s Office of Planning and Research (OPR) forwarded the Governor’s determination to the Joint Legislative Budget Committee. OPR prepared an independent evaluation of the transportation efficiency analysis. On May 22, 2015, the State Legislative Analyst’s Office indicated that the Project aligns with the intent of AB 900, and recommended to the Joint Legislative Budget Committee that it concur with the Governor’s determination. On May 27, 2015, the Joint Legislative Budget Committee concurred with the Governor’s determination that the Project is an eligible project under AB 900.

The process of certifying a project as an environmental leadership project pursuant to AB 900, including quantification of GHG emissions, is a separate process from the preparation of an EIR under CEQA, with separate and distinct review and approval requirements. The Governor's findings and certification of the Project as an environmental leadership development project are final and are not subject to judicial review. (Pub. Resources Code, § 21184, subd. (b)(1).) Because the Project is an environmental leadership development project, OCII has complied with procedures set forth in Public Resources sections 21186 and 21187 as part of the administrative review process for the Project. In the event of litigation challenging approval of the Project by the OCII Commission (or by the Board of Supervisors after an administrative appeal), the environmental leadership development project is subject to Rules of Court specifically designed to ensure the actions or proceedings challenging the adequacy of an EIR adopted for an environmental leadership development project or the granting of project approvals for such a project, including any potential appeals therefrom, are resolved, within 270 days of certification of the record of proceedings. (Pub. Resources Code, § 21185.) The same is true of any state court litigation over any other project approvals needed by other state, regional, or local agencies for the Project. (*Id.*)

#### **F. Consistency with the Mission Bay South Redevelopment Plan**

The Mission Bay South Redevelopment Plan designates land uses for specific parcels within the Plan Area. Proposed land uses to be permitted for Blocks 29-32 are designated as Commercial Industrial/Retail, and the plan provides for either principal or secondary uses at this site. Primary uses are permitted in accordance with the Plan's provisions, and secondary uses are permitted, provided that such use generally conforms with redevelopment objectives and planning and design controls established pursuant to this Plan. As the GSW DSEIR explains on page 4-2, "[o]n September 17, 1998, by Resolution No. 14702, the Planning Commission determined that the Mission Bay South Redevelopment Plan provides for a type, intensity, and location of development that is consistent with the overall goals, objectives, and policies of the General Plan. Therefore, the project's consistency with the Mission Bay South Redevelopment Plan ... would ensure that the project would not obviously or substantially conflict with General Plan goals, policies, or objectives."

A project is consistent with a general plan "if, considering all its aspects, it will further the objectives and policies of the general plan and not obstruct their attainment." (*Corona-Norco Unified School Dist. v. City of Corona* (1993) 17 Cal.App.4th 985, 994.) A 100% match with each policy is not required. (*Clover Valley Foundation v. City of Rocklin* (2011) 197 Cal.App.4th 200, 238.) Rather, a lead agency must consider whether a project is "compatible with 'the objectives, policies, general land uses and programs specified in the general plan.'" (*Ibid.*) A project will only be considered inconsistent if it "conflicts with a general plan policy that is fundamental, mandatory, and clear." (*Endangered Habitats League, Inc. v. County of Orange* (2005) 131 Cal.App.4th 777, 782.)

The Mission Bay South Redevelopment Plan identifies the following principal uses under the Commercial Industrial/Retail land use designation applicable to Blocks 29-32: manufacturing; institutions; retail sales and services; arts activities; art spaces; office use; home and business services; animal care; wholesaling; automotive; and other uses (e.g., greenhouse, nursery, open recreation and activity areas, parking and certain telecommunications-related facilities). The following secondary uses are also identified: institutions, assembly and entertainment, and other uses (including public structures or uses of a nonindustrial character).

Additionally, the Mission Bay South Redevelopment Plan describes general controls and limitations for development, and sets limits on leasable square footages of various uses within defined zones within the Plan Area, including the project site. The Plan sets a maximum floor area ratio of 2.9 to 1 for the commercial industrial/ retail uses at the project site, and the maximum building height within the entire Plan Area is 160 feet. The plan further indicates that within the limits, restrictions, and controls established in the plan, OCII is authorized to establish height limits of buildings, land coverage, density, setback requirements, design and sign criteria, traffic circulation and access standards and other development and design controls in the Design for Development.

The OCII Commission finds that the Project does not conflict with any land use plans or policies that provide guidance for development proposed within the region, including the Mission Bay South Redevelopment Plan, the San Francisco General Plan, San Francisco Planning Code, Plan Bay Area, the 2010 Clean Air Plan, San Francisco Bay Plan, and the San Francisco Basin Plan.

#### **G. Approval Actions**

The OCII Commission, as the lead agency under CEQA for the Project, is responsible for certifying the FSEIR. Thereafter, local agencies and possibly one state agency will rely on the FSEIR for the approval actions listed below and in doing so will adopt CEQA findings, including a statement of overriding considerations and a mitigation monitoring and reporting program. With the exception of OCII and the OCII Commission, which together make up the Lead Agency, all other agencies approving the Project, including the City and County of San Francisco and its departments and commissions, will be acting as Responsible Agencies.<sup>3</sup>

The following approvals or permits are required for the Project to be implemented:

---

<sup>3</sup> By Resolution 33-2015, to increase public participation in the CEQA process, the OCII Commission voluntarily requested that the Board of Supervisors consider any appeal filed of the OCII's certification of the GSW FSEIR. If such an appeal were filed, the Board would affirm or reverse that certification. If reversed, the Board would adopt findings and remand the FSEIR to the OCII for further action consistent with its findings. However, consistent with Ordinance No. 215-12, by which the Board of Supervisors, acting as the Successor Agency to the former San Francisco Redevelopment Agency, delegated final land use decisionmaking authority over the project area to the OCII Commission, the Board of Supervisors has no decision-making authority over the project except in its capacity as a responsible agency under CEQA.

- Approval by the OCII Executive Director of secondary use findings of consistency for the proposed event center
- Approval by the OCII Commission of a new Major Phase for Blocks 29-32, and related conditions of approval
- Approval by the OCII Commission of Combined Basic Concept and Schematic Designs (Schematic Designs) for the Project
- Approval by the OCII Commission (and any other City Departments as required under the Mission Bay South Plan, OPA, Interagency Corporation Agreement, and associated documents) of: amendments to the Mission Bay South Design for Development, and modifications to the Mission Bay South Signage Master Plan and Mission Bay South Streetscape Plan, and conditions of approval.
- Approval by Mayor, Department of Public Works Executive Director, and OCII Executive Director of any non-material changes to Mission Bay South Infrastructure Plan
- Entertainment Commission approval of applicable entertainment permits, including, but not limited to, a Place of Entertainment permit
- Planning Commission approval of office building Schematic Designs related to Proposition M allocation
- Port of San Francisco staff approval of changes to waterfront infrastructure, including roadway striping
- San Francisco MTA/Department of Public Works approval for reconfiguration of adjacent streets
- San Francisco Department of Public Works and Board of Supervisors approval of subdivision maps, including street vacations, acceptance of public improvements and right-of-way dedications, and encroachment permits to the extent required
- Termination or relocation of existing City-reserved easements by applicable City departments, including the San Francisco Public Utilities Commission, to the extent required
- San Francisco Department of Building Inspection approval of a building/site permit, and related approvals from other City departments including the San Francisco Public Utilities Commission (SFPUC) for utility connections
- Approval from the University of California (UCSF) to terminate and/or modify a view easement extending 100 feet within the project site along the Campus Way axis or consent to implementation of the Project if it encroaches into the view easement area (not required under the Third Street Plaza Project Variant)

## H. Contents and Location of Record

The record upon which all findings and determinations related to the Project consists of those items listed in Public Resources Code section 21167.6, subdivision (e), including but not limited to the following documents, which are incorporated by reference and made part of the record supporting these findings:

- The NOP and all other public notices issued by OCII in conjunction with the Project.
- The GSW DSEIR and all documents referenced in or relied upon by the FSEIR. (The references in these findings to the FSEIR include the GSW DSEIR, the RTC, and the Initial Study.)
- The MMRP for the Project.
- All findings and resolutions adopted by OCII in connection with the Project, and all documents cited or referred to therein.
- All information including written evidence and testimony provided by City and OCII staff to the OCII Commission relating to the SEIR, the Project, and the alternatives set forth in the GSW SEIR or these CEQA findings.
- All information provided by the public, including the proceedings of the public hearings on the adequacy of the GSW DSEIR and the transcripts of the hearings, including the OCII Commission hearing on June 30, 2015, and written correspondence received by OCII staff during the public comment period of the GSW DSEIR.
- All information and documents included on the website prepared for the Project pursuant AB 900, which are available at the following link: <http://www.gsweventcenter.com/>

The OCII Commission has relied on all of the documents listed above in reaching its decision on the Project, even if not every document was formally presented to the Commission. Without exception, any documents set forth above not found in the Project files fall into one of two categories. In the first category, many of the documents reflect prior planning or legislative decisions of which the OCII Commission was familiar with when approving the Project. (See *City of Santa Cruz v. Local Agency Formation Com.* (1978) 76 Cal.App.3d 381, 391-392; *Dominey v. Dept. of Personnel Admin.* (1988) 205 Cal.App.3d 729, 738, fn. 6.) In the second category, documents that influenced the expert advice provided to OCII staff or consultants, who then provided advice to the OCII Commission as final decisionmakers, form part of the underlying factual basis for the OCII Commission's decisions relating to approval of the Project and properly constitute part of the administrative record. (See Pub. Resources Code, § 21167.6, subd. (e)(10); *Browning-Ferris Industries v. City Council of City of San Jose* (1986) 181

Cal.App.3d 852, 866; *Stanislaus Audubon Society, Inc. v. County of Stanislaus* (1995) 33 Cal.App.4th 144, 153, 155.)

The public hearing transcript, a copy of all letters regarding the GSW DSEIR received during the public review period, the administrative record, and background documentation for the FSEIR, as well as additional materials concerning approval of the Project and adoption of these findings are contained in the Project files. Project files are available by contacting Claudia Guerra, OCII Commission Secretary, the Custodian of Records for OCII, at the Office of Community Investment and Infrastructure, 1 South Van Ness Avenue, 5th Floor, San Francisco, CA 94103. All files have been available to the OCII Commission and the public for review in considering these findings and whether to approve the Project.

## **I. Findings About Significant Environmental Impacts and Mitigation Measures**

The following Sections – II, III and IV – set forth the OCII Commission’s findings about the FSEIR’s determinations regarding significant environmental impacts and the mitigation measures proposed to address them. These findings provide the written analysis and conclusions of the OCII Commission regarding the environmental impacts of the Project and the mitigation measures included as part of the FSEIR and adopted by the OCII Commission as part of the Project. To avoid duplication and redundancy, and because the OCII Commission agrees with, and hereby adopts, the conclusions in the FSEIR, these findings will not repeat the analysis and conclusions in the FSEIR, but instead incorporates them by reference in these findings and relies upon them as substantial evidence supporting these findings.

In making these findings, the OCII Commission has considered the opinions of staff and experts, other agencies, and members of the public. The OCII Commission finds that the determination of significance thresholds is generally a decision requiring judgment within the discretion of OCII; the significance thresholds used in the FSEIR are supported by substantial evidence in the record, including the expert opinion of the FSEIR preparers and OCII staff; and the significance thresholds used in the FSEIR provide reasonable and appropriate means of assessing the significance of the adverse environmental effects of the Project. Thus, although as a legal matter, the OCII Commission is not bound by the significance determinations in the FSEIR (see Pub. Resources Code, § 21082.2, subd. (e)), the OCII Commission finds them persuasive and hereby adopts them as its own.

These findings do not attempt to describe the full analysis of each environmental impact contained in the FSEIR. Instead, a full explanation of these environmental findings and conclusions can be found in the FSEIR, and these findings hereby incorporate by reference the discussion and analysis in the FSEIR supporting the FSEIR’s determination regarding the Project’s impacts and mitigation measures designed to address those impacts. In making these findings, the OCII Commission ratifies, adopts and incorporates in these findings, the determinations and conclusions of the FSEIR relating to environmental impacts and mitigation

measures, except to the extent any such determinations and conclusions are specifically and expressly modified by these findings.

As set forth below, the OCII Commission adopts and incorporates all of the mitigation measures within its authority and jurisdiction as lead agency, as set forth in the FSEIR and presented in the attached MMRP (**Exhibit B**), in order to substantially lessen or avoid the potentially significant and significant impacts of the Project. The MMRP will remain available for public review during the compliance period. In adopting mitigation measures from the FSEIR, the OCII Commission intends to adopt each of the mitigation measures proposed in the FSEIR for the Project for adoption by OCII. The OCII Commission also intends that the MMRP should include each and every mitigation measure included in the FSEIR, including those assigned to responsible agencies. Accordingly, in the event a mitigation measure recommended in the FSEIR has inadvertently been omitted in these findings or the MMRP, any such mitigation measure is hereby adopted and/or incorporated in the findings below by reference. In addition, in the event the language describing a mitigation measure set forth in these findings or the MMRP fails to accurately reflect the mitigation measures in the FSEIR due to a clerical error, the language of the policies and implementation measures as set forth in the FSEIR shall control. The impact numbers and mitigation measure numbers used in these findings reflect the impact and mitigation measure numbers used in the FSEIR.

In the section II, III and IV below, the same statutory findings are made for a category of environmental impacts and mitigation measures. Rather than repeat the identical finding dozens of times to address each and every significant effect and mitigation measure, the initial finding obviates the need for such repetition because in no instance is the OCII Commission rejecting the conclusions of the FSEIR or the mitigation measures recommended in the FSEIR for the Project.

## **II. IMPACTS FOUND TO BE LESS THAN SIGNIFICANT AND THUS REQUIRING NO MITIGATION**

Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.) Based on substantial evidence in the whole record of this proceeding, the OCII Commission finds that implementation of the Project will not result in any significant impacts in the following areas and that these impact areas, therefore, do not require mitigation. In some instances, the Project would have no impact in a particular area; these instances are denoted below by "NI" for no impact.

### **A. Land Use and Land Use Planning**

- 1. Impact LU-1, Impacts on an established community from physical division of the area.** (GSW DSEIR Appendix NOP-IS p. 29; RTC, Response LU-1; Response PP-1; Response PD-1.)

2. **Impact LU-2**, Consistency with plans, policies and regulations. (GSW DSEIR Appendix NOP-IS p. 30; RTC, Response LU-1; Response LU-2; Response PP-1; Response PD-1.)

3. **Impact LU-3**, Effects on existing land use character. (GSW DSEIR Appendix NOP-IS p. 32; RTC, Response LU-1; Response PP-1; Response PD-1.)

4. **Impact C-LU-1**, Significant cumulative impacts to land use (GSW DSEIR Appendix NOP-IS p. 34; RTC, Response LU-1; Response PD-1.)

## **B. Population and Housing**

1. **Impact PH-1**, Effects of construction activities on population growth. (GSW DSEIR Appendix NOP-IS p. 39.)

2. **Impact PH-2**, Effects of construction on existing housing units and housing demand. (GSW DSEIR Appendix NOP-IS p. 40.)

3. **Impact PH-3**, Effects of construction on existing housing units or residents from displacement. (GSW DSEIR Appendix NOP-IS p. 40.)

4. **Impact PH-4**, Effects of operations on population growth. (GSW DSEIR Appendix NOP-IS p. 41; RTC, Response PD-4.)

5. **Impact PH-5**, Effects of operations on housing displacement or housing demand (GSW DSEIR Appendix NOP-IS p. 43.)

6. **Impact PH-6 (NI)**, Effects of operations on displacement of people (GSW DSEIR Appendix NOP-IS p. 43.)

7. **Impact C-PH-1**, Significant cumulative effects on population and housing (GSW DSEIR Appendix NOP-IS p. 43.)

## **C. Cultural and Paleontological Resources**

1. **Impact CP-1**, Substantial adverse change to historical resources. (GSW DSEIR Appendix NOP-IS p. 47.)

2. **Impact CP-3**, Destruction of paleontological or geologic features (GSW DSEIR Appendix NOP-IS p. 55.)

3. **Impact CP-4**, Disturbance of human remains (GSW DSEIR Appendix NOP-IS p. 56.)

## **D. Transportation and Circulation**

1. **Impact TR-1**, Construction-related ground transportation impacts (GSW DSEIR p. 5.2-111; RTC, Response TR-10; Response TR-11.)
2. **Impact TR-4**, Effects on transit demand without SF Giants game. (GSW DSEIR p. 5.2-135; RTC, Response TR-2; Response TR-5; Response TR-12.)
3. **Impact TR-7**, Effects on bicycle safety and accessibility without SF Giants game. (GSW DSEIR p. 5.2-157; RTC, Response TR-2; Response TR-7.)
4. **Impact TR-8**, Effects of loading on hazardous conditions or delays for traffic, transit, bikes or pedestrians. (GSW DSEIR p. 5.2-161; RTC, Response TR-2; Response TR-8.)
5. **Impact TR-9b**, Effects of construction lighting on UCSF helipad flight operations. (GSW DSEIR p. 5.2-266.)
6. **Impact TR-9c**, Obstruction of UCSF helipad airspace surfaces. (GSW DSEIR p. 5.2-267.)
7. **Impact TR-10**, Effects on emergency vehicle access without SF Giants game. (GSW DSEIR p. 5.2-166; RTC, Response TR-9; Response TR-11.)
8. **Impact TR-16**, Effects on bicycle safety and accessibility with overlapping SF Giants evening game. (GSW DSEIR p. 5.2-189; RTC, Response TR-2.)
9. **Impact TR-17**, Effects on emergency vehicle access with overlapping SF Giants evening game. (GSW DSEIR p. 5.2-189; RTC, Response TR-2.)
10. **Impact TR-23**, Effects on bicycle safety and accessibility without Muni Special Event Transit Service Plan. (GSW DSEIR p. 5.2-206; RTC, Response TR-2.)
11. **Impact TR-24**, Effects on loading without Muni Special Event Transit Service Plan. (GSW DSEIR p. 5.2-207; RTC, Response TR-2.)
12. **Impact TR-25**, Effects on emergency vehicle access without Muni Special Event Transit Service Plan. (GSW DSEIR p. 5.2-208; RTC, Response TR-2.)
13. **Impact C-TR-1**, Cumulative construction-related ground transportation impacts. (GSW DSEIR p. 5.2-210; RTC, Response TR-10; Response TR-11.)
14. **Impact C-TR-7**, Cumulative adverse bicycle impacts. (GSW DSEIR p. 5.2-230; RTC, Response TR-2.)
15. **Impact C-TR-8**, Cumulative adverse loading impacts. (GSW DSEIR p. 5.2-230; RTC, Response TR-2.)

16. **Impact C-TR-10**, Cumulative adverse emergency vehicle access impacts. (GSW DSEIR p. 5.2-230; RTC, Response TR-2.)

**E. Noise and Vibration**

1. **Impact NO-1**, Effects of construction on ambient noise levels in the Project vicinity above levels existing without the Project. (GSW DSEIR p. 5.3-20; FSEIR, Chapter 12, Sections 12.2.3 and 12.3.2; Response NOI-2; Response NOI-3; Response NOI-4.)

2. **Impact NO-2**, Construction noise in excess of standards in general plan, noise ordinance of other applicable standards. (GSW DSEIR p. 5.3-24; RTC, Response NOI-2; Response NOI-4.)

3. **Impact NO-3**, Effects of construction on groundborne vibration levels. (GSW DSEIR p. 5.3-24; FSEIR, Chapter 12, Section 12.3.2; Response NOI-3b; Response NOI-5.)

4. **Impact C-NO-3**, Noise impacts of UCSF helipad operations on Project occupants (GSW DSEIR p. 5.3-44.)

**F. Air Quality**

1. **Impact AQ 3: Toxic Air Contaminants from Construction Activities**. (GSW DSEIR p. 5.4-43; FSEIR, Chapter 12, Sections 12.2.1, 12.3.2; Response AQ-1; Response AQ-4; Response AQ-5; Response AQ-6.)

2. **Impact C-AQ-2: Contribution to Cumulative Toxic Air Contamination and Diesel Particulate Matter Emissions** (GSW DSEIR 5.4-56; FSEIR, Chapter 12, Sections 12.2.1, 12.3.2; Response AQ-1; Response AQ-5.)

**G. Greenhouse Gas Emissions**

1. **Impact C-GG-1**, Effect of greenhouse gas emissions or conflict with existing greenhouse gas regulations (GSW DSEIR p. 5.5-10; RTC, Response AB-1; Response GHG-2.)

**H. Wind and Shadow**

1. **Impact C-WS-1**, Cumulative impacts of development on wind in a manner that would substantially affect off-site public areas. (GSW DSEIR p. 5.6-19; FSEIR, Chapter 12, Section 12.2.2; Response WS-1.)

2. **Impact C-WS-2**, Cumulative shadow impacts on publically accessible open space or public areas within Mission Bay South Plan Area (GSW DSEIR p. 5.6-21; RTC, Response WS-2.)

3. **Impact C-WS-3**, Cumulative shadow impacts on publically accessible open space or public areas outside Mission Bay South Plan Area (GSW DSEIR p. 5.6-23; RTC, Response WS-2.)

**I. Recreation**

1. **Impact RE-1**, Effects on existing parks and recreational facilities. (GSW DSEIR Appendix NOP-IS p. 62; RTC, Response REC-1; Response REC-2.)

2. **Impact RE-2**, Project requires construction or expansion of recreational facilities. (GSW DSEIR Appendix NOP-IS p. 63; RTC, Response REC-1; Response REC-2.)

3. **Impact C-RE-1**, Cumulative recreational impacts. (GSW DSEIR Appendix NOP-IS p. 64.)

**J. Utilities and Service Systems**

1. **Impact UT-1**, Effects on water supply facilities or entitlements. (GSW DSEIR Appendix NOP-IS p. 66; RTC, Response UTIL-1; Response UTIL-2.)

2. **Impact UT-2**, Construction of new or expanded water treatment facilities. (GSW DSEIR Appendix NOP-IS p. 68; RTC, Response UTIL-1)

3. **Impact UT-3**, Sufficient permitted landfill capacity for Project's waste disposal needs. (GSW DSEIR Appendix NOP-IS p. 69.)

4. **Impact UT-4**, Project complies with federal, state and local statutes and regulations related to solid waste. (GSW DSEIR Appendix NOP-IS p. 71.)

5. **Impact UT-5**, Project in itself would require the construction of new, or expansion of existing, wastewater treatment facilities. (GSW DSEIR p. 5.7-11; RTC, Response UTIL-3; Response UTIL-4; Response UTIL-6.)

6. **Impact C-UT-1**, Cumulative utilities and service system impacts (GSW DSEIR Appendix NOP-IS p. 72.)

7. **Impact C-UT-3**, Cumulative impact on demand for new stormwater drainage facilities or expansion of existing facilities (GSW DSEIR p. 5.8-18; RTC, Response UTIL-7; Response UTIL-8.)

**K. Public Services**

1. **Impact PS-1**, Effects of Project on need for new or altered governmental facilities for schools or other services. (GSW DSEIR Appendix NOP-IS p. 75; RTC, Response PS-3.)
2. **Impact PS-2**, Effects of Project construction on fire protection, emergency medical services and law enforcement. (GSW DSEIR p. 5.8-11; RTC, Response PS-1; Response PS-2.)
3. **Impact PS-3**, Effects of Project operation on fire protection or emergency medical services. (GSW DSEIR p. 5.8-12; RTC, Response PS-1; Response PS-2.)
4. **Impact PS-4**, Effects of Project operation on law enforcement. (GSW DSEIR p. 5.8-14; RTC, Response PS-1; Response PS-2.)
5. **Impact C-PS-1**, Cumulative impacts on schools or other services (GSW DSEIR Appendix NOP-IS p. 75; RTC, Response PS-3.)
6. **Impact C-PS-2**, Cumulative impacts on fire protection, emergency medical services and law enforcement (GSW DSEIR p. 5.8-16; RTC, Response PS-1; Response PS-2.)

#### **L. Biological Resources**

1. **Impact BI-1**, Effects of Project on special status species. (GSW DSEIR Appendix NOP-IS p. 77; RTC, Response BIO-1; Response BIO-2; Response BIO-3.)
2. **Impact BI-2 (NI)**, Effects of Project on riparian habitat or sensitive natural community. (GSW DSEIR Appendix NOP-IS p. 79; RTC, Response BIO-1; Response BIO-4.)
3. **Impact BI-3**, Effects of Project on wetlands or navigable waters. (GSW DSEIR Appendix NOP-IS p. 79; RTC, Response BIO-1; Response BIO-2; Response BIO-5.)
4. **Impact BI-5**, Project complies with local policies or ordinances protecting biological resources (GSW DSEIR Appendix NOP-IS p. 83.)
5. **Impact C-BI-1**, Cumulative impacts on biological resources (GSW DSEIR Appendix NOP-IS p. 84; RTC, Response BIO-1; Response BIO-2; Response BIO-3; Response BIO-4; Response BIO-5; Response BIO-6.)

#### **M. Geology and Soils**

1. **Impact GE-1**, Exposure of people to rupture of earthquake fault, seismic groundshaking, ground failure or landslides. (GSW DSEIR Appendix NOP-IS p. 86; RTC, Response GEO-1; Response GEO-2; Response GEO-3; Response GEO-4.)

2. **Impact GE-2**, Erosion or loss of top soil. (GSW DSEIR Appendix NOP-IS p. 87.)
3. **Impact GE-3**, Location of Project on unstable soils, or creation of unstable soils by Project. (GSW DSEIR Appendix NOP-IS p. 88; RTC, Response GEO-5.)
4. **Impact GE-4**, Location of Project on expansive or problematic soils. (GSW DSEIR Appendix NOP-IS p. 91; RTC, Response GEO-6.)
5. **Impact GE-5**, Effect of Project on topography or unique geologic features (GSW DSEIR Appendix NOP-IS p. 92.)
6. **Impact C-GE-1**, Cumulative impacts related to geologic hazards (GSW DSEIR Appendix NOP-IS p. 92.)

**N. Hydrology and Water Quality**

1. **Impact HY-1**, Violation of water quality standards or degradation of water quality from construction-related activities (GSW DSEIR Appendix NOP-IS p. 99; RTC, Response HYD-2.)
2. **Impact HY-1a**, Violation of water quality standards or degradation of water quality from construction-related dewatering. (GSW DSEIR p. 5.9-31; RTC, Response HYD-1.)
3. **Impact HY-2**, Effects of Project operation on groundwater supplies and groundwater recharge. (GSW DSEIR Appendix NOP-IS p. 101.)
4. **Impact HY-3**, Effects of Project on existing drainage patterns and rates and amounts of surface runoff. (GSW DSEIR Appendix NOP-IS p. 102.)
5. **Impact HY-4**, Effects of Project on flood risk exposure and flood flows. (GSW DSEIR Appendix NOP-IS p. 102; RTC, Response HYD-6.)
6. **Impact HY-5**, Effects of Project on exposure to seiche or tsunami inundation. (GSW DSEIR Appendix NOP-IS p. 103; RTC, Response HYD-8.)
7. **Impact HY-7**, Effect of Project on exposure to flooding. (GSW DSEIR p. 5.9-41; RTC, Response HYD-6; Response HYD-7.)
8. **Impact C-HY-1**, Cumulative effects on hydrology and water. (GSW DSEIR Appendix NOP-IS p. 105; RTC, Response HYD-1; Response HYD-6; Response HYD-7; Response HYD-8.)
9. **Impact C-HY-2**, Cumulative impacts on compliance with National Pollutant Discharge Elimination System ("NPDES") permit requirements, water quality standards

or waste water requirements related to changes in wastewater and stormwater discharges; on the Mission Bay separate stormwater system; or on polluted runoff. Cumulative wet weather flows would not contribute to an increase in combined sewer discharges. (GSW DSEIR p. 5.9-44; RTC, Response HYD-3; Response HYD-5.)

**10. Impact C-HY-3**, Cumulative impacts on flood risk (GSW DSEIR p. 5.9-48; RTC, Response HYD-6; Response HYD-7.)

**O. Hazards and Hazardous Materials**

**1. Impact HZ-3**, Effects on adopted emergency response and evacuation plans, and fire exposure risk. (GSW DSEIR Appendix NOP-IS p. 119; RTC, Response HAZ-8.)

**2. Impact C-HZ-1**, Cumulative impacts related to hazardous materials. (GSW DSEIR Appendix NOP-IS p. 121.)

**P. Mineral and Energy Resources**

**1. Impact ME-1**, Project utilization of large amounts of fuel, water or energy (GSW DSEIR Appendix NOP-IS p. 123; FSEIR, Chapter 12, Section 12.3.2; Response EN-1; Response PD-4.)

**2. Impact C-ME-1**, Cumulative impacts on energy resources (GSW DSEIR Appendix NOP-IS p. 125.)

**III. FINDINGS OF POTENTIALLY SIGNIFICANT IMPACTS THAT CAN BE AVOIDED OR REDUCED TO A LESS-THAN-SIGNIFICANT LEVEL**

Public Resources Code section 21002 provides that “public agencies should not approve projects as proposed if there are feasible alternatives or feasible mitigation measures available which would substantially lessen the significant environmental effects of such projects[.]” The same statute provides that the procedures required by CEQA “are intended to assist public agencies in systematically identifying both the significant effects of projects and the feasible alternatives or feasible mitigation measures which will avoid or substantially lessen such significant effects.”

The mandate and principles announced in Public Resources Code section 21002 are implemented, in part, through the requirement that agencies must adopt findings before approving projects for which EIRs are required. For each significant environmental effect identified in an EIR for a project, the approving agency must issue a written finding reaching one or more of three permissible conclusions. (CEQA Guidelines, § 15091.) The first such finding is that changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the final EIR. (CEQA Guidelines, § 15091, subd. (a)(1).) The second permissible finding is that such changes or alterations are within the responsibility and jurisdiction of another public agency and not the

agency making the finding, and such changes have been adopted by such other agency or can and should be adopted by such other agency. (CEQA Guidelines, § 15091, subd. (a)(2).) The third potential conclusion is that specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the Final EIR. (CEQA Guidelines, § 15091, subd. (a)(3).) Public Resources Code, section 21061.1 defines “feasible” to mean “capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, legal, and technological factors.” CEQA Guidelines section 15364 adds another factor: “legal” considerations. (See also *Citizens of Goleta Valley v. Bd. of Supervisors* (1990) 52 Cal.3d 553, 565 (“*Goleta I*”).)

The concept of “feasibility” also encompasses the question of whether a particular alternative or mitigation measure promotes the underlying goals and objectives of a project. (*City of Del Mar v. City of San Diego* (1982) 133 Cal.App.3d 410, 417 (*City of Del Mar*); *Sierra Club v. County of Napa* (2004) 121 Cal.App.4th 1490, 1506-1509 [court upholds CEQA findings rejecting alternatives in reliance on applicant’s project objectives]; see also *California Native Plant Society v. City of Santa Cruz* (2009) 177 Cal.App.4th 957, 1001 (CNPS) [“an alternative ‘may be found infeasible on the ground it is inconsistent with the project objectives as long as the finding is supported by substantial evidence in the record’”] (quoting 1 Kostka & Zischke, *Practice Under the Cal. Environmental Quality Act* [Cont.Ed.Bar 2d ed. 2009], § 17.30, p. 825); *In re Bay-Delta Programmatic Environmental Impact Report Coordinated Proceedings* (2008) 43 Cal.4th 1143, 1165, 1166 [“[i]n the CALFED program, feasibility is strongly linked to achievement of each of the primary program objectives”; “a lead agency may structure its EIR alternative analysis around a reasonable definition of underlying purpose and need not study alternatives that cannot achieve that basic goal”].) Moreover, “‘feasibility’ under CEQA encompasses ‘desirability’ to the extent that desirability is based on a reasonable balancing of the relevant economic, environmental, social, legal, and technological factors.” (*City of Del Mar*, *supra*, 133 Cal.App.3d at p. 417; see also CNPS, *supra*, 177 Cal.App.4th at p. 1001 [“an alternative that ‘is impractical or undesirable from a policy standpoint’ may be rejected as infeasible”] [quoting 2 Kostka & Zischke, *Practice Under the Cal. Environmental Quality Act*, *supra*, § 17.29, p. 824]; *San Diego Citizenry Group v. County of San Diego* (2013) 219 Cal.App.4th 1, 17.)

The findings in this Section III and Section IIIA and in Section IV and Section IVA concern mitigation measures set forth in the FSEIR. These findings discuss mitigation measures as proposed in the FSEIR and as recommended for adoption by the OCII Commission. The full explanation of the potentially significant environmental impacts is set forth in the GSW DSEIR (including the Initial Study which OCII made part of the GSW DSEIR through its inclusion in GSW DSEIR Volume 3 – Appendix NOP-IS) and in some cases is further explained in the RTC. As indicated in the MMRP, in most cases, mitigation measures will be implemented by OCII or the Project Sponsor. In these cases, implementation of mitigation measures will be made

conditions of project approval. For each of these mitigation measures and the impacts they address, the OCII Commission finds that changes or alterations have been required in, or incorporated into, the Project which avoid or substantially lessen the significant environmental effect as identified in the GSW FSEIR. (CEQA Guidelines, § 15091, subd. (a)(1).)

In the case of all other mitigation measures, an agency other than OCII (either another City agency or a non-City agency) will have responsibility for implementation or assisting in the implementation or monitoring of mitigation measures. This is because certain mitigation measures are partly or wholly within the responsibility and jurisdiction of another public agency (other than OCII). In such instances, the entity that will be responsible for implementation is identified in the MMRP for the Project (**Exhibit B**). Generally, OCII has designated the agencies to implement mitigation measures as part of their existing permitting or program responsibilities. Based on past experience and ongoing relationships and communications with these agencies, OCII has reason to believe that they can and will implement the mitigation measures assigned to them. These agencies include, for example, the San Francisco Municipal Transportation Agency ("SFMTA"), which operates and maintains local traffic and transit systems, Port, which manages Port property, and other agencies, which will participate in mitigation measure implementation through their normal program operations, such as the Ballpark/Mission Bay Transportation Coordinating Committee. In the case of SFMTA, to the extent that mitigation measures identify new SFMTA responsibilities, SFMTA has indicated to OCII that it generally finds that it will be feasible to implement the mitigation measures.<sup>4</sup>

The OCII also will be assisted in monitoring implementation of mitigation measures by other agencies, as indicated in the MMRP in **Exhibit B**, such as the San Francisco Entertainment Commission, the San Francisco Department of Building Inspection ("DBI"), the San Francisco Department of Public Works ("SFPW") through their permit responsibilities, the San Francisco Public Utilities Commission ("SFPUC") through its operation of the City's combined sewer system, or the SFMTA as part of its operation and maintenance of traffic and transit systems. For each of these mitigation measures and the impacts they address, the OCII Commission finds that the changes or alterations are in whole or in part within the responsibility and jurisdiction of a public agency other than OCII and that the changes have been adopted by such other agency or can and should be adopted by such other agency. (CEQA Guidelines, § 15091, subd. (a)(2).)

The mitigation measures proposed for adoption in Sections III, IIIA, IV and IVA are the same as the mitigation measures identified in the FSEIR for the Project as proposed. The full text of all of the mitigation measures as proposed for adoption is contained in **Exhibit B**, the MMRP.

---

<sup>4</sup> Letter from SFMTA Director of Transportation Edward D. Reiskin to Tiffany Bohee, OCII Executive Director, dated May 15, 2015 and Letter from SFMTA Director of Transportation Edward D. Reiskin to Tiffany Bohee, OCII Executive Director, dated October 20, 2015.

The OCII Commission adopts all of the mitigation measures proposed for the Project that are within the jurisdiction and control of OCII. For those mitigation measures that are the responsibility of agencies other than OCII (e.g., the City and County of San Francisco and its subsidiary agencies), the OCII Commission finds that those measures can and should be implemented by the other agencies as part of their existing permitting or program responsibilities. Based on the analysis contained in the GSW DSEIR and FSEIR, other considerations in the record, and the standards of significance, the OCII Commission finds that implementation of all of the proposed mitigation measures discussed in this Section III and Section IIIA will reduce potentially significant impacts to a less-than-significant level.

#### **A. Cultural and Paleontological Resources**

**1. Impact CP-2: Adverse change in the significance of an archaeological resource.** (GSW DSEIR Appendix NOP-IS p. 48; RTC, Section 13.10.2, Response CULT-1.) The Project could cause a substantial adverse change in the significance of an archaeological resource pursuant to CEQA Guidelines § 15064.5. Specifically, there is a reasonable presumption that archaeological resources may be present within the project site that could be disturbed during subsurface construction. However, the impact can be reduced to a less-than-significant level through Mitigation Measure M-CP-2a and Mitigation Measure M-CP-2b. Implementation of Mitigation Measure M-CP-2a would reduce any potential impacts to archaeological resources by retaining an archeological consultant to create a testing program and be available to conduct an archaeological monitoring and/or data recovery program. If an archaeological site associated with descendant Native Americans, the Overseas Chinese, or other descendant group is discovered, a representative of that descendant group shall be contacted and can monitor the archaeological field investigations of the site. Implementation of Mitigation Measure M-CP-2b would reduce any potential impacts to accidentally discovered buried or submerged historical resources by distributing an “ALERT” sheet to the Project prime contractor, to any Project subcontractor, or to any utilities firm involved in soils disturbing activities. If an archaeological resource is encountered, the soil disturbing activities shall be suspended until OCII or its designated representative determines what additional measures should be undertaken.

**MM M-CP-2a: Archaeological Testing, Monitoring and/or Data Recovery Plan**

**MM M-CP-2b: Accidental Discovery of Archaeological Resources**

#### **B. Transportation and Circulation**

**1. Impact TR-6: Pedestrian impacts without an overlapping SF Giants evening game.** (GSW DSEIR p. 5.2-147; RTC, Response, TR-2; Response TR-6.) The Project could result in sidewalk overcrowding or potentially hazardous pedestrian conditions

without an overlapping SF Giants evening game. Overall, the Project would implement numerous improvements that would enhance pedestrian conditions and safety in the Project vicinity. The existing and proposed pedestrian facilities would be adequate to meet the pedestrian demand associated with the Project uses. The exception would be the crosswalks at the intersection of Third/South, which would operate at LOS E or LOS F conditions during the weekday evening and late evening, and Saturday evening conditions for sell-out events (i.e., the Basketball Game scenario). Mitigation Measure M-TR-6: Active Management of Pedestrian Flows at the Intersection of Third/South and the Project's TMP protocols for events would manage short-term peak pedestrian flows at adjacent intersections and would mitigate pedestrian impacts to less-than-significant levels. At all other locations and Project conditions, the addition of Project-generated pedestrian trips would not substantially affect pedestrian flows, create potentially hazardous conditions for pedestrians, or otherwise interfere with pedestrian accessibility to the site and adjoining areas.

**MM M-TR-6: Active Management of Pedestrian Flows at the Intersection of Third/South.**

**2. Impact TR-9a: Temporary obstruction of UCSF helipad airspace surfaces.**

(GSW DSEIR p. 5.2-262; FSEIR, Chapter 12, Section 12.3.1; Response TR-12.)

Placement and usage of cranes during construction could temporarily obstruct helipad airspace surfaces. The GSW DSEIR determined that, based on the preliminary Project construction plan for the Project construction cranes, one of the Project construction cranes would have the potential to result in a temporary penetration of a Part 77 Transitional Surface associated with the helipad, which would be considered a potentially significant impact. After publication of the GSW DSEIR, the Project Sponsor refined its construction crane plan with the goal to further reduce potential Project effects on the UCSF helipad during construction. Based on the analysis of the refined construction crane plan, none of the proposed tower construction cranes would penetrate the Part 77 Approach or Transitional Surfaces associated with the UCSF helipad. Furthermore, adequate clearance for the construction cranes would be provided for the South Street alternate flight path. However, if the refined construction crane plan details were to change with respect to proposed tower crane size, location or other factors, then the Project would have the potential to result in greater and/or less effects. Mitigation Measure M-TR-9a, Crane Safety Plan for Project Construction, identifies feasible measures that would reduce potential temporary impacts associated with the use of cranes during the construction period to less than significant. The objective of the crane safety plan is to ensure the safe use of the UCSF Benioff Children's Hospital helipad, and the safety for people residing or working in the Project area during construction. Therefore, with implementation of Mitigation Measure M-TR-9a, this impact would be less than significant with mitigation.

### **MM M-TR-9a: Crane Safety Plan for Project Construction**

**3. Impact TR-9d: Lighting impacts on UCSF helipad flight operations** (GSW DSEIR p. 5.2-270; FSEIR, Chapter 12, Section 12.3.1; Response TR-12; Response TR-PD-1.) Routine and specialized exterior lighting could impact flight operations. The use of certain specialized lighting systems would have the potential to adversely affect a pilot's vision and execution of a visual night time approach or departure to/from the UCSF helipad. Lights that adversely affect the night vision of pilots and interfere with the execution of a visual nighttime approach to the helipad would endanger the pilot, passengers, and people on the ground. Therefore, the possible use of these specialized lighting systems would be considered a potentially significant impact. Mitigation Measure M TR-9d: Event Center Exterior Lighting Plan identifies feasible measures that would reduce potential impacts associated with potential specialized lighting systems to less than significant.

### **MM M-TR-9d: Event Center Exterior Lighting Plan**

**4. Impact TR-13: Local transit impacts with overlapping evening SF Giants game.** (GSW DSEIR p. 5.2-183; RTC, Response TR-2; Response TR-5; Response TR-2; Response TR-5; Response TR-12.) Implementation of the Project could result in substantial increase in transit demand that could not be accommodated by adjacent Muni transit capacity with an overlapping evening SF Giants game. Overall, on days with overlapping evening events at the project site and at AT&T Park, transit demand would exceed the capacity prior to and following the events, and the Project would result in significant transit impacts. Implementation of Mitigation Measure M-TR-13: Enhanced Muni Transit Service during Overlapping Events would minimize transit impacts. The additional Muni capacity would generally be within what is currently provided for SF Giants games and the additional capacity provided as part of the Muni Special Event Transit Service Plan for the Project. Implementation of the mitigation measure would ensure that Muni service would be provided to accommodate the T Third demand via Muni bus shuttles to AT&T Park and/or the proposed event center, and would not result in secondary transportation impacts. Thus, with implementation of this mitigation measure, the Project's transit impacts would be less than significant with mitigation.

### **MM M-TR-13: Enhanced Muni Transit Service during Overlapping Events**

**5. Impact TR-15: Pedestrian impacts with an overlapping SF Giants evening game.** (GSW DSEIR p. 5.2-185; RTC, Response TR-2.) The Project could result in sidewalk overcrowding or potentially hazardous pedestrian conditions with an overlapping SF Giants game. Overall, on days with overlapping evening events at the project site and at AT&T Park, pedestrian conditions would become more crowded prior to and following the events; however, with the TMP transportation management

strategies and implementation of Mitigation Measure M-TR-6: Active Management of Pedestrian Flows at the Intersection of Third/South, the impact of the Project on pedestrians during overlapping evening events would be less than significant with mitigation.

**MM M-TR-6: Active Management of Pedestrian Flows at the Intersection of Third/South.**

**6. Impact TR-22, Pedestrian impacts without Muni Special Event Transit Service Plan** (GSW DSEIR p. 5.2-203; RTC, Response TR-2). Without the implementation of the Muni Special Event Transit Service Plan, the number of attendees arriving by transit would decrease while the number of attendees arriving by automobiles would increase. Mitigation Measure M-TR-22: Provide Safe Pedestrian Access to Adjacent Transit and Parking Facilities and Monitoring would ensure that the pedestrian impacts would remain the same as those identified in Impact TR-6 for pedestrian conditions without an overlapping SF Giants evening game and in Impact TR-15 for pedestrian conditions with an overlapping SF Giants evening game irrespective of whether SFMTA Parking Control Officers (“PCOs”) were available during various events, and would not result in secondary transportation impacts. With implementation of Mitigation Measure M-TR-22: Provide Safe Pedestrian Access to Adjacent Transit and Parking Facilities, Project-generated pedestrian demand during large events would not substantially affect pedestrian flows, create potentially hazardous conditions for pedestrians, or otherwise interfere with pedestrian accessibility to the site and adjoining areas. Therefore, without implementation of the Muni Special Event Transit Service Plan, the Project’s impact on pedestrians would be less than significant with mitigation.

**MM M-TR-22: Provide Safe Pedestrian Access to Adjacent Transit and Parking Facilities and Monitoring**

**C. Noise and Vibration**

**1. Impact NO-4: Noise in excess of General Plan and Noise Ordinance standards during operations.** (GSW DSEIR p. 5.3-27; FSEIR, Chapter 12, Section 12.2.1; Response NOI-2; Response PD-1.) Operation of the event center would introduce new stationary noise sources to the Project area. Operation of the Project would introduce new stationary noise sources that would be subject to the requirements of the San Francisco Noise Ordinance. These new sources include generators and mechanical equipment, as well as the potential for amplified sound within the Third Street plaza. As explained in the GSW DSEIR and the RTC Document, predicted noise levels from new stationary sources would not meaningfully contribute to the existing monitored ambient noise levels in the Project area, and the Project would therefore be consistent with the restrictions of the noise ordinance.

The Project would also introduce new land uses, and these new uses would be exposed to noise levels of up to 75 DNL. However, modern building techniques and materials, as well as inclusion of non-operable windows and ventilation systems, would be sufficient to ensure that the Project would comply with land use compatibility requirements of the San Francisco General Plan, and this impact would be less than significant.

With respect to amplified sound, either interior to the event center or in open-air plazas on the project site, the predicted sound levels and hours of occurrence would be consistent with the noise ordinance. However, due to uncertainties as to the nature and extent of future outside events at the Third Street Plaza, implementation of Mitigation Measure M-NO-4a: Noise Control Plan for Outdoor Amplified Sound would ensure that noise levels from amplified sound exterior to the event center would comply with the noise ordinance. In addition, implementation of Mitigation Measure M-NO-4b: Noise Control Plan for Place of Entertainment Permit would ensure that noise levels from concerts, basketball games, and other events would comply with the noise ordinance, regardless of current unknowns as to the nature of future events within the arena. Therefore, this impact would be less than significant with mitigation.

**MM M-NO-4a: Noise Control Plan for Outdoor Amplified Sound**

**MM M-NO-4b: Noise Control Plan for Place of Entertainment Permit**

**D. Air Quality**

**1. Impact AQ-4: Potential conflicts with BAAQMD's 2010 Clean Air Plan.**

(GSW DSEIR p. 5.4-51; RTC, Response AQ-1; Response AQ-2; Response AQ-3; Response AQ-4; Response AQ-6; Response AQ-7.) Without mitigation measures or the adoption of control measures, emissions associated with the Project could conflict with the 2010 Clean Air Plan ("CAP"). The Project would be consistent with the 2010 CAP, however, with implementation of mitigation measures, which include offsetting emissions to below significance thresholds in addition to Project-specific measures to reduce pollutant emissions. Additionally, the Project would be consistent with the 2010 CAP by virtue of incorporation of control measures of the CAP, including land use/local impact measures and energy/climate measures as well as the transportation demand management measures incorporated in the Project. The Project would also not hinder implementation of the 2010 CAP. Therefore, the Project would not conflict with, or obstruct implementation of the 2010 Clean Air Plan, and this impact would be less than significant with mitigation.

**MM M-AQ-1: Construction Emissions Minimization**

**MM M-AQ-2a: Reduce Operational Emissions**

## **MM M-AQ-2b: Emissions Offsets**

### **E. Wind and Shadow**

**1. Impact WS-1: Wind effects on off-site public spaces.** (GSW DSEIR p. 5.6-10; FSEIR, Chapter 12, Section 12.2.2; Response WS-1.) The GSW DSEIR indicated that the Project could result in a net increase in the total duration of the wind hazard exceedance at off-site public walkways in the Project vicinity and proposed Mitigation Measure M-WS-1: Develop and Implement Design Measures to Reduce Project Off-site Wind Hazards, which describes potential design measures that would serve to reduce or avoid Project wind hazards. Although preliminary evaluation by the Project Sponsor of certain potential on-site design modifications indicated such modifications would be effective in reducing the Project wind hazard impact to a less than significant, the impact was conservatively identified as significant and unavoidable with mitigation because Project design was not yet finalized. After publication of the GSW DSEIR, the Project Sponsor pursued design measures as required by Mitigation Measure M-WS-1, and identified an on-site design modification that would reduce the Project wind hazard impact to less than significant as verified by wind tunnel testing. Because design modifications have been identified, the impact will be reduced to a level of less than significant through Mitigation Measure M-WS-1.

Under the Third Street Plaza Variant, the Project would not alter wind in a manner that would substantially affect off-site public areas, and, accordingly, the impact would be less than significant and no mitigation would be required.

#### **MM M-WS-1: Develop and Implement Design Measures to Reduce Project Off-site Wind Hazards**

### **F. Biological Resources**

**1. Impact BI-4: Effects on the movement of wildlife or established migratory corridors or nurseries** (GSW DSEIR Appendix NOP-IS p. 81; RTC, Response BIO-1; Response BIO-6; PD-1.) The Project could interfere substantially with the movement of native resident or migratory wildlife species resident or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites. Specifically, migratory and resident birds which breed locally in San Francisco have the potential to nest in shrub vegetation observed within the project site and could be adversely affected by Project construction. Implementation of Mitigation Measure M-BI-4a: Preconstruction Surveys for Nesting Birds would avoid disrupting or destroying active nests which could occur within the Project site during bird breeding season, and would reduce this impact to less than significant. Migratory birds may also be affected by increased risk of collisions with the proposed structures and due to the Project's artificial night lighting. This impact will be reduced due to a level of less than

significant through Mitigation Measure M-BI-4b: Bird Safe Building Practices, which requires bird safe practices in the proposed building and lighting design that are consistent with the City's *Standards for Bird-Safe Buildings*.

**MM M-BI-4a: Preconstruction Surveys for Nesting Birds**

**MM M-BI-4b: Bird Safe Building Practices**

**G. Hydrology and Water Quality**

**1. Impact HY-6: Operational effects on water quality** (GSW DSEIR p. 5.9-33; RTC, Response HYD-2; Response HYD-3; Response HYD-4; Response HYD-5.)  
Operation of the Project could affect the quality of effluent discharges from the Southeast Water Pollution Control Plant if future uses at the project site were to discharge unusual chemicals or pollutants not typically associated with most other San Francisco discharges, such as radioactive or biohazardous materials. National Pollutant Discharge Elimination System Mitigation Measure M-HY 6: Wastewater Sampling Ports will reduce the impacts to a level of less-than-significant by installing sampling ports as part of the Project design to facilitate sampling to monitor discharge quality and by participating in the City's existing Water Pollution Prevention Program.

**MM M-HY-6: Wastewater Sampling Ports**

**H. Hazards and Hazardous Materials**

**1. Impact HZ-1: Routine transport, use and disposal of hazardous materials.** (GSW DSEIR Appendix NOP-IS p. 111; RTC, Response HAZ-4; Response REC-1.)  
During operation, the proposed event center and other development would use common types of hazardous materials, such as cleaners, disinfectants and chemical agents, as well as diesel fuel for generators. This impact will be reduced to a level below significance by implementation of Mitigation Measure M-HZ 1a: Guidelines for Handling Biohazardous Materials, which requires that any businesses that handle biohazardous materials to certify that they follow the safety guidelines, use high efficiency particulate air filters or substantially equivalent devices, do not handle or use biohazardous materials requiring Biosafety Level 4 containment. In addition, during construction, there is the potential to encounter serpentinite, which could contain naturally occurring asbestos. This impact will be further reduced to less than significant by implementation of Mitigation Measure M-HZ 1b: Geologic Investigation and Dust Mitigation Plan for Naturally Occurring Asbestos, which will limit any potential exposure to naturally occurring asbestos. Together, these mitigation measures will reduce this impact to a level that is less than significant.

**MM M-HZ-1a: Guidelines for Handling Biohazardous Materials**

**MM M-HZ-1b: Geologic Investigation and Dust Mitigation Plan for  
Naturally Occurring Asbestos**

**2. Impact HZ-2: Exposure to Contaminants during Construction.** (GSW DSEIR Appendix NOP-IS p. 115; RTC, Response HAZ-1; Response HAZ-2; Response HAZ-3; Response HAZ-7.) The Project would be located on a site identified on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5. Construction activities associated with the Project could expose construction workers, the public, or the environment to hazardous materials. A Risk Management Plan (“RMP”) was prepared subsequent to and as required by the Mission Bay FSEIR, and remedial actions consistent with the RMP have been completed. Compliance with the RMP, as required by the deed restriction, would ensure that human health and environmental risks during and after development of the Project would be within acceptable levels and no new or different mitigation would be required. However, the Mission Bay FSEIR determined that further risk evaluation would be required, if future uses at the project site were to include a public school or child care facility. Thus, in the event that child care facilities were to occur under the Project, implementation of Mitigation Measure M-HZ-2: RMP Provisions for Child Care Facilities, would reduce this impact to less than significant.

**MM M-HZ-2: RMP Provisions for Child Care Facilities**

**IIIA. FINDINGS FOR POTENTIALLY SIGNIFICANT CUMULATIVE IMPACTS  
THAT CAN BE AVOIDED OR REDUCED TO A LESS-THAN-SIGNIFICANT LEVEL**

**A. Cultural and Paleontological Resources**

**1. Impact C-CP-1: Contribution to Cumulative Impacts on Cultural Resources** (GSW DSEIR Appendix NOP-IS p. 57.) Implementation of the Project, along with cumulative projects in the Mission Bay area, could have a significant impact on recorded and unrecorded archeological resource. The Project’s contribution to this cumulative impact would be avoided or substantially reduced by the implementation of Mitigation Measures M-CP-2a: Archaeological Testing, Monitoring and/or Data Recovery Program and M-CP-2b: Accidental Discovery of Archaeological Resources. Implementation of Mitigation Measure M-CP-2a would reduce any potential impacts to archeological resources by retaining an archeological consultant to create a testing program and be available to conduct an archaeological monitoring and/or data recovery program. If an archaeological site associated with descendant Native Americans, the Overseas Chinese, or other descendant group is discovered, a representative of that descendant group shall be contacted and can monitor the archaeological field investigations of the site. Implementation of Mitigation Measure M-CP-2b would reduce any potential impacts to accidentally discovered buried or submerged historical resources by distributing an

“ALERT” sheet to the Project’s prime contractor, to any Project subcontractor, or to any utilities firm involved in soils disturbing activities. If an archeological resource is encountered, the soil disturbing activities shall be suspended until OCII or its designated representative determines what additional measures should be undertaken. Consequently, with implementation of these mitigation measures, the Project would not make a considerable contribution to the cumulative impact, and this impact would be less than significant with mitigation.

**Mitigation Measure M-CP-2a: Archaeological Testing, Monitoring and/or Data Recovery Program**

**Mitigation Measure M-CP-2b: Accidental Discovery of Archaeological Resources**

**B. Transportation and Circulation**

**1. Impact C-TR-4: Contribution to Cumulative Impacts on Muni** (GSW DSEIR p. 5.2-222; RTC, Response TR-2; Response TR-12.) 2040 cumulative conditions could have significant impacts on Muni service and could contribute transit impacts at Muni screenlines. The Project’s contribution to this cumulative impact would be avoided or substantially reduced by the implementation of Mitigation Measure M-TR-13: Enhanced Muni Transit Service during Overlapping Events. The additional Muni capacity would generally be within what is currently provided for SF Giants games and the additional capacity provided as part of the Muni Special Event Transit Service Plan for the Project. Implementation of the mitigation measure would ensure that Muni service would be provided to accommodate the T Third demand via Muni bus shuttles to AT&T Park and/or the proposed event center, and would not result in secondary transportation impacts. Thus, with implementation of this mitigation measure, the Project’s transit impacts would be less than cumulatively considerable (i.e., less than significant) with mitigation.

**Mitigation Measure M-TR-13: Enhanced Muni Transit Service during Overlapping Events**

**2. Impact C-TR-6: Contribution to Cumulative Impacts on Pedestrians** (GSW DSEIR p. 5.2-227; RTC, Response TR-2.) Pedestrian volumes would increase between implementation of the Project and 2040 cumulative conditions due to buildout of planned Mission Bay developments in the Project vicinity. The Project’s contribution to this cumulative impact would be avoided or substantially reduced by the implementation of Mitigation Measure M-TR-6: Active Management of Pedestrian Flows at the Intersection of Third/South, and the Project’s TMP protocols for events would manage short-term peak pedestrian flows at adjacent intersections. Consequently, with implementation of

this mitigation measure, the Project would not make a considerable contribution to the cumulative impact, and this impact would be less than significant with mitigation.

**Mitigation Measure M-TR-6: Active Management of Pedestrian Flows at the Intersection of Third/South**

**3. Impact C-TR-9: Contribution to Cumulative Construction Impacts on UCSF Helipad Operations** (GSW DSEIR p. 5.2-231; FSEIR, Chapter 12, Section 12.3.1.) Under cumulative conditions, development in the immediate Project vicinity would have the potential to result in cumulative impacts to the UCSF helipad. The Project's contribution to this cumulative impact would be avoided or substantially reduced by the implementation of Mitigation Measure M-TR-9a: Crane Safety Plan for Project Construction, which identifies feasible measures that would reduce potential temporary impacts associated with the use of cranes during the construction period and ensure the safe use of the UCSF Benioff Children's Hospital helipad, and the safety for people residing or working in the Project area during construction. Consequently, with implementation of this mitigation measure, the Project would not make a considerable contribution to the cumulative impact, and this impact would be less than significant with mitigation.

**Mitigation Measure M-TR-9a: Crane Safety Plan for Project Construction**

**C. Noise and Vibration**

**1. Impact C-NO-1: Contribution to Cumulative Construction Noise Impacts** (GSW DSEIR p. 5.3-39; FSEIR, Chapter 12, Sections 12.2.3, 12.3.2; Response NOI-2.) Cumulative construction noise in the Project area could cause a substantial temporary or periodic increase in ambient noise levels during Project construction. The Project's contribution to this cumulative impact would be avoided or substantially reduced by the implementation of Mitigation Measure C-NO-1: Construction Noise Control Measures, which requires site-specific noise attenuation measures during construction to reduce the generation of construction noise. Consequently, with implementation of this mitigation measure, the Project would not make a considerable contribution to the cumulative impact, and this impact would be less than significant with mitigation.

**Mitigation Measure M-C-NO-1: Construction Noise Control Measures**

**IV. SIGNIFICANT IMPACTS THAT CANNOT BE AVOIDED OR REDUCED TO A LESS THAN SIGNIFICANT LEVEL**

Based on substantial evidence in the whole record of these proceedings, the OCII Commission finds that, where feasible, changes or alterations have been required, or incorporated into, the Project to reduce the significant environmental impacts listed below as identified in the FSEIR.

The OCII Commission finds that the mitigation measures in the FSEIR and described below are appropriate, and that changes have been required in, or incorporated into, the Project that, to use the language of Public Resources Code section 21002 and CEQA Guidelines section 15091, may substantially lessen, but do not avoid (i.e., reduce to less-than-significant levels), the potentially significant or significant environmental effects associated with implementation of the Project as described in Sections III and IV.

The OCII Commission adopts all of the mitigation measures proposed in the FSEIR that are relevant to the Project and set forth in the MMRP, attached hereto as **Exhibit B**. The OCII Commission further finds, however, for the impacts listed below, that no feasible mitigation is currently available to render the effects less than significant. The effects therefore remain significant and unavoidable. Based on the analysis contained within the FSEIR, other considerations in the record and stated herein, and the standards of significance, the OCII Commission finds that because some aspects of the Project would cause potentially significant impacts for which feasible mitigation measures are not available to reduce the impact to a less-than-significant level, the impacts are significant and unavoidable.

With respect to a project for which significant impacts are not avoided or substantially lessened, a public agency, after adopting proper findings, may nevertheless approve the project if the agency first adopts a statement of overriding considerations setting forth the specific reasons why the agency found that the project's "benefits" rendered "acceptable" its "unavoidable adverse environmental effects." (CEQA Guidelines, §§ 15093, 15043, subd. (b); see also Pub. Resources Code, § 21081, subd. (b).) The California Supreme Court has stated, "[t]he wisdom of approving . . . any development project, a delicate task which requires a balancing of interests, is necessarily left to the sound discretion of the local officials and their constituents who are responsible for such decisions. The law requires that those decisions be informed, and therefore balanced." (*Goleta II, supra*, 52 Cal.3d at p. 576.) The OCII Commission determines that the following significant impacts on the environment, as reflected in the FSEIR, are unavoidable, but under Public Resources Code Section 21081, subdivisions (a)(3) and (b), and CEQA Guidelines 15091, subdivision (a)(3), 15092, subdivision (b)(2)(B), and 15093, the OCII Commission determines that the impacts are acceptable due to the overriding considerations described in Section VI below. This finding is supported by substantial evidence in the record of this proceeding.

#### **A. Transportation and Circulation**

**1. Impact TR-2: Effects on Vehicle Traffic on Multiple Intersections without SF Giants game.** (GSW DSEIR p. 5.2-117; FSEIR, Chapter 12; Response TR-2; Response TR-4; Response TR-12.) The Project would result in significant traffic impacts at seven intersections that would operate at LOS E or LOS F under Existing plus Project conditions without a SF Giants game at AT&T Park. These include the intersections of King/Fourth Streets, Fifth/Harrison Streets/I-280 westbound off-ramp, Fifth/Bryant

Streets/I-280 eastbound on-ramp, Third/Channel Streets, Fourth/Channel Streets, Seventh Street/Mission Bay Drive, and Seventh/Mississippi/16th Streets. Mitigation Measure M-TR-2a: Additional PCOs during Events would reduce the Project's impacts related to event-related traffic conditions, and would not result in secondary transportation-related impacts, but would not reduce impacts to less-than-significant levels. Mitigation Measure M-TR-2b: Additional Strategies to Reduce Transportation Impacts would require the Project Sponsor to work with the City to pursue and implement commercially reasonable strategies to reduce transportation impacts. The measures identified above would reduce traffic congestion in the Project vicinity and would not result in secondary transportation impacts. However, even with implementation of these measures, the arrival and departure peak of vehicle trips to and from the event center through these intersections would continue to occur, and therefore, the Project's significant traffic impacts would remain significant and unavoidable with mitigation.

The Project would result in significant and unavoidable impacts at intersections not previously identified in the Mission Bay FSEIR due to event-related vehicles that would result in exceedance of the intersection LOS threshold. Mission Bay FSEIR Mitigation Measures 47a - 47c, and 47e - 47i would minimize traffic impacts but would not reduce them to less-than-significant levels, and traffic impacts would remain significant and unavoidable with mitigation.

**Mitigation Measure M-TR-2a: Additional PCOs during Events**

**Mitigation Measure M-TR-2b: Additional Strategies to Reduce Transportation Impacts**

**Mission Bay FSEIR Mitigation Measure E.47: Transportation System Management Plan**

**2. Impact TR-3: Effect of Project on Traffic Volumes at Freeway Ramps without SF Giants game.** (GSW DSEIR p. 5.2-132; RTC, Response TR-2; Response TR-4; Response TR-12.) The Project would result in significant traffic impacts at the I-80 eastbound on-ramp at Fifth/Bryant Streets that would operate at LOS E or LOS F under Existing plus Project conditions without a SF Giants game at AT&T Park. Mitigation Measure M-TR-2b: Additional Strategies to Reduce Transportation Impacts would help reduce the Project traffic increase on regional freeway mainline and ramps. However, the reduction in Project-generated vehicle trips would not reduce impacts to less-than-significant levels. Thus, for these reasons, the Project's impacts related to freeway ramp operations would be significant and unavoidable with mitigation.

**Mitigation Measure M-TR-2b: Additional Strategies to Reduce Transportation Impacts.**

**3. Impact TR-5: Effect of Project Regional Transit Service Demand without SF Giants game.** (GSW DSEIR p. 5.2.144, RTC, Response TR-2; Response TR-5; Response TR-12.) The Project would result in a substantial increase in transit demand that could not be accommodated by regional transit capacity such that significant adverse impacts to regional transit service would occur under Existing plus Project conditions without a SF Giants game at AT&T Park. Implementation of Mitigation Measure M-TR-5a: Additional Caltrain Service and Mitigation Measure M-TR-5b: Additional North Bay Ferry and/or Bus would help reduce or minimize the severity of the capacity utilization exceedances for the regional transit service providers, and would not result in secondary transportation impacts. However, since the provision of additional South Bay and North Bay service is uncertain and full funding for the service has not yet been identified, the Project's significant impacts remain significant and unavoidable with mitigation.

**Mitigation Measure M-TR-5a: Additional Caltrain Service**

**Mitigation Measure M-TR-5b: Additional North Bay Ferry and/or Bus Service**

**4. Impact TR-11: Effect of Project Traffic at Multiple Intersections with SF Giants game.** (GSW DSEIR p. 5.2-171; RTC, Response TR-2; Response TR-4; Response TR-12.) On days with overlapping evening events at the project site and at AT&T Park, intersections in the Project vicinity would become more congested prior to and following the events, and the Project would result in significant traffic impacts at the following ten study intersections: King/Fifth/I-280 ramps, Fifth/Harrison Streets/I-80 westbound off-ramp, Fifth/Bryant Streets/I-80 eastbound on-ramp, Third/South Streets, Seventh Street/Mission Bay Drive, Fourth/16th Streets, Owens/16th Streets, Seventh/Mississippi/16th Streets, Illinois/Mariposa Streets, and Mariposa Street/I-280 northbound off-ramp. Implementation of Mitigation Measure M-TR-2b: Additional Strategies to Reduce Transportation Impacts, Mitigation Measure M-TR-11a: Additional PCOs during Overlapping Events, and Mitigation Measure M-TR-11b: Participation in the Ballpark/Mission Bay Transportation Coordinating Committee would minimize the severity of traffic impacts at these intersections and would not result in secondary transportation impacts, but would not improve intersection LOS to LOS D or better. Thus, traffic impacts at the ten study intersections would remain significant and unavoidable with mitigation.

In addition to the mitigation measures described above, Mitigation Measure M-TR-11c: Additional Strategies to Reduce Transportation Impacts of Overlapping Events would require the Project Sponsor to continue to work with the City to pursue and implement additional strategies to reduce transportation impacts. One potential strategy involves using off-site parking lot(s) south of the event center and providing shuttles to the event center if the location of off-site parking is not within walking distance to the event center;

but regardless, secondary traffic impacts associated with Mitigation Measure M-TR-11c, involving the use of one or more off-site parking lot(s) would contribute to the same significant and unavoidable impact (with mitigation) that would be caused by the Project-generated traffic described in the first paragraph in this impact statement above. With implementation of off-site parking lots during overlapping events as part of Mitigation Measure M-TR-11c, the significant traffic impacts identified above at the intersections of Fourth/16th Streets and Mariposa Street/I-280 northbound off-ramp would not occur, and instead a significant and unavoidable traffic impact would occur at the intersection of Pennsylvania/Cesar Chavez Streets/I-280 northbound off-ramp. Thus, with implementation of off-site parking lots during overlapping events as part of Mitigation Measure M-TR-11c, significant traffic impacts would occur at nine rather than ten intersections; however, impacts in the Project vicinity during overlapping evening events at the project site and at AT&T Park would remain significant and unavoidable with mitigation.

**Mitigation Measure M-TR-2b: Additional Strategies to Reduce Transportation Impacts**

**Mitigation Measure M-TR-11a: Additional PCOs During Overlapping Events**

**Mitigation Measure M-TR-11b: Regular Participation in Ballpark/Mission Bay Transportation Coordinating Committee**

**Mitigation Measure M-TR-11c: Additional Strategies to Reduce Transportation Impacts of Overlapping Events**

**5. Impact TR-12: Effect of Project Traffic at Freeway Ramps with SF Giants game.** (GSW DSEIR p. 5.2-180; RTC, Response TR-2; Response TR-4; Response TR-12.) The Project, under the Basketball Game scenario with an overlapping SF Giants evening game at AT&T Park, would result in a significant impact at the I-80 westbound off-ramp at Fifth/Harrison Streets during the weekday evening and Saturday evening peak hours (i.e., attendees driving to San Francisco from the East Bay), and at the I-280 northbound off-ramp at Mariposa Street during the weekday evening peak hour (i.e., attendees driving to the event center and AT&T Park from the south of the project site). The Project would also result in a significant impact at the I-80 eastbound on-ramp at Fifth/Bryant Streets during the weekday late evening peak hour (i.e., attendees returning to the East Bay). As discussed in Impact TR-3 for conditions without an overlapping SF Giants evening game, no feasible mitigation measures are available for the freeway ramp impacts because there is insufficient physical space for additional capacity without redesign of the I-80 and I-280 ramps and mainline structures, which may require acquisition of additional right-of-way; and other potential measures would not adequately

address the short-term peak travel patterns associated with special events. Mitigation Measure M-TR-2b: Additional Strategies to Reduce Transportation Impacts and Mitigation Measure M-TR-11c: Additional Strategies to Reduce Transportation Impacts of Overlapping Events would reduce the Project traffic increase on regional freeway mainline and ramps. However, the mitigation measures would not reduce impacts related to freeway ramp operations to less-than-significant levels. Thus, for these reasons, the Project's impacts related to freeway ramp operations would be significant and unavoidable with mitigation.

**Mitigation Measure M-TR-2b: Additional Strategies to Reduce Transportation Impacts**

**Mitigation Measure M-TR-11c: Additional Strategies to Reduce Transportation Impacts of Overlapping Events**

**6. Impact TR-14: Effect of Project on Regional Transit Demand with SF Giants game.** (GSW DSEIR p. 5.2-184, RTC, Response TR-2; Response TR-4; Response TR-12.) Under existing plus Project conditions with an overlapping SF Giants evening game at AT&T Park, the Project would result in significant Project-specific transit impacts to East Bay, North Bay and South Bay transit service. Implementation of Mitigation Measure M-TR-5a: Additional Caltrain Service, Mitigation Measure M-TR-5b: Additional North Bay Ferry and Bus Service, and Mitigation Measure M-TR-14: Additional BART Service to the East Bay during Overlapping Events would reduce or minimize the severity of the capacity utilization exceedances for the regional transit service providers, and would not result in secondary transportation impacts. However, since the provision of additional South Bay, North Bay and BART service is uncertain and full funding for the service has not yet been identified, the mitigation measures would not reduce the impact to a less-than-significant level. Accordingly, the Project's significant impacts to regional transit demand would be significant and unavoidable with mitigation.

**Mitigation Measure M-TR-5a: Additional Caltrain Service during Events**

**Mitigation Measure M-TR-5b: Additional North Bay Bus and Ferry Service during Events**

**Mitigation Measure M-TR-14: Additional BART Service to the East Bay during Overlapping Events**

**7. Impact TR-18. Effect of Project on Traffic Without Muni Special Event Transit Service Plan.** (GSW DSEIR p. 5.2-191, RTC, Response TR-2.) The Project without implementation of the Muni Special Event Transit Service Plan would result in significant traffic impacts at the following additional study intersections, or analysis

periods: Third/Channel Streets (weekday late evening), Fourth/Channel Streets (Saturday evening), Seventh Street/Mission Bay Drive (weekday late evening), Illinois/Mariposa Streets (weekday evening, Saturday evening), and Owens/16th Streets (weekday late evening). Mitigation Measure M-TR-2a: Additional PCOs during Events, Mitigation Measure M-TR-2b: Additional Strategies to Reduce Transportation Impacts, and Mitigation Measure M-TR-18: Auto Mode Share Performance Standard and Monitoring, would reduce the severity of the impact and would not result in secondary transportation impacts. Even with implementation of the mitigation measures, however, the Project's traffic impacts would remain significant and unavoidable with mitigation.

**Mitigation Measure M-TR-2a: Additional PCOs during**

**Mitigation Measure M-TR-2b: Additional Measures to Reduce Transportation Impacts**

**Mitigation Measure M-TR-18: Auto Mode Share Performance Standard and Monitoring**

**8. Impact TR-19: Effect of Project Traffic on Freeway Ramps Without Muni Special Event Transit Service Plan.** (GSW DSEIR p. 5.2-197.) The Project without implementation of the Muni Special Event Transit Service Plan would result in significant traffic impacts at the following three additional freeway ramp locations: I-80 eastbound on-ramp at Fifth/Bryant Streets (weekday late evening), I-80 westbound off-ramp at Fifth/Harrison Streets (Saturday evening), I-280 northbound off-ramp at Mariposa Street (weekday evening). Mitigation Measure M-TR-2b: Auto Mode Share Performance Standard and Monitoring, and Mitigation Measure M-TR-18: Auto Mode Share Performance Standard and Monitoring, would reduce the severity of the impact, and would not result in secondary transportation impacts. Even with implementation of the mitigation measures, however, the Project's impacts related to freeway ramp operations would remain significant and unavoidable with mitigation.

**Mitigation Measure M-TR-2b: Additional Measures to Reduce Transportation Impacts**

**Mitigation Measure M-TR-18: Auto Mode Share Performance Standard and Monitoring**

**9. Impact TR-20: Effect of Project Transit Demand Without Muni Special Event Transit Service Plan.** (GSW DSEIR p. 5.2-199; RTC, Response TR-2; Response TR-5.) Under existing plus Project conditions without the Muni Special Event Transit Service Plan, the Project would result in significant Project-specific transit impacts, as follows: T Third during the weekday evening, weekday late evening, and Saturday evening peak hours; 22 Fillmore during the weekday late evening; and Saturday evening

peak hours. Mitigation Measure M-TR-18: Auto Mode Share Performance Standard and Monitoring would reduce the severity of the impact, and would not result in secondary transportation impacts. Even with implementation of this mitigation measure, however, the Project's impacts related to transit operations would remain significant and unavoidable with mitigation.

**Mitigation Measure M-TR-18: Auto Mode Share Performance Standard and Monitoring**

**10. Impact TR-21: Effect of Project Regional Transit Demand Without Muni Special Event Transit Service Plan.** (GSW DSEIR p. 5.2-202, RTC, Response TR-2.) Under existing plus Project conditions without a SF Giants game at AT&T Park and without the Muni Special Event Transit Service Plan, the Project would result in significant Project-specific transit impacts on WETA and Golden Gate Transit service during the weekday late evening peak hours. Implementation of Mitigation Measure M-TR-5a: Additional Caltrain Service and Mitigation Measure M-TR-5b: Additional North Bay Ferry and Bus Service would reduce or minimize the severity of the impact, but not to a less than significant level. Accordingly, the Project's significant impacts to regional transit capacity would remain significant and unavoidable with mitigation.

**Mitigation Measure M-TR-5a: Additional Caltrain Service**

**Mitigation Measure M-TR-5b: Additional North Bay Ferry and Bus Service**

**B. Noise**

**1. Impact NO-5: Noise Impacts from Project Traffic and Crowd Noise.** (GSW DSEIR p. 5.3-32; RTC, Response NOI-2; Response NOI-3; Response NOI-6.) Noise levels generated by crowds prior to, during, and after events could result in a substantial increase in noise levels at the receptor adjacent to the northbound Muni T-Line transit platform, particularly during nighttime egress hours of 9 p.m. to 11 p.m., and this impact would be significant and unavoidable. Operation of the Project would introduce new mobile noise sources that would contribute to ambient noise levels in the Project vicinity. Increases in roadway traffic noise would be significant and unavoidable during events either with or without implementation of the Muni Special Event Transit Service Plan, even with implementation of Mitigation Measure M-TR-2b: Additional Strategies to Reduce Transportation Impacts and Mitigation Measure M-TR-11c: Additional Strategies to Reduce Transportation Impacts of Overlapping Events. Therefore, the Project's effect on crowd and traffic noise remains significant and unavoidable with mitigation.

**Mitigation Measure M-TR-2c: Additional Strategies to Reduce Transportation Impacts**

## **Mitigation Measure M-TR-11c: Additional Strategies to Reduce Transportation Impacts of Overlapping Events**

### **C. Air Quality**

#### **1. Impact AQ-1: Impacts of Criteria Air Pollutants from Construction**

**Activities.** (GSW DSEIR p. 5.4-28; FSEIR, Chapter 12, Sections 12.2.3, 12.3.2; Response AQ-1; Response AQ-2; Response AQ-3; Response AQ-4; Response AQ-6; Response PD-3.) Construction of the Project would generate emissions of fugitive dust and criteria air pollutants. The Project Sponsor, through its contractors, would be required to implement dust control measures in compliance with the requirements of the Construction Dust Control Ordinance, which would ensure that the construction-related impacts due to fugitive dust would be less than significant.

Estimated emissions of criteria air pollutants indicate that average daily construction emissions of PM<sub>10</sub> and PM<sub>2.5</sub> would be below the applicable thresholds. Emissions of ROG and NO<sub>x</sub>, however, would exceed the applicable significance thresholds. Implementation of Mitigation Measure M-AQ-1: Construction Emissions Minimization would reduce ROG and NO<sub>x</sub> emissions, but additional implementation of Mitigation Measure M-AQ-2b: Emission Offsets would be further required to reduce NO<sub>x</sub> emissions to below the applicable threshold. However, because implementation of emissions offsets is dependent in part on the actions of a third party and a specific emission offset project has not yet been identified, this measure is not fully within the control of the Project Sponsor. As such, the impact related to regional emissions of criteria pollutants during construction is conservatively considered significant and unavoidable with mitigation.

#### **Mitigation Measure M-AQ-1: Construction Emissions Minimization**

#### **2. Impact AQ-2: Impacts of Criteria Air Pollutants from Project Operations.**

(GSW DSEIR p. 5.4-37, FSEIR, Chapter 12, Section 12.2.1; Response AQ-1; Response AQ-4; Response AQ-6; Response AQ-7.) Operation of the Project would include a variety of sources that would contribute to long term emissions of criteria air pollutants (ROG, NO<sub>x</sub>, PM<sub>10</sub>, and PM<sub>2.5</sub>). These sources would include new vehicle trips, maintenance and operation of standby diesel generators, boilers, and area sources such as landscape equipment and use of consumer products. Calculations of average daily and maximum annual emissions indicate that the Project without mitigation would result in levels of ROG and NO<sub>x</sub> that would exceed significance thresholds; this would be a significant impact. Mitigation Measures M-AQ-2a: Reduce Operational Emissions, and Mitigation Measure M-AQ-2b: Emission Offsets would reduce the severity of the impact. However, this impact is conservatively considered significant and unavoidable with mitigation because implementation of an emissions offset project is dependent in part on

the actions of a third party and a specific emission offset project has not yet been identified, beyond the control of the Project Sponsor.

**Mitigation Measure M-AQ-2a: Reduce Operational Emissions**

**Mitigation Measure M-AQ-2b: Emission Offsets**

**Mitigation Measure M-TR-2b: Additional Strategies to Reduce Transportation Impacts**

**Mitigation Measure M-TR-11c: Additional Strategies to Reduce Transportation Impacts of Overlapping Events**

**IVA. SIGNIFICANT CUMULATIVE IMPACTS THAT CANNOT BE AVOIDED OR REDUCED TO A LESS-THAN-SIGNIFICANT LEVEL**

**A. Transportation and Circulation**

**1. Impact C-TR-2: Project Traffic Contribution to Cumulative Impacts at Multiple Intersections.** (GSW DSEIR p. 5.2-212; RTC, Response TR-2.) Overall, combined for all analysis peak hours, the Project would result in cumulative impacts, or contribute to 2040 cumulative impacts at the following 16 study intersections: King/Third Streets, King/Fourth Streets, King/Fifth Streets/I-280 ramps, Fifth/Harrison Streets/I-80 westbound off-ramp, Fifth/Bryant Streets/I-80 eastbound on-ramp, Third/Channel Streets, Fourth/Channel Streets, Seventh Street/Mission Bay Drive, Third/South Streets, Third/16th Streets, Fourth/16th Streets, Owens/16th Streets, Seventh/Mississippi/16th Streets, Illinois/Mariposa Streets, Mariposa Street/I-280 northbound off-ramp, and Third/Cesar Chavez Streets. As noted above, the Project would result in Project-specific impacts or contribute considerably to cumulative impacts at nine intersections during the weekday p.m. peak hour, and at the eight intersections during the Saturday evening peak hour. Implementation of Mitigation Measure M-TR-2a: Additional PCOs during Events, Mitigation Measure M-TR-2b: Additional Strategies to Reduce Transportation Impacts, Mitigation Measure M-TR-11a: Additional PCOs During Overlapping Events, Mitigation Measure M-TR-11b: Participation in Ballpark/Mission Bay Transportation Coordinating Committee, and Mitigation Measure M-TR-11c: Additional Strategies to Reduce Transportation Impacts of Overlapping Events would reduce the Project's contribution to cumulative impacts related to event-related traffic conditions; however, these impacts would remain significant and unavoidable with mitigation.

With implementation of the off-site parking facilities as part of Mitigation Measure M-TR-11c, the Project would also result in cumulative impacts, or contribute to 2040 cumulative impacts at 16 study intersections; however, significant traffic impacts would not occur at the intersections of Fourth/16th Streets or Mariposa Street/I-280 northbound off-ramp, and

instead would occur at the intersections of Pennsylvania/Cesar Chavez Streets/I-280 northbound off-ramp and Pennsylvania Street/I-280 southbound off-ramp. Therefore, the Project's contribution to this 2040 cumulative impacts would remain significant and unavoidable with mitigation.

**Mitigation Measure M-TR-2a: Additional PCOs during**

**Mitigation Measure M-TR-2b: Additional Strategies to Reduce Transportation Impacts**

**Mitigation Measure M-TR-11a: Additional PCOs During Overlapping Events**

**Mitigation Measure M-TR-11b: Participation in Ballpark/Mission Bay Transportation Coordinating Committee**

**Mitigation Measure M-TR-11c: Additional Strategies to Reduce Transportation Impacts of Overlapping Events**

**2. Impact C-TR-3: Project Traffic Contribution to Cumulative Impacts at Freeway Ramps.** (GSW DSEIR p. 5.2-220; RTC, Response TR-2.) The Project, in combination with past, present, and reasonably foreseeable development in San Francisco, would contribute considerably to cumulative traffic impacts at three freeway ramps (i.e., I-80 eastbound on-ramp at Fifth/Bryant Streets, I-80 westbound off-ramp at Fifth/Harrison Streets, and I-280 southbound on-ramp at Mariposa Street). Implementation of Mitigation Measure M-TR-2b: Additional Strategies to Reduce Transportation Impacts and Mitigation Measure M-TR-11c: Additional Strategies to Reduce Transportation Impacts of Overlapping Events would reduce the Project's contribution to cumulative impacts related to event-related traffic conditions but would not mitigate the contribution to less-than-significant levels. Therefore, the Project's contribution to cumulative impacts at the ramp locations is considered significant and unavoidable with mitigation.

**Mitigation Measure M-TR-2b: Additional Strategies to Reduce Transportation Impacts**

**Mitigation Measure M-TR-11c: Additional Strategies to Reduce Transportation Impacts of Overlapping Events**

**3. Impact C-TR-5: Project Traffic Contribution to Cumulative Impacts to Regional Transit.** (GSW DSEIR p. 5.2-226; RTC, Response TR-2.) The Project would result in significant cumulative transit impacts to regional transit. Implementation of Mitigation Measure M-TR-5a: Additional Caltrain Service, Mitigation Measure M-TR-5b: Additional North Bay Ferry and Bus Service, and Mitigation Measure M-TR-14:

Additional BART Service to the East Bay during Overlapping Events would reduce or minimize the severity of the capacity utilization exceedances for the regional transit service providers, although not to less than significant levels. Accordingly, the Project's cumulative impacts to regional transit capacity would remain significant and unavoidable with mitigation.

**Mitigation Measure M-TR-5a: Additional Caltrain Service**

**Mitigation Measure M-TR-5b: Additional North Bay Ferry and Bus Service**

**Mitigation Measure M-TR-14: Additional BART Service to the East Bay During Overlapping Events**

**B. Noise**

**1. Impact C-NO-2: Project Contribution to Cumulative Impacts on Crowd and Traffic Noise.** (GSW DSEIR p. 5.3-42; RTC, Response NOI-2b.) Operation of the Project would contribute to ambient noise levels in the Project vicinity. Cumulative increases in roadway traffic noise would be significant and unavoidable during events even with implementation of Mitigation Measure M-TR-2b: Additional Strategies to Reduce Transportation Impacts and Mitigation Measure M-TR-11c: Additional Strategies to Reduce Transportation Impacts of Overlapping Events. Therefore, this impact would be significant and unavoidable with mitigation.

**Mitigation Measure M-TR-2b: Additional Strategies to Reduce Transportation Impacts**

**Mitigation Measure M-TR-11c: Additional Strategies to Reduce Transportation Impacts of Overlapping Events**

**C. Air Quality**

**1. Impact C-AQ-1: Project Contribution to Regional Air Quality Impacts.** (GSW DSEIR p. 5.4-55; FSEIR, Chapter 12, Sections 12.2.1, 12.2.3, 12.3.2; Response AQ-1; Response AQ-2; Response AQ-3; Response AQ-4; Response AQ-6; Response AQ-7.) The analysis of construction-related and operational criteria pollutant impacts (Impact AQ-1 and Impact AQ-2, respectively) assesses whether the Project would be considered to result in a cumulatively considerable contribution to regional and localized air quality impacts. Mitigation Measure M-AQ-1: Construction Emissions Minimization, Mitigation Measure M-AQ-2a: Reduce Operational Emissions, and Mitigation Measure M-AQ-2b: Emission Offsets would reduce the Project's contribution to the cumulative impact, although it cannot be certain that Project's contribution would be reduced to less than cumulatively considerable. Therefore, this impact would be significant and unavoidable with mitigation.

### **Mitigation Measure M-AQ-1: Construction Emissions Minimization**

### **Mitigation Measure M-AQ-2a: Reduce Operational Emissions**

### **Mitigation Measure M-AQ-2b: Emission Offsets**

## **D. Utilities and Service Systems**

**1. Impact C-UT-2: Wastewater Treatment Capacity** (GSW DSEIR p. 5.7-16; RTC, Response UTIL-3; Response UTIL-4; Response UTIL-5; Response UTIL-6.) The SFPUC has determined that the Project in combination with full build out of Mission Bay South would result in wastewater flows that could exceed the capacity of the Mariposa Pump Station and associated force mains and conveyance piping. Therefore, improvements to the Mariposa Pump Station and associated facilities would be required to accommodate the cumulative wastewater flows. While temporary or interim measures to accommodate the flows would not result in significant environmental effects because they would be operational or internal to the pump stations, construction of the permanent improvements could potentially result in significant environmental effects. Because specific plans and design for permanent pump station improvements and associated force mains and conveyance piping have not been finalized and CEQA environmental review has not been completed, it is not possible at this time to conclude whether impacts resulting from these improvements could be mitigated to a less than significant level. Furthermore, implementation of any improvements to the City's pump stations and force mains is outside of the Project Sponsor's control and there is uncertainty in timing as to when the SFPUC will be able to complete the necessary capacity improvements. Therefore, this would be a significant and unavoidable impact related to requiring construction of new wastewater facilities or the expansion of existing wastewater facilities in the Mariposa sub-basin the construction of which could cause significant environmental impacts, with no feasible mitigation available to the Project Sponsor.

Cumulative wastewater flows could also exceed the capacity of the Mission Bay Sanitary Pump Station, resulting in a significant impact related to construction and/or expansion of related wastewater facilities. However, the Project's contribution would not be cumulatively considerable (i.e., it would be less than significant) because the Mission Bay Sanitary Pump Station was designed to accommodate 0.29 mgd of wastewater flows from the project site, and the Project would discharge only 0.182 mgd to the pump station which would be within the remaining capacity at the pump station. Even so, for the reasons mentioned in the first paragraph above, impacts relating to the construction of expanded wastewater treatment capacity would be significant and unavoidable.

**2. Impact C-UT-4: Wastewater Demand** (GSW DSEIR p. 5.7-19; RTC, Response UTIL-5.) The SFPUC has determined that there is currently inadequate capacity to serve the Project's wastewater demand in combination with anticipated increased wastewater

flows from other projects (including UCSF's demand and other reasonably foreseeable development). The impact analysis determined that the Project's contribution to this impact would be cumulatively considerable, and therefore, this cumulative impact on the wastewater system was determined to be significant and unavoidable with mitigation. Implementation of Mitigation Measure M-C-UT-4, Fair Share Contribution for Pump Station Upgrades, would offset the Project's contribution to this impact. The measure would require the Project Sponsor to contribute its fair share to the SFPUC for the required improvements to the Mariposa Pump Stations and associated wastewater facilities. However, because the necessary improvements have not been completely defined and implementation of the improvements to the City's wastewater system is outside of the Project Sponsor's control, this impact would be significant and unavoidable with mitigation.

**Mitigation Measure M-C-UT-4: Fair Share Contribution for Mariposa Pump Station Upgrades**

## **V. EVALUATION OF ALTERNATIVES**

This section describes the Project as well as the Project alternatives (the "Alternatives") and the reasons for approving the Project and for rejecting the Alternatives. This section also outlines the project objectives and provides a context for understanding the reasons for selecting or rejecting alternatives.

CEQA mandates that an EIR evaluate a reasonable range of potentially feasible alternatives to a proposed Project or the Project location that would meet most of the project objectives while reducing or avoiding any of the significant environmental impacts of the proposed Project. CEQA requires that every EIR also evaluate a "No Project" alternative. Alternatives provide a basis of comparison to the Project in terms of their significant impacts and their effectiveness in meeting project objectives. This comparative analysis is used to consider reasonable, potentially feasible options for minimizing the significant environmental impacts of the Project.

After an extensive alternative screening and selection process, OCII selected three alternatives, in addition to the Project, to carry forward for detailed analysis in the GSW SEIR:

- Alternative A: No Project Alternative
- Alternative B: Reduced Intensity Alternative
- Alternative C: Off-site Alternative at Piers 30-32 and Seawall Lot 330

These alternatives adequately represent a range of potentially feasible alternatives to the Project as required under CEQA.

The GSW SEIR also analyzed two Project variants:

- Third Street Plaza Variant

- Muni UCSF/Mission Bay Station Variant

The GSW DSEIR noted that the Third Street Plaza Variant also served as an alternative to the Project because it would meet all of the project objectives and would lessen or avoid a significant environmental impact of the Project. Specifically, the Third Street Plaza Variant would lessen or avoid the Project's potential wind impacts, which the GSW DSEIR conservatively identified as significant and unavoidable with mitigation. After publication of the GSW DSEIR, the Project Sponsor identified minor refinements that have been incorporated into the Project that will reduce the Project's wind impacts to less than significant with mitigation. Therefore, because the Third Street Plaza Variant no longer lessens or avoids a significant environmental impact of the Project, it is now properly treated as a Project variant, and not a true alternative to the Project. As explained above, the environmental impacts of the Project and the Third Street Plaza Variant would be the same and the same mitigation measures would apply, except that no mitigation would be required to reduce wind impacts of the Third Street Plaza Variant to a less than significant level. As further explained above, OCII is approving the Project so either the Project or the Third Street Plaza Variant may be implemented by the Project Sponsor, at the sponsor's election.

The GSW FSEIR noted that the Muni UCSF/Mission Bay Station Variant would result in an incremental noise reduction at Hearst Tower, and therefore, an incremental reduction in the crowd noise impact identified in the GSW DSEIR as significant and unavoidable. Even with the incremental reduction, however, the Project could still result in a substantial increase in noise levels and the incremental reduction would not be sufficient to reduce the impact to a less-than-significant level. In any event, as explained above, the Muni UCSF/Mission Bay Station Variant has been incorporated into the Project approved by OCII and thus need not be discussed in this section.

#### **A. Reasons for Selection of the Project**

The Project will meet all of the Project Objectives identified above in Section IC, and will provide numerous public benefits as explained in greater detail in Section VI.

- 1. Construct a state-of-the-art multi-purpose event center in San Francisco that meets NBA requirements for sports facilities, can be used year-round for sporting events and entertainment and convention purposes with events ranging in capacity from approximately 3,000-18,500, and expands opportunities for the City's tourist, hotel and convention business.*

The Project includes the construction of a state-of-the-art multi-purpose event center in San Francisco that meets NBA requirements for sports facilities, can be used year-round for sporting events and entertainment and convention purposes with events ranging in capacity from approximately 3,000-18,500. Although the event center is one of the smallest venues used by

NBA basketball teams, it meets the NBA's requirements and will provide sufficient capacity to meet the market demand for Golden State Warriors basketball games. Further, the event center will provide sufficient capacity to accommodate a variety of desirable events, including other sporting events, small and large concerts and shows, conventions and conferences, and other family events. No similar-sized event center currently exists in San Francisco, so the construction of the event center will attract events to the City that cannot be accommodated by other venues. By providing a state-of-the-art event center that can accommodate a wide variety of small- and large-scale events, including Warriors basketball games, the Project will benefit City residents and expand opportunities for the City's tourist, hotel and convention business.

- 2. Provide sufficient complementary mixed-use development, including office and retail uses, to create a lively local and regional visitor-serving destination that is active year-round, promotes visitor activity and interest during times when the event center is not in use, provides amenities to visitors of the event center as well as the surrounding neighborhood, and allows for a financially feasible project.*

The Project provides sufficient complementary mixed-use development to create a lively local and regional visitor-serving destination that is active year-round. In addition to the event center, the Project includes a mix of office use, retail, and open space that will promote visitor activity and interest during times when the event center is not in use, and provide amenities to visitors of the event center as well as the surrounding neighborhood. The Project is also financially feasible for the Project Sponsor and will provide substantial tax revenue available for OCII to support the construction of affordable housing, parks and open space, and critical utility, water quality, and transportation infrastructure.

- 3. Develop a project that meets high-quality urban design and high-level sustainability standards.*

The Project meets high-quality urban design and high-level sustainability standards. The Project is designed to Leadership in Energy and Environmental Design ("LEED®") Gold standards and incorporates a variety of design features to provide energy and water conservation and efficiency, encourage alternative transportation, promote a healthy indoor environment, minimize waste, and maximize recycling opportunities.

- 4. Optimize public transit, pedestrian and bicycle access to the site by locating the project within walking distance to local and regional transit hubs, and adjacent to routes that provide safe and convenient access for pedestrians and bicycles.*

The Project is located in an urban infill area in Mission Bay, immediately adjacent to local transit stops and less than a mile from other regional transit resources, including Caltrain, Bay Area

Rapid Transit, AC Transit, Golden Gate Transit, other regional carriers. The Project will also implement a number of off-site roadway network and curb regulations, and transit network, pedestrian and bicycle network improvements in the project site vicinity, including roadway restriping, intersection signalization, on-street parking, new perimeter sidewalks, bicycle lanes, signage and other improvements.

Further, as part of the Project, the Project Sponsor prepared and will implement a TMP. The TMP is a management and operating plan to facilitate multimodal access at the event center during Project operation. The TMP includes various management strategies designed to reduce use of single-occupant vehicles and to increase the use of rideshare, transit, bicycle, and walking for trips to and from the project site.

5. *Provide adequate parking and vehicular access that meets NBA and project sponsor's reasonable needs for the event center and serves the needs of project visitors and employees, while encouraging the use of transit, bicycle, and other alternative modes of transportation.*

The Project provides adequate parking and vehicular access that meets NBA and the Project Sponsor's reasonable needs for the event center and serves the needs of Project visitors and employees, while encouraging the use of transit, bicycle, and other alternative modes of transportation.

6. *Provide the City with a world class performing arts venue of sufficient size to attract those events which currently bypass San Francisco due to lack of a world class 3,000-4,000 seat facility.*

The Project will provide the City with a world class performing arts venue of sufficient size to attract those events which currently bypass San Francisco due to the limited availability of such world class facilities. The City is currently unable to attract or accommodate certain events because there are no venues in the city with the flexibility for such small or large seating capacities that can accommodate such events. With the event center, the City will be able to accommodate such events, for which there is a high demand in the City.

7. *Develop a project that promotes environmental sustainability, transportation efficiency, greenhouse gas reduction, stormwater management using green technology, and job creation consistent with the objectives of the California Jobs and Economic Improvement Through Environmental Leadership Act (AB 900), as amended.*

The Project will promote environmental sustainability, transportation efficiency, greenhouse gas reduction, stormwater management using green technology, and job creation consistent with the

objectives of the California Jobs and Economic Improvement Through Environmental Leadership Act (AB 900), as amended.

The Project also meets the major redevelopment objectives of the Mission Bay South Redevelopment Plan. These major redevelopment objectives are also the primary objectives of the Mission Bay South Redevelopment Plan as set forth in the Mission Bay FSEIR. (GSW DSEIR, p. 3-4.)

1. Eliminating blighting influences and correcting environmental deficiencies in the Plan Area, including, but not limited to, abnormally high vacancies, abandoned buildings, incompatible land uses, depreciated or stagnant property values, and inadequate or deteriorated public improvements, facilities and utilities.
2. Retaining and promoting, within the City and County of San Francisco, academic and research activities associated with the University of California San Francisco ("UCSF"), which seeks to provide space for existing and new programs and consolidate academic and support units from many dispersed sites at a single major new site which can accommodate the 2,650,000 square foot program analyzed in the UCSF Long Range Development Plan.
3. Assembling land into parcels suitable for modern, integrated development with improved pedestrian and vehicular circulation in the Plan Area.
4. Replanning, redesigning and developing undeveloped and underdeveloped areas which are improperly utilized.
5. Providing flexibility in the development of the Plan Area to respond readily and appropriately to market conditions.
6. Providing opportunities for participation by owners in the redevelopment of their properties.
7. Strengthening the community's supply of housing by facilitating economically feasible, affordable housing through installation of needed site improvements and expansion and improvement of the housing supply by the construction of up to approximately 3,440 very low-, low- and moderate-income and market-rate units, including approximately 1,100 units of very low-, low- and moderate-income housing.
8. Strengthening the economic base of the Plan Area and the community by strengthening retail and other commercial functions in the Plan Area through the addition of up to

approximately 335,000 Leasable square feet of retail space and a hotel of up to 500 rooms and associated uses, depending on the amount of residential uses constructed in the Hotel land use district, and about 5,953,600 Leasable square feet of mixed office, research and development and light manufacturing uses.

9. Facilitating emerging commercial-industrial sectors including those expected to emerge or expand due to their proximity to the UCSF new site, such as research and development, bio-technical research, telecommunications, business service, multi-media services, and related light industrial, through improvement of transportation access to commercial and industrial areas, improvement of safety within the Plan Area, and the installation of needed site improvements to stimulate new commercial and industrial expansion, employment, and economic growth.
10. Facilitating public transit opportunities to and within the Plan Area to the extent feasible.
11. Providing land in an amount of approximately 41 acres for a variety of publicly accessible open spaces.
12. Achieving the objectives described above in the most expeditious manner feasible.

The Project is consistent with all of the above major redevelopment project objectives. The successful completion of the Plan Area is dependent on economically feasible land uses, such as the Project, that will provide the revenues to repay the bonded indebtedness used to build the public infrastructure for the area. The Project will improve underutilized blocks within the Plan Area and will provide substantial economic benefits within the Plan Area.

The area surrounding the Project has already been substantially built out with commercial, industrial and other uses. Construction of the Project would develop one of the few remaining vacant and under-utilized parcels in this area. In doing so, the Project would secure the Property, increase the diversity of uses in the area, contribute towards creating an attractive and interesting urban environment, and reduce the need for Plan Area residents and employees to drive to reach retail, food, and recreation resources. There are few existing retail, restaurant, and entertainment uses within the Plan Area; by including those uses, the Project would contribute vitality to Mission Bay's street life and activate its pedestrian realms, which would generally benefit Mission Bay including the employees, students, and visitors that use the UCSF campus.

Furthermore, the Project includes implementation of several improvements to the existing public transit network and open space near the Property. For example, the Project will provide expanded Mission Bay Transportation Management Association ("TMA") shuttle service to increase frequency of, and the number of stops offered by, the shuttle service in Mission Bay

South. These shuttle service improvements would be an integrated part of the Mission Bay TMA network and would continue to be free of charge for all residents and employees in Mission Bay, regardless of their origin or destination. The Project would enhance Plan Area open space through the creation of a substantial public plaza and creation of enhanced public views, including the elevated view terrace located on the Bayfront Terrace and overlooking the Bayfront Park and the Bay beyond. The Project would also draw many more members of the public to the Plan Area, allowing a greater number of people to experience and enjoy the Bay, the shoreline parks and the Mission Bay open space.

## **B. Environmentally Superior Alternative**

CEQA Guidelines section 15126.6 requires that each EIR identify the “environmentally superior alternative” among those considered. If the No Project Alternative is identified as environmentally superior, then the EIR must also identify the environmentally superior alternative among the other alternatives. (CEQA Guidelines, § 15126.6, subd. (e)(2).)

As discussed in the SEIR, Alternative A, the No Project, would result in substantially less severe environmental impacts than the Project. However, per CEQA Guidelines Section 15126.6, if the environmentally superior alternative is the “no project” alternative, an EIR shall also identify an environmentally superior alternative among the other alternatives. The three remaining alternatives consist of the Reduced Intensity Alternative, the Off-site Alternative at Piers 30-32 and Seawall Lot 330, and the Third Street Plaza Variant. As discussed more fully below, *infra* Section VC, the Reduced Intensity Alternatives would result in somewhat less severe environmental impacts than the Project, including transportation, noise, air quality, and wastewater demand; however, this alternative would not avoid or substantially lessen any of the significant and unavoidable impacts that were identified for the Project. The Off-site Alternative at Piers 30-32 and Seawall Lot 330 would more effectively avoid and substantially reduce the severity of a number of significant impacts related to noise, air quality, and utilities that were identified for the Project; however, this alternative would result in substantially more severe significant impacts related to noise, vibration, and air quality, and also introduce new significant and unavoidable adverse impacts related to transportation and biological resources that would not occur under the Project. The Third Street Plaza Variant would have all of the same significant impacts as the Project.

Therefore, overall, the Reduced Intensity Alternative is considered the environmentally superior alternative, because it would reduce the severity of adverse environmental effects across a broad range of environmental resources and would not result in any new significant environmental impacts. (See also GSW DSEIR, pp. 7-99 – 7-109, 8-1 – 8-14.)

## **C. SEIR Alternatives Rejected and Reasons for Rejection**

The OCII Commission rejects the Alternatives set forth in the FSEIR, and listed below, because the OCII Commission finds that there is substantial evidence, including evidence of economic, legal, social, technological, and other considerations described in this section and elsewhere in the record on these proceedings under CEQA Guidelines section 15091, subdivision (a)(3), that make the Alternatives infeasible. In making these determinations, OCII is aware that CEQA defines “feasibility” to mean “capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, legal, and technological factors.” (Pub. Resources Code, § 21061.1; see also *Goleta II*, *supra*, 52 Cal.3d at p. 565.) OCII is also aware that under CEQA case law the concept of “feasibility” encompasses (i) the question of whether a particular alternative promotes the underlying goals and objectives of the project, and (ii) the question of whether an alternative is “desirable” from a policy standpoint to the extent that desirability is based on a reasonable balancing of the relevant economic, environmental, social, legal and technological factors. (See, e.g., *City of Del Mar*, *supra*, 133 Cal.App.3d at p. 417; *Sequoyah Hills Homeowners Assn. v. City of Oakland* (1993) 23 Cal.App.4th 704, 715; *CNPS*, *supra*, 177 Cal.App.4th at p. 1001.)

### **1. Alternative A: No Project Alternative**

Under the No Project Alternative, the Golden State Warriors organization would not relocate to San Francisco, and Blocks 29-32 in the Mission Bay South Plan Area would not be developed with the event center and mixed-use development described in Section I. Instead, it is assumed that in the short term, the Warriors organization would exercise its option to stay in Oakland, and accordingly, the team would continue to play its home games at Oracle Arena and lease their management offices and practice facility at the Oakland Convention Center in Oakland. Oracle Arena, built in 1966 and remodeled in 1996, is the oldest facility still in use by the NBA. Therefore, under this alternative, it is likely that the Warriors organization would either build a new arena at its current location or relocate and build a new facility in the long term in the Bay Area or elsewhere.

Currently, there are no other development proposals pending at Blocks 29-32, but given its prime location, existing entitlement, and ongoing development on similar sites adjacent to or near to Blocks 29-32, it is reasonable to expect that development at Blocks 29-32 would occur in the foreseeable future. Thus, the No Project Alternative does not assume that the project site at Blocks 29-32 would remain under its current vacant conditions, but rather that the site would be developed. Consistent with CEQA Guidelines Section 15126.6, subdivision (e)(2), this scenario represents what is reasonably expected to occur in the foreseeable future if the Project were not approved, based on current plans, available infrastructure, and community services. Specifically, the No Project Alternative assumes that Blocks 29-32 would be developed with another mixed-use development project consistent with the restrictions and controls established in the Mission Bay South Redevelopment Plan and the South Design for Development.

For the purposes of the GSW DSEIR, a hypothetical development scenario was developed that conforms to the Mission Bay South Redevelopment Plan and associated Design for Development, which allows all building to be a maximum of 90 feet in height, except for one 160-foot high tower on Block 29. The No Project Alternative assumes that approximately 1,056,000 gross square feet ("gsf") of commercial/industrial plus 31,700 gsf of retail uses would be developed at Blocks 29-32, for a total of 1,087,700 gsf. There would be no event center. The commercial/industrial uses would presumably consist of office and research/development uses, with a 13-story, 160-foot tall office tower located on Block 29 along Third Street and varying heights of office mid-rise buildings, all less than 90 feet in height, throughout Blocks 29, 30, 31, and 32. One- to two-story retail uses would be located at the corner of Third and South Streets on Block 29 and along the re-aligned Terry A. Francois Boulevard on Block 30. There would be two, above-grade, five- to five-and-a-half-story parking structures, one on South Street and one on 16th Street, with 1,050 parking stalls on-site, plus 132 spaces off-site at the South Street garage, for a total of 1,182 spaces. It is assumed that publicly accessible open spaces would be provided amidst the office buildings. Possible future uses for this hypothetical development scenario could include biotech uses, UCSF-related uses, or a wide variety of private or public uses that are allowed as principle uses under the Mission Bay South Redevelopment Plan.

This scenario assumes that no further CEQA environmental review would be required beyond the Mission Bay FSEIR and that no amendments to the Mission Bay South Redevelopment Plan or Design for Development would be needed, although OCII would make a final determination as to the need for supplemental CEQA environmental review or minor changes to Mission Bay planning documents on a project-specific basis.

The No Project Alternative is rejected as infeasible for the following reasons:

(a) Environmental Impacts: The No Project Alternative would result in similar impacts to those disclosed in the Mission Bay FSEIR and would be subject to all mitigation measures identified in the Mission Bay FSEIR applicable to Blocks 29-32. Many impacts of the No Project Alternative would also be similar to those of the Project. This is because many of the impacts would result from the conversion of a vacant parcel at this same location to a fully developed City block, regardless of the type of the development, and the same or similar mitigation or improvement measures identified for the Project would apply to the No Project Alternative. As explained in the GSW DSEIR, however, the No Project Alternative would reduce or avoid numerous significant impacts of the Project. (GSW DSEIR, pp. 7-32 to 7-46.) Overall, the No Project Alternative would result in substantially less severe environmental impacts than the Project but would fail to meet the basic objectives of the Project, as explained below.

(b) Project Objectives: This alternative would not meet, or would substantially reduce the ability to meet, the project objectives identified in the GSW FSEIR. The No Project Alternative would fail to achieve the primary objective of the Project Sponsor of constructing a new multi-purpose event center and home court for the Golden State Warriors NBA basketball team that

can be used year-round for sporting events and entertainment and convention purposes with events ranging in capacity from approximately 3,000-18,500 and expands opportunities for the City's tourist, hotel and convention business. Further, this alternative would not optimize or provide public transit, pedestrian, parking, and vehicular and bicycle access to an event center, nor would it provide the City with a 3,000 to 4,000 seat performing arts venue. Lastly, because the No Project Alternative would substantially reduce the scale of development at the site, the alternative would be substantially less effective than the Project in meeting the Project objective to "[p]rovide sufficient complementary mixed-use development, including office and retail uses, to create a lively local and regional visitor-serving destination that is active year-round, promotes visitor activity and interest during times when the event center is not in use, provides amenities to visitors of the event center as well as the surrounding neighborhood, and allows for a financially feasible project." As explained below, the reduction in development would generate far less revenue that could be used for purposes such as funding affordable housing, parks and open space, and critical utility, water quality, and transportation infrastructure.

(c) Other Feasibility and Policy Considerations:

The No Project Alternative includes a substantially reduced amount of development compared to the Project, which would substantially reduce the amount of tax increment bonds available to support the construction of affordable housing, parks and open space, and critical utility, water quality, and transportation infrastructure. Specifically, the No Project Alternative assumes that approximately 1,056,000 gsf of commercial/industrial plus 31,700 gsf of retail uses would be developed at Blocks 29-32, for a total of 1,087,700 gsf. The Project, by comparison, includes a total of 1,955,000 gsf of development. The property tax base, and therefore the tax increment bonding capacity, is driven directly by the construction costs associated with each project, as well as assumptions about whether those buildings are sold at market value, or remain on the tax rolls at construction value. As explained in greater detail below, the OCII Commission finds that reducing the intensity of development at the site to the levels proposed under the Reduced Intensity Alternative would substantially reduce the tax increment bonds available to OCII. The No Project Alternative includes even less development than the Reduced Intensity Alternative (1,087,700 total gsf for the No Project Alternative compared to 1,548,000 total gsf under the Reduced Intensity Alternative). Therefore, the OCII Commission finds that the No Project Alternative would substantially reduce the amount of tax increment bonds available to support the construction of affordable housing, parks and open space, and critical utility, water quality, and transportation infrastructure. OCII considers this to be an undesirable policy outcome, and one that (as mentioned above) would not be as effective as the Project in meeting the objective to "[p]rovide sufficient complementary mixed-use development, including office and retail uses, to create a lively local and regional visitor-serving destination that is active year-round, promotes visitor activity and interest during times when the event center is not in use, provides amenities to visitors of the event center as well as the surrounding neighborhood, and allows for a financially feasible project."

The OCII Commission rejects the No Project Alternative on each of these grounds independently. The OCII Commission finds each of these reasons to be sufficient independent grounds for rejecting the No Project Alternative as infeasible.

## **2. Alternative B: Reduced Intensity Alternative**

The Reduced Intensity Alternative was designed to reduce transportation and construction-related impacts that were identified for the Project. This alternative is identical to the Project with respect to the event center's design and siting on Blocks 29-32, but the mixed use development of commercial-industrial-retail uses throughout the rest of the site would be reduced in scale by 40 percent. The office uses would be reduced from 580,000 to 373,000 gsf, retail uses would be reduced from 125,000 to 75,000 gsf, and on-site, subgrade parking reduced from 950 to 750 stalls. The total development would be reduced from 1,955,000 to 1,673,000 gsf, or a reduction of 282,000 gsf. Reducing the size of the event center was considered, but was determined not to be potentially feasible due to the current standards of the NBA for professional basketball games, the current market demand for season tickets, and the likelihood that reducing the size or scale of the event center would not avoid or lessen the significant and unavoidable transportation-related impacts.

In addition, there would be only one instead of two 160-foot-tall office towers; the tower at Third and 16th Streets would be lowered by seven floors, such that the height of this structure would be 55 feet instead of 160 feet. Retail uses would be reduced across the project site, with 5,000 gsf less at the South Street podium, 5,000 gsf less at the Gatehouse, 11,000 gsf less at the 16th Street podium, and 29,000 gsf less at the food hall complex at South Street and Terry A. Francois Boulevard. Like the Project, the same gatehouse would be located mid-block along Third Street, and vehicle access would be from South and 16th Streets. The area of open space would be the same as that for the Project (i.e. 3.2 acres).

Operations under the Reduced Intensity Alternative would be essentially the same as that for the Project. The event center operations would be identical, as described in the GSW DSEIR, Chapter 3, Table 3-3. Operations of the office and retail uses would be expected to be the same as for the Project, though reduced in scale commensurate with the reduced gross square footage of uses. For the purposes of this alternatives analysis, it is assumed that the Reduced Intensity Alternative would incorporate the same design standards, infrastructure improvements, and transportation management planning assumptions as those under the Project.

The Reduced Intensity Alternative is rejected as infeasible for the following reasons:

### **(a) Environmental Impacts:**

Impacts of the Reduced Intensity Alternative would be similar to those of the Project with respect to nearly all resource areas. This is because many of the impacts would result from the development of a vacant parcel with an event center and mixed-use development, regardless of

the size of the mixed-use development. And in all cases, the same mitigation or improvement measures identified for the Project would apply to the Reduced Intensity Alternative.

The Reduced Intensity Alternative would not avoid or substantially lessen any of the significant and unavoidable impacts that were identified for the Project. Nor would the Reduced Intensity Alternative result in any changes to the significance determinations identified for the Project, and all mitigation measures would apply to this alternative. However, the Reduced Intensity Alternative would have similar but slightly less severe significant impacts than the Project (i.e., the significance determination would be the same but the severity, magnitude and/or frequency of the impact would be notably less) with respect several resource areas, as explained in the GSW DSEIR. (GSW DSEIR, pp. 7-66 to 7-67.) Overall, the Reduced Intensity Alternative would not provide substantial environmental benefits in comparison to the Project.

(b) Project Objectives:

This alternative would not meet, or would substantially reduce the ability to meet, the project objectives identified in the GSW SEIR. Because the Reduced Intensity Alternative would include an event center identical to the Project, this alternative would meet the project objectives related to providing a venue for sporting events, entertainment, and convention purposes. However, because the Reduced Intensity Alternative would substantially reduce the scale of office development at the site, the alternative would be substantially less effective than the Project in meeting the Project objective to “[p]rovide sufficient complementary mixed-use development, including office and retail uses, to create a lively local and regional visitor-serving destination that is active year-round, promotes visitor activity and interest during times when the event center is not in use, provides amenities to visitors of the event center as well as the surrounding neighborhood, and allows for a financially feasible project.” As explained below, the reduction in office space would generate far less revenue that could be used for purposes such as funding affordable housing, parks and open space, and critical utility, water quality, and transportation infrastructure.

(c) Other Feasibility and Policy Considerations:

The Reduced Intensity Alternative would substantially jeopardize the economic feasibility of the Project and would reduce the economic benefits the Project will provide for the Mission Bay area, as well as the entire City. The components of the Project other than the event center, such as the office buildings and retail component, are critical to the Project’s overall economic model. The Reduced Intensity Alternative would reduce the overall size of the Project by reducing the non-event center components; the retail component of the Project would be reduced from 125,000 square feet to 75,000 and the non-GSW office component from 580,000 to 373,000, for a total reduction of 282,000 square feet. In addition, the on-site parking garage would be reduced from 950 to 750 spaces. The retail programming for the Project is necessary to provide an active and lively visitor-serving destination, and a sufficiently sized amount of retail is

necessary to ensure the attractiveness of the event center to prospective patrons. However, supporting the retail tenants on non-event days is an important factor in attracting and maintaining a vibrant retail tenant base. As a result, the office components of the Project will afford the retail proprietors the benefit of an on-site population of potential customers, even on days when the Event Center is not active. Thus, the significant reduction in the office component under the Reduced Intensity Alternative would necessarily result in a reduced potential customer base, thereby increasing the potential risk of any prospective retail tenant.<sup>5</sup> Consequently, the Reduced Intensity Alternative would not be as effective as the Project in meeting the objective to “[p]rovide sufficient complementary mixed-use development, including office and retail uses, to create a lively local and regional visitor-serving destination that is active year-round, promotes visitor activity and interest during times when the event center is not in use, provides amenities to visitors of the event center as well as the surrounding neighborhood, and allows for a financially feasible project.”

Furthermore, the Reduced Intensity Alternative would substantially reduce the tax increment bonds available to OCII to support the construction of affordable housing, parks and open space, and critical utility, water quality, and transportation infrastructure. Compared with the Project, the Reduced Intensity Alternative would lead to a reduction over the next 25 years of approximately \$45 million (\$11.7 million to the normal taxing entities, \$9 million to affordable housing, and \$24.3 million to parks and open space and infrastructure).<sup>6</sup>

It is anticipated that, because of immediate needs and contractual obligations, OCII will issue bonds against certain of these revenues to provide immediately available funds to advance goals around affordable housing and infrastructure, especially important in a growing community like Mission Bay. The potential financial consequences of going forward with the Reduced Density Alternative can be determined through a series of typical bonding assumptions (i.e., a 5% interest rate, 25 year amortization, full utilization of all revenue for debt service because debt service coverage is provided by AB1290 subordination, and reserves and issuance costs of approximately 8%). Applying these assumptions to the revenue from Reduced Intensity Alternative results in net proceeds from tax increment bonds sales being lowered by approximately \$13.49 million (\$3.64 million for affordable housing and \$9.85 million for parks and open space and infrastructure) compared with what would occur under the Project. In addition, due to the 2% annual growth (which is not used for debt service), another

---

<sup>5</sup> GSW Arena LLC, Rick Welts, Letter to Tiffany Bohee, Re: Event Center and Mixed-Use Development Mission Bay Blocks 29-32, October 23, 2015; Attachment – Golden State Warriors, LLC, Jennifer Cabalquinto, Memorandum, Re: Event Center and Mixed-Use Development Mission Bay Blocks 29-32, October 23, 2015.

<sup>6</sup> GSW Arena LLC, Rick Welts, Letter to Tiffany Bohee, Re: Event Center and Mixed-Use Development Mission Bay Blocks 29-32, October 23, 2015; Attachment - Mission Bay Development Group, Seth Hamalian, Letter to Clarke Miller, Re: Relative difference in property tax base and tax increment bonding capacity between the proposed project and a lower density alternative, October 13, 2015.

approximately \$7.3 million of direct increment (\$2 million for affordable housing and \$5.3 million for parks and open space and infrastructure) would also be lost compared with what would occur under the Project. These amounts of money foregone under the Reduced Intensity Alternative represents a conservative assessment and the actual amount of lost revenue would likely be much greater.<sup>7</sup> Thus, the OCII Commission finds that, compared to the Project, the Reduced Intensity Alternative would substantially reduce the tax increment bonds available to OCII to support the construction of affordable housing, parks and open space and critical utility, water quality and transportation infrastructure in the Mission Bay area. OCII considers this to be an undesirable policy outcome, and one that (as mentioned above) would not be as effective as the Project in meeting the objective to “[p]rovide sufficient complementary mixed-use development, including office and retail uses, to create a lively local and regional visitor-serving destination that is active year-round, promotes visitor activity and interest during times when the event center is not in use, provides amenities to visitors of the event center as well as the surrounding neighborhood, and allows for a financially feasible project.”

Further, the Reduced Intensity Alternative would reduce the ability to meet the long-term planning objectives for the Mission Bay area. As explained above, the Project will increase the diversity of uses in the area, contribute towards creating an attractive and interesting urban environment, and reduce the need for Plan Area residents and employees to drive to reach retail, food, and recreation resources. There are few existing retail and restaurant uses within the Plan Area; by including those uses, the Project would contribute vitality to Mission Bay’s street life and activate its pedestrian realms, which would generally benefit Mission Bay including the employees, students, and visitors that use the UCSF campus. The retail and office uses included in the Project would also draw many more members of the public to the Plan Area, allowing a greater number of people to experience and enjoy the Bay, the shoreline parks and the Mission Bay open space. Compared to the Project, the Reduced Intensity Alternative would reduce the ability to meet these redevelopment objectives of the Mission Bay South Redevelopment Plan.

The OCII Commission rejects the Reduced Intensity Alternative on each of these grounds independently. The OCII Commission finds each of these reasons to be sufficient independent grounds for rejecting the Reduced Intensity Alternative as infeasible.

### **3. Alternative C: Off-site Alternative at Piers 30-32 and Seawall Lot 330**

The Project Sponsor previously proposed to construct a multi-purpose event center, event hall, public open space, maritime uses, fire station, a parking facility, and visitor-serving retail and restaurant uses on Piers 30-32 along the San Francisco waterfront, south of the Bay Bridge, in

---

<sup>7</sup> GSW Arena LLC, Rick Welts, Letter to Tiffany Bohee, Re: Event Center and Mixed-Use Development Mission Bay Blocks 29-32, October 23, 2015; Attachment - Mission Bay Development Group, Seth Hamalian, Letter to Clarke Miller, Re: Relative difference in property tax base and tax increment bonding capacity between the proposed project and a lower density alternative, October 13, 2015.

conjunction with a residential and hotel mixed-use development across The Embarcadero on Seawall Lot 330. As described in the GSW DSEIR, this alternative would be essentially the same as that previous proposal, although without the formerly proposed fire station, since the San Francisco Fire Department has proceeded with a different plan for upgrading its waterfront facilities.

#### Site Description

Piers 30-32 and Seawall Lot 330 are located along The Embarcadero, between Bryant Street and Brannan Street, just south of the Bay Bridge, and within the jurisdictional boundary of the Port of San Francisco ("Port"). Piers 30-32 is an approximately 12.7-acre rectangular-shaped concrete pier structure that extends east from the bulkhead wharf into the San Francisco Bay. With the exception of Red's Java House, located on the northwest corner of the piers, Piers 30-32 have no existing on-deck structures and are used for surface parking and an occasional berthing location for cruise ships and other large vessels. Substantial areas of Piers 30-32 are in poor structural condition and can no longer safely support heavy loads such as trucks or large crowds. Seawall Lot 330 is an approximately 2.3-acre paved inland site, located directly across The Embarcadero from Piers 30-32, and currently operates as a surface parking lot. The site is within the City's Rincon Point-South Beach neighborhood adjacent to several existing residential uses. Piers 30-32 are within an area subject to the San Francisco Bay Conservation and Development Commission ("BCDC") San Francisco Waterfront Special Area Plan. In addition, Piers 30-32 are within the purview of the State Lands Commission as part of its stewardship of state-owned lands, waterways, and resources and subject to public trust considerations under the Burton Act.

#### Alternative Description

This alternative assumes the same design and programming as the Project Sponsor's previously-proposed project at this location, with the only exception being the removal of the fire house and associated San Francisco Fire Department facilities. The Off-site Alternative at Piers 30-32 and Seawall Lot 330 would have an event center on Piers 30-32 with the same basketball seating capacity as the Project (18,064 seats), totaling 694,944 gsf (including the GSW offices), plus an event hall covering 25,946 gsf. Also located on Piers 30-32, this off-site alternative would include about 90,000 gsf of retail/restaurant uses, 13,172 gsf for services, about 252,554 gsf for parking and loading, and 1,820 gsf for Red's Java House, for a total building area of about 1,078,436 gsf. The height of the event center would be 128 feet high, with seven arena levels, height of the retail buildings 32 to 58 feet, with 1 to 3 levels, and the parking would be 31 feet high, with 3 levels. Red's Java House would be relocated from its current location in the northwest corner of Piers 30-32 to near the southwest corner, and relocation would be conducted consistent with the Port of San Francisco Building Code requirements and the Secretary of the Interior's Standards for the Treatment of Historic Properties. Other proposed facilities on Piers 30-32 would include a water taxi dock, a "dolphin" berthing structure, and over seven acres of public open space on Piers 30-32. There would be 500 parking spaces at Piers 30-32. Vehicular

access would be at one midblock access point on The Embarcadero, between Bryant and Brannan Streets. Maritime uses include a water taxi dock on the north side and berthing for deep water vessels on the east side.

Seawall Lot 330 would be developed with a combination of residential, hotel, and retail uses (including restaurants and parking) and would be designed to architecturally connect to the development at Piers 30-32. A total of 534,890 gsf of building development is proposed at Seawall Lot 330, consisting of 208,844 gsf of residential, 178,406 gsf of hotel, 29,854 gsf of retail, 106,339 gsf parking, and 11,447 gsf of shared support areas. The development would include a four-story building (ground level plus three podium levels containing a combination of retail, residential, hotel and parking uses) above which a 13-story residential tower would be developed in the south portion of the site (i.e., 17 stories total) and a 7-story hotel tower in the north portion of the site. The tallest structure on Seawall Lot 330 would be the proposed residential tower, which would measure approximately 175 feet at its building rooftop. The hotel would consist of two building wings connected by a multi-level glass bridge, approximately 105 feet in height. The podium building would vary in height, ranging from 20 to 50 feet depending on location, and would incorporate rooftop open space areas. The Seawall Lot 330 development would contain multiple ground-level vehicular and pedestrian/bicycle access points to the site, and a pedestrian/bicycle pathway through the development connecting Main Street and The Embarcadero. A total of 259 vehicle parking spaces are proposed on Seawall Lot 330.

Operations under this alternative are assumed to be essentially the same as those of the Project at Mission Bay, with the same year-round schedule and types of events at the event center, and typical operational schedules for the hotel, residential, and retail uses.

Construction of the Off-site Alternative at Piers 30-32 and Seawall Lot 330 would require approximately 32 months for the entire development, about 6 months longer than the construction schedule for the Project. Unlike the Project, extensive in-water construction activities would be required in the vicinity of Piers 30-32 due to the seismic and structural upgrades to the pier structure that would be required. At or in the vicinity of Piers 30-32, construction activities would include: demolition of portions of the existing Piers 30-32 pier deck; removal and/or disconnection of existing pier piles; installation of new pier piles and reconstruction of the pier deck; dredging within a portion of the Pier 28-30 open water area; strengthening of the seawall and sections of the bulkhead wharf adjacent to Piers 30-32 along The Embarcadero promenade; construction of all above-deck Piers 30-32 development, including foundations, event center structure, retail buildings, parking and loading structure, and open space features; installation of associated on-site utilities; interior finishing, exterior hardscaping and landscaping improvements; installation of floating dock facilities along the north side of Piers 30-32; and installation of frontage improvements along The Embarcadero.

At Seawall Lot 330, construction activities would include: site demolition, clearing and excavation; pile installation and foundation construction; construction of all proposed Seawall

Lot 330 development, including podium structure and residential and hotel towers; installation of associated on-site utilities; interior finishing; exterior hardscaping and landscaping improvements; and installation of frontage improvements along The Embarcadero and Bryant and Beale Streets.

This alternative would require numerous federal and state permits and approvals, including approvals from the U.S. Army Corps of Engineers, U.S. Fish and Wildlife Services, National Marine Fisheries Service, California State Lands Commission, San Francisco Bay Conservation and Development Commission, and California Department of Fish and Wildlife. Local approvals would be required from the San Francisco Planning Commission, San Francisco Port Commission, and the San Francisco Board of Supervisors as well as the San Francisco voters.

It should be noted that this alternative includes a mix of uses different than that of the Project, including new residential and hotel uses and substantially fewer office uses. Because of these differences, this alternative would result in impacts that would not occur for the Project, particularly due to the residential uses. However, the program for this alternative is based on the previous proposal by the Project Sponsor for this site, and was determined to be the most viable mix of uses for this site at the time it was under active consideration.

Under the Off-site Alternative, development at Blocks 29-32 at Mission Bay would not be precluded. Development of the Off-site Alternative could occur concurrently with development of Blocks 29-32 per the Mission Bay Plan, potentially contributing to localized impacts at both sites.

The Off-site Alternative at Piers 30-32 and Seawall Lot 330 is rejected for the following reasons:

(a) Environmental Impacts:

The Off-site Alternative at Piers 30-32 and Seawall Lot 330 would avoid or lessen some of the impacts of the Project identified in the GSW FSEIR, but it would also result in different significant impacts — including significant and unavoidable impacts — that would not occur under the Project.

The Off-site Alternative would have slightly more severe impacts than were identified for the Project (i.e., impact determination would change from LS to LSM and would require implementation of additional mitigation measures not required for the Project) with respect to:

- Construction water quality impacts (Impact would change from LS to LSM. There would be greater potential for adverse effects on water quality to occur, as well as more complex mitigation requirements.)
- Water quality impacts associated with trash and littering (Impact would change from LS to LSM.)

The Off-site Alternative would have substantially more severe significant impacts than were identified for the Project (i.e., impact determination would change from LS or LSM to SU or SUM and would require implementation of additional and/or different mitigation measures not required for the Project) with respect to:

- Construction noise levels substantially higher than ambient levels, exceeding Federal Transit Administration (“FTA”) criterion for residential exposure to construction. (Impact would change from LS to SUM.)
- Construction vibration impacts exceeding thresholds for human annoyance at nearby sensitive receptors. (Impact would change from LS to SUM.)
- Cumulatively considerable contribution to construction noise and vibration impacts, assuming other construction activities in the vicinity were to overlap with the construction activities. (Impact would change from LSM to SUM.)
- Exposure of sensitive receptors to increased PM<sub>2.5</sub> concentrations and cancer risk from toxic air contaminant concentrations during construction and operation and associated contribution to cumulative impacts. (Impact would change from LSM to SUM.)

The Off-site Alternative would have different significant and unavoidable impacts that were not identified for the Project (i.e., new SU or SUM impact and would require implementation of different mitigation measures not required for the Project) with respect to:

- Traffic impacts at different intersections than those identified for the Project. The number of intersections with significant traffic impacts would increase, and these impacts would occur under a greater number of scenarios. Even though the Off-site Alternative would generate fewer vehicle trips than the Project, traffic impacts would be substantially greater due to its more central and congested location closer to downtown. (Impact would be SUM.)
- Construction noise impacts on special-status fish and marine mammals (Impact would be SUM.)

Overall, the Off-site Alternative at Piers 30-32 and Seawall Lot 330 would avoid and lessen several of the environmental impact identified for Project, but it would also result in new and different significant environmental impacts that would not occur under the Project.

(b) Project Objectives:

As described in the GSW DSEIR, the objectives for the proposed Event Center and Mixed-Use Development at Blocks 29-32 are intended to be consistent with the overall objectives of the Mission Bay Redevelopment Plan. (GSW DSEIR, pp. 3-4 – 3-5.) Development at Piers 30-32 and Seawall Lot 330 as proposed in the Off-Site Alternative would not achieve any of the

redevelopment objectives identified for the Mission Bay South Redevelopment Plan, which are described above in Section V.A. However, since it is assumed that an alternative development would occur at Blocks 29-32, it is assumed such development would achieve at least some of the redevelopment objectives identified for the Mission Bay South Redevelopment Plan. As discussed in the context of the No Project Alternative above, it is also reasonable to assume that such an alternative development on Blocks 29-32 would substantially reduce the scale of development at the site as compared to the Project, and, as a result, would be substantially less effective than the Project in meeting the redevelopment objectives relating to economic growth because the reduction in development would generate far less revenue that could be used for purposes such as funding affordable housing, parks and open space, and critical utility, water quality, and transportation infrastructure. Therefore, the OCII Commission finds that this alternative would substantially reduce the ability to meet the project objectives within the context of the overall objectives of the Mission Bay Redevelopment Plan.

(c) Other Feasibility and Policy Considerations:

There are numerous uncertainties with regard to the acquisition of all the necessary permits and approvals required for the Piers 30-32 and Seawall Lot 330 site, including permits from the U.S. Army Corps of Engineers, State Lands Commission, San Francisco Bay Conservation and Development Commission (“BCDC”), Port of San Francisco, and voter approval under Proposition B.

Piers 30-32 and SWL Lot 330 are both under the jurisdiction of the Port of San Francisco. The current height limits (which are unchanged from 2012) for those sites are 40 feet and 65-105, respectively. Proposition B, passed by the voters in 2014, requires that any height increase on property within the Port’s jurisdiction from the height limit that existed in June of 2014 must go to the San Francisco voters for approval. Consequently, in order for the proposed project to proceed at those locations, the first step in the entitlement process would be to seek and obtain a height reclassification of the sites at the ballot. Taking a height reclassification to the ballot requires the Project Sponsor wait until the next election, and in advance of that expend significant sums to draft the ballot measure, collect signatures to place it on the ballot, and campaign for its approval.<sup>8</sup>

After completing the height reclassification process (if successful), the project would then commence seeking project approvals, which would require analysis under the California Environmental Quality Act as well as the National Environmental Policy Act (“NEPA”) because the Army Corps of Engineers (a federal agency) has certain permitting authority over the piers. The work required to retrofit the existing piers, which are in poor condition, would be extremely expensive, costing over an estimated \$120 million, and would entail in-water work requiring

---

<sup>8</sup> GSW Arena LLC, Rick Welts, Letter to Tiffany Bohee, Re: Event Center and Mixed-Use Development Mission Bay Blocks 29-32, October 23, 2015.

certain mitigation measures to protect biological resources. Under the Burton Act, a state law that governs the Port's authority, the Port could not enter into a lease of more than 66 years in length; thus, the maximum term the arena could be leased would be 66 years. As a consequence, the extremely high costs of retrofitting the Piers in order to allow arena construction could only be amortized over a relatively short period of time, making the recovery of the capital costs of the project financially infeasible for the Project Sponsor. In addition, the mitigation measures required to protect biological resources would likely include limiting the months in which construction can occur, particularly in-water work in order to protect the resources. These mitigations serve to increase the construction times and risk.<sup>9</sup>

Finally, the time entailed in pursuing the required two-part entitlement process would take significantly longer than at a site not under the jurisdiction of the Port or subject to federal permitting for in-water construction. Piers 30-32 are also regulated by other state and regional agencies, in addition to the U.S. Army Corps of Engineers. The Project Sponsor's lease at its current location at Oracle Arena expires in 2017 and the Project Sponsor must make a definitive decision about the long-term venue for the team as quickly as possible as a result.<sup>10</sup> Presumably, the Project Sponsor initially anticipated all of the above-described challenges could potentially be overcome and the Event Center at the Piers 30-32 and Seawall Lot 330 site could have been developed in a successful manner within a reasonable period of time. (*Uphold Our Heritage v. Town of Woodside* (2007) 147 Cal.App.4th 587, 600 ["No proponent, whether wealthy or not, is likely to proceed with a project that will not be economically successful."].) However, as of today, in consideration of the circumstances surrounding the Project, including the Project Sponsor's goal of constructing a new NBA Arena in time for the 2018-2019 NBA season, the OCII Commission finds that these uncertainties, combined with other factors, make the alternative infeasible.

Furthermore, development must occur within the Plan Area to further any of the Mission Bay South Redevelopment Plan redevelopment objectives. Piers 30-32 and Seawall Lot 330 are not located within the Plan Area. Therefore, the Off-Site Alternative does not further any of the Mission Bay South Redevelopment Plan redevelopment objectives. Even if, as noted above, an alternative mixed use development project was assumed to be proposed and ultimately developed on the project site in the future if the Off-Site Alternative was selected, OCII finds that such an alternative development on the project site would likely be substantially smaller in scale as compared to the Project, and, as a result, would be substantially less effective than the Project in meeting the redevelopment objectives relating to economic growth because the reduction in development would generate far less revenue that could be used for purposes such as funding affordable housing, parks and open space, and critical utility, water quality, and transportation

---

<sup>9</sup> GSW Arena LLC, Rick Welts, Letter to Tiffany Bohee, Re: Event Center and Mixed-Use Development Mission Bay Blocks 29-32, October 23, 2015.

<sup>10</sup> GSW Arena LLC, Rick Welts, Letter to Tiffany Bohee, Re: Event Center and Mixed-Use Development Mission Bay Blocks 29-32, October 23, 2015.

infrastructure. Additionally, one of the major Mission Bay South Redevelopment Plan redevelopment objectives is to successfully complete the Mission Bay South Redevelopment Plan “in the most expeditious manner feasible.” Approving the Off-Site Alternative and assuming an alternative development project would be proposed on the project site in the immediate future would not further the goal to successfully complete the Mission Bay South Redevelopment Plan “in the most expeditious manner feasible.” Therefore, the OCII Commission finds that approval of the Off-site Alternative would not further the Mission Bay South Redevelopment Plan redevelopment objectives. The OCII Commission rejects the Off-site Alternative at Piers 30-32 and Seawall Lot 330 on each of these grounds both collectively and independently. The OCII Commission finds each of these reasons sufficient independent grounds for rejecting the Off-site Alternative at Piers 30-32 and Seawall Lot 330 as infeasible.

#### **D. Alternatives Considered but Rejected from Further Consideration**

##### Alternative Locations

The DSEIR explains that eleven additional alternative locations for the Project were considered but rejected because they either would not achieve most of the basic project objectives, would not reduce or avoid significant environmental Project impacts, and/or do not represent potentially feasible alternatives for other economic, social, or environmental reasons. (GSW DSEIR, section 7.5, pp., 713 through 7-14 and 7-110 through 7-116.) The OCII Commission finds each of these reasons sufficient independent grounds for rejecting these alternative locations as infeasible.

##### Alternative Locations Proposed After Publication of the GSW DSEIR

Subsequent to publication of the GSW DSEIR and after the end of the public comment period on the GSW DSEIR, a potential alternative site for the Project – near Pier 80 – proposed by a group called the Mission Bay Alliance (“MBA”), was brought to light through local media (“MBA Alternative Site”). MBA subsequently presented the MBA Alternative Site to OCII in a comment letter on October 13, 2015, which was more than two and one half months after the public comment period on the GSW DSEIR had closed. The MBA Alternative Site is an approximately 21-acre site bounded by Cesar Chavez Street, Islais Creek Channel, and Interstate 280. Although this potential site was not presented to OCII until late in the environmental review process, it has been thoroughly vetted and is not considered a feasible option.

First, it should be noted that a similar site is described in the GSW DSEIR. Among the alternative locations that were considered for inclusion in the GSW DSEIR but ultimately rejected was the so-called Pier 80 or India Basin Area, located very close to the newly proposed MBA Alternative Site. The OCII Commission finds each of the reasons provided in the FSEIR for rejecting the Pier 80 or India Basin Site provides sufficient independent grounds for also rejecting the MBA Alternative Site as infeasible.

In any event, the OCII Commission finds that the MBA Alternative Site is not a feasible option for the following additional reasons.

The MBA Alternative Site consists of approximately 12 separate lots located across the street from Pier 80 in San Francisco. About half of the parcels appear to be held by 3-4 different private parties; the other, larger lots are controlled by the City and the Port of San Francisco.<sup>11</sup> The SFMTA currently operates a bus acceptance facility at the Port property located at 1399 Marin Street. The SMFTA owns the property at 1301 Cesar Chavez Street, where it operates and is currently expanding its Islais Creek Motor Coach Facility. This facility has been in the planning and acquisition stages since 1990 and once completed, will be among the SFMTA's largest facilities. Furthermore, SFMTA also recently began construction on a maintenance and operations building at the southeast corner of the site, which once completed, will be used to store and service buses and include administrative offices and a community meeting space. SFMTA considers these properties to be "critical" to its mission. The Project Sponsor does not control or own the publicly or privately owned sites and no evidence suggests it would be feasible for the Project Sponsor to acquire such rights.

The parcels located across from Pier 80 are zoned PDR-2 and have heights ranging from 40 feet to 68 feet. The PDR-2 zoning would not allow the office buildings. In contrast to the allowed heights, the proposed Event Center would be 135 feet in height and the office and retail buildings would be 160 feet in height. Thus, the development would not be permitted without approval of ordinances rezoning the permitted uses and height limits in the Planning Code and the Height Maps in order to accommodate the proposed Event Center and office buildings. In the case of the Port property, any increase in height limit would require voter approval due to the passage of Proposition B by the voters in 2014, which requires voter approval for any height increase on Port property.

The MBA Alternative Site would not avoid significant impacts of the Project, and would have more severe transportation, air quality, hydrology and water quality impacts.

Access to this location would require a greater proportion of event attendees to travel by auto, as local and regional transit service in the site's vicinity is limited, and the site is located further from locations accessible via bicycle and walk modes. The T Third light rail line is the primary Muni light rail route that would serve the site. The 19 Polk Muni bus route, with a connection at Evans/Connecticut Streets, runs north to Market Street and connects with the Civic Center BART station, but has limited service during the weekday and Saturday evening and late evening peak periods. The closest BART station is at 24th Street and Mission Street, approximately two miles to the west. The closest Caltrain station is at 22nd Street, under the I-280 freeway, approximately two-thirds of a mile to the north. It offers less train service (fewer trains stop there) than the Caltrain station at Fourth/King Streets, as it is an intermediate station, as opposed to the line terminal at Fourth/King Streets. Due to its remote location, this site would not meet

---

<sup>11</sup> Sally Oerth, OCII, and Chris Kern, SF Planning Department, Letter to Tiffany Bohee, Re: Proposed Alternative at Pier 80, October 23, 2015.

the project objectives to locate the Event Center within walking distance to local and regional transit hubs.

Unlike the project site, the MBA Alternative Site is located in an Air Pollution Exposure Zone. Consequently, this site would likely result in substantially more severe air quality health risk impacts than the Project. The MBA Alternative Site is located directly adjacent to the Islais Creek Channel, and thus would have a greater potential to result in adverse impacts on water quality and aquatic resources due to stormwater runoff into the Bay during both project construction and operation. The MBA Alternative Site is also located within the 100-year flood zone, and accordingly, locating the project here would expose people and structures to a greater risk of loss, injury or death due to flooding than the proposed location outside of the 100-year flood zone. Moreover, because it is directly adjacent to the Islais Creek Channel and is at a low elevation relative to sea level, the MBA Alternative Site would be more vulnerable to flooding in the future due to sea level rise and is more vulnerable to tsunami risk than the project site.<sup>12</sup>

In consideration of SFMTA's active and expanding use and development on a portion of the MBA Alternative Site, the number of private lots included as part of the site (none of which are owned or in the control of the Project Proponent), and the other considerations discussed above, the OCII Commission finds that the MBA Alternative Site could not be assembled in a successful manner within a reasonable period of time taking into account existing development on the site as well as economic, legal, and environmental factors. The OCII Commission finds each of these reasons sufficient independent grounds for rejecting this alternative location.

#### Alternative Concepts, Designs, and Strategies

In developing the alternatives selected for detailed analysis in the GSW DSEIR, and throughout the environmental review process, OCII, with the assistance of the Planning Department, considered additional alternative concepts, designs, and strategies that could potentially avoid or lessen the Project's environmental impacts. In some cases, the alternative concepts were incorporated into the Reduced Intensity Alternative analyzed in the GSW DSEIR or into the mitigation measures proposed for the Project. In other cases, however, alternative concepts were determined to either be infeasible or to result in the same or more severe environmental impacts compared to those of the Project, and therefore were not included in the range of alternatives carried forward for full analysis. The reasons the alternative concepts, designs, and strategies are rejected are described below.

#### Alternative Strategy to Reduce Size/Scale of the Event Center

The size and scale of the event center is currently designed to meet the primary objective of meeting the NBA requirements for sports facilities, and specifically for use as the home court for the Golden State Warriors basketball team. The capacity of 18,064 seats is over 1,000 fewer

---

<sup>12</sup> Sally Oerth, OCII, and Chris Kern, SF Planning Department, Letter to Tiffany Bohee, Re: Proposed Alternative at Pier 80, October 23, 2015.

seats than the average capacity of all current NBA facilities. The 18,064-seat capacity is also well below the capacity of the Warriors' current home court at the Oracle Arena in Oakland.<sup>13</sup> However, while the event center is designed to meet the specific needs for NBA basketball games, it is also designed on balance to achieve the overall project objectives of providing a year-round venue for a variety of sporting events, entertainment, and convention purposes that promotes environmental sustainability, transportation efficiency, greenhouse gas reduction, and job creation.

The 18,064-seat capacity will be the fifth lowest capacity in the NBA, despite the high current market demand for season tickets. Currently, the Warriors have 14,500 season ticket holders and there are over 17,000 people on the waiting list for season tickets. Therefore, the Project Sponsor has indicated that reducing the capacity of the event center below 18,064 is not feasible due to its already small size relative to other NBA facilities and the overwhelming market demand for season tickets.<sup>14</sup>

A reduced size event center would also not meet the project objective of constructing an event center that can be used year-round for sporting events and entertainment and convention purposes with events ranging in capacity from approximately 3,000-18,500, and expands opportunities for the City's tourist, hotel and convention business.

The viability of attracting top entertainment events, including large touring shows, is influenced primarily by the buildings' gross potential and secondarily by the venues' ability to support large event requirements/logistics such as rigging, space requirements, power, data, lighting and sound. Today's concerts typically tour with 12 to 24 tractor-trailers of equipment, requiring a venue that not only has the infrastructure to mount a 200,000 lb show but is able to compete economically with other markets to attract these type of events to the market. The business model for these events is impacted dramatically by potential attendance, and therefore, most large-scale entertainment events could not occur at the event center if the capacity is reduced below 18,500. Therefore, reducing the capacity of the event center below 18,500 would deprive City residents the opportunity to attend these types of events in the City and would substantially reduce opportunities for the City's tourist, hotel and convention business.<sup>15</sup>

Moreover, the City of San Francisco currently lacks a public venue that can compete for "arena" type entertainment attractions. The lack of a state-of-the-art arena venue in the City prevents top

---

<sup>13</sup> GSW Arena LLC, Rick Welts, Letter to Tiffany Bohee, Re: Event Center and Mixed-Use Development Mission Bay Blocks 29-32, October 23, 2015

<sup>14</sup> GSW Arena LLC, Rick Welts, Letter to Tiffany Bohee, Re: Event Center and Mixed-Use Development Mission Bay Blocks 29-32, October 23, 2015

<sup>15</sup> GSW Arena LLC, Rick Welts, Letter to Tiffany Bohee, Re: Event Center and Mixed-Use Development Mission Bay Blocks 29-32, October 23, 2015; Attachment - Stephen Collins, Memorandum Re: Event Center and Mixed-Use Development Mission Bay Blocks 29-32, October 23, 2015.

domestic and international music tours, political conventions, major award shows, athletic tournaments, family shows and a variety of other entertainment and sporting events from taking place in San Francisco. The existing venues in San Francisco cannot support these needs and, as a result, over a hundred of the top tours and attractions are currently unable to perform in the City. And there is currently a high market demand for these types of events in the City. The market demand for such attractions in San Francisco is demonstrated by the high demand for similar venues on the Peninsula, such as Levi's stadium, the Shoreline Amphitheatre and HP Pavilion, as well as the existing Oracle Arena.<sup>16</sup>

Furthermore, as described above, most of the event center-related impacts could be mitigated with the adopted mitigation measures, and it is unlikely that reducing the size/scale of the event center could effectively or substantially lessen the Project's significant transportation-related impacts.

Detailed traffic modeling of a smaller event center has not been performed. For this reason, it is not possible to determine exactly how small the event center would need to be in order to avoid some or all of the Project's significant and unavoidable traffic impacts. Based on the modeling that has been performed, however, a smaller event center could potentially result in significant impacts at fewer intersections; but, as indicated by the modeling conducted for the No Event scenario, even a substantially smaller Event Center would result in significant and unavoidable traffic impacts including at the intersection of 16th/Seventh/Mississippi Streets. Thus, even a substantially smaller event center than the 18,500-seat event center would still have significant and unavoidable traffic impacts, would not meet NBA standards for an arena, and would not meet the basic project objectives. As a result, this alternative strategy would not effectively avoid or substantially lessen transportation-related impacts. Thus, reducing the size and scale of the event center was screened from further consideration for detailed alternatives analysis. It should be noted, however, that reducing the size of Project features other than the event center were included under the Reduced Intensity Alternative, which is analyzed in the GSW DSEIR.

The OCII Commission finds each of these reasons sufficient independent grounds for rejecting this alternative strategy.

Alternative Strategy to Reduce Number of Events at the Event Center that Would Overlap with SF Giants Games at AT&T Park.

As explained in the GSW FSEIR, it is estimated that there would be a potential for about 32 overlapping events per year, but in rare circumstances there could be as many as 40 events (with varying combined total attendance) in one year. These estimates are based on the following

---

<sup>16</sup> GSW Arena LLC, Rick Welts, Letter to Tiffany Bohee, Re: Event Center and Mixed-Use Development Mission Bay Blocks 29-32, October 23, 2015; Attachment - Stephen Collins, Memorandum Re: Event Center and Mixed-Use Development Mission Bay Blocks 29-32, October 23, 2015.

assumptions, which are conservative because they rely on current scheduling information and do not account for any advanced coordination between the SF Giants and the Golden State Warriors, or internal schedule coordination at the event center:

- Overlap with Golden State Warriors games. The regular NBA (late October through mid-April) and regular baseball seasons (April through September) overlap slightly in the first half of April, and for both teams, only half of the games are home games. Conservatively, about 2 games per year could overlap during the regular season. If either or both of the Warriors and SF Giants were to move on to the post season, there would be increased likelihood of overlapping events, with up to approximately five additional overlapping events if both teams were to advance to their respective championship final series in the same year.
- Overlap with concerts. As indicated in Chapter 3, Project Description, Table 3-3, the major concert season is fall, winter, and early spring. Thus, of the 45 yearly concerts, about 20 could overlap with the regular baseball season, but at most, only half of these (10) are estimated to occur on the same day as a SF Giants home game.
- Overlap with family shows. As indicated in Chapter 3, Project Description, Table 3-3, the approximate 55 family shows would be distributed throughout the year on Wednesday through Sunday. Since the SF Giants play for six months of the year during the regular season, it is assumed that half of the family shows (27) would occur during the baseball season (April through September), but the SF Giants only play home games at AT&T Park for half of that time, leaving 14 days of possible overlap. However, the SF Giants also play games on Monday and Tuesday when there would be no family shows. So about 10 of the family shows are estimated to occur on the same day as a SF Giants home game.
- Overlap with other non-Golden State Warriors sporting events. Of the approximate 30 other non-Golden State Warriors sporting events that would be held at the event center, it is assumed that half could occur during baseball season, and half of those could overlap with SF Giants home games, or about 7 events.
- Overlap with conventions/corporate events. Of the approximate 31 conventions or corporate events, it is assumed that half could occur during baseball season, and half of those could overlap with SF Giants home games. However, these events would almost exclusively be during the day, and only about 35 percent of the SF Giants games are day games; this indicates the potential for an estimated 3 overlapping events.

Based on league schedules and concert scheduling as described in the GSW FSEIR, it is anticipated that in a regular year, on average, there is a possibility of about nine large events

(about 12,500 or more attendees) at the event center overlapping with a SF Giants evening game at AT&T Park (i.e., two basketball games and seven concerts) annually. If either or both teams make it to their respective championships, the number of large events overlapping could moderately increase; however, it is unlikely that this scenario would occur on a regular basis.

The OCII Commission has considered whether there are feasible strategies to further reduce the number of events at the event center that would overlap with SF Giants games at AT&T Park in an effort to reduce potential environmental impacts. For the following reasons, however, the OCII Commission finds that it is not feasible to reduce the number of overlapping events.

First, the NBA schedule, and therefore, the Warriors schedule is beyond the Project Sponsor's and OCII's control. Similarly, the Major League Baseball ("MLB") schedule, and therefore, the SF Giants schedule is also beyond the Project Sponsor's and OCII's control. In other words, because neither the lead agency or responsible agencies nor the Project Sponsor has any control over MLB or NBA schedules, it is not possible to reduce the number of Warriors basketball games that overlap with SF Giants baseball games at AT&T Park.

Second, there is no feasible strategy to reduce the number of concerts, family shows, or conventions/corporate events at the event center that would overlap with SF Giants Games at AT&T Park. The financial model of most venues, such as the event center, is predicated on programming the venue for a variety of shows and events over the course of the year. The costs of developing and constructing a new event venue, or even the more limited costs of rehabilitating an existing venue, demand that the venue be utilized throughout the year in order to most effectively amortize the costs of the facility. In other words, the event center must host year-round events because the business model (particularly where the venue is privately financed) demands year-round revenue to be economically successful.<sup>17</sup> Therefore, it is not feasible to prohibit events at the event center during the SF Giants baseball season. Moreover, prohibiting events during the SF Giants baseball season would be inconsistent with the overall Project purpose of constructing an event center that can be used year-round for sporting events and entertainment and convention purposes.

Third, shifting of event start times for most entertainment attractions can be difficult or impossible, particularly without sufficient advance notice of the need to make such a request. The difficulty in doing such is driven primarily by the requirements of the client (tour management), which falls outside the control of the promoter or the venue operator. Most arena events are routed months and sometimes more than a year in advance. The event is designed in almost all circumstances to be able to play the venue in a single day (load-in, show, load-out). The tour maintains an extremely regimented schedule for all venues played across the country

---

<sup>17</sup> GSW Arena LLC, Rick Welts, Letter to Tiffany Bohee, Re: Event Center and Mixed-Use Development Mission Bay Blocks 29-32, October 23, 2015; Attachment – Golden State Warriors, LLC, Jennifer Cabalquinto, Memorandum, Re: Event Center and Mixed-Use Development Mission Bay Blocks 29-32, October 23, 2015.

and internationally in order to efficiently and effectively move the show from venue to venue, which can include dozens of tractor trailers, tour buses, and support vehicles. It is very common for the show to load-out in one city and travel a significant distance, in some cases hundreds of miles, in order to load-in in another city the next morning. The artists' travel arrangements, as well as the logistics to move the show from city to city, are carefully choreographed, which makes it extremely difficult to alter any schedules, including show start times. Similar circumstances apply to moving a show date. The tours are routed as much as a year in advance.<sup>18</sup>

Any requirements that would necessitate that shows move to alternate dates would in almost all circumstances result in an event cancellation as the tour and artists' schedule and logistics could not absorb such a move due to the ongoing commitments of the tour. As a consequence, while some staggering of start times may at times be possible with sufficient advance notice, there are practical, industry-driven limits on how often one could successfully negotiate staggered start times. In short, there is an inherent degree of temporal inflexibility built into the industry model for road shows. Thus, to be able to attract and accommodate the type of events that are both desirable and financially necessary for the Project, it is not possible to prohibit events from occurring at the event center during times that might overlap with an SF Giants game at AT&T Park.<sup>19</sup>

Additionally, reducing the number of events that might overlap with an SF Giants game at AT&T Park would not decrease magnitude of the Project's traffic impacts on days when overlapping events occur. Therefore, a reduction in overlapping events would not effectively avoid or substantially lessen the magnitude of the Project's transportation-related impacts identified in the FSEIR. Furthermore, the OCII Commission finds that a limit on overlapping events is infeasible from an economic and policy perspective because a restriction, such as an overlapping event restriction, that results in a reduction in the number of events held at the Event Center annually would directly impact the public revenues generated by events held at the Event Center that could be used for purposes such as funding affordable housing, parks and open space, and critical utility, water quality, and transportation infrastructure.

The OCII Commission finds each of these reasons sufficient independent grounds for rejecting this alternative strategy.

<sup>19</sup> GSW Arena LLC, Rick Welts, Letter to Tiffany Bohee, Re: Event Center and Mixed-Use Development Mission Bay Blocks 29-32, October 23, 2015; Attachment - Stephen Collins, Memorandum Re: Event Center and Mixed-Use Development Mission Bay Blocks 29-32, October 23, 2015.

## **VI. STATEMENT OF OVERRIDING CONSIDERATIONS**

Pursuant to CEQA section 21081, subdivision (b), and CEQA Guideline 15093, the OCII Commission hereby finds, after consideration of the FSEIR and all other evidence in the record, that each of the specific overriding economic, legal, social, technological and other benefits of the Project as set forth below independently and collectively outweighs the significant and unavoidable impacts of the Project and is an overriding consideration warranting approval of the Project. Any one of the reasons for approval cited below is sufficient to justify approval of the Project. Thus, even if a court were to conclude that not every reason is supported by substantial evidence, the OCII Commission will stand by its determination that each individual reason is sufficient. The substantial evidence supporting the various benefits can be found in the preceding findings, which are incorporated by reference into this Section, and in the documents found in the Record of Proceedings, as defined in Section I.

On the basis of the above findings and the substantial evidence in the whole record of this proceeding, the OCII Commission specifically finds that there are significant benefits of the Project to support approval of the Project in spite of the unavoidable significant impacts, and therefore makes this Statement of Overriding Considerations. The OCII Commission further finds that, as part of the process of obtaining Project approval, all significant effects on the environment from implementation of the Project have been eliminated or substantially lessened where, and to the extent, feasible. All mitigation measures proposed in the FSEIR that are applicable to the Project are adopted as part of this approval action. Furthermore, the OCII Commission has determined that any remaining significant effects on the environment found to be unavoidable are acceptable due to the following specific overriding economic, technical, legal, social and other considerations.

The Project has the following benefits:

- The Project includes the construction of a state-of-the-art multi-purpose event center in San Francisco that meets NBA requirements for sports facilities and can be used year-round for sporting events and entertainment and convention purposes with events ranging in capacity from approximately 3,000-18,500. Although the event center is one of the smallest venues used by NBA basketball teams, it meets the NBA's requirements and will provide sufficient capacity to meet the market demand for Golden State Warriors basketball games. Further, the event center will provide sufficient capacity to accommodate a variety of desirable events, including other sporting events, small and large concerts and shows, conventions and conferences, and other family events. No similar-sized event center currently exists in San Francisco, so the construction of the event center will attract events to the City that cannot be accommodated by other venues. By providing a state-of-the-art event center that can accommodate a wide variety of small- and large-scale events, including Warriors basketball games, the Project will

benefit City residents and expand opportunities for the City's tourist, hotel and convention business.

- The Project provides sufficient complementary mixed-use development to create a lively local and regional visitor-serving destination that is active year-round. In addition to the event center, the Project includes a mix of office use, retail, and open space that will promote visitor activity and interest during times when the event center is not in use, and provide amenities to visitors of the event center as well as the surrounding neighborhood.
- The Project meets high-quality urban design and high-level sustainability standards. The Project is designed to LEED® Gold standards and incorporates a variety of design features to provide energy and water conservation and efficiency, encourage alternative transportation, promote a healthy indoor environment, minimize waste, and maximize recycling opportunities.
- The Project is located in an urban infill area in Mission Bay, immediately adjacent to local transit stops and less than a mile from other regional transit resources, including train and ferry and therefore will promote public transit and further the City's Transit First Policy. The Project will also implement a number of off-site roadway network and curb regulations, transit network, pedestrian and bicycle network improvements in the project site vicinity, including roadway restriping, intersection signalization, on-street parking, new perimeter sidewalks, bicycle lanes, signage and other improvements, that will substantially benefit the community.
- The Project will provide the City with a world class performing arts venue of sufficient size to attract those events which currently bypass San Francisco due to the current lack of a world class facility in the City. The City is currently unable to attract or accommodate certain events because there are no venues in the city that can accommodate such events. With the event center, however, the City will be able to accommodate such events, for which there is a high demand in the City.
- The Project will promote environmental sustainability, transportation efficiency, greenhouse gas reduction, stormwater management using green technology, and job creation consistent with the objectives of the California Jobs and Economic Improvement Through Environmental Leadership Act (AB 900), as amended.
- The Project will provide substantial tax revenue available to support the construction of affordable housing, parks and open space, and critical utility, water quality, and transportation infrastructure.

- The Project will generate thousands of jobs for residents of Mission Bay and the City of San Francisco area during both construction and operation.

In summary, the development and revitalization of the Mission Bay area and the betterment of the quality of life for the residents of this community is one of OCII's highest priorities. Having considered these benefits, the OCII Commission finds that the benefits of the Project outweigh the unavoidable adverse environmental effects, and that the adverse environmental effects are therefore acceptable.

# Mitigation Monitoring and Reporting Program

## SECTION 1: AUTHORITY

This Mitigation Monitoring and Reporting Program (MMRP) has been prepared pursuant to Section 21081.6 of the *California Environmental Quality Act*, known as CEQA (Public Resources Code Section 21000 et seq.), to provide for the monitoring of mitigation measures required for the Event Center and Mixed-Use Development at Mission Bay Blocks 29-32 (Project), as set forth in the Final Subsequent Environmental Impact Report (Final SEIR) prepared for the Project. This report will be kept on file at the Office of Community Investment and Infrastructure (OCII), One South Van Ness Avenue, Fifth Floor, San Francisco, CA, 94103 and at the City Planning Department (City), 1650 Mission Street, Fourth Floor, San Francisco, CA, 94103.

As described in Section 15097 of the *CEQA Guidelines*, "[r]eporting' generally consists of a written compliance review that is presented to a decision-making body or authorized staff person. A report may be required at various stages during project implementation or upon completion of the mitigation measure. 'Monitoring' is generally an ongoing or periodic process of project oversight." This MMRP includes both reporting and monitoring elements, as appropriate for implementation of each mitigation or improvement measure.

## SECTION 2: CONTENT OF MMRP MATRIX

The MMRP matrix consists of four separate tables:

- Table A, Mitigation Measures
- Table B, Improvement Measures
- Table C, Applicable Regulations
- Table D, Summary of Transportation Management Plan

Table A, Mitigation Measures, and Table B, Improvement Measures, identify the environmental issue areas for which actions/measures are identified; the required actions/measures; the timeframe for implementing, monitoring, and reporting on these measures; the responsible implementing, monitoring and reporting parties; and action needed to verify compliance/completion of the measures. Table C lists applicable regulations that were identified in the Initial Study and the Final SEIR that were relied upon to reduce or avoid significant impacts and the associated environmental issue areas. Table D summarizes the Transportation Management Plan (TMP) that is included as part of the proposed project, but will be monitored as part of the MMRP, and includes the same types of information as Tables A and B.

## SECTION 3: IMPLEMENTATION AND ENFORCEMENT OF MEASURES

This MMRP includes all mitigation measures that are applicable to the project. The intent of the MMRP is to ensure the effective implementation and enforcement of adopted mitigation measures. In addition to listing mitigation measures, for the purposes of public disclosure and to assist in

implementation and enforcement, the MMRP also lists “improvement measures”, “applicable regulations”, and the Project TMP.

Mitigation measures are contained in **Table A**. As discussed in the Initial Study and the Final SEIR, the mitigation measures included in the MMRP are measures required to avoid or lessen significant impacts of the project.

Improvement measures are contained in **Table B**. CEQA does not require mitigation measures to be adopted to address impacts that are determined to be less than significant. (*Cal. Oak Foundation v. Regents of U. of Cal.* (2010) 188 Cal.App.4th 227, 282.) Nevertheless, OCII has exercised its discretion to require implementation of various “improvement measures” to further reduce or avoid impacts that the Final SEIR determined to be less than significant without mitigation.

Applicable regulations are contained in **Table C**. A lead agency may rely on compliance with applicable laws and regulations in determining that a proposed project will result in a less-than-significant impact. (See *San Francisco Tomorrow v. City and County of San Francisco* (2014) 229 Cal.App.4th 49, 525 [holding the city properly relied on compliance with building codes and related regulations in determining the proposed project would not result in potential safety hazards].) Applicable regulations are legally binding and enforceable laws or adopted regulations that OCII has determined are legally applicable to the project and will ensure an impact is less than significant.

A summary of the project’s Transportation Management Plan (TMP) is included as **Table D**. The TMP is a management and operating plan included as part of the project to facilitate multimodal access to the project site. The TMP includes various management strategies to reduce use of single-occupant vehicles and to increase the use of ridershare, transit, bicycle, and walk modes for trips to and from the project site. The TMP program was developed by the project sponsor in consultation with the San Francisco Municipal Transportation Agency (SFMTA), OCII, and the Planning Department. The TMP outlines the process to monitor and refine the strategies in the TMP in conjunction with the City throughout the life of the project. Thus, the TMP is a working document that will be adjusted and refined over time by the project sponsor and City agencies involved in implementing the plan. Monitoring methods include field surveys of operations of the event center during the first four years, and an annual survey and reporting program for the life of the project. Under the annual survey and reporting program, the project sponsor shall conduct annual surveys of: (1) event center employee, (2) event center attendees, (3) UCSF employees and patients, (4) emergency service providers, and (5) visitors of Mission Bay neighborhoods to evaluate the effectiveness of the management strategies. The TMP includes annual reporting of the TMP measures to OCII, referred to in this MMRP as the TMP monitoring surveys and reports. The TMP monitoring surveys and reports may be included as part of the MMRP Annual Report described in Section 4 below.

The MMRP matrix identifies the mitigation schedule and the parties responsible for implementing, monitoring and reporting on the implementation of the measures listed in Tables A, B, and D. As the CEQA lead agency for the Project, OCII is principally responsible for MMRP monitoring and enforcement. In addition, as provided in CEQA Guidelines Section 15097(a), OCII may delegate MMRP monitoring responsibilities to other public agencies, either working with City or other local

governments through their permitting or regulatory authorities, or through memoranda of understanding that OCII enters into with other entities. Accordingly, the MMRP identifies other public agencies, including SFMTA, the San Francisco Public Utilities Commission (SFPUC), the San Francisco Department of Building Inspection (DBI), the San Francisco Department of Public Works (DPW), the San Francisco Planning Department, the San Francisco Entertainment Commission, the San Francisco Bay Regional Water Quality Control Board (RWQCB) and the Bay Area Air Quality Management District (BAAQMD) where such delegation is known or anticipated.

If any mitigation and improvement measures are not implemented as required, OCII may, in conjunction with other entities listed above, pursue corrective actions including, but not limited to, the following: (1) a written notification and request for compliance; (2) withholding of permits; (3) administrative fines; (4) a stop-work order; (5) criminal prosecution and/or administrative fines; (6) forfeiture of security bonds or other guarantees; and (7) revocation of permits or other entitlements.

#### **SECTION 4: MMRP ANNUAL REPORT**

The project sponsor shall submit a MMRP Annual Report to OCII for the life of the project. The first MMRP Annual Report shall be due one year following commencement of project construction. The MMRP Annual Report shall summarize the current implementation and compliance status at the time of the report for all mitigation, improvement, and TMP measures for which the project sponsor has been assigned some or all reporting responsibility; for measures that another entity is responsible for implementing, the project sponsor shall report on readily available information about the implementation and compliance status of such measures but such reporting responsibility does not transfer responsibility for implementation of such measures to the project sponsor. The MMRP matrix identifies the monitoring and reporting actions included in the annual report unless another monitoring or reporting action is specified for individual mitigation measures.

#### **SECTION 5: CHANGES TO MITIGATION MEASURES**

Any substantive change in the MMRP made by OCII staff shall be reported in writing to the Executive Director of OCII. Reference to such changes shall be made in the MMRP Annual Report. OCII staff may modify or substitute mitigation measures subject to one of the following findings, documented by substantial evidence:

- a. The mitigation measure included in the Final SEIR and the MMRP is no longer required because the significant environmental impact identified in the Final SEIR has been found not to exist, or to occur at a level which makes the impact less than significant as a result of changes in the project, changes in conditions of the environment, or other factors.

OR

- b. The modified or substitute mitigation measure either provides corrections to text without any substantive change in the intention or meaning of the original mitigation measure, or provides a level of environmental protection equal to or greater than that afforded by the mitigation measure included in the Final SEIR and the MMRP; and

The modified or substitute mitigation measures do not have significant adverse effects on the environment in addition to or greater than those which were considered by the relevant agencies in their decisions on the Final SEIR and the proposed project; and

The modified or substitute mitigation measures are feasible, and OCII, through measures included in the MMRP or other City procedures, can ensure their implementation.

Documentation supporting the findings involving modifications to mitigation measures shall be maintained in the project file with the MMRP and shall be made available to the public upon request.

MITIGATION MEASURE	MITIGATION RESPONSIBILITY	MITIGATION SCHEDULE	MONITORING AND REPORTING RESPONSIBILITY	MONITORING ACTIONS/SCHEDULE AND VERIFICATION OF COMPLIANCE
<b>Transportation and Circulation, SEIR Section 5.2</b>				
<b>M-TR-2a: Additional PCOs during Events</b> As a mitigation measure to manage traffic flows and minimize congestion associated with events at the project site, the proposed project's TMP shall be modified to include four additional PCOs (i.e., in addition to the 17 PCOs included in the project TMP) that shall be deployed to intersections where the proposed project would result in significant impacts, as conditions warrant during events. These could include the intersections of King/Fourth, Fifth/Harrison/I-80 westbound off-ramp, Fifth/Bryant/I-80 eastbound on-ramp, Seventh/Mission Bay Drive, and Seventh/Mississippi/16th. The PCO Supervisor shall make the determination where the additional PCOs would be located, based on field conditions during an event.	SFMTA	Ongoing: All events with more than 12,500 attendees	SFMTA	Ongoing: Visual verification at time of event by PCO Supervisor
<b>M-TR-2b: Additional Strategies to Reduce Transportation Impacts</b> The project sponsor shall work with the City to pursue and implement commercially reasonable additional strategies (i.e., in addition to those included in the project TMP) to reduce transportation impacts. In addition, the City shall pursue and implement additional strategies to be implemented by the City or other public agency (e.g., Caltrans). These strategies shall include one or more of the following:				
<b>Strategies to Reduce Traffic Congestion</b> <ul style="list-style-type: none"> <li>The City to request that Caltrans install changeable message signs on I-280 upstream of key entry points onto the local street network.</li> <li>The City to provide coordinated outreach efforts to surrounding neighborhoods to explore the need/desire for new on-street parking management strategies, which could include implementation of time limits and Residential Parking Permit program areas.</li> </ul>	SFMTA	Within one year of project approval	OCII	Include in MMRP Annual Report; Complete when request made
	SFMTA	Ongoing	OCII	Include in MMRP Annual Report; Ongoing outreach efforts as needed

## MITIGATION MONITORING &amp; REPORTING PROGRAM

<b>Transportation and Circulation, SEIR Section 5.2 (cont.)</b>				
designated representative. Measures may include, but are not limited to, the following:				
<ul style="list-style-type: none"> <li>Prohibit the use of high-intensity lights that are directed towards the UCSF helipad</li> <li>Prohibit the use of high-intensity outdoor flashing lights or strobe lights in proximity to the hospital helipad's three approaches</li> <li>Prohibit the use of outdoor lasers directed upward, and laser light shows that have not been subject to prior review by OCII in consultation with SFO staff knowledgeable of the effects of lighting on pilots and safe air navigation and, if necessary the FAA</li> <li>Avoid outdoor fireworks proximate to flight paths unless (1) the SFFD approves the proposed use of fireworks, and (2) notice of the event is provided to UCSF</li> <li>Avoid the use of light configurations similar to those associated with the UCSF helipad landing area, and where feasible, locate primary outdoor lighted displays and television/lighted screens away from the project property line at 16th Street, South Street, or Third Street</li> <li>Notify in advance and consult with OCII and UCSF representatives regarding planned special event lighting</li> <li>Develop exterior specialized lighting guidelines and ensure event organizers are informed of the hospital helipad, its approaches, and safety concerns related to outdoor nuisance lighting</li> <li>Identify appropriate management policies and procedures to respond to the use of handheld laser pointers by the public on the project site which may pose a hazard to pilots</li> <li>Identify appropriate management policies regarding the use of drones on the project site and procedures to respond to aerial drone activity that may pose a hazard to pilots</li> </ul>				

## MITIGATION MONITORING &amp; REPORTING PROGRAM

TABLE A - MITIGATION MEASURES

MITIGATION MEASURE	MITIGATION RESPONSIBILITY	MITIGATION SCHEDULE	MONITORING AND REPORTING RESPONSIBILITY	MONITORING ACTIONS/SCHEDULE AND VERIFICATION OF COMPLIANCE
<b>Transportation and Circulation, SEIR Section 5.2 (cont.)</b>				
<b>M-TR-11a:</b> As a mitigation measure to manage traffic flows and minimize congestion associated with overlapping events, the proposed project's TMP shall be expanded to include two additional PCOs that shall be deployed to the following intersections where the proposed project would result in significant traffic impacts, as conditions warrant during events: King/Fifth/I-280 ramps, and Fourth/16th, where PCOs would not be located as part of the project TMP or Mitigation Measure M-TR-2a: Additional PCOs during Events. The PCO Supervisor shall make the determination where the additional PCOs would be located, based on field conditions during an event. This measure shall be implemented in coordination with Mitigation Measure M-TR-2a: Additional PCOs during Events, and these two additional PCOs during overlapping events shall be in addition to the four additional PCOs that shall be provided as part of Mitigation Measure M-TR-2a: Additional PCOs during Events.	SEMTA	Ongoing: all events with more than 12,500 attendees that overlap with SF Giants events at AT&T Park	SEMTA	Ongoing: Visual verification at time of event by PCO Supervisor
<b>M-TR-11b: Participation in the Ballpark/Mission Bay Transportation Coordinating Committee</b> As a mitigation measure to optimize effectiveness of the transportation management strategies for day-to-day operations and events in the Mission Bay area, at AT&T Park, UCSF Mission Bay campus, and the proposed project, the project sponsor shall actively participate as a member of the Ballpark/Mission Bay Transportation Coordinating Committee in order to evaluate and plan for operations of all three facilities (i.e., AT&T Park, UCSF Mission Bay Campus, and the proposed event center). This committee would, among other roles, serve as a single point for coordination of transportation management strategies. The Transportation Coordinating Committee shall consult on changes to and expansion of transit services, and for developing and implementing strategies within their purview that address transportation issues and conflicts as they arise. In addition, the committee shall serve as a liaison for operation of the facilities, monitoring conditions, and addressing community issues related to events and the project sponsor shall make good faith efforts to notify the committee regarding events.	Project Sponsor through participation in B/MBTCC	Following project approval and as scheduled thereafter	OCII	Include in MMRP Annual Report; OCII, SEMTA to attend B/MBTCC meetings

## MITIGATION MONITORING &amp; REPORTING PROGRAM

TABLE A - MITIGATION MEASURES

MITIGATION MEASURE	MITIGATION RESPONSIBILITY	MITIGATION SCHEDULE	MONITORING AND REPORTING RESPONSIBILITY	MONITORING ACTIONS/SCHEDULE AND VERIFICATION OF COMPLIANCE
<b>Transportation and Circulation, SEIR Section 5.2 (cont.)</b>				
<b>M-TR-11c: Additional Strategies to Reduce Transportation Impacts of Overlapping Events</b> The project sponsor shall work with the City to pursue and implement additional strategies to reduce transportation impacts associated with overlapping events at AT&T Park and the proposed event center. These strategies shall include one or more of the following:				
<ul style="list-style-type: none"> <li>The project sponsor shall exercise commercially reasonable efforts to avoid scheduling non-Golden State Warriors events of 12,500 or more event center attendees that start within 60 minutes of the start of events at AT&amp;T Park.</li> </ul>	Project Sponsor	Ongoing; all events with more than 12,500 attendees that overlap with SF Giants events at AT&T Park	OCII	Include in MMRP Annual Report
<ul style="list-style-type: none"> <li>When overlapping non-Golden State Warriors events of 12,500 or more event center attendees and evening SF Giants games, the project sponsor shall exercise commercially reasonable efforts to negotiate with the event promoter to stagger start times such that the event headliner starts no earlier than 8:30 p.m.</li> </ul>	Project Sponsor	Ongoing; all events with more than 12,500 attendees that overlap with SF Giants events at AT&T Park	OCII	Include in MMRP Annual Report
<ul style="list-style-type: none"> <li>The City has identified two off-site parking lots on Port of San Francisco lands to the south of the event center (19th Street and Western Pacific sites) that can accommodate approximately 250 additional parking spaces for all events and up to approximately 800 additional parking spaces for use during dual events of 12,500 or more event center attendees (for a total of approximately 1,050 additional off-site parking spaces). As long as the Port of San Francisco takes all necessary actions to make the land available for public parking, the project sponsor shall: (1) make commercially reasonable efforts to negotiate with the Port of San Francisco or its designee to acquire sufficient rights for the use of such parking lot(s) through lease, purchase, or other means as necessary; and (2) (if such negotiations are successful) provide free shuttles to the event center from such off-site parking lot(s) that are more than ½-mile from the event center on a maximum 10-minute headway before and after events.</li> </ul>	Port; Project Sponsor; parking lot operator(s)	Within one year after Port takes all necessary actions to make land available for public parking.	OCII	Include in MMRP Annual Report; Complete before opening of Event Center

## MITIGATION MONITORING &amp; REPORTING PROGRAM

TABLE A - MITIGATION MEASURES

MITIGATION MEASURE	MITIGATION RESPONSIBILITY	MITIGATION SCHEDULE	MONITORING AND REPORTING RESPONSIBILITY	MONITORING ACTIONS/SCHEDULE AND VERIFICATION OF COMPLIANCE
<b>Transportation and Circulation, SEIR Section 5.2 (cont.)</b>				
<ul style="list-style-type: none"> <li>In the event that the off-site parking lots at 19th Street and the Western Pacific site are implemented, the SFMTA shall consult with Caltrans in assessing the feasibility of signalizing the intersection of Pennsylvania/I-280 southbound off-ramp. If determined feasible by the SFMTA and Caltrans, the SFMTA and Caltrans shall establish the level of traffic volumes that would trigger the need for a signal, and the project sponsor shall fund its fair share cost of the design and implementation of the new signal, based on project contributions to annual average weekday traffic volumes at this intersection.</li> </ul>	SFMTA	When traffic signal warrants are met	OCII	Include in MMRP Annual Report; SFMTA to track cumulative development in area
<ul style="list-style-type: none"> <li>In addition, as part of monitoring of traffic conditions during overlapping events, the SFMTA shall consult with Caltrans regarding the need to deploy an SFMTA PCO or CHP officer to expedite traffic exiting I-280 southbound (i.e., waving vehicles exiting I-280 southbound and turning left onto southbound Pennsylvania Street through the existing stop sign) during overlapping events when the Western Pacific parking lot is used for project event parking. The PCO or CHP officer would be deployed during those events prior to installation of a traffic signal or if signalization of this intersection is determined not to be feasible.</li> </ul>	SFMTA	During all events with more than 12,500 attendees, that overlap with SF Giants events at AT&T Park	SFMTA	SFMTA by stationing PCO or CHP at off-ramp as needed
<ul style="list-style-type: none"> <li>To manage traffic flows and minimize congestion associated with non-Golden State Warriors events overlapping with events at AT&amp;T Park, and to incentivize event attendees and UCSF employees to use alternatives to the private automobile, the City and the project sponsor shall pursue and implement additional transportation management actions during the pre-event period during overlapping events. This measure shall be implemented in coordination with and in addition to Mitigation Measure M-TR-11a: Additional PCOs during Events and Mitigation Measure M-TR-11b: Additional Strategies to Reduce Transportation Impacts. Strategies shall include one or more of the following:</li> </ul>	Project Sponsor; SFMTA	First year of event center operation, and annually thereafter	OCII	TMP monitoring surveys and reports

## MITIGATION MONITORING &amp; REPORTING PROGRAM

<b>Transportation and Circulation, SEIR Section 5.2 (cont.)</b>				
Muni light rail service and/or shuttle buses between key Market Street locations and the project. Examples of the enhanced service include Muni bus shuttles between Union Square and/or Powell Street BART/Muni station and the project site. The need for enhanced Muni service shall be based on characteristics of the overlapping events (e.g., projected attendance levels, and anticipated start and end times).				
<b>M-TR-14: Additional BART Service to the East Bay during Overlapping Events</b> As a mitigation measure to accommodate transit demand to the East Bay following weekday and weekend evening events, the project sponsor shall work with the Ballpark/Mission Bay Transportation Coordinating Committee to consult with BART to provide additional service from San Francisco following weekday and weekend evening events. The additional East Bay BART service could be provided by operating longer trains. The need for additional BART service shall be based on characteristics of the overlapping events (e.g., event type, projected attendance levels, and anticipated start and end times).	Ballpark/Mission Bay Transportation Coordinating Committee; Project Sponsor through participation in the B/MBTCC	First year of event center operation and reviewed and revised annually thereafter	OCII	Include in MMRP Annual Report; SFMTA through participation in the B/MBTCC
<b>M-TR-18: Auto Mode Share Performance Standard and Monitoring (Required only without implementation of Muni Special Event Transit Service Plan)</b> <i>Performance Standards and Strategies for Achieving Them</i> The project sponsor shall be responsible for implementing TDM measures intended to reach an auto mode share performance standard for different types of events. Specifically, the project sponsor shall work to achieve the following performance standards: 1. For weekday events that have 12,500 or more attendees, the project shall not exceed an arrival auto mode share of 53 percent. 2. For weekend events that have 12,500 or more attendees, the project shall not exceed an arrival auto mode share of 59 percent.	Project Sponsor	All events with more than 12,500 attendees	OCII; SFMTA	Include in MMRP Annual Report in the event that Muni Special Event Transit Service Plan is not implemented

## MITIGATION MONITORING &amp; REPORTING PROGRAM

TABLE A - MITIGATION MEASURES

MITIGATION MEASURE	MITIGATION RESPONSIBILITY	MITIGATION SCHEDULE	MONITORING AND REPORTING RESPONSIBILITY	MONITORING ACTIONS/SCHEDULE AND VERIFICATION OF COMPLIANCE
<b>Transportation and Circulation, SEIR Section 5.2 (cont.)</b>				
<p>The performance standards shall be achieved by the middle of the Golden State Warriors' third season at the event center, and for every Golden State Warriors season thereafter.</p> <p>The project sponsor may implement any combination of TDM strategies, including those identified in the proposed project's TMP, to achieve the above performance standards. Potential strategies include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• Providing shuttle bus service between major transportation hubs such as Transbay Transit Terminal, BART stations, Caltrain stations and the event center.</li> <li>• Providing bus shuttles between park &amp; ride lots, remote parking facilities, or other facilities or locations within San Francisco, and the event center.</li> <li>• Facilitating charter bus packages through the event sales department to encourage large groups to travel to and from the event center on charter buses.</li> <li>• Reducing the project parking demand through a variety of mechanisms, including pricing.</li> <li>• Offering high occupancy vehicle parking at more convenient locations than parking for the general public and/or at reduced rates.</li> <li>• Undertaking media campaigns, including in social media, that promote walking and/or bicycling to the event center.</li> <li>• Conducting cross-marketing strategies with event center businesses (e.g., discount on merchandise/food if patrons arrive by transit and/or bike or on foot).</li> <li>• Carrying out public education campaigns.</li> <li>• Offering special event ferry service to the closest ferry station to the project site (similar to the existing service provided between AT&amp;T Park and Alameda and Marin Counties by Golden Gate Transit, Alameda/Oakland and Vallejo ferry service).</li> <li>• Providing incentive for arrivals by bike.</li> <li>• Providing transit fare incentives to event ticket holders.</li> </ul>				

## MITIGATION MONITORING &amp; REPORTING PROGRAM

TABLE A - MITIGATION MEASURES

MITIGATION MEASURE	MITIGATION RESPONSIBILITY	MITIGATION SCHEDULE	MONITORING AND REPORTING RESPONSIBILITY	MONITORING ACTIONS/SCHEDULE AND VERIFICATION OF COMPLIANCE
<b>Transportation and Circulation, SEIR Section 5.2 (cont.)</b>				
<p><b>Monitoring and Reporting</b></p> <p>The project sponsor shall retain a qualified transportation professional<sup>1</sup> to conduct travel surveys, as outlined below, and to document the results in a <i>Transportation Demand Management Report</i>. Prior to beginning the travel survey, the transportation professional shall develop the data collection methodology in consultation with and approved by OCII (or its designated representative, such as the Planning Department's Environmental Review Officer (ERO)) and in consultation with SEMTA. It is anticipated that data collection would occur at least during four days for two different types of events, for a total of eight days annually. Specifically, data collection shall be conducted during at least two weekday and two weekend NBA basketball games with 12,500 or more attendees, and two weekday and two weekend non-basketball events with attendance of 12,500 or more attendees.</p> <p>The schedule of the travel surveys shall be as follows:</p> <ul style="list-style-type: none"> <li>Comprehensive travel surveys of basketball game attendees shall be conducted between December and April of every season.</li> <li>Comprehensive travel surveys of non-basketball event attendees (conventions events, concerts, family shows, etc.) could be collected any time during the year.</li> </ul> <p>The following data of event attendees shall be collected as part of the travel surveys:</p> <ul style="list-style-type: none"> <li>Origin/destination of the trip (city, zip code, home/work/other)</li> <li>Mode of travel to/from event center <ul style="list-style-type: none"> <li>If by transit, list mode and name of transit operator (AC Transit, BART, Caltrain, Muni, etc.)</li> <li>If by rail or ferry, name of station trip started and ended</li> </ul> </li> </ul>				

<sup>1</sup> The Transportation Demand Management Report shall be performed by a qualified transportation professional from the Planning Department's *Transportation Consultant Pool*.

## MITIGATION MONITORING &amp; REPORTING PROGRAM

TABLE A - MITIGATION MEASURES

MITIGATION MEASURE	MITIGATION RESPONSIBILITY	MITIGATION SCHEDULE	MONITORING AND REPORTING RESPONSIBILITY	MONITORING ACTIONS/SCHEDULE AND VERIFICATION OF COMPLIANCE
<b>Transportation and Circulation, SEIR Section 5.2 (cont.)</b>				
<ul style="list-style-type: none"> <li>- If by auto, number of people in the vehicle</li> <li>- If by auto, parking location and approximate walking time to event center</li> <li>- If by auto, ask if following trips would continue as auto, or if anticipate a mode shift.</li> <li>- If by bicycle or walking, name the origin of the trip. If a transfer from regional transit, name the origin and operator.</li> <li>• If by bike share, name the origin (i.e., the pick up location) of the trip. Note if trip is a "last mile" connection from regional transit, and include the origin and operator.</li> <li>• Arrival and departure times at the event center</li> </ul> <p>The travel survey shall employ whatever methodology necessary, as approved by the OCII (or its designee) in consultation with SFMTA, to collect the above described data including but not limited to: manual or automatic (e.g., video or tubes) traffic volume counts, intercept surveys, smart phone application-based surveys, and on-line surveys.</p> <p>The <i>Transportation Demand Management Report(s)</i> shall be submitted to OCII, or its designee, for review within 30 days of completion of the data collection. If OCII, or its designee, finds that the project exceeds the stated mode share performance standard, the project sponsor shall revise the proposed project's Transportation Management Plan (TMP) to incorporate a set of measures that would lower the auto mode share. OCII, or its designee, shall review and approve the revised TMP. For basketball events, the TMP shall be revised by no later than August 15th of the calendar year to ensure adequate lead time to implement TDM measures prior to the start of the following basketball season. For non-basketball events, the proposed project's TMP shall be revised within 90 days of submittal of the <i>Transportation Demand Management Report</i> to incorporate a set of measure that would lower the auto mode share.</p> <p>If the project does not meet the stated performance standard, the project sponsor shall implement TDM measures and collect data on a semi-annual basis (i.e., twice during a calendar year) to</p>				

## MITIGATION MONITORING &amp; REPORTING PROGRAM

TABLE A - MITIGATION MEASURES

MITIGATION MEASURE	MITIGATION RESPONSIBILITY	MITIGATION SCHEDULE	MONITORING AND REPORTING RESPONSIBILITY	MONITORING ACTIONS/SCHEDULE AND VERIFICATION OF COMPLIANCE
<b>Transportation and Circulation, SEIR Section 5.2 (cont.)</b>				
<p>assess their effectiveness for basketball games and other events. The implementation of TDM measures shall be intensified until the auto mode split performance standard is achieved. Upon achievement of the performance standard, the project sponsor may resume travel survey data collection for basketball and non-basketball events on an annual basis. If the sponsor demonstrates three consecutive years of meeting the auto mode share performance standard, the comprehensive data collection effort may occur every two years.</p> <p>The data collection plan described above may be modified by OCII, or its designee, in consultation with SFMTA if field observations and/or other circumstances require data collection at different times and/or for different events than specified above. The modification of the data collection plan, however, shall not change the performance standards set forth in this mitigation measure.</p>				
<p><b>M-TR-22: Provide Safe Pedestrian Access to Adjacent Transit and Parking Facilities and Monitoring (Required only without implementation of Muni Special Event Transit Service Plan)</b></p> <p>During events with 3,000 or more attendees, the project sponsor shall be responsible for providing trained personnel (e.g., off-duty SFPD staff) to control pedestrian, bicycle and vehicular flows to and from the event center at the intersections immediately adjacent to the project site and to ensure that Muni platforms serving the site are not over capacity. The trained personnel shall be provided during pre- and post-event periods. The project sponsor shall ensure that conflicts between various modes are reduced to the maximum extent possible through adequate staffing of trained personnel as well as other measures, as appropriate.</p> <p>Other pedestrian management measures that could be implemented include but are not limited to: installation of barricades, proper signage and announcements to disperse patrons to other streets around the project site, such as to Terry A. Francois Boulevard, and cross-marketing incentives such as discounts at the restaurant and retail establishments to extend the peak departure period. Through the implementation of various</p>	Project Sponsor	All events with more than 3,000 attendees	OCII; SFMTA	<p>Include in MMRP Annual Report in the event that Muni Special Event Transit Service Plan is not implemented</p>

## MITIGATION MONITORING &amp; REPORTING PROGRAM

TABLE A - MITIGATION MEASURES

MITIGATION MEASURE	MITIGATION RESPONSIBILITY	MITIGATION SCHEDULE	MONITORING AND REPORTING RESPONSIBILITY	MONITORING ACTIONS/SCHEDULE AND VERIFICATION OF COMPLIANCE
<b>Transportation and Circulation, SEIR Section 5.2 (cont.)</b>				
<p>strategies, the project sponsor shall ensure that pedestrian conflicts with other modes are minimized by separating vehicles, bicycles, transit and pedestrian flows to the greatest extent possible, including ensuring that various modes are adequately instructed about when it is their turn to proceed. The project sponsor shall also ensure that Muni platforms are not overcrowded by staging event attendees on the adjacent sidewalks until there is sufficient space on the Muni platforms, which are proposed to be expanded as part of the project.</p> <p>At the intersection of Third/South, the trained personnel shall implement strategies to allow pedestrians to cross the street safely. The strategies could include allowing authorized personnel to manually override the traffic signal and direct pedestrians to cross, erecting temporary pedestrian crossing barriers, allowing use of the closed Third Street as a pedestrian access route, providing a defined passenger waiting area within the closed Third Street, and shielding passengers waiting to board light rail from adjacent pedestrian traffic.</p> <p><b>Monitoring and Reporting</b></p> <p>The project sponsor shall retain a qualified transportation professional<sup>2</sup> to conduct field observations of pedestrian hazards and safety conditions along Third Street adjacent to the project site, as outlined below, and to document the results in a <i>Pedestrian Access Report</i>. City staff shall verify the field data collection results. Prior to beginning field observations, the transportation professional shall develop the data collection methodology in consultation with and approved by OCII, or its designee, in coordination with SFMTA. The data collection methodology shall be reviewed and revised annually, if appropriate. Field observations shall be conducted during the following event types and attendance levels:</p> <ul style="list-style-type: none"> <li>at least two weekday NBA basketball games with 12,500 or more attendees;</li> </ul>				

2. The Transportation Demand Management Report shall be performed by a qualified transportation professional from the San Francisco Planning Department's *Transportation Consultant Pool*. Available online at <http://www.sf-planning.org/index.aspx?page=1886>. Accessed May 28, 2015.

## MITIGATION MONITORING &amp; REPORTING PROGRAM

TABLE A - MITIGATION MEASURES

MITIGATION MEASURE	MITIGATION RESPONSIBILITY	MITIGATION SCHEDULE	MONITORING AND REPORTING RESPONSIBILITY	MONITORING ACTIONS/SCHEDULE AND VERIFICATION OF COMPLIANCE
<b>Transportation and Circulation, SEIR Section 5.2 (cont.)</b>				
<ul style="list-style-type: none"> <li>at least two weekend NBA basketball games with 12,500 or more attendees;</li> <li>at least two weekday non-basketball game events with 12,500 or more attendees;</li> <li>at least two weekend non-basketball game events with 12,500 or more attendees;</li> <li>at least two weekday non-basketball game events with 3,000 to 9,000 attendees; and,</li> <li>at least two weekend non-basketball game events with 3,000 to 9,000 attendees; and</li> <li>at least two weekday convention events of 9,000 or more attendees.</li> </ul> <p>The pedestrian hazard and safety conditions field observations shall occur on an annual basis. The <i>Pedestrian Access Report</i> shall be submitted to SFMTA, OCII and Planning Department for review within 30 days of completion of the data collection. If OCII finds that the project does not meet the performance standard outlined below, the Transportation Management Plan (TMP) shall be revised to incorporate techniques to minimize conflicts between pedestrians and other modes. The TMP shall be revised within 90 days of submittal of the <i>Pedestrian Access Report</i>. When the project is not meeting the stated performance standard, the project sponsor shall collect data on a semi-annual basis (i.e., twice during a calendar year) to assess the effectiveness of various measures incorporated into the revised TMP. The implementation of various measures shall be intensified until pedestrian access to and from the site occurs in a safe manner, as determined by OCII, or its designee.</p> <p>The performance standard for safe pedestrian operations consists of the following: substantial numbers of pedestrians are not spilling onto the Muni right-of-way area, are not illegally crossing Third Street midblock, are not overcrowding the Muni platforms, and are not crossing intersections against the signal. Upon achievement of the performance standard, the project sponsor</p>				

## MITIGATION MONITORING &amp; REPORTING PROGRAM

TABLE A - MITIGATION MEASURES

MITIGATION MEASURE	MITIGATION RESPONSIBILITY	MITIGATION SCHEDULE	MONITORING AND REPORTING RESPONSIBILITY	MONITORING ACTIONS/SCHEDULE AND VERIFICATION OF COMPLIANCE
<b>Transportation and Circulation, SEIR Section 5.2 (cont.)</b>				
may resume field observations for basketball, non-basketball and convention events on an annual basis. If the sponsor demonstrates three consecutive years of meeting the performance standard, the comprehensive data collection effort may occur every two years.  Further, in reviewing the <i>Pedestrian Access Report</i> , OCII, or its designee, may adjust the size of the events for which this measure is applicable. For example, if small scale events (e.g., those with 5,000 attendees) do not result in crosswalk and/or Muni platform overcrowding or other similar pedestrian safety conditions, OCII, or its designee, may revise this mitigation measure to apply to events of 5,001 or more attendees.				
<b>Mission Bay FSEIR Mitigation Measure E.47: Transportation System Management Plan<sup>3</sup></b> Prepare a TSM Plan, which could include the following:				
<ul style="list-style-type: none"> <li>• <i>FSEIR Mitigation Measure E.47.a:</i> Shuttle Bus - Operate shuttle bus service between Mission Bay and regional transit stops in San Francisco (e.g., BART, Caltrain, Ferry Terminal, Transbay Transit Terminal), and specific gathering points in major San Francisco neighborhoods (e.g., Richmond and Mission Districts).</li> </ul>	Mission Bay TMA; Project Sponsor through participation in the TMA	As identified by Mission Bay TMA; ongoing review with OCII	OCII; SFMTA	Include in Mission Bay TMA annual report
<ul style="list-style-type: none"> <li>• <i>FSEIR Mitigation Measure E.47.b:</i> Transit Pass Sales - Sell transit passes in neighborhood retail stores and commercial buildings in the Project Area.</li> </ul>	Mission Bay TMA; Project Sponsor through participation in the TMA	As identified by Mission Bay TMA; ongoing review with OCII	OCII; SFMTA;	Include in Mission Bay TMA annual report
<ul style="list-style-type: none"> <li>• <i>FSEIR Mitigation Measure E.47.c:</i> Employee Transit Subsidies - Provide a system of employee transportation subsidies for major employers.</li> </ul>	Mission Bay TMA; Project Sponsor through participation in the TMA	As identified by Mission Bay TMA; ongoing review with OCII	OCII; SFMTA	Include in Mission Bay TMA annual report

3 The Mission Bay South Transportation Management Plan incorporates the Mission Bay FSEIR Mitigation Measures 47a - 47c, and 47e - 47i, and it is part of the Mission Bay South Owners Participation Agreement for development within Mission Bay. Because the project sponsor would be subject to the Owner Participation Agreement, these mitigation measures were assumed to be part of the proposed project, and are summarized here for informational purposes. The Mission Bay Transportation Management Association (Mission Bay TMA) is the non-profit organization that was formed to meet the requirements of the Mission Bay FSEIR Mitigation Measure E.46: Transportation Management Organization, and implement, as appropriate, the Transportation System Management measures included in Mission Bay FSEIR Mitigation Measures E.47: Transportation System Management Plan. The Mission Bay TMA submits an Annual Report to OCII on the Transportation Management Plan activities, including the Mission Bay TMA shuttle service and ridership, travel surveys, Transportation Demand Management marketing efforts, and other transportation planning coordination with SFMTA.

MITIGATION MEASURE	MITIGATION RESPONSIBILITY	MITIGATION SCHEDULE	MONITORING AND REPORTING RESPONSIBILITY	MONITORING ACTIONS/SCHEDULE AND VERIFICATION OF COMPLIANCE
<b>Noise and Vibration, SEIR Section 5.3 (cont.)</b>				
<ul style="list-style-type: none"> <li>Sound-control devices no less effective than those provided by the manufacturer shall be provided on all construction equipment.</li> <li>Impact tools (e.g., jack hammers, pavement breakers, and rock drills) used for construction shall be hydraulically or electrically powered wherever possible to avoid noise associated with compressed air exhaust from pneumatically powered tools. Where use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used; this muffler can lower noise levels from the exhaust by up to about 10 dBA. External jackets on the tools themselves shall be used where feasible; this could achieve a reduction of 5 dBA. Quieter procedures, such as use of drills rather than impact tools, shall be used where feasible.</li> <li>Stationary noise sources such as material stockpiles and vehicle staging areas shall be located as far from adjacent receptors as possible.</li> <li>Enclosures and mufflers for stationary equipment shall be provided, impact tools shall be shrouded or shielded, and barriers shall be installed around particularly noisy activities at the construction sites so that the line of sight between the construction activities and nearby sensitive receptor locations is blocked to the extent feasible.</li> <li>Unnecessary idling of internal combustion engines shall be prohibited.</li> <li>Construction-related vehicles and equipment shall be required to use designated truck routes to travel to and from the project sites as determined in consultation with the SFMTA as part of the permit process prior to construction (see <b>Improvement Measure I-IR-1: Construction Management Plan and Public Updates</b>).</li> <li>The project sponsor shall designate a point of contact to respond to noise complaints. The point of contact must have the authority to modify construction noise-generating activities to ensure compliance with the measures above and with the San Francisco Noise Ordinance.</li> </ul>				

## MITIGATION MONITORING &amp; REPORTING PROGRAM

TABLE A - MITIGATION MEASURES

MITIGATION MEASURE	MITIGATION RESPONSIBILITY	MITIGATION SCHEDULE	MONITORING AND REPORTING RESPONSIBILITY	MONITORING ACTIONS/SCHEDULE AND VERIFICATION OF COMPLIANCE
<b>Air Quality, SEIR Section 5.4</b> <b>M-AQ-1: Construction Emissions Minimization</b> <b>A. Construction Emissions Minimization Plan.</b> Prior to issuance of a construction permit, the project sponsor shall submit a Construction Emissions Minimization Plan (Plan) to the OCII or its designated representative for review and approval by an Air Quality Specialist. The Plan shall detail project compliance with the following requirements:  1. All off-road equipment greater than 25 horsepower (hp) and operating for more than 20 total hours over the entire duration of construction activities shall meet the following requirements:  a) Where access to alternative sources of power are reasonably available, portable diesel engines shall be prohibited. Where portable diesel engines are required because alternative sources of power are not reasonably available, the diesel engine shall meet the equipment compliance step-down schedule in <b>Table M-AQ-1-1</b> .	Project Sponsor and Construction Contractor	Submit plan prior to issuance of construction site permit and implementation of plan ongoing during construction; Final plan within six months of the completion of construction.	Project sponsor to submit a Construction Emissions Minimization Plan to the OCII or its designated representative for review and approval by an Air Quality Specialist	As specified in the measure

TABLE M-AQ-1-1

## OFF-ROAD EQUIPMENT COMPLIANCE STEP-DOWN SCHEDULE

Compliance Alternative	Engine Emission Standard	Emissions Control
1	Tier 4 Interim	ARB NOx VDECS (40%) <sup>4</sup>
2	Tier 3	ARB NOx VDECS (40%)
3	Tier 2	ARB NOx VDECS (40%)
<b>How to use the table:</b> If the requirements of (A)(1)(b) cannot be met, then the project sponsor would need to meet Compliance Alternative 1. Should the project sponsor not be able to supply off-road equipment meeting Compliance Alternative 1, then Compliance Alternative 2 would need to be met. Should the project sponsor not be able to supply off-road equipment meeting Compliance Alternative 2, then Compliance Alternative 3 would need to be met.

MITIGATION MEASURE	MITIGATION RESPONSIBILITY	MITIGATION SCHEDULE	MONITORING AND REPORTING RESPONSIBILITY	MONITORING ACTIONS/SCHEDULE AND VERIFICATION OF COMPLIANCE
<b>Air Quality, SEIR Section 5.4 (cont.)</b>				
<b>M-AQ-2b: Emission Offsets, Option 2</b> 2) Directly implement a specific offset project to achieve reductions of 17 tons per year of ozone precursors (or greater as described in item 1 above). To qualify under this mitigation measure, the specific emissions retrofit project must result in emission reductions within the SFBAAB that would not otherwise be achieved through compliance with existing regulatory requirements. Prior to implementation of the offset project, the project sponsor must obtain OCII's approval of the proposed offset project by providing documentation of the estimated amount of emissions of ROG and NOx to be reduced (tons per year) within the SFBAAB from the emissions reduction project(s). The project sponsor shall notify OCII within six months of completion of the offset project for OCII verification.	Project Sponsor	Upon completion of construction, and prior to issuance of certificate of occupancy	OCII	Include in MMRP Annual Report; Complete upon completion of project and OCII's verification
<b>Wind and Shadow, SEIR Section 5.6</b>				
<b>M-WS-1: Develop and Implement Design Measures to Reduce Project Off-site Wind Hazards</b> The project sponsor shall develop and implement design measures to reduce the identified project off-site wind hazards. The project sponsor has selected a specific on-site design modification (installation of a solid canopy with a porous vertical standoff at the ground level of the southwest corner of the proposed 16th Street office building) that is demonstrated to be effective in reducing the project wind hazard impact to a less-than-significant level. Other measures may include additional on-site project design modifications or additions, additional on-site landscaping; and the implementation of potential additional off-site streetscape landscaping or other off-site wind-reducing features. Potential on- and/or off-site project site wind-reduction design measures developed by the sponsor would be coordinated with, and subject to review and approval, by OCII.	Project Sponsor	Prior to issuance of building permit.	OCII	Include in MMRP Annual Report; Complete upon completion of final design

<p><b>Cultural and Paleontological Resources, Initial Study Section E4 (cont.)</b></p> <p>rotational Department Qualified Archaeological Consultants List (QACL) maintained by the Planning Department archaeologist. The project sponsor shall contact the Department archaeologist to obtain the names and contact information for the next three archaeological consultants on the QACL. The archaeological consultant shall undertake an archaeological testing program as specified herein. In addition, the consultant shall be available to conduct an archaeological monitoring and/or data recovery program if required pursuant to this measure. The archaeological consultant's work shall be conducted in accordance with this measure at the direction of OCII or its designated representative. All plans and reports prepared by the consultant as specified herein shall be submitted first and directly to OCII or its designated representative for review and comment, and shall be considered draft reports subject to revision until final approval by OCII or its designated representative. Archaeological monitoring and/or data recovery programs required by this measure could suspend construction of the project for up to a maximum of four weeks. At the direction of the OCII or its designated representative, the suspension of construction can be extended beyond four weeks only if such a suspension is the only feasible means to reduce to a less than significant level potential effects on a significant archaeological resource as defined in CEQA Guidelines Sect. 15064.5 (a)(c).</p> <p><b>Consultation with Descendant Communities:</b> On discovery of an archaeological site<sup>5</sup> associated with descendant Native Americans, the Overseas Chinese, or other descendant group an appropriate representative<sup>6</sup> of the descendant group and OCII or its designated representative shall be contacted. The representative of the descendant group shall be given the</p>				

<sup>5</sup> The term "archaeological site" is intended here to include, at a minimum, any archaeological deposit, feature, burial, or evidence of burial.

<sup>6</sup> An "appropriate representative" of the descendant group is here defined to mean, in the case of Native Americans, any individual listed in the current Native American Contact List for the City and County of San Francisco maintained by the California Native American Heritage Commission and in the case of the Overseas Chinese, the Chinese Historical Society of America. An appropriate representative of other descendant groups should be determined in consultation with the Department archaeologist.

## MITIGATION MONITORING &amp; REPORTING PROGRAM

<b>Cultural and Paleontological Resources, Initial Study Section E4 (cont.)</b>				
<p>officer or its designated representative may require, if warranted, specific additional measures to be implemented by the project sponsor.</p> <p>Measures might include: preservation in situ of the archaeological resource; an archaeological monitoring program; or an archaeological testing program. If an archaeological monitoring program or archaeological testing program is required, it shall be consistent with the Environmental Planning (EP) division guidelines for such programs. OCII officer or its designated representative may also require that the project sponsor immediately implement a site security program if the archaeological resource is at risk from vandalism, looting, or other damaging actions.</p> <p>The project archaeological consultant shall submit a Final Archaeological Resources Report (FARR) to OCII officer or its designated representative that evaluates the historical significance of any discovered archaeological resource and describing the archaeological and historical research methods employed in the archaeological monitoring/data recovery program(s) undertaken. Information that may put at risk any archaeological resource shall be provided in a separate removable insert within the final report.</p> <p>Copies of the Draft FARR shall be sent to OCII officer or its designated representative for review and approval. Once approved by OCII officer or its designated representative, copies of the FARR shall be distributed as follows: California Archaeological Site Survey Northwest Information Center (NWIC) shall receive one (1) copy and OCII officer or its designated representative shall receive a copy of the transmittal of the FARR to the NWIC. OCII and the Environmental Planning division of the Planning Department shall each receive one bound copy, one unbound copy and one unlocked, searchable PDF copy on CD three copies of the FARR along with copies of any formal site recordation forms (CA DPR 523 series) and/or documentation for nomination to the National Register of Historic Places/California Register of Historical Resources. In instances of high public interest or interpretive value, OCII officer or its designated representative may require a different final report content, format, and distribution than that presented above.</p>				

## MITIGATION MONITORING &amp; REPORTING PROGRAM

TABLE A - MITIGATION MEASURES

MITIGATION MEASURE	MITIGATION RESPONSIBILITY	MITIGATION SCHEDULE	MONITORING AND REPORTING RESPONSIBILITY	MONITORING ACTIONS/SCHEDULE AND VERIFICATION OF COMPLIANCE
<b>Biological Resources, Initial Study Section E13</b>				
<p><b>M-BL4a: Preconstruction Surveys for Nesting Birds</b></p> <p>To the extent practicable, vegetation removal and grading of the site in advance of new site construction shall be performed between September 1 and January 31 in order to avoid breeding and nesting season for birds. If these activities cannot be performed during this period, a preconstruction survey of onsite vegetation for nesting birds shall be conducted by a qualified biologist.</p> <p>In coordination with the OCII or its designated representative, pre-construction surveys of onsite vegetation shall be performed during bird breeding season (February 1 – August 31) no more than 14 days prior to vegetation removal, grading, or initiation of construction in order to locate any active passerine nests within 250 feet of the project site and any active raptor nests within 500 feet of the project site. Surveys shall be performed in accessible areas within 500 feet of the project site and include suitable habitat within line of sight as access is available. If active nests are found on either the project site or within the 500-foot survey buffer surrounding the project site, no-work buffer zones shall be established around the nests. Buffer distances will consider physical and visual barriers between the active nest and project activities, existing noise sources and disturbance, as well as sensitivity of the bird species to disturbance. Modification of standard buffer distances, 250 feet for active passerine nests and 500 feet for active raptor nests, will be determined by a qualified biologist in consultation with the California Department of Fish and Wildlife (CDFW). No vegetation removal or ground-disturbing activities including grading or new construction shall occur within a buffer zone until young have fledged or the nest is otherwise abandoned as determined by the qualified biologist.</p> <p>If construction work during the nesting season stops for 14 days or more and then resumes, then nesting bird surveys shall be repeated, to ensure that no new birds have begun nesting in the area.</p>	Project Sponsor	Not more than 15 days prior to vegetation removal and grading activities that occur between February 1 and August 31	OCII	Include in MMRP Annual Report; Complete upon completion of preconstruction nesting bird surveys or completion of vegetation removal and grading activities outside of the bird breeding season

<b>Transportation and Circulation, SEIR Section 5.2 (cont.)</b>				
<p><b>I-TR-8: Truck and Service Vehicle Loading Operations Plan</b></p> <p>As an improvement measure to reduce potential conflicts between driveway operations, including loading activities, and pedestrians, bicycles and vehicles on South Street, Terry A. Francois Boulevard, and 16th Street, the project sponsor shall prepare a Loading Operations Plan, and submit the plan for review and approval by the OCII, or its designee, and the SFMTA. As appropriate, the Loading Operations Plan shall be periodically reviewed by the sponsor, the OCII or its designee, and SFMTA and revised if required to more appropriately respond to changes in street or circulation conditions.</p> <p>The Loading Operations Plan shall include a set of guideline related to the operation of the on-site and on-street loading facilities, as well as large truck curbside access guidelines; it shall also specify driveway attendant responsibilities to minimize truck queuing and/or substantial conflicts between project-generated loading/unloading activities and pedestrians, bicyclists, transit and autos. Elements of the Loading Operations Plan shall include:</p> <ul style="list-style-type: none"> <li>Commercial loading activities within on-street commercial loading spaces on South Street, Terry A. Francois Boulevard, and 16th Street shall comply with all posted time limits and all other posted restrictions.</li> <li>Double parking or any form of illegal parking or truck loading/unloading shall not be permitted on any streets adjacent to the project site, and particularly on 16th Street which would include a bicycle lane. Working with the SFMTA Parking Control Officers, building management shall ensure that no truck loading/unloading activities occur within the bicycle lanes on 16th Street.</li> <li>All move-in and move-out activities for commercial office uses shall be coordinated by building management, and, in the event that moving trucks cannot be accommodated within the below-grade loading area, building management shall obtain a reserved curbside permit from the SFMTA in advance of move-in or move-out activities.</li> </ul>	Project Sponsor	Prior to issuance of occupancy permit	OCII; SFMTA	Include in MMRP Annual Report; Complete upon completion of Loading Operations Plan

TABLE B - IMPROVEMENT MEASURES

IMPROVEMENT MEASURE	RESPONSIBILITY FOR IMPLEMENTATION	IMPROVEMENT MEASURE SCHEDULE	MONITORING AND REPORTING RESPONSIBILITY	MONITORING ACTIONS/SCHEDULE AND VERIFICATION OF COMPLIANCE
<b>Transportation and Circulation, SEIR Section 5.2 (cont.)</b>				
<b>I-TR-10a: UCSF Emergency Vehicle Access and Garage Signage Plan</b> As an improvement measure to enhance access for emergency vehicles and other visitors to the UCSF Children's Hospital emergency room and parking facilities at the UCSF Medical Center, the project sponsor shall work with UCSF, SFMTA, Caltrans, and DPW to develop and implement a UCSF emergency vehicle access and garage signage plan for I-280 and Mariposa, Owens, and 16th Streets to reflect desirable access routes for UCSF and event center access.	Project Sponsor	Prior to issuance of occupancy permit	OCII	Include in MMRP Annual Report; Complete upon completion of Vehicle Access and Garage Signage Plan
<b>I-TR-10b: Mariposa Street Restriping Study</b> In connection with the Mission Bay Plan improvements to the I-280 on- and off-ramps at Mariposa Street and the Owens Street extension, the SFMTA will be reevaluating the travel lane striping plan for Mariposa Street between Pennsylvania Avenue and Fourth Street. As part of this evaluation, the SFMTA will assess the feasibility of lengthening the dedicated left turn lane from eastbound Mariposa Street onto northbound Fourth Street. The evaluation is anticipated to take place in 2016, two years prior to the opening of the proposed event center. A re-evaluation may be needed following the opening of the event center. Therefore, as an improvement measure to enhance access to the UCSF Medical Center Children's Hospital, subsequent to the opening of the event center, the project sponsor shall retain a qualified transportation professional approved by SFMTA to conduct a traffic engineering study to evaluate potential changes to the travel lane configuration and related signage on Mariposa Street between the I-280 ramps and Fourth Street. The study, to be conducted in consultation with UCSF and SFMTA, would be used to determine if the dedicated eastbound left turn lane into Fourth Street/UCSF passenger loading/unloading and emergency vehicle entrance to the UCSF Children's Hospital should be extended west from its existing length of about 150 feet to provide for a longer queuing area separated from event-related traffic flow. If the study recommends restriping, the project sponsor shall fund SFMTA's cost of the design and implementation of the restriping.	Project Sponsor; SFMTA	Prior to second year of operation of the event center	OCII; SFMTA	Include in MMRP Annual Report; Complete upon completion of Restriping Study; Restriping of Mariposa Street if recommended

<b>Noise and Vibration, SEIR Section 5.3</b>				
<b>I-NO-1: Mission Bay Good Neighbor Construction Noise Policy</b> The project sponsor shall comply with the Mission Bay Good Neighbor Policy and limit all extreme noise-generating construction activities to 8:00 a.m. to 5:00 p.m., Monday through Friday. No pile driving or other extreme noise generating activity is permitted on Saturdays, Sundays, and holidays.	Project Sponsor	Ongoing during construction	OCII	Include in MMRP Annual Report; Complete upon completion of construction
<b>Greenhouse Gas Emissions, SEIR Section 5.5</b>				
<b>I-C-GG-1: Purchase Voluntary Carbon Credits</b> <i>Construction Emissions:</i> No later than six (6) months after the issuance of a Temporary Certificate of Occupancy for the project, the project sponsor shall provide to the Office of Community Investment and Infrastructure (OCII), a calculation of the net additional emissions resulting from the construction of the project, to be calculated in accordance with the methodology agreed upon by the California Air Resources Board (CARB) in connection with the AB 900 certification of the project. The project sponsor shall provide courtesy copies of the calculations to CARB and the Governor's office promptly following transmittal of the calculations to OCII. The project sponsor shall enter into one or more contracts to purchase voluntary carbon credits from a qualified greenhouse gas emissions broker in an amount sufficient to offset the construction emissions. The project sponsor shall provide courtesy copies of any such contracts to the ARB and the Governor's office promptly following the execution of such contracts.	Project Sponsor	No later than six months after the issuance of a Temporary Certificate of Occupancy for the project	OCII	Include in MMRP Annual Report; Complete upon receipt of supporting documentation
<i>Operational Emissions:</i> No later than six (6) months after project stabilization, to be defined as the date following project completion when the project is 90 percent leased and occupied (and with respect to the arena component, 90 percent of the available booking dates are utilized), the project sponsor shall submit to OCII a projection of operational emissions arising from the project, based on data accumulated to that date and reasonable projections of operational emissions for the useful life of the project (30 years), to be calculated in accordance with the methodology agreed upon by CARB in connection with the AB 900 certification of the project. The project sponsor shall provide	Project Sponsor	No later than six months after project stabilization, to be defined as the date following project completion when the project is 90 percent leased and occupied (and with respect to the arena component, 90 percent of the available booking dates are utilized)	OCII	Include in MMRP Annual Report; Complete upon receipt of supporting documentation

## MITIGATION MONITORING &amp; REPORTING PROGRAM

TABLE D – TRANSPORTATION MANAGEMENT PLAN MONITORING AND REPORTING PROGRAM SUMMARY

MANAGEMENT MEASURE	RESPONSIBILITY FOR IMPLEMENTATION	MANAGEMENT MEASURE SCHEDULE	MONITORING AND REPORTING RESPONSIBILITY	MONITORING ACTIONS/SCHEDULE AND VERIFICATION OF COMPLIANCE
Transportation Management Plan (TMP) and updates	Project Sponsor; SFMTA	Various	OCII	Periodic TMP Updates Annual TMP Monitoring Surveys and Reports prepared by Project Sponsor
Travel Demand Management Plan (TMP Chapter 4, Sections 4.1, 4.2, and 4.3)	Project Sponsor	First year of event center operation, and reviewed and revised annually thereafter	OCII	Annual TMP Monitoring Surveys and Reports prepared by Project Sponsor
Local/Hospital Access Plan A Local/Hospital Access Plan (L/HAP) to facilitate movements in and out to residents and employees in the UCSF and Mission Bay Area would be implemented for the pre-event period for all large weekday evening events at the event center (i.e., those events with more than 12,500 attendees that start between 6:00 and 8:00 p.m.). The L/HAP would be configured to discourage event attendees arriving by car from using portions of Fourth Street, Owens Street, UCSF campus internal roads such as Nelson Rising Lane, Campus Lane, Fifth Street, and local residential streets. As part of the L/HAP, special temporary and permanent signage would be positioned at appropriate locations to direct event traffic towards designated routes in order to access off-street parking facilities serving the event center and away from streets within the Local/Hospital Access Plan network. In addition, three PCOs would be stationed at key intersections (i.e., Fourth/16th, Owens/Mission Bay Traffic Circle, and Fourth/Nelson Rising Lane) before the start of an event to facilitate local driver access to their destinations. These three additional PCOs would also be available after the event to be positioned at the most effective locations to direct outbound pedestrians, bicyclists, and vehicles, as determined by the PCO Supervisor.	SFMTA	Pre event period for any weekday project event that starts between 6:00 and 8:00 p.m. with more than 12,500 attendees	OCII; SFMTA	Review of conditions during events by PCO Supervisor
Muni Special Event Transit Service Plan (TMP Chapter 4, Section 4.4)	SFMTA	All project events; different Transit Service Plan levels depending on attendance	OCII; SFMTA	Review of conditions during events by Muni Service Planning Supervisor

MITIGATION MONITORING &amp; REPORTING PROGRAM

TABLE D – TRANSPORTATION MANAGEMENT PLAN MONITORING AND REPORTING PROGRAM SUMMARY

MANAGEMENT MEASURE	RESPONSIBILITY FOR IMPLEMENTATION	MANAGEMENT MEASURE SCHEDULE	MONITORING AND REPORTING RESPONSIBILITY	MONITORING ACTIONS/SCHEDULE AND VERIFICATION OF COMPLIANCE
No Event Transportation Management Condition (TMP Chapter 6, Section 6.1)	SFMTA	On days without events at the event center,	OCII; SFMTA	PCOs during regular rounds
Small to Medium (Convention) Event Transportation Management Condition (TMP Chapter 6, Section 6.2)	Project Sponsor; SFMTA	Any daytime convention event or small daytime or evening event with less than 12,500 attendees	OCII; SFMTA	Review of conditions during events by PCO Supervisor
Medium to Large (Concert) Event Transportation Management Condition (TMP Chapter 6, Section 6.3)	Project Sponsor; SFMTA	Any evening event with between 12,500 and 16,000 attendees	OCII; SFMTA	Review of conditions during events by PCO Supervisor
Peak Event Transportation Management Condition (TMP Chapter 6, Section 6.4)	Project Sponsor; SFMTA	Any evening event with more than 16,000 attendees	OCII; SFMTA	Review of conditions during events by PCO Supervisor
Overlapping Events Transportation Management Plan (TMP Chapter 6, Section 6.5 and Section 2.2.5)	Project Sponsor; SFMTA	Any event with more than 12,500 attendees overlapping with an event at AT&T Park with more than 40,000 attendees. # **Appeal Filing to the Board of Supervisors In Its Capacity as Governing Body of the Successor Agency**

## **Environmental Leadership Projects California Environmental Quality Act (CEQA) Final Environmental Impact Report Appeal (Commission on Community Investment and Infrastructure Resolution No. 33-2015)**

The certification of a Final Environmental Impact Report (FEIR) for an Environmental Leadership Project by the Successor Agency to the former San Francisco Redevelopment Agency (Successor Agency, also known as the Office of Community Investment and Infrastructure along with its policy body the Commission on Community Investment and Infrastructure [CCII]) may be appealed to the Board of Supervisors (Board) pursuant to the terms of CCII Resolution No. 33-2015, approved on June 2, 2015

Any appeal filed pursuant to Resolution No. 33-2015 shall be filed in accordance with the procedures listed below. This document summarizes the process. Further details of this process and about Environmental Leadership Projects California Public Resources Code Sections 21178 et seq., are set forth in the text of CCII Resolution No. 33-2015, copies of which are available in the offices of the Clerk of the Board of Supervisors or at the following electronic link:

[www.sfocii.org/modules/showdocument.aspx?documentid=9140](http://www.sfocii.org/modules/showdocument.aspx?documentid=9140). In case of any conflict between any part of this document and CCII Resolution No. 33-2015, the provisions of CCII Resolution No. 33-2015 control. All references below to the Board are to the Board of Supervisors and all references to the Clerk of the Board are to the Clerk of the Board of Supervisors.

### **Who May File An Appeal:**

Only a person or entity that submitted comments to the Office of Community Investment and Infrastructure (OCII) or the Commission on Community Investment and Infrastructure (CCII), either in writing during the public review period of an Environmental Leadership Project EIR, or orally or in writing at or before the close of a CCII public hearing on the EIR, may appeal a CCII certification of an FEIR on an Environmental Leadership Project.

CCII Resolution No. 33-2015, Exhibit A, Para. (1).

### **Filing Deadline:**

The appellant or his or her agent must submit a letter of appeal to the Office of Community Investment and Infrastructure (OCII) Executive Director or his or her designee (collectively referred to as OCII Executive Director) within 10 calendar days of OCII's Environmental Leadership EIR certification and no later than 5:00 pm on that 10th day. No extension of this deadline may be granted.

CCII Resolution No. 33-2015, Exhibit A, Paras. (2), (3), and (5).

*(NOTE: If the 10<sup>th</sup> day falls on a Saturday, Sunday or holiday the appeal may be filed before 5:00 p.m. on the next business day. Also note that the appeal is filed with the OCII Executive Director, not the Clerk's Office.)*

**What and Where to File:**

The following must be filed with the OCII Executive Director at the address below:

Executive Director  
Office of Community Investment and Infrastructure  
1 South Van Ness, 5th Floor  
San Francisco, CA. 94103

*(NOTE: Filing is **not** to be made with the Clerk of the Board of Supervisors.)*

(1) A signed letter of appeal stating the specific grounds for appeal of OCII's Environmental Leadership EIR certification, including references to the written or oral comments that were timely submitted to OCII raising the issues identified in the appeal, and any other written materials in support of the appeal. The appeal may be based only on specific CEQA grounds alleged by any persons or entities before OCII makes its decision on the project. For purposes of these procedures, "project" has the meaning for such term set forth in CEQA Guidelines, Title 14 CCR, Division 6, Chapter 3, Section 15378, and "approval" has the meaning set forth for such term in Section 15352.

CCII Resolution No. 33-2015, Exhibit A, Paras. (4) and (5).

**Lodging of the appeal with the Clerk of the Board of Supervisors for purposes of scheduling an appeal hearing:**

After following the procedures established in CCII Resolution No. 33-2015, Exhibit A, Paragraph (6), the OCII Executive Director will advise the Clerk of the Board of the notice that he or she has accepted an appeal and provide a copy of the letter of appeal and a list of individuals and organizations that have requested notices relating to the project. The Clerk of the Board of Supervisors will then set the appeal for a public hearing before the Board in accordance with the "Hearing Date" provisions set forth below.

CCII Resolution No. 33-2015, Exhibit A, Para. (6).

*(NOTE: A decision by the OCII Executive Director rejecting an appeal is final and may not be appealed. CCII Resolution No. 33-2015, Exhibit A, Para. (6).)*

**Hearing Date:**

After the 10 days for filing an appeal with OCII has expired, the Clerk, if he or she has been notified that an appeal was accepted by the OCII Executive Director, will schedule an appeal hearing at a regular meeting of the full Board of Supervisors no less than 21 and no more than 45 days following the date(s) of the OCII Executive Director's notification of acceptance of an appeal to the Clerk of the Board. The Clerk will inform the appellant(s) of the hearing date and time after receipt of the OCII Executive Director's notification of acceptance of the appeal and the Clerk has scheduled the matter for hearing. If more than one appeal is filed on the same FEIR, the President of the Board may request the Clerk schedule a consolidated appeal hearing.

CCII Resolution No. 33-2015, Exhibit A, Paras. (6) and (8) and Administrative Code, Section 31.16 (b) (4).

**Hearing Notice:**

The Clerk will send notices to the appellant(s) and all organizations and individuals who previously have requested such notice in writing no less than 14 days prior to the date the appeal is scheduled to be heard by the Board. The appellant must provide the names and addresses in label format of interested parties that it wishes the Clerk to notify.

CCII Resolution No. 33-2015, Exhibit A, Paras. (6), (7), and (8) and Administrative Code, Section 31.16 (b) (4).

*(NOTE: If the OCII Executive Director has not done so already, he or she shall provide to the Clerk of the Board a list of individuals and organizations that have commented, in writing or orally during the public review period, on the decision or determination in a timely manner, and individuals who requested notice of an appeal, no less than 20 days prior to the scheduled hearing.)*

**Procedural Steps:**

The public, appellant, project sponsor and OCII may submit written materials to the Clerk of the Board no later than noon, 11 days prior to the hearing. Promptly, but no later than 11 calendar days before the scheduled hearing, the OCII Executive Director, if he or she has not done so already, will transmit copies of the environmental review document to the Clerk of the Board and make the administrative record available to the Board. Additional documentation the appellant would like the Board members to consider after the 11-day deadline must be delivered (18 hard copies and one electronic copy sent to [bos.legislation@sfgov.org](mailto:bos.legislation@sfgov.org)) to the Clerk no later than noon, eight days prior to the hearing. Materials submitted after the eight-day deadline will be marked as "received after the eight-day deadline" and placed in the Board file but not distributed.

CCII Resolution No. 33-2015, Exhibit A, Paras. (7) and (8) and Administrative Code, Section 31.16 (b) (5).

*(NOTE: The administrative record for any pending EIR for an Environmental Leadership Project can be found at the following electronic link [www.gsweventcenter.com](http://www.gsweventcenter.com).)*

**Decision:**

The Board by a majority vote of all of its members may affirm or reverse the certification of the FEIR by CCII. The Board will act on the appeal within 30 days of the date scheduled or within 40 days if the Board does not hold at least three regular Board meetings within 30 days of the scheduled hearing. If the full Board is not present, the Board may postpone a decision until the full Board is present. The Board may not postpone the decision on the appeal for more than 90 days following expiration of the time for appeal.

Administrative Code, Section 31.16 (b) (7) and (8).

**Continuances:**

Only the Board of Supervisors, acting as a body (and not the Clerk of the Board), may continue the appeal hearing or grant a written request for continuance. A written request must be submitted by an appellant and the project sponsor, in advance, for the Board's consideration. Administrative Code, Section 31.16 (b) (7).

**Contact:**

Office of the Clerk of the Board/Legislative Clerk  
(415) 554-5184 or (415) 554-4445

**Subject: Responses to Comment on Draft Subsequent Environmental Impact Report for Event Center and Mixed Use Development at Mission Bay Blocks 29-32. SCN:2014112045**

P15003

Dear Mr. Lippe:

This is a continuation of my November 2, 2015 review of the Responses to Comment ("the RTC") on the Draft Subsequent Environmental Impact Report (hereinafter "the DSEIR") on the above referenced Project in the City and County of San Francisco (hereinafter "the City"). As I was a commenter on the DSEIR in regard to matters involving transportation and circulation in a letter dated July 26, 2015 which was transmitted as Exhibit 1 to your comment letter of July 27, 2015, my current comments focus on the responses to my own comments and yours on that subject. In addition, several others including representatives of BARTD, Caltrans, Caltrain, UCSF and other have filed comments that parallel and reinforce our own. I address the responses to those comments as well.

My qualifications to perform this review were thoroughly documented in my letter of comment on the DSEIR dated July 26, 2015 and are incorporated herein by reference.

This continuation of my comments focuses on emergency response and considerations of emergency access to the UCSF hospitals adjacent to the Project site.

## **Emergency Response and Hospital Access**

Our comments of November 2, 2015 concluded with the very brief remarks on SEIR Response TR – 9 which concerned comments on emergency response and UCSF hospital access. These additional comments offer more detailed observations on that response.

### Inadequacy of Analysis of Congestion and Delay at Critical Intersection of Sixteenth – Seventh and Mississippi Streets

Response TR-9 states that under existing-plus-Project conditions, the majority of the study intersection in the vicinity of the Project site and the UCSF Medical Center Phase One site are projected to operate at LOS E or better. The exception is the intersection of Seventh, Mississippi and Sixteenth Streets which would change from LOS E to dysfunctional LOS F. The problem with the response is twofold. First, this overburdened intersection is on the primary emergency access routes to the UCSF hospitals from the East Bay, Downtown San Francisco, SOMA and most of the central and northern parts of the City. Hence, the so called “exception” is actually a critical failure. Second, the SEIR’s analysis of the intersection understates the level of congestion there because it fails to account for the portion of time when train movements at the adjacent at-grade crossing block movements on Sixteenth. In the 5 –to – 6 pm commute peak hour, according to current Caltrain schedules, between 10 and 12 trains preempt this crossing, and 9 to 10 in the 6 – to – 7 pm hour. This means that the Sixteenth Street leg of the intersection will be blocked for about 9 minutes or more in the 5 –to-6 pm peak and about 7.5 minutes or more in the 6 – to – 7 pm hour. In other words, movements to and from Sixteenth east of the subject intersections will be blocked between 12.5 and 15 percent of the time in these hours – and the effect of this blockage wasn’t accounted for in the SEIR analysis.

### Lack of Any Traffic Analysis of Intersections of Eighth – Harrison and Eighth – Bryant and Related I-80 Ramps That Are on Critical Access Routes to UCSF Hospitals

Another problem with the SEIR response regarding the Project’s effects on emergency response and emergency access is that the SEIR failed to analyze the complex of the intersections of Eighth with Harrison and Eighth with Bryant and their related I-80 ramps at all. These heavily congested intersections are on the primary emergency access routes to the UCSF Mission Bay hospitals from the East Bay and from Downtown, most of the SOMA and northern San Francisco. The access route via these intersections on Eighth are particularly crucial whenever there is an overlapping Giants event that tends to preempt access via the Third/Fourth Street corridor.

SEIR's Underestimate of Numbers of Arena Event Attendees Traveling in 5-to-6 PM Evening Commute Peak Conceals the Extent of Impact on Emergency Services and Access to UCSF Hospitals

The SEIR, based on data on time of turnstile entry to the "paid" area of the Warriors current venue, Oracle Arena and at the Barclay Center in Brooklyn (home court of the Nets), that only about 5 percent of weekday arena event attendees traveling to an event starting at 7:30 pm would be traveling on the transportation system between 5 and 6 pm (the pm commute peak hour). Our comments of July 26, 2015 and November 2, 2015 presented cogent reasons why those turnstile based assumptions grossly understate the number of attendees to a 7:30 pm start basketball game would be traveling on the transportation system in the 5-to-6 pm peak commute hour. Those reasons include:

- The offset between getting off the transit system or out of a car in a parking spot and the time of actual passage through the ticket turnstiles, even for people who go straight in after arrival,
- The offset between arena turnstile passage time and the actual duration of travel time on the transportation system that would put people on the system during the peak hour.
- The offset between turnstile passage time and actual arrival time in the arena area for those who go into nearby restaurants and bars to eat a meal or have a drink before entering the arena or those who just hang around outside to meet up with friends traveling independently, especially perhaps to exchange a ticket.

The SEIR has ignored these considerations and persisted in assuming that only a tiny fraction of arena attendees would be traveling in the 5-to-6 pm evening commute peak hour.

In our prior comments, we have pointed out that national TV broadcasts of weeknight Warrior games which typically start at 6 pm, (and possibly national broadcasts of other arena events) would also cause a very high portion of event attendees to be traveling in the 5-to-6 pm commute peak hour and requested that this be analyzed as a separate case in the SEIR. The SEIR persists in refusing to consider this scenario.

Both of these considerations – the attendees who travel to the Project area long before passing through the arena turnstiles and the attendees coming to a national TV game start – would intensify emergency service and hospital access problems in the 5-to-6 pm commute peak hour well beyond anything analyzed in the SEIR and most importantly, compound the critical emergency service and UCSF hospital access problem issues related to the Sixteenth – Seventh – Mississippi – Caltrain

rail crossing complex as well as the Eighth – Harrison / Eighth – Bryant / I-80 ramps complex as described above.

#### The SEIR Refuses To Quantify Impacts on Emergency Vehicle Travel

Another commenter requested that the SEIR estimate emergency vehicle travel times with and without an event for the proposed Project. SEIR Response TR-9 refuses to do so. It claims that because the infrastructure supporting UCSF hospital facilities is currently incomplete, such a projection is not feasible. We note, however, that the SEIR has not hesitated to estimate LOS and delay times on the incomplete roadway network for ordinary predictions of Project traffic impacts (for instance, at Owens and Sixteenth without Owens yet connected through to Mariposa). This inconsistency is an unacceptable evasion. If the SEIR is unable to estimate emergency response time, then the entire analysis of effects on all emergency services is without foundation, uselessly conclusory and inadequate.

#### Public Relations Response To Emergency Access Impacts Irrelevant

SEIR Response TR-9 continues, stating that strategies to provide attendees with suggested driving routes to and from the 950 parking spaces within the Project site would alleviate interference of that traffic with emergency vehicle traffic. However, most of the on-site spaces would be held by VIP season ticket holders. These drivers will determine quickly various routes that work to their own advantage to minimize their own travel time, rather than following suggested routes to fine-tune recommended event access/egress routes that avoid primary emergency vehicle routes. The notion that pre-event and post-event recommended driving routes all could be revised based on monitoring is nonsense because knowledgeable regular attendees will follow their own notion of what works best for them, not public relations advisories.

#### Effects of Event Coordinator and PCO Management Doubtful

The next section of SEIR Response TR-9 indicates that at the times when northbound lanes of Third Street are closed in between Sixteenth and South Streets (mostly during post-event times), PCOs would be available to open the emergency barricades to allow northbound emergency vehicle traffic through. While the PCOs may get the emergency barricades out of the way, whether they can safely clear swarming pedestrians from the “closed” street section is an open question.

The response indicates that the Event Transportation Coordinator would inform emergency service dispatchers of the dates and times when there would be temporary closure of Third Street following an event so that emergency vehicles could be advised to take routes other than Third Street. However this is not very

useful if the location of the emergency dictates that emergency services really need to travel on Third Street.

This response also observes that drivers must comply with California vehicle code article 21806 requiring the drivers to clear a way to for authorized emergency vehicles, drive to the right road curb, stop, and remain stopped until the emergency vehicle has passed. This is a nonsensical evasion of the key issue which is that when traffic is queued in gridlock, it becomes very difficult and potentially dangerous for drivers to clear the way for emergency vehicles.

For smaller events where there are fewer PCOs, the response claims that PCOs would be stationed at key locations monitoring traffic conditions and could be reassigned to respond to conflicts between event center traffic and UCSF hospital access. It is questionable that PCOs could relocate quickly enough to be of effective assistance in an emergency access matter at another location.

#### Effective Facilitation of Privately Driven Vehicles in Emergencies Doubtful

The next section of the ResponseTR-9 claims that persons accessing UCSF medical Center emergency room and Urgent Care Center using private vehicles rather than authorized emergency vehicles would be able to use the transit-only lanes provided for the 22 Fillmore transit priority on 16th Street. This begs the questions of how anxious non-professional drivers, probably making their first emergency trip of this nature, would know the bus lanes are there, that they're eligible to use them, or how they will safely get around the lumbering, overloaded buses using the lanes and how they would be distinguished from casual bus lane violators.

#### Failure to Address Access to Hospitals for Doctors, Other Caregivers and Support Staff

UCSF's comments on the DSEIR included the observation that adverse traffic impacts on the hospitals is not limited to emergency vehicles. Doctors, other caregivers and support staff must have reasonably unobstructed access to and from the facilities at all times. Nowhere does the SEIR address this issue.

### **Conclusion**

Because of all of the foregoing, the SEIR's conclusions regarding the Project's impacts on emergency access are unsupported and unsupportable. A more realistic appraisal of the Project's impacts on emergency service and hospital access is required as is a more realistic set of mitigation measures.

**Subject: Responses to Comment on Draft Subsequent Environmental Impact Report for Event Center and Mixed Use Development at Mission Bay Blocks 29-32. SCN:2014112045**

P15003

Dear Mr. Lippe:

This is a continuation of my November 2, 2015 review of the Responses to Comment ("the RTC") on the Draft Subsequent Environmental Impact Report (hereinafter "the DSEIR") on the above referenced Project in the City and County of San Francisco (hereinafter "the City"). As I was a commenter on the DSEIR in regard to matters involving transportation and circulation in a letter dated July 26, 2015 which was transmitted as Exhibit 1 to your comment letter of July 27, 2015, my current comments focus on the responses to my own comments and yours on that subject. In addition, several others including representatives of BARTD, Caltrans, Caltrain, UCSF and other have filed comments that parallel and reinforce our own. I address the responses to those comments as well.

My qualifications to perform this review were thoroughly documented in my letter of comment on the DSEIR dated July 26, 2015 and are incorporated herein by reference.

This continuation of my comments focuses on use of certain sites owned by the Port of San Francisco for parking in support of the Warriors Arena Project.

The revised parking analysis, SEIR Appendix TR-X, identifies additional parking areas to the south of the Project site that are not addressed in the DSEIR. We note that the nearer site, described as 'the Nineteenth Street site' in Appendix TR-X, is located within the Port of San Francisco's Port Waterfront Land Use Plan Southern Waterfront Subarea and designated as part of the Pier 70 Waterfront Opportunity Area. The site is within the Union Iron Works Historic District (listed on the National Register of Historic Places. Building 40 within the site has been determined to be a contributing resource to the Historic District although the Port has determined that its removal would not affect the historic significance of the District. The Port currently plans to construct a 250 space parking lot on the site. SEIR Appendix TR-X assumes the Port will have done so and that the parking lot will be operational prior to completion of the proposed Project and that it will be made available for use of Project arena event attendees. However, given the complications of the Historic designation, compatibility with the Pier 70 Plans and with the Port's own purposes in developing this parking for support of Pier 70 and the Historic District, the assumptions that this parking will be developed in advance of completion of the proposed Project and will be made available to support the Project's arena event parking over the long term are extremely optimistic and inconsistent with the good faith effort to disclose impact required by CEQA.

The other parking site identified in Appendix TR-X is located on the Southern Waterfront with its nearest corner 1.2 miles south of the nearest corner of the Project site. Portions of the site are located within the San Francisco Bay Conservation and Development Commission's (BCDC) shoreline band jurisdiction. The site is currently used for off-site storage of trailers supporting Moscone Center. The site could support development of an up to 800 space parking lot. Because of the distance from the proposed Project site, it would require shuttle bus service connections. Because considerations such as BCDC approval, development of a suitable place for relocating the off-site trailer parking that supports Moscone Center and whether parking this far from the proposed Project site and located in a remote industrial wasteland would be attractive to patrons have not been addressed, the suitability of this parking area remains speculative. Hence, Response TR-9's assumptions regarding dispersal of parking locations itself remains speculative.

## **Conclusion**

Because of the speculative nature of these parking proposals with respect to service of events at the proposed arena, they cannot be considered clear elements that support the project or disperse its traffic.

**Subject: Subsequent Environmental Impact Report for Event Center and  
Mixed Use Development at Mission Bay Blocks 29-32.  
SCN:2014112045**

P15003

Dear Mr. Lippe:

This is an addendum to my November 2, 2015 comments of the Responses to Comment ("the RTC") on the Subsequent Environmental Impact Report (hereinafter "the SEIR") on the above referenced Project in the City and County of San Francisco (hereinafter "the City"). This addendum focuses on additions to the Project that were not addressed in the DSEIR

My qualifications to perform this review were thoroughly documented in my letter of comment on the DSEIR dated July 26, 2015 and are incorporated herein by reference.

### **Central Subway/ T Third Electrical Power Distribution System Expansion**

The Central Subway / T Third electrical power distribution system expansion is included in the proposed Project to provide additional traction power for expanded frequencies of LRT service associated with new special event operations. This traction power expansion feature would provide two new circuits from the existing King Street substation for the inbound and outbound circuits of the Central Subway / T Third. Providing duct banks for the new electrical connection for King Substation and the Central Subway line would involve trenching in the eastbound and westbound travel lanes of King Street between Second and Fourth Streets. This trenching would take place over a 6-month

period and would require lane closures while trenching and duct installation is actively taking place. Although the power distribution system expansion had previously been identified by SFMTA as a desirable long-term action, it is now incorporated in the subject Event Center and Mixed Use Development Project.

As noted in the third paragraph of SEIR Volume 4, page 12-11, the trenching work and duct installation on King Street associated with the electrical power distribution system expansion was not analyzed in the DSEIR.

Under CEQA, if the project changes after publication of the Draft EIR, and these changes create a new significant impact not identified in the Draft EIR, or a substantial increase in severity of a significant impact that was identified in the Draft EIR, the lead agency must recirculate the draft EIR for public comment. (CEQA section 21092.1.). Although the FEIR makes the conclusory statement that this would not result in new or more severe impacts than previously disclosed, there is no analysis to support this conclusion, which defies logic that this always busy boulevard would be unimpacted by lane closures over a period of six months.

Sincerely,

Smith Engineering & Management  
A California Corporation

Daniel T. Smith Jr., P.E.  
President

## COMMISSION ON COMMUNITY INVESTMENT AND INFRASTRUCTURE

RESOLUTION NO. 33-2015

*Approved June 2, 2015*

### **ADOPTING PROCEDURES FOR FILING OF APPEALS OF THE CERTIFICATION OF A FINAL ENVIRONMENTAL IMPACT REPORT FOR ENVIRONMENTAL LEADERSHIP DEVELOPMENT PROJECTS UNDER THE CALIFORNIA ENVIRONMENTAL QUALITY ACT**

- WHEREAS, Prior to its dissolution, the Redevelopment Agency of the City and County of San Francisco (“Redevelopment Agency”) implemented numerous redevelopment plans approved by the Board of Supervisors and authorized under the California Community Redevelopment Law, Cal. Health & Safety Code §§ 33000 et seq. Under this state authority, the redevelopment plans established land use controls in project areas and did not generally rely on the San Francisco Planning Code or other local land use regulation, including Article 31 of the Administrative Code, unless a particular redevelopment plan required it; and
- WHEREAS, State law dissolved the Redevelopment Agency on February 1, 2012, (Part 1.85 of the California Health and Safety Code (commencing with Section 34170)) (the “Redevelopment Dissolution Law”), and provided, among other things, that successor agencies assumed the rights and obligations of the former Redevelopment Agency (with the exception of certain affordable housing assets). In particular, state law requires successor agencies to fulfill enforceable obligations that the former redevelopment agencies had entered into prior to June 28, 2011 (“Enforceable Obligations”); and
- WHEREAS, The Board of Supervisors, in its capacity as governing body of the Successor Agency, approved Ordinance No. 215-12 (Oct. 4, 2012) to implement Redevelopment Dissolution Law and established the Successor Agency Commission to which it delegated authority to exercise land use, development and design approval for “surviving redevelopment projects,” subject to specified reserved authority for the Board of Supervisors acting as the governing body of the Successor Agency; and
- WHEREAS, The Successor Agency to the Redevelopment Agency, commonly known as the Office of Community Investment and Infrastructure (“OCII”), is a legal entity separate from the City and County of San Francisco (“City”), has assumed the remaining rights and obligations of the former Redevelopment Agency, and has “succeed[ed] to the organizational status of the former redevelopment agency” with the authority “to complete any work related to an approved enforceable obligation,” Cal. Health & Safety Code § 34173 (g); and

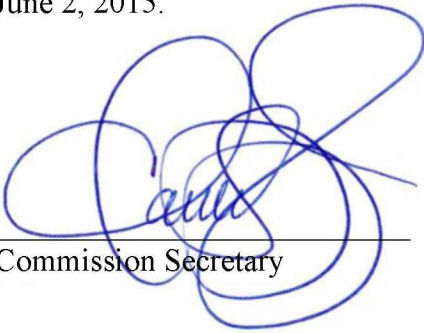

- WHEREAS, OCII has the continuing authority and obligation: (1) to exercise land use controls required under Enforceable Obligations (including the Mission Bay North Owner Participation Agreement (“OPA”), the Mission Bay South OPA, the Disposition and Development Agreement (“DDA”) for Hunters Point Shipyard (“HPS”) Phase 1, the DDA for Candlestick Point-HPS Phase 2 DDA, the Transbay Implementation Agreement, and other OPAs and DDAs for projects that are not yet complete, and (2) to enforce the land use controls under redevelopment plans and related development controls where the City has not requested the transfer of land use functions to the City. These redevelopment plans include Zone 1 of the Transbay Redevelopment Plan, Zone 1 of the Bayview Hunters Point Redevelopment Plan, the HPS Redevelopment Plan, the Mission Bay North and South Redevelopment Plans, the Rincon Point-South Beach Redevelopment Plan, and the Bayview Industrial Triangle Redevelopment Plan; and
- WHEREAS, The Redevelopment Dissolution Law provides, among other things, that successor agencies may take actions in compliance with enforceable obligations and for the purpose of winding down the redevelopment agency. Cal. Health & Safety Code § 34177.3; and
- WHEREAS, The OCII has a continuing need to review and approve development projects, including design and environmental review, as part of the wind down of redevelopment agencies; and
- WHEREAS, OCII is currently reviewing a multi-purpose event center and mixed used development that the Golden State Warriors, through its affiliate GSW Arena LLC, have proposed under the Mission Bay South Redevelopment Plan and the Mission Bay South OPA and that Governor Jerry Brown has certified, on April 30, 2015, as an “environmental leadership development project” (“Leadership Project”) under the Jobs and Economic Improvement Through Environmental Leadership Act of 2011 (“AB 900”). Cal. Public Resources Code §§ 21178 et seq., and
- WHEREAS, Under AB 900, OCII as the lead agency under the California Environmental Quality Act, must certify finally an environmental impact report for, and approve, a Leadership Project prior to January 1, 2016; and
- WHEREAS, To ensure adequate public participation and review of environmental impact reports for Leadership Projects (“Leadership Project EIRs”), OCII proposes special procedures for the filing of appeals associated with Leadership Project EIRs, including filing an appeal with OCII within ten days of the Final EIR certification and requiring OCII to review the appeal for sufficiency and completeness and to transmit the appeal to the Clerk of the Board of Supervisors; and
- WHEREAS, OCII proposes that the Board of Supervisors, acting in its capacity as the governing body for the Successor Agency, follow standards and procedures for

scheduling and conducting a public hearing that it has previously established for similar appeals of CEQA decisions by the Planning Commission or other City agencies. NOW THEREFORE BE IT,

RESOLVED, that the Commission on Community Investment and Infrastructure hereby adopts the Procedures for Appeal of EIR Certifications of Environmental Leadership Development Projects approved by the Office of Community Investment and Infrastructure, attached as Exhibit A to this Resolution.

I hereby certify that the foregoing resolution was adopted by the Commission at its meeting of June 2, 2015.

Commission Secretary

## **Procedures for Appeal of EIR Certifications of Environmental Leadership Development Projects approved by the Office of Community Investment and Infrastructure**

This policy establishes the procedures under which the Successor Agency to the Redevelopment Agency of the City and County of San Francisco, acting through the Office of Community Investment and Infrastructure, or its Commission (collectively referred to as "OCII"), will provide that OCII's certification of an environmental impact report for a qualifying Environmental Leadership Development Project under the Jobs and Economic Improvement Through Environmental Leadership Act of 2011, Cal. Public Resources Code §§ 21178 et seq. ("Environmental Leadership EIR" or "EIR") may be appealed to the Board of Supervisors (the "Board"). The appeal procedures are as follows:

- (1) Only persons or entities that submit comments on a project either in writing during the public review period of an Environmental Leadership EIR, or orally or in writing at or before the close of OCII's public hearing, may appeal OCII's EIR certification to the Board.
- (2) The appellant shall submit a letter of appeal to the OCII Executive Director or his or her designee (collectively referred to as "OCII Executive Director") within 10 calendar days of OCII's Environmental Leadership EIR certification. If the 10<sup>th</sup> day is a weekend or holiday, the appellant must submit the letter of appeal no later than the next business day.
- (3) A letter of appeal shall be timely filed only if it is received by the OCII Executive Director no later than 5:00 PM on the day the letter of appeal must be submitted under paragraph (2).
- (4) The letter of appeal must state the specific grounds for appeal of OCII's Environmental Leadership EIR certification and include references to the written or oral comments that were timely submitted to OCII raising the issues identified in the appeal, and any other written materials in support of the appeal. The appeal may be based only on specific CEQA grounds alleged by any persons or entities before OCII makes its decision on the project. For purposes of these procedures, "project" has the meaning set forth in CEQA Guidelines, Title 14 CCR, Division 6, Chapter 3, Section 15378 and "approval" has the meaning set forth in Section 15352.
- (5) The appellant must sign the letter of appeal, or may have an agent sign and file an appeal on the appellant's behalf.
- (6) Upon receiving an appeal, the OCII Executive Director must determine whether the appeal has been filed in a timely manner and otherwise complies with the requirements of these procedures. Within five business days of the filing of the appeal, the OCII Executive Director must mail notice to the appellant of OCII's acceptance or rejection of the appeal. If the appeal is accepted, at the same time, the OCII Executive Director must advise the Clerk of the Board of the notice of OCII's acceptance of the appeal, request that the Clerk set the appeal for a public hearing before the Board, and provide a copy of the letter of appeal and a list of individuals and organizations that have requested notices relating to the project. A decision by the OCII Executive Director rejecting an appeal is final and may not be appealed.

No further action is required by the OCII Executive Director or OCII for a letter of appeal that has been rejected.

- (7) Once the Clerk of the Board has scheduled the appeal for public hearing, the OCII Executive Director must promptly, but no later than 11 calendar days before the scheduled hearing, transmit copies of the environmental review document to the Clerk of the Board and make the administrative record available to the Board. Also, the OCII Executive Director must otherwise assist the Clerk of the Board in accordance with any procedures established by the Clerk of the Board for such appeals.
- (8) In adopting these procedures, OCII recognizes that the Board, in considering any appeal of a OCII's Environmental Leadership EIR certification, may follow the standards and procedures for a hearing that the Board has established for similar appeals of CEQA decisions by the Planning Commission or other City agencies.
- (9) If the Board reverses OCII's Environmental Leadership EIR certification, OCII must take further action under CEQA in compliance with the Board's appeal findings. Any further appeal from a subsequent CEQA decision by OCII after such remand shall be limited to the adequacy of changes made by OCII in response to the Board's findings relating to the initial appeal.
- (10) If the Board affirms OCII's Environmental Leadership EIR certification, the date of the final EIR shall be the date upon which OCII first certified the EIR and any actions approving the project made prior to the appeal decision shall be deemed valid.
- (11) The date the project shall be considered finally approved must occur no earlier than (1) the expiration date of the appeal period if no appeal is filed, (2) the date the OCII Executive Director rejects the appeal, or (3) the date the Board denies the appeal.
- (12) After OCII has decided to approve the project and the project is considered finally approved as provided for Paragraph 11, in accordance with CEQA procedures, and upon the payment of required fees by the project sponsor, the OCII Executive Director shall file a notice of determination with the County Clerk for an environmental impact report. If required by CEQA, the notice of determination shall also be filed with the California Office of Planning and Research. When the OCII Executive Director files a notice of determination with the county clerk or the California Office of Planning and Research or both, OCII also shall post a copy of the notice of determination in the offices of OCII and on OCII's website, and mail a copy of the notice of determination to organizations and individuals who previously have requested such notice in writing.

## **Procedures for Appeal of EIR Certifications of Environmental Leadership Development Projects approved by the Office of Community Investment and Infrastructure**

This policy establishes the procedures under which the Successor Agency to the Redevelopment Agency of the City and County of San Francisco, acting through the Office of Community Investment and Infrastructure, or its Commission (collectively referred to as "OCII"), will provide that OCII's certification of an environmental impact report for a qualifying Environmental Leadership Development Project under the Jobs and Economic Improvement Through Environmental Leadership Act of 2011, Cal. Public Resources Code §§ 21178 et seq. ("Environmental Leadership EIR" or "EIR") may be appealed to the Board of Supervisors (the "Board"). The appeal procedures are as follows:

- (1) Only persons or entities that submit comments on a project either in writing during the public review period of an Environmental Leadership EIR, or orally or in writing at or before the close of OCII's public hearing, may appeal OCII's EIR certification to the Board.
- (2) The appellant shall submit a letter of appeal to the OCII Executive Director or his or her designee (collectively referred to as "OCII Executive Director") within 10 calendar days of OCII's Environmental Leadership EIR certification. If the 10<sup>th</sup> day is a weekend or holiday, the appellant must submit the letter of appeal no later than the next business day.
- (3) A letter of appeal shall be timely filed only if it is received by the OCII Executive Director no later than 5:00 PM on the day the letter of appeal must be submitted under paragraph (2).
- (4) The letter of appeal must state the specific grounds for appeal of OCII's Environmental Leadership EIR certification and include references to the written or oral comments that were timely submitted to OCII raising the issues identified in the appeal, and any other written materials in support of the appeal. The appeal may be based only on specific CEQA grounds alleged by any persons or entities before OCII makes its decision on the project. For purposes of these procedures, "project" has the meaning set forth in CEQA Guidelines, Title 14 CCR, Division 6, Chapter 3, Section 15378 and "approval" has the meaning set forth in Section 15352.
- (5) The appellant must sign the letter of appeal, or may have an agent sign and file an appeal on the appellant's behalf.
- (6) Upon receiving an appeal, the OCII Executive Director must determine whether the appeal has been filed in a timely manner and otherwise complies with the requirements of these procedures. Within five business days of the filing of the appeal, the OCII Executive Director must mail notice to the appellant of OCII's acceptance or rejection of the appeal. If the appeal is accepted, at the same time, the OCII Executive Director must advise the Clerk of the Board of the notice of OCII's acceptance of the appeal, request that the Clerk set the appeal for a public hearing before the Board, and provide a copy of the letter of appeal and a list of individuals and organizations that have requested notices relating to the project. A decision by the OCII Executive Director rejecting an appeal is final and may not be appealed.

No further action is required by the OCII Executive Director or OCII for a letter of appeal that has been rejected.

- (7) Once the Clerk of the Board has scheduled the appeal for public hearing, the OCII Executive Director must promptly, but no later than 11 calendar days before the scheduled hearing, transmit copies of the environmental review document to the Clerk of the Board and make the administrative record available to the Board. Also, the OCII Executive Director must otherwise assist the Clerk of the Board in accordance with any procedures established by the Clerk of the Board for such appeals.
- (8) In adopting these procedures, OCII recognizes that the Board, in considering any appeal of a OCII's Environmental Leadership EIR certification, may follow the standards and procedures for a hearing that the Board has established for similar appeals of CEQA decisions by the Planning Commission or other City agencies.
- (9) If the Board reverses OCII's Environmental Leadership EIR certification, OCII must take further action under CEQA in compliance with the Board's appeal findings. Any further appeal from a subsequent CEQA decision by OCII after such remand shall be limited to the adequacy of changes made by OCII in response to the Board's findings relating to the initial appeal.
- (10) If the Board affirms OCII's Environmental Leadership EIR certification, the date of the final EIR shall be the date upon which OCII first certified the EIR and any actions approving the project made prior to the appeal decision shall be deemed valid.
- (11) The date the project shall be considered finally approved must occur no earlier than (1) the expiration date of the appeal period if no appeal is filed, (2) the date the OCII Executive Director rejects the appeal, or (3) the date the Board denies the appeal.
- (12) After OCII has decided to approve the project and the project is considered finally approved as provided for Paragraph 11, in accordance with CEQA procedures, and upon the payment of required fees by the project sponsor, the OCII Executive Director shall file a notice of determination with the County Clerk for an environmental impact report. If required by CEQA, the notice of determination shall also be filed with the California Office of Planning and Research. When the OCII Executive Director files a notice of determination with the county clerk or the California Office of Planning and Research or both, OCII also shall post a copy of the notice of determination in the offices of OCII and on OCII's website, and mail a copy of the notice of determination to organizations and individuals who previously have requested such notice in writing.

**COMMISSION ON COMMUNITY INVESTMENT AND INFRASTRUCTURE**

**RESOLUTION NO. 69-2015**

*Adopted November 3, 2015*

**CERTIFYING THE FINAL SUBSEQUENT ENVIRONMENTAL IMPACT REPORT  
FOR THE GOLDEN STATE WARRIORS EVENT CENTER AND MIXED-USE  
DEVELOPMENT ON BLOCKS 29-32 IN MISSION BAY SOUTH UNDER THE  
CALIFORNIA ENVIRONMENTAL QUALITY ACT ("CEQA") AND THE CEQA  
GUIDELINES; MISSION BAY SOUTH REDEVELOPMENT PROJECT AREA**

WHEREAS, The Commission on Community Investment and Infrastructure, ("Commission"), the successor agency to the San Francisco Redevelopment Agency ("Successor Agency"), takes the following certification action in compliance with the California Environmental Quality Act ("CEQA"), the California Public Resources Code Sections 21000 et seq., and the CEQA Guidelines, 14 Cal. Code Reg. Sections 15000 et seq. ("CEQA Guidelines") and acting in its capacity as lead agency under CEQA Section 21067; and,

WHEREAS, On September 17, 1998, the Commission of the former Redevelopment Agency of the City and County of San Francisco ("Redevelopment Commission") by Resolution No. 182-98, and the San Francisco Planning Commission, by Resolution No. 14696, together acting as co-lead agencies for conducting environmental review for the Redevelopment Plans for the Mission Bay North Redevelopment Project Area and the Mission Bay South Redevelopment Project Area (the "Plans"), the Mission Bay North Owner Participation Agreement ("North OPA") and the Mission Bay South Owner Participation Agreement ("South OPA"), and other permits, approvals and related and collateral actions (the "Mission Bay Project"), certified the Final Subsequent Environmental Impact Report ("Mission Bay FSEIR") (State Clearinghouse Number 97092068), as a program EIR for Mission Bay North and South pursuant to CEQA and CEQA Guidelines Sections 15168 (Program EIR) and 15180 (Redevelopment Plan EIR). The Mission Bay FSEIR document provided programmatic environmental review of the overall Mission Bay Redevelopment Plan (consisting of the approximately 300-acre Mission Bay North and South Redevelopment Plan Areas); and,

WHEREAS, On the same day, the Redevelopment Commission adopted Resolution No. 183-98, which adopted environmental findings, including a mitigation monitoring and reporting program ("MMRP") and a statement of overriding considerations, in connection with the approval of the Plans and other Mission Bay Project approvals, and adopted Resolution No. 190-98, approving the Redevelopment Plan for the Mission Bay South Redevelopment Project Area ("Plan") and Resolution No. 193-98 authorizing execution of the South OPA and related documents between the Redevelopment Agency and the Mission Bay Master Developer (originally Catellus Development Corporation and now FOCIL-MB, LLC, the successor to Catellus Development Corporation); and,

WHEREAS, On October 19, 1998, the Board of Supervisors adopted Motion No. 98-132 affirming certification of the Mission Bay FSEIR by the Planning Commission and the Redevelopment Agency, and Resolution No. 854-98 adopting environmental findings, including an MMRP and a statement of overriding considerations, for the Mission Bay Project. On November 2, 1998, the San Francisco Board of Supervisors (“Board of Supervisors”), by Ordinance No. 335-98, adopted the Plans; and,

WHEREAS, On February 1, 2012, state law dissolved the Former Redevelopment Agency and required the transfer of certain of its assets and obligations to the Successor Agency, and on June 27, 2012, state law clarified that successor agencies are separate public entities, Cal. Health & Safety Code §34170 et seq. (“Redevelopment Dissolution Law”); and,

WHEREAS, Redevelopment Dissolution Law required creation of an oversight board to the successor agency and provided that with approval from its oversight board and the State Department of Finance (“DOF”), a successor agency may continue to implement “enforceable obligations” such as existing contracts, bonds and leases, that were executed prior to the suspension of redevelopment agencies’ activities. On January 24, 2014, DOF finally and conclusively determined that the Mission Bay North and South Owner Participation Agreements and Mission Bay Tax Increment Allocation Pledge Agreements are enforceable obligations pursuant to Health and Safety Code Section 34177.5(i); and,

WHEREAS, On October 2, 2012, the Board of Supervisors of the City, acting as the governing body of the Successor Agency, adopted Ordinance No. 215-12 (the “Implementing Ordinance”), which Implementing Ordinance was signed by the Mayor on October 4, 2012, and which, among other matters: (a) acknowledged and confirmed that the Successor Agency is a separate legal entity from the City, and (b) established this Commission and the Office of Community Investment and Infrastructure (“OCII”) and delegated to the Commission the authority to (i) act in place of the Redevelopment Agency Commission to, among other matters, implement, modify, enforce and complete the Redevelopment Agency’s enforceable obligations, (ii) approve all contracts and actions related to the assets transferred to or retained by the Successor Agency, including, without limitation, the authority to exercise land use, development, and design approval, consistent with applicable enforceable obligations, and (iii) take any action that the Redevelopment Dissolution Law requires or authorizes on behalf of the Successor Agency and any other action that this Commission deems appropriate, consistent with the Redevelopment Dissolution Law, to comply with such obligations; and,

WHEREAS, The Board of Supervisors’ delegation to this Commission includes the authority to act as the lead agency that administers environmental review for private projects in Mission Bay North and South Redevelopment Plan Areas in compliance with the requirements of CEQA and the CEQA Guidelines, including CEQA Section 21067; and,

- WHEREAS, The proposed project is the Golden State Warriors Event Center and Mixed-Use Development at Mission Bay South Blocks 29-32, with the MUNI UCSF/Mission Bay Station Variant and the Third Street Plaza variant, and related actions ("Event Center Project" or "Project"), as described in Chapter 3 of the Final Subsequent Environmental Impact Report ("FSEIR"). The Project Sponsor is GSW Arena LLC ("GSW"), an affiliate of the Golden State Warriors, LLC, which owns and operates the Golden State Warriors National Basketball Association team. GSW proposes to construct a multi-purpose event center and a variety of mixed uses, including office, retail, open space, and structured parking on an approximately 11-acre site on Bocks 29-32. The Project site is bounded by South Street on the north, Third Street on the west, 16th Street on the south, and by the future planned realigned Terry A. Francois Boulevard on the east; and
- WHEREAS, In compliance with CEQA and the CEQA Guidelines, OCII determined that the Project required preparation of a Subsequent Environmental Impact Report and OCII provided public notice of that determination to governmental agencies and organizations and persons interested in the proposed project on November 19, 2014, initiating a 30-day public scoping period, which ended on December 19, 2014 and included a public scoping meeting on December 9, 2014.
- WHEREAS, On June 5, 2015, OCII published and circulated the Draft Subsequent Environmental Impact Report (hereinafter "GSW DSEIR") to local, state, and federal agencies and to interested organizations and individuals. In addition, electronic copies of the GSW DSEIR were made available for public review on the OCII website and paper copies of the GSW DSEIR were made available for public review at OCII (1 South Van Ness Avenue, 5th Floor), the San Francisco Planning Department (1660 Mission Street, 1st Floor, Planning Information Counter), the San Francisco Main Library (100 Larkin Street) and San Francisco Library, Mission Bay Branch (960 4th Street).
- WHEREAS, Notices of availability of the GSW DSEIR and of the date and time of the public hearing were posted near the project site and published in a newspaper of general circulation in San Francisco on June 5, 2015.
- WHEREAS, On October 23, 2015, OCII published the Final Subsequent Environmental Impact Report ("FSEIR") for the Event Center Project consisting of the GSW DSEIR, the comments received during the review period, any additional information that became available after the publication of the GSW DSEIR, and the Responses to Comments document, all as required by law, copies of which are available through the Secretary of the Commission and at [www.gsweventcenter.com](http://www.gsweventcenter.com), and are incorporated herein by reference; and,
- WHEREAS, The administrative record that contains the GSW DSEIR, the FSEIR and all documents related to, or relied on in the preparation thereof has been prepared by OCII in accordance with the Jobs and Economic Improvement through Environmental Leadership Act (AB 900). Governor Jerry Brown certified the proposed project as an environmental leadership development project under this Act on April 30, 2015, and on May 27, 2015, the Joint Legislative Budget

Committee concurred with this certification. Therefore, this project is eligible for streamlined judicial review. Project EIR files have been made available for review by the Commission and the public. These files are available for public review at OCII at 1 South Van Ness Avenue, 5th Floor, can be found at [www.gsweventcenter.com](http://www.gsweventcenter.com) and are part of the record before the Commission; now therefore be it,

RESOLVED, The Commission hereby certifies the Final Environmental Impact Report identified as OCII Case No. ER-2014-919-97 (also identified as Planning Department Case No. 2014.1441E and State Clearinghouse No. 2014112045), Event Center and Mixed-Use Development at Mission Bay Blocks 29-32 (hereinafter "Project"), based upon the following findings:

1. The Commission has reviewed and considered the FSEIR and hereby does find that the contents of said report and the procedures through which the FSEIR was prepared, publicized, and reviewed comply with the provisions of CEQA and the CEQA Guidelines.
2. The Commission hereby does find that the FSEIR concerning Case No. ER-2014-919-97, Event Center and Mixed-Use Development at Mission Bay Blocks 29-32, reflects its independent judgment and analysis, is adequate, accurate and objective, and that the Comments and Responses document contains no significant revisions to the GSW DSEIR, and hereby does certify the completion of said FSEIR in compliance with CEQA and the CEQA Guidelines.
3. The Commission, in certifying the completion of said FSEIR, hereby does find that the Project:
  - A. Will have a significant and unavoidable project-specific effect on the environment in the following areas:
    - 1) On days without a SF Giants game at AT&T Park:
      - a) Increased traffic congestion and traffic impacts at seven intersections that would operate at LOS E or LOS F.
      - b) Increased traffic congestion and traffic impacts at one freeway ramp location that would operate at LOS E or LOS F.
      - c) A substantial increase in transit demand that could not be accommodated by regional transit capacity that would result in a significant impact to North Bay and South Bay regional transit service (Caltrain, Golden Gate Transit and Water Emergency Transportation Authority (WETA)).
    - 2) On days with overlapping evening events at the project site and at

AT&T Park:

- a) Increased traffic and traffic impacts at ten additional intersections that would operate at LOS E or LOS F.
  - b) Increased traffic and traffic impacts at three freeway ramp locations that would operate at LOS E or LOS F.
  - c) A substantial increase in transit demand that could not be accommodated by regional transit capacity would result in a significant impact to East Bay, North Bay and South Bay regional transit service (Bay Area Rapid Transit, Caltrain, Golden Gate transit and WETA).
- 3) Without implementation of the Muni Special Event Transit Service Plan:
- a) Increased traffic congestion and traffic impacts at nine intersections that would operate at LOS E or LOS F.
  - b) Increased traffic congestion and traffic impacts at three freeway ramp locations that would operate at LOS E or LOS F.
  - c) Transit service operation impacts on the Muni T Third light rail line and the 22 Fillmore bus route.
  - d) Capacity utilization standard exceedances for Caltrain, Golden Gate Transit and WETA.
- 4) Increased ambient noise levels due to increased vehicular traffic along local roadways in the project vicinity and to crowd noise associated with events at the event center.
- 5) Construction-related emissions of criteria air pollutants (reactive organic gases and nitrogen oxides) that would exceed applicable significance thresholds.
- 6) Long-term operational emissions of criteria air pollutants (ROG and NOx) that would exceed applicable significance thresholds in connection with project operations, from sources including new vehicle trips, maintenance and operation of standby diesel generators, boilers and area sources such as landscape equipment and use of consumer products.
- B. Will result in unavoidable cumulatively considerable contributions to the following significant cumulative effects on the environment:
- 1) During peak hours, cumulative increased traffic congestion and

traffic impacts at 16 intersections that would operate at LOS E or LOS F.

- 2) Cumulative increased traffic congestion and traffic impacts at three freeway ramp locations that would operate at LOS E or LOS F.
  - 3) Cumulative capacity utilization exceedances for BART, Caltrain, Golden Gate Transit and WETA.
  - 4) Increased cumulative roadway traffic noise in the project vicinity.
  - 5) Increased cumulative construction-related and operational emissions of criteria air pollutants that would exceed applicable significance thresholds.
  - 6) Cumulative wastewater flows that could exceed the capacity of the Mariposa Pump Station and associated force mains and conveyance piping, and construction impacts resulting from future construction of improvements to the Mariposa Pump Station and associated facilities to expand wastewater treatment capacity.
4. The Commission has reviewed and considered the information contained in the FSEIR prior to approving the Project.

I hereby certify that the foregoing resolution was adopted by the Commission at its meeting of November 3, 2015.

Commission Secretary

Re: OCII Case No. ER 2014-919-97; Planning Department Case No. 2014.1441E –  
Event Center and Mixed-Use Development at Mission Bay Blocks 29-32

Dear President Breed and Members of the Board:

As you know, on November 3, 2015, the Commission on Community Investment and Infrastructure (“OCII Commission”) certified the Final Subsequent Environmental Impact Report (“FSEIR” or “SEIR”) for the Golden State Warriors Event Center and Mixed-Use Development on Blocks 29-32 in Mission Bay South (the “Event Center” or “Project”). The OCII Commission also adopted findings under the California Environmental Quality Act (“CEQA”) and approved the Project based on the determination by the Executive Director of the Office of Community Investment and Infrastructure (“OCII”) that the Project is consistent with the Mission Bay South Redevelopment Plan.

As you also know, on November 13, 2015, the Mission Bay Alliance (“MBA” or “Appellant”) appealed to this Board the OCII Commission’s decision to certify the FSEIR. In response, OCII staff has put together a compendium of responses that, together with the FSEIR itself, demonstrate the lack of merit in the multitude of legal contentions made by MBA. Among the arguments raised by the Appellant are several directed at the manner in which the FSEIR dealt with the Project’s potential impacts relating to the generation of greenhouse gases (“GHGs”). The OCII staff compendium, as well as the FSEIR, explain why these particular contentions lack merit.

On behalf of the Project Sponsor, the GSW Arena LLC, an affiliate of Golden State Warriors, LLC, we wish to address these same issues in light of a recent California Supreme Court decision that did not exist at the time OCII staff prepared the FSEIR and appeal responses. This recent decision, issued on November 30, 2015, is called *Center for Biological Diversity v.*

*California Department of Fish and Wildlife* (“*CBD v. DFW*”). The decision addresses, among other issues, the respondent state agency’s approach to assessing the significance of GHG impacts caused by a major land use plan in Southern California. (A copy of this decision is provided at Attachment A.) As explained below, nothing in that decision casts doubt on the validity of the approach taken by OCII in the FSEIR.

In *CBD v. DFW*, the Supreme Court found a problem with the manner in which the California Department of Fish and Wildlife (“DFW”) had analyzed the GHG-related impacts of the project at issue, concluding that DFW’s administrative record did not contain substantial evidence supporting the finding that GHG emissions would be less-than-significant under the particular “significance threshold” used by DFW. More specifically, the Court held that, although the EIR “employs a legally permissible criterion of significance” (i.e., “whether the project was consistent with meeting statewide emission reduction goals”), the EIR’s “finding that the project’s emissions would not be significant under that criterion is not supported by a reasoned explanation based on substantial evidence.” (Slip Opinion, p. 2.) The Court determined that DFW erred in assuming that, because the “Scoping Plan” prepared by the California Air Resources Board pursuant to the Global Warming Solutions Act of 2006 (or “AB 32”) concluded that the State of California, as a whole, had to reduce its GHG emissions by 29 percent compared with a hypothetical “business as usual” scenario (in which no regulatory actions were taken to address climate change), the project at issue in that case would not have significant GHG-related impacts if the project itself also reduced its own GHG emissions by 29 percent compared with what would have occurred under a business as usual scenario. As the Court explained:

[T]he EIR’s deficiency stems from taking a quantitative comparison method developed by the Scoping Plan as a measure of the greenhouse gas emissions reduction effort required by the state as a whole, and attempting to use that method, without consideration of any changes or adjustments, for a purpose very different from its original design: To measure the efficiency and conservation measures incorporated in a specific land use development proposed for a specific location. The EIR simply assumes that the level of effort required in one context, a 29 percent reduction from business as usual statewide, will suffice in the other, a specific land use development. From the information in the administrative record, we cannot say that conclusion is wrong, but neither can we discern the contours of a logical argument that it is right.

(*Id.*, p. 22.)

Although the Court found DFW’s record to be inadequate to support the conclusion that GHG-related impacts were less-than-significant, the Court did provide guidance regarding potential alternative approaches to GHG impact assessment that other agencies around the State

might follow going forward in the future.<sup>1</sup> One such suggested approach is essentially the one that OCII followed in this case. The Court noted that local governments can rely on “geographically specific greenhouse gas emission reduction plans to provide a basis for the tiering or streamlining of project-level CEQA analysis.” (Slip Opinion, p. 26.) The Court stated that the Air Resources Board’s Scoping Plan “encourages local jurisdictions to develop “climate action plans” or greenhouse gas “emissions reduction plans” for their geographic areas, and several jurisdictions have adopted or proposed such plans as tools for CEQA streamlining.” (*Ibid.*) The Court also cited CEQA Guidelines section 15183.5 as providing local agencies with suggestions about how to go about preparing such plans. (*Ibid.*)

As the FSEIR and appeal responses explain, San Francisco has previously adopted various regulatory documents, ordinances, and plans of the kind mentioned by the Court; and the Project’s consistency with these regulatory commitments and requirements was the primary basis for concluding that the Project would *not* cause significant impacts associated with the generation of GHGs. As Volume 5 of the SEIR explains on page 13.14-6:

San Francisco has prepared its own Greenhouse Gas Reduction Strategy, which the [Bay Area Air Quality Management District or “BAAQMD”] has reviewed and concluded provides aggressive GHG reduction targets and comprehensive strategies that help the Bay Area move toward reaching the State’s AB 32 goals. San Francisco’s Greenhouse Gas Reduction Strategy identifies actions the City is implementing to achieve cleaner energy, energy conservation, and alternative transportation and solid waste policies. For instance, the City has implemented mandatory requirements and incentives that have measurably reduced GHG emissions; these actions include, but are not limited to, increasing the energy efficiency of new and existing buildings, installation of solar panels on building roofs, implementation of green building strategies, adoption of a zero waste strategy, a construction and demolition debris recovery ordinance, a solar energy generation subsidy, incorporation of alternative fuel vehicles in the City’s transportation fleet (including buses), and a mandatory recycling and composting ordinance. The Strategy identifies 42 specific regulations for new development that would reduce a project’s GHG emissions. San Francisco’s policies and programs have resulted in a reduction in GHG emissions to below 1990 levels, exceeding statewide AB 32 GHG reduction goals.

The SEIR analysis for determining the significance of GHG impacts is based on finding consistency of the project with San Francisco’s Greenhouse Gas Reduction Strategy. *Because the City’s local GHG reduction targets are more*

---

<sup>1</sup> Notably, the Court’s suggested approaches are not intended to be an exclusive list, but merely an illustrative one. (See Slip Opinion, p. 24 “[w]e briefly address *some of the potential options* for DFW on remand”; “what follows is merely a description of *potential pathways* to compliance, depending on the circumstances of a given project”], italics added.)

*aggressive than those of the region or the State, consistency with the City's Greenhouse Gas Reduction Strategy necessarily demonstrates consistency with the State's GHG regulations, the Governor's executive orders, and the Bay Area 2010 Clean Air Plan.* If the project is consistent with the City's Greenhouse Gas Reduction Strategy, then the project's impacts related to GHG emissions would be considered less than significant.

(Italics added.)<sup>2</sup>

Importantly, in approving the Greenhouse Gas Reduction Strategy, the BAAQMD emphasized that the City was seeking GHG reductions substantially in excess of what might be considered the City's fair share of reductions under AB 32:

Bay Area Air Quality Management District (District) staff reviewed the City and County of San Francisco's (City's) Draft Greenhouse Gas Reduction Strategy (Strategy). We understand that the Strategy is a compilation of policies, programs and regulations that comprise San Francisco's greenhouse gas reduction efforts. The City's climate protection goal is to reduce the City's communitywide greenhouse gas (GHG) emissions 25% below 1990 levels by 2017. The Strategy includes a variety of documents characterizing the City's GHG emissions and describing approaches to reduce those emissions, including the City's Climate Action Plan.

The District applauds the City's proactive approach to reducing GHG emissions and supports its efforts in developing the GHG Reduction Strategy. The District's intent in creating the Qualified GHG Reduction Strategy as an operational threshold of significance in its CEQA Guidelines is to ensure that communities will develop in such a manner as to enable the State to meet its GHG reduction goals under AB 32. In its own GHG Reduction Strategy, the City has demonstrated that it is not only supporting the State in this endeavor, but is exceeding the State's own climate protection goals [to reduce GHG emissions levels to 1990 levels by the year 2020].

In some areas, the City has surpassed the minimum standard elements of a Qualified GHG Reduction Strategy as laid out in the District's CEQA Guidelines:

- the City's GHG reduction goal is more stringent than the State's AB 32 goal

---

<sup>2</sup> The City's "Strategies to Address Greenhouse Gas Emissions" can be found on-line at <http://www.sf-planning.org/index.aspx?page=2627>. A copy of the City's 2010 plan is at [http://sfmea.sfplanning.org/GHG\\_Reduction\\_Strategy.pdf](http://sfmea.sfplanning.org/GHG_Reduction_Strategy.pdf).

- the City's 2008 GHG emissions inventory analysis and third party review indicates that the City is on track for meeting this aggressive target
- the City is committed to updating the GHG inventory every two years, exceeding the Guideline's recommendation that this be done a minimum of every five years
- the Strategy identifies 42 specific regulations required of new developments

\*\*\*

District staff believes the City's Strategy meets the criteria for a qualified GHG reduction strategy as described in the District's CEQA Guidelines. Aggressive GHG reduction targets and comprehensive strategies like San Francisco's help the Bay Area move toward reaching the State's AB 32 goals, and also serve as a model from which other communities can learn.

(Letter to Bill Wycko, San Francisco Planning Department, from Jean Roggenkamp, BAAQMD, October 28, 2010.)<sup>3</sup>

As this approval letter makes clear, San Francisco has undertaken one of the most aggressive GHG-reduction strategies in California (if not *the* most aggressive such strategy). Indeed, the City's overall strategy sets a 2017 goal that is substantially more aggressive than the State's goal for 2020. Moreover, the City is successfully implementing this strategy, and the progress to date has been real. As of 2010, the City had achieved a citywide reduction of GHG emissions of 14.5%, as compared to 1990 emissions; on a per-capita basis, the decline was 28%. (City and County of San Francisco, Climate Action Strategy – 2013 Update (October 21, 2013) (“2013 Update”), pp. 6-7.)<sup>4</sup> Indeed, the City is currently on a path to achieve its targets of 25% reductions in 2017, and 40% reductions in 2025. (2013 Update, p. 9.) Thus, requiring the Project to comply with all applicable elements of the strategy will translate into real reductions in GHG emissions, as compared to reductions that would not otherwise occur.

The Project's consistency with the City's Strategies to Address Greenhouse Gas Emissions is demonstrated within the administrative record for the Project – in a document entitled, “Compliance Checklist, Greenhouse Gas Analysis”; a copy of this document is at Attachment C. The checklist is specifically referenced in Volume 2 of the Draft SEIR on page 5.5-11, and is included in OCII's administrative record.

---

<sup>3</sup> A copy of this letter is provided at Attachment B.

<sup>4</sup> A copy of the 2013 Update is included in OCII's administrative record for the Project. (See [http://www.gsweventcenter.com/Draft\\_SEIR\\_References%5C2013\\_1021\\_SFE\\_ClimateActionStrategyUpdate.pdf](http://www.gsweventcenter.com/Draft_SEIR_References%5C2013_1021_SFE_ClimateActionStrategyUpdate.pdf).)

In addition to the *CBD v. DFW* case, in which the California Supreme Court encourages lead agencies to rely on compliance with plans for reducing GHGs as a basis for assessing the significance of proposed projects' GHG impacts, a number of Court of Appeal decisions in recent years have held that compliance with regulatory requirements from laws other than CEQA can often be a basis for mitigating environmental impacts to less than significant levels. (See, e.g., *Oakland Heritage Alliance v. City of Oakland* (2011) 195 Cal.App.4th 884, 910 [application of seismic codes sufficient to address geologic hazards in seismically active area where office buildings would be located]; *City of Maywood v. Los Angeles Unified School Dist.* (2012) 208 Cal.App.4th 362, 411-412 [compliance with regulatory standards as adequately addressing hazardous materials at school site].) Given the comprehensive nature of the requirements in the Strategies to Address Greenhouse Gas Emissions, the Project's obligation to comply with them is an independent conceptual ground for concluding that its GHG-related impacts are less than significant.

Although the SEIR does not rely on the Golden State Warriors' obligation to purchase GHG offsets as a basis for determining that GHG-related impacts were less than significant, it is worth noting that the Warriors have made such an obligation, as set forth in "Improvement Measure I-C-GG-1, Purchase Voluntary Carbon Credits." (See discussion on Draft EIR, Vol. 2, p. 5.5-11; see also Mitigation Monitoring and Reporting Program, p. MMRP-51 [Exhibit B to OCII Commission Resolution 70-15].) This obligation extends to GHGs generated through both the construction and operation of the proposed Event Center. The Warriors agreed to purchase these offsets as part of the process of obtaining from the State of California the status of an "Environmental Leadership Project" eligible for extra fast CEQA litigation. The "Improvement Measure" makes this obligation independently enforceable by OCII. As the Draft SEIR explains on page 5.5-6, only very "green" projects can qualify for designation as Environmental Leadership Projects:

Leadership projects include all of the following:

1. The project is residential, retail, commercial, sports, cultural, entertainment, or recreational in nature;
2. The project, upon completion, will qualify for LEED silver certification or better.
3. The project will achieve at least 10 percent greater transportation efficiency than comparable projects.
4. The project is located on an infill site and in an urbanized area.
5. The project is within a metropolitan planning organization for which a sustainable communities strategy or alternative planning strategy is in effect,

and the California Air Resources Board has accepted that the strategy meets the adopted greenhouse gas reduction targets.

The Warriors feel very confident that this Project will include the most environmentally friendly major sports facility ever built in the United States. The Draft SEIR (on pages 5.5-10 and 5.5-11) summarized the number of GHG-reducing obligations with which the Project must comply as follows:

The proposed project would comply with the following regulations or their equivalent: Commuter Benefits Ordinance; Emergency Ride Home Program; Transportation Management Programs (see Project Description and Appendix TMP); Transit Impact Development Fee to the extent applicable under the Mission Bay Redevelopment Plan; Jobs-Housing Linkage Program (residential uses less than 1/4 -mile north of the project site); Bicycle Parking requirements (the project would exceed these requirements and provide a total of 586 bicycle parking spaces); Fuel Efficient Vehicle and Carpool Parking (providing 51 carpool spaces and 51 fuel efficient and vehicle charging stations); San Francisco Green Building Requirements (increased energy efficiency, purchase of renewable energy credits, reduction of potable water consumption by about 35 percent, enhanced energy commissioning); San Francisco Stormwater Management Ordinance (low impact development practices including filtration basins, rain gardens, and approximately 50,000 square feet of self-treating green roofs); San Francisco Water Efficient Irrigation Ordinance (the project's landscaped areas include low-water use planting selections, use of sedum and allium-based green roof materials, and soil mix design for a high available water holding capacity); Mandatory Recycling and Composting Ordinance (paper, glass, corrugated cardboard, plastic, and metals would be collected on site for recycling, and recycling bins and composting containers would be located throughout the buildings); San Francisco Construction and Demolition Debris Recovery Ordinance (to be included as part of the construction specifications); Street Tree Planting Requirements for New Construction (the project includes 79 new street trees); Light Pollution Reduction (exterior lighting fixture selections will have minimum backlight/uplight/glare ratings as allowed by required illuminance levels); Construction Site Runoff Control (site is served by a separate storm sewer system and construction contractors would implement best management practices to comply with conditions of a site-specific stormwater pollution prevention plan); Enhanced Refrigerant Management; Finished Material Pollutant Control; and Regulation of Diesel Backup Generators.

These obligations, in a sense, are quite onerous; but the Warriors are happy to comply with them, as they reflect the environmental values of the people of San Francisco, as well as those of the Warriors organization itself.

In summary, nothing in the California Supreme Court's recent decision in *CBD v. DFW* casts any doubt over the legal adequacy of the SEIR's analysis of GHG-related impacts. OCII followed an approach that the Supreme Court has essentially blessed in conceptual terms. Although the Mission Bay Alliance, which has seemed to be always on the lookout for new legal arguments to make attacking the SEIR, may argue otherwise, we are confident that any such arguments are without merit.

Very truly yours,

Whitman F. Manley

This case presents three issues regarding the adequacy of an environmental impact report for a large land development in northwest Los Angeles County, each issue arising under the California Environmental Quality Act (CEQA; Pub. Resources Code, § 21000 et seq.): (1) Does the environmental impact report validly determine the development would not significantly impact the environment by its discharge of greenhouse gases? (2) Are mitigation measures adopted for protection of a freshwater fish, the unarmored threespine stickleback, improper because they involve taking of the fish prohibited by the Fish and Game Code?

(3) Were plaintiffs' comments on two other areas of disputed impact submitted too late in the environmental review process to exhaust their administrative remedies under Public Resources Code section 21177?

We conclude, first, that as to greenhouse gas emissions the environmental impact report employs a legally permissible criterion of significance—whether the project was consistent with meeting statewide emission reduction goals—but the report's finding that the project's emissions would not be significant under that criterion is not supported by a reasoned explanation based on substantial evidence. Second, we conclude the report's mitigation measures calling for capture and relocation of the stickleback, a fully protected species under Fish and Game Code section 5515, subdivision (b)(9), themselves constitute a taking prohibited under subdivision (a) of the same statute. Finally, we hold that under the circumstances of this case plaintiffs exhausted their administrative remedies regarding certain claims of deficiency by raising them during an optional comment period on the final report.

## **I. FACTUAL AND PROCEDURAL BACKGROUND**

The California Department of Fish and Wildlife (DFW, formerly the Department of Fish and Game) and the United States Army Corps of Engineers prepared a joint environmental impact statement/environmental impact report (the EIR)<sup>1</sup> for two natural resource plans (the "Resource Management and

---

<sup>1</sup> Federal participation in environmental evaluation was called for under the National Environmental Policy Act (NEPA; 42 U.S.C. § 4321 et seq.) because the proposed infrastructure requires permits from federal agencies. Both CEQA and NEPA provide for cooperation between state and federal agencies in environmental review of projects, including by the preparation of joint documents. (Pub. Resources Code, §§ 21083.6, 21083.7; 42 U.S.C. § 4332.) We generally refer to the joint document prepared in this case simply as the EIR because we discuss solely issues arising under CEQA.

Development Plan” and the “Spineflower Conservation Plan”) related to a proposed land development called Newhall Ranch. To be developed over about 20 years on almost 12,000 acres along the Santa Clara River west of the City of Santa Clarita, the proposed Newhall Ranch would consist of up to 20,885 dwelling units housing nearly 58,000 residents as well as commercial and business uses, schools, golf courses, parks and other community facilities. The project applicant and owner of Newhall Ranch is real party in interest the Newhall Land and Farming Company (Newhall).

Newhall Ranch’s potential environmental impacts were previously studied by the County of Los Angeles in connection with the county’s 2003 approval of a land use plan for the proposed development; the present EIR draws on but is independent of the environmental documentation for that approval. DFW acted as the lead state agency in preparing the EIR because the project (i.e., the Resource Management and Development Plan and the Spineflower Conservation Plan) called for DFW’s concurrence in a streambed alteration agreement and issuance of incidental take permits for protected species. Although DFW has direct authority only over biological resource impacts from the project, the agency attempts in the EIR to evaluate all environmental impacts from the project and the Newhall Ranch development that would be facilitated by project approval.

DFW and the United States Army Corps of Engineers (the Corps), the lead federal agency, issued a draft EIR in April 2009 and a final EIR in June 2010. In December 2010, DFW certified the EIR, made the findings required by CEQA as to significant impacts, mitigation, alternatives and overriding considerations, and approved the project. Of relevance here, DFW found that the project could significantly impact the unarmored threespine stickleback but that adopted mitigation measures would avoid or substantially lessen that impact, and that “taking into account the applicant’s design commitments and existing regulatory

standards,” Newhall Ranch’s emissions of greenhouse gases would have a less than significant impact on the global climate.

Plaintiffs challenged DFW’s actions by a petition for writ of mandate.<sup>2</sup> The superior court granted the petition on several grounds. The Court of Appeal reversed, rejecting all of plaintiffs’ CEQA claims. We granted plaintiffs’ petition for review.

## II. DISCUSSION

The general principles governing our review of DFW’s actions can be simply stated. In reviewing an agency’s nonadjudicative determination or decision for compliance with CEQA, we ask whether the agency has prejudicially abused its discretion; such an abuse is established “if the agency has not proceeded in a manner required by law or if the determination or decision is not supported by substantial evidence.” (Pub. Resources Code, § 21168.5.)<sup>3</sup> In determining whether there has been an abuse of discretion, we review the agency’s action, not the trial court’s decision. “[I]n that sense appellate judicial review under CEQA is *de novo*.” (*Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 427 (*Vineyard Area Citizens*).)

On particular questions of CEQA compliance, however, the standard of review depends on “whether the claim is predominantly one of improper procedure or a dispute over the facts.” (*Vineyard Area Citizens, supra*, 40 Cal.4th at p. 435.) “While we determine *de novo* whether the agency has employed the

<sup>3</sup> All further unspecified statutory references are to the Public Resources Code.

correct procedures, . . . we accord greater deference to the agency’s substantive factual conclusions. In reviewing for substantial evidence, the reviewing court ‘may not set aside an agency’s approval of an EIR on the ground that an opposite conclusion would have been equally or more reasonable,’ for, on factual questions, our task ‘is not to weigh conflicting evidence and determine who has the better argument.’ (*Laurel Heights [Improvement Assn. v. Regents of University of California]* (1988)] 47 Cal.3d [376,] 393.)” (*Ibid.*)

### **A. The EIR’s Determination the Project’s Greenhouse Gas Emissions Will Not Have a Significant Environmental Impact**

#### *1. Background*

In California’s landmark legislation addressing global climate change, the California Global Warming Solutions Act of 2006, Statutes 2006, Chapter 488, page 3419 (enacting Assem. Bill No. 32 (2005–2006 Reg. Sess.); hereafter referred to by its common shorthand name, A.B. 32), our Legislature emphatically established as state policy the achievement of a substantial reduction in the emission of gases contributing to global warming. (Health & Saf. Code, §§ 38500, 38501.) More specifically, A.B. 32 calls for reduction of such emissions to 1990 levels by the year 2020. (Health & Saf. Code, § 38550.) The law designates the California Air Resources Board (the Air Board) as the state agency charged with regulating greenhouse gas emissions (*id.*, § 38510) and calls for the Air Board to coordinate with other state agencies to implement the state’s reduction goal (*id.*, § 38501, subd. (f)).

Under A.B. 32, the Air Board was required to determine as accurately as possible the statewide level of greenhouse gas emissions in 1990 and to approve on that basis a statewide emissions limit to be achieved by 2020. (Health & Saf. Code, §38550) The Air Board was required to prepare and approve by January 1, 2009, a “scoping plan” for achieving the “maximum technologically feasible and

cost-effective” reductions in greenhouse gas emissions by 2020. (*Id.*, § 38561, subd. (a).)

In its 2008 Climate Change Scoping Plan, the Air Board explained that “[r]educing greenhouse gas emissions to 1990 levels means cutting approximately 30 percent from business-as-usual emission levels projected for 2020, or about 15 percent from today’s levels.” (Air Resources Bd., Climate Change Scoping Plan (Dec. 2008) Executive Summary, p. ES-1 (Scoping Plan).) The Scoping Plan then set out a “comprehensive array of emissions reduction approaches and tools” to meet the goal, including expanding energy efficiency programs, achieving a statewide renewable energy mix of 33 percent, developing with our regional partners a cap-and-trade program for greenhouse gases, establishing targets and policies for emissions in transportation and implementing existing clean transportation programs, and creating targeted fees on certain activities affecting emissions. (*Id.*, pp. ES-3—ES-4.)

The Scoping Plan’s “business as usual” model is important here, as it formed the basis for the present EIR’s greenhouse gas significance analysis. The Air Board had previously identified a year 2020 annual emissions limit, equal to its estimate of statewide 1990 emissions, of 427 million metric tons of carbon dioxide equivalent (MMTCO<sub>2</sub>E). (Scoping Plan, *supra*, at p. 5.) In the Scoping Plan, the board estimated emissions by economic sector in the period 2002–2004, finding they totaled 469 MMTCO<sub>2</sub>E annually. Those annual emissions were then projected forward to the year 2020, employing population and economic growth estimates, yielding a business-as-usual figure of 596 MMTCO<sub>2</sub>E. (*Id.*, p. 13.) The target of 427 MMTCO<sub>2</sub>E is about 29 percent below the 2020 forecast of 596 MMTCO<sub>2</sub>E, giving the Air Board the 30 percent reduction goal quoted earlier.

The Scoping Plan’s 2020 forecast is referred to as a “business-as-usual” projection because it assumes no conservation or regulatory efforts beyond what

was in place when the forecast was made. It “represent[s] the emissions that would be expected to occur in the absence of any GHG [greenhouse gas] reductions actions.” (Scoping Plan, *supra*, appen. F, Cal.’s Greenhouse Gas Emissions Inventory, p. F-3.) For example, the emissions forecast for electricity generation assumes “all growth in electricity demand by 2020 will be met by in-state natural gas-fired power plants” and the estimate for on-road vehicle emissions “assumes no change in vehicle fleet mix over time.” (*Id.*, p. F-4.)

Neither A.B. 32 nor the Air Board’s Scoping Plan set out a mandate or method for CEQA analysis of greenhouse gas emissions from a proposed project. A 2007 CEQA amendment, however, required the preparation, adoption and periodic update of guidelines for mitigation of greenhouse gas impacts. (Stats. 2007, ch. 185, § 1, p. 2330, adding Pub. Resources Code, § 21083.05.) In 2010, the Natural Resources Agency adopted a new CEQA Guideline on Determining the Significance of Impacts from Greenhouse Gas Emissions. (Cal. Code Regs., tit. 14, § 15064.4.)<sup>4</sup>

The new guideline provides that a lead agency should attempt to “describe, calculate or estimate” the amount of greenhouse gases the project will emit, but recognizes that agencies have discretion in how to do so. (Guidelines, § 15064.4, subd. (a).) It goes on to provide that when assessing the significance of

---

<sup>4</sup> The CEQA Guidelines (Guidelines), promulgated by the state Natural Resources Agency and found in title 14 of the California Code of Regulations, section 15000 et seq., are statutorily mandated to provide “criteria for public agencies to follow in determining whether or not a proposed project may have a ‘significant effect on the environment.’ ” (§ 21083, subd. (b).) We give the Guidelines great weight in interpreting CEQA, except where they are clearly unauthorized or erroneous. (*Vineyard Area Citizens, supra*, 40 Cal.4th at p. 428, fn. 5; *Laurel Heights Improvement Assn. v. Regents of University of California* (1993) 6 Cal.4th 1112, 1123.)

greenhouse gas emissions, the agency should consider these factors among others: “(1) The extent to which the project may increase or reduce greenhouse gas emissions as compared to the existing environmental setting; [¶] (2) Whether the project emissions exceed a threshold of significance that the lead agency determines applies to the project[;] [¶] (3) The extent to which the project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of greenhouse gas emissions. Such requirements must be adopted by the relevant public agency through a public review process and must reduce or mitigate the project’s incremental contribution of greenhouse gas emissions. If there is substantial evidence that the possible effects of a particular project are still cumulatively considerable notwithstanding compliance with the adopted regulations or requirements, an EIR must be prepared for the project.” (*Id.*, subd. (b).)

## *2. The EIR’s Significance Determination*

In order to evaluate the project’s greenhouse gas emissions impact, the EIR attempts to quantify the emissions currently generated on the project site in its existing uses and the emissions that would be generated by full development of the Newhall Ranch community. Annual emissions from the existing uses (primarily oil wells and agriculture) are estimated at 10,272 metric tons of CO<sub>2</sub>, which the EIR conservatively treats as zero for purposes of the impact analysis. The annual greenhouse gas emissions from Newhall Ranch at full build-out are projected to be 269,053 metric tons of CO<sub>2</sub> equivalent (MTCO<sub>2</sub>E).

The EIR asserts that while this annual emissions increase of 269,053 MTCO<sub>2</sub>E is “an obvious change to existing, on-site conditions,” the global nature of climate change and the “absence of scientific and factual information” on the significance of particular amounts of greenhouse gas emissions make the change

“[in]sufficient to support a significance determination.” The EIR accordingly goes on to consider “whether the proposed Project’s emissions . . . would impede the State of California’s compliance with the statutory emissions reduction mandate established by AB 32.”

The EIR’s method for determining whether the project would impede achievement of A.B. 32’s goals is modeled on the Air Board’s use, in its Scoping Plan, of comparison to a “business-as-usual” projection as a measure of the emission reductions needed to meet the 2020 goal (determined to be a reduction of 29 percent from business as usual). As explained earlier, the Scoping Plan forecasted statewide greenhouse gas emissions under a business-as-usual scenario in which no additional regulatory actions were taken to reduce emissions. The EIR does the same for Newhall Ranch, estimating at 390,046 MTCO<sub>2</sub>E per year the emissions “if the proposed Project and resulting development were constructed consistent with [the Air Board’s] assumptions for the CARB 2020 NAT [no action taken, or business as usual] scenario.” Because the EIR’s estimate of actual annual project emissions (269,053 MTCO<sub>2</sub>E) is 31 percent below its business-as-usual estimate (390,046 MTCO<sub>2</sub>E), exceeding the Air Board’s determination of a 29 percent reduction from business as usual needed statewide, the EIR concludes the project’s likely greenhouse gas emissions will not impede achievement of A.B. 32’s goals and are therefore less than significant for CEQA purposes.

### *3. Analysis*

We consider whether DFW abused its discretion in determining the project’s greenhouse gas emissions would not have a significant environmental impact, either because it failed to proceed in the manner required by CEQA or

because it made the no significant impact determination without the support of substantial evidence in the administrative record. (§ 21168.5.)

Plaintiffs contend the EIR's no significant impact conclusion resulted from use of a legally improper baseline for comparison. Relying on this court's decision in *Communities for a Better Environment v. South Coast Air Quality Management Dist.* (2010) 48 Cal.4th 310 (*Communities for a Better Environment*), in which we disapproved the defendant district's use of pollutant emission levels allowed under prior permits—but not reflecting actual existing conditions—as a comparative baseline for a CEQA significance evaluation, plaintiffs argue DFW erred in determining significance by comparison to the hypothetical business-as-usual scenario rather than by comparison to existing greenhouse gas emissions on the project site.

DFW contends it properly relied on methodology devised by the Air Board, the state agency with greatest expertise on climate change. Newhall defends the EIR's approach and conclusion extensively, arguing that DFW acted within its discretion under Guidelines section 15064.4 in adopting compliance with A.B. 32's goals as its significance criterion and that both DFW's choice of methodology and its conclusion of no significant impact should be reviewed only for support by substantial evidence.

We begin with the broadest question posed: Did DFW abuse its discretion in adopting consistency with A.B. 32's reduction goals as its significance criterion for the project's greenhouse gas emissions? We review this issue de novo, as it is predominantly a legal question of correct CEQA procedure. (*Communities for a Better Environment, supra*, 48 Cal.4th at p. 319; *Vineyard Area Citizens, supra*, 40 Cal.4th at p. 435.)

Before considering the principal statutory and regulatory provisions governing CEQA analysis of greenhouse gas emissions (§ 21083.05; Guidelines,

§ 15064.4), we address two related aspects of the greenhouse gas problem that inform our discussion of CEQA significance.

First, because of the global scale of climate change, any one project's contribution is unlikely to be significant by itself. The challenge for CEQA purposes is to determine whether the impact of the project's emissions of greenhouse gases is *cumulatively* considerable, in the sense that "the incremental effects of [the] individual project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects." (§21083, subd. (b)(2); see Guidelines, § 15064, subd. (h)(1).) "With respect to climate change, an individual project's emissions will most likely not have any appreciable impact on the global problem by themselves, but they will contribute to the significant cumulative impact caused by greenhouse gas emissions from other sources around the globe. The question therefore becomes whether the project's incremental addition of greenhouse gases is 'cumulatively considerable' in light of the global problem, and thus significant." (Crockett, *Addressing the Significance of Greenhouse Gas Emissions Under CEQA: California's Search for Regulatory Certainty in an Uncertain World* (July 2011) 4 Golden Gate U. Env'tl. L.J. 203, 207–208 (hereafter *Addressing the Significance of Greenhouse Gas Emissions*).)

Second, the global scope of climate change and the fact that carbon dioxide and other greenhouse gases, once released into the atmosphere, are not contained in the local area of their emission means that the impacts to be evaluated are also global rather than local. For many air pollutants, the significance of their environmental impact may depend greatly on *where* they are emitted; for greenhouse gases, it does not. For projects, like the present residential and commercial development, which are designed to accommodate longterm growth in California's population and economic activity, this fact gives rise to an argument

that a certain amount of greenhouse gas emissions is as inevitable as population growth. Under this view, a significance criterion framed in terms of efficiency is superior to a simple numerical threshold because CEQA is not intended as a population control measure.

The EIR makes this point in its response to plaintiff Center for Biological Diversity's comments on the greenhouse gas significance analysis: "[W]hen location does not matter (such as in the case of GHG emissions), evaluation of project significance via an efficiency metric is appropriate. [¶] [F]or a global environmental issue (such as climate change), utilizing an absolute number as a significance criterion equates to attempting to use CEQA to discourage population growth. Of note, the future residents and occupants of development enabled by Project approval would exist and live somewhere else if this Project is not approved. Whether 'here or there,' GHG emissions associated with such population growth will occur."

These considerations militate in favor of consistency with meeting A.B. 32's statewide goals as a permissible significance criterion for project emissions. Meeting our statewide reduction goals does not preclude all new development. Rather, the Scoping Plan—the state's roadmap for meeting A.B. 32's target—assumes continued growth and depends on increased efficiency and conservation in land use and transportation from all Californians. (See Scoping Plan, *supra*, pp. ES-1 [meeting the A.B. 32 goal "means reducing our annual emissions of 14 tons of carbon dioxide equivalent for every man, woman and child in California down to about 10 tons per person by 2020"]; *id.* at pp. 15 ["Every part of California's economy needs to play a role in reducing greenhouse gas emissions"], 42 [outlining energy efficiency measures for both new and existing buildings].) To the extent a project incorporates efficiency and conservation measures sufficient to contribute its portion of the overall greenhouse gas reductions

necessary, one can reasonably argue that the project's impact "is not 'cumulatively considerable,' because it is helping to solve the cumulative problem of greenhouse gas emissions as envisioned by California law." (*Addressing the Significance of Greenhouse Gas Emissions, supra*, 4 Golden Gate U. Envtl. L.J. at p. 210.)

Given the reality of growth, some greenhouse gas emissions from new housing and commercial developments are inevitable. The critical CEQA question is the cumulative significance of a project's greenhouse gas emissions, and from a climate change point of view it does not matter where in the state those emissions are produced. Under these circumstances, evaluating the significance of a residential or mixed use project's greenhouse gas emissions by their effect on the state's efforts to meet its longterm goals makes at least as much sense as measuring them against an absolute numerical threshold.

Using consistency with A.B. 32's statewide goal for greenhouse gas reduction, rather than a numerical threshold, as a significance criterion is also consistent with the broad guidance provided by section 15064.4 of the CEQA Guidelines. As the issuing agency explained, section 15064.4 was drafted to reflect "the existing CEQA principle that there is no iron-clad definition of 'significance.' " (Natural Resources Agency, Final Statement of Reasons for Regulatory Action: Amendments to the State CEQA Guidelines Addressing Analysis and Mitigation of Greenhouse Gas Emissions Pursuant to SB 97 (Dec. 2009) p. 20 (Final Statement of Reasons); cf. Pub. Res. Code, § 21083.05 [requiring periodic update of CEQA Guidelines for mitigation of greenhouse gas emissions to reflect new information or criteria established by Air Resources Board].) Section 15064.4 was not intended to closely restrict agency discretion in choosing a method for assessing greenhouse gas emissions, but rather "to assist lead agencies" in investigating and disclosing "all that they reasonably can"

regarding a project's greenhouse gas emissions impacts. (Final Statement of Reasons, *supra*, at p. 20.)<sup>5</sup>

While Guidelines section 15064.4 states a lead agency "should consider," among other factors, "[t]he extent to which the project may increase or reduce greenhouse gas emissions as compared to the existing environmental setting" (*id.*, subd. (b)(1)) and "[w]hether the project emissions exceed a threshold of significance that the lead agency determines applies to the project" (*id.*, subd. (b)(2)), the section does not mandate the use of absolute numerical thresholds to measure the significance of greenhouse gas emissions. The factors listed in subdivision (b) are not exclusive. They are rather intended "to assist lead agencies in collecting and considering information relevant to a project's incremental contribution of GHG emissions and the overall context of such emissions." (Final Statement of Reasons, *supra*, at p. 24.)

The present EIR discloses the project's likely increase in emissions over the existing environment, informing the reader that the project will increase greenhouse gas emissions by 269,053 MTCO<sub>2</sub>E compared to the existing environmental setting (Guidelines, §15064.4, subd. (b)(1)), but declines to consider the impact significant based on the size of that increase alone "because of

---

<sup>5</sup> In an amicus curiae brief, the Natural Resources Agency argues that because Guidelines section 15064.4 was not yet in force when DFW circulated its draft EIR for public comment, the lead agency was not obliged to comply with that regulation. Because we hold the regulation did not prohibit reliance on consistency with A.B. 32's goals as a significance criterion (pp. 13-16), and further hold DFW's use of a business-as-usual model was deficient for reasons independent of Guidelines section 15064.4 (*post*, pp. 19-23), we need not decide whether the new Guideline section, which was operative March 18, 2010, applied to the final EIR circulated in June 2010 and to DFW's December 2010 approval of Newhall Ranch. (See Guidelines, § 15007 [prospective application of amendments to Guidelines].)

the absence of scientific and factual information regarding when particular quantities of greenhouse gas emissions become significant.” As for a significance threshold (*id.*, subd. (b)(2)), the EIR asserts that no agency had adopted an applicable threshold.

Plaintiffs challenge these statements as insufficient to justify the EIR’s choice of methodology, noting that California air pollution control officials and air quality districts have made several proposals for numerical thresholds. But given that multiple agencies’ efforts at framing greenhouse gas significance issues have not yet coalesced into any widely accepted set of numerical significance thresholds, but *have* produced “a certain level of consensus” on the value of A.B. 32 consistency as a criterion (*Addressing the Significance of Greenhouse Gas Emissions, supra*, 4 Golden Gate U. Env’tl. L.J. at p. 209), we cannot conclude DFW’s discretionary choice of A.B. 32 consistency as a significance criterion for this project violated Guidelines section 15064.4, subdivisions (b)(1) or (b)(2).

Subdivision (b)(3) of Guidelines section 15064.4 states the lead agency should also consider “[t]he extent to which the project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of greenhouse gas emissions.” A.B. 32 did not create a set of “regulations or requirements” implementing a “plan” (Guidelines, § 15064.4, subd. (b)(3)); indeed, it is not a plan but rather a statement of policies and objectives. The Scoping Plan adopted pursuant to A.B. 32 is a plan for reducing greenhouse gas emissions, but does not itself establish the regulations by which it is to be implemented; rather, it sets out how existing regulations, and new ones yet to be adopted at the time of the Scoping Plan, will be used to reach A.B. 32’s emission reduction goal. At the time the Natural Resources Agency promulgated Guidelines section 15064.4, the agency explained that the Scoping Plan “may not be appropriate for use in determining the significance of individual projects . . .

because it is conceptual at this stage and relies on the future development of regulations to implement the strategies identified in the Scoping Plan.” (Final Statement of Reasons, *supra*, at pp. 26–27.)

In short, neither A.B. 32 nor the Scoping Plan establishes regulations implementing, for specific projects, the Legislature’s statewide goals for reducing greenhouse gas emissions. Neither constitutes a set of “regulations or requirements adopted to implement” a statewide reduction plan within the meaning of Guidelines section 15064.4, subdivision (b)(3). That guideline, however, does not expressly or impliedly prohibit a lead agency from using the A.B. 32 goals themselves to determine whether the project’s projected greenhouse gas emissions are significant. As noted by the Natural Resources Agency in its amicus curiae brief, “a discussion of a project’s consistency with the State’s long-term climate stabilization objectives . . . will often be appropriate . . . under CEQA,” provided the analysis is “tailored . . . specifically to a particular project.” Indeed, to proceed in this manner is consistent with CEQA’s “inherent recognition . . . that if a plan is in place to address a cumulative problem, a new project’s incremental addition to the problem will not be ‘cumulatively considerable’ if it is consistent with the plan and is doing its fair share to achieve the plan’s goals.” (*Addressing the Significance of Greenhouse Gas Emissions*, *supra*, 4 Golden Gate U. Env’tl. L.J. at pp. 210–211.) For this reason as well, we conclude DFW’s choice to use that criterion does not violate CEQA. The only published Court of Appeal decisions to consider this question have reached the same conclusion, albeit with little discussion. (*Friends of Oroville v. City of Oroville* (2013) 219 Cal.App.4th 832, 841; *Citizens for Responsible Equitable Environmental Development v. City of Chula Vista* (2011) 197 Cal.App.4th 327, 335–336.)

A qualification regarding the passage of time is in order here. Plaintiffs do not claim it was improper for this EIR, issued in 2010, to look forward only to

2020 for a guidepost on reductions in greenhouse gas emissions, and we therefore do not consider the question whether CEQA required the EIR to address the state's goals beyond 2020. Nevertheless, over time consistency with year 2020 goals will become a less definitive guide, especially for longterm projects that will not begin operations for several years. An EIR taking a goal-consistency approach to CEQA significance may in the near future need to consider the project's effects on meeting longer term emissions reduction targets.<sup>6</sup>

Having concluded DFW did not proceed in violation of CEQA by its choice of A.B. 32 consistency as a significance criterion, we proceed to plaintiff's contention that the agency violated CEQA by comparing the project's expected emissions to a hypothetical business-as-usual scenario rather than to a baseline of emissions in the existing physical environment.

In *Communities for a Better Environment*, *supra*, 48 Cal.4th 310, a refinery sought a permit to conduct a new process using some new and some existing equipment, including existing boilers used for steam generation, each of which was subject to an existing permit setting its maximum rate of operation. (*Id.* at

---

<sup>6</sup> Executive Order No. S-3-05, signed by Governor Schwarzenegger on June 1, 2005, set reduction targets of 1990 levels by 2020 and 80 percent below 1990 levels by 2050. A.B. 32 codified the 2020 goal but did not indicate any intent to abandon the 2050 goal; indeed, the Legislature cited the executive order and indicated its intent that the climate policy efforts the order initiated continue. (Health & Saf. Code, § 38501, subd. (i).) More recently, in an update to the Scoping Plan, the Air Board noted the need for steep post-2020 reductions and proposed the state adopt a “strong mid-term target” for the year 2030, in the range of 35–50 percent below 1990 levels. (Air Resources Board, First Update to the Climate Change Scoping Plan: Building on the Framework (May 2014), p. 34.) Executive Order No. B-30-15, signed by Governor Brown on April 29, 2015, endorsed the effort to set “an interim target of emission reductions for 2030.” Pending legislation would codify this additional goal, directing the Air Board to establish a 2030 limit equivalent to 40 percent below 1990 levels. (Sen. Bill No. 32 (2015–2016 Reg. Sess.) § 4.)

pp. 317–318.) The negative declaration the regional air district prepared for the project, in determining the significance of the project’s nitrogen oxide emissions, treated emissions that could be generated by the existing boilers operating together at their maximum permitted capacity (a condition that did not occur in normal operation) as part of the baseline for environmental review rather than as part of the project. (*Id.* at p. 318.) Although the negative declaration acknowledged that actual nitrogen oxide emissions would increase under the project by an amount that would normally be considered significant, the declaration determined the emissions were not significant because they were below what could have been emitted by the refinery’s boilers under the existing permits. (*Ibid.*)

We held the air district’s approach violated the rule expressed in Guidelines section 15125, subdivision (a), as well as in case law, that the comparative baseline for a significance determination should normally be the existing physical conditions in the project’s vicinity. (*Communities for a Better Environment, supra*, 48 Cal.4th at pp. 320–322.) “By comparing the proposed project to what *could* happen, rather than to what was actually happening, the District set the baseline not according to ‘established levels of a particular use,’ but by ‘merely hypothetical conditions allowable’ under the permits. [Citation.] Like an EIR, an initial study or negative declaration ‘must focus on impacts to the existing environment, not hypothetical situations.’ [Citation.]” (*Id.* at p. 322.)

Contrary to plaintiffs’ arguments, we do not see the EIR’s approach here as comparable to that of the negative declaration in *Communities for a Better Environment*. Unlike the air district in *Communities for a Better Environment*, DFW does not claim its business-as-usual model represented “the physical environmental conditions . . . as they exist” at the time of environmental analysis. (Guidelines, § 15125, subd. (a).) Rather, it employs a hypothetical business-as-usual emissions model merely as a means of comparing the project’s projected

emissions to the statewide target set under the Scoping Plan. The business-as-usual emissions model is used here as a comparative tool for evaluating efficiency and conservation efforts, not as a significance baseline.

The percentage reduction from business as usual identified by the Scoping Plan is a measure of the reduction effort needed to meet the 2020 goal, not an attempt to describe the existing level of greenhouse gas emissions. Similarly, the EIR employs its calculation of project reductions from business-as-usual emissions in an attempt to show the project incorporates efficiency and conservation measures sufficient to make it consistent with achievement of A.B. 32's reduction goal, not to show the project will not increase greenhouse gas emissions over those in the existing environment. As discussed earlier, distinctive aspects of the greenhouse gas problem make consistency with statewide reduction goals a permissible significance criterion for such emissions. Using a hypothetical scenario as a method of evaluating the proposed project's efficiency and conservation measures does not violate Guidelines section 15125 or contravene our decision in *Communities for a Better Environment*.

Notwithstanding this conclusion, we agree with plaintiffs that DFW abused its discretion in finding, on the basis of the EIR's business-as-usual comparison, that the project's greenhouse gas emissions would have no cumulatively significant impact on the environment. We reach this conclusion because the administrative record discloses no substantial evidence that Newhall Ranch's *project-level* reduction of 31 percent in comparison to business as usual is consistent with achieving A.B. 32's *statewide* goal of a 29 percent reduction from business as usual, a lacuna both dissenting opinions fail to address. Even using the EIR's own significance criterion, the EIR's analysis fails to support its conclusion of no significant impact.

The Scoping Plan set out a statewide reduction goal and a framework for reaching it—a set of broadly drawn regulatory approaches covering all sectors of the California economy and projected, if implemented and followed, to result in a reduction to 1990-level greenhouse gas emissions by the year 2020. The plan expressed the overall level of conservation and efficiency improvements required as, among other measures, a percentage reduction from a hypothetical scenario in which no additional regulatory actions were taken. But the Scoping Plan nowhere related that *statewide* level of reduction effort to the percentage of reduction that would or should be required from *individual projects*, and nothing DFW or Newhall have cited in the administrative record indicates the required percentage reduction from business as usual is the same for an individual project as for the entire state population and economy.

Plaintiffs put forward one ready reason to suspect that the percent reduction is *not* the same, and that in fact a greater degree of reduction may be needed from new land use projects than from the economy as a whole: Designing new buildings and infrastructure for maximum energy efficiency and renewable energy use is likely to be easier, and is more likely to occur, than achieving the same savings by retrofitting of older structures and systems. The California Attorney General’s Office made this point while commenting on an air district’s greenhouse gas emissions reduction plan, in a letter one of the plaintiffs brought to DFW’s attention in a comment on the EIR: “The [air district] Staff Report seems to assume that if new development projects reduce emissions by 29 percent compared to ‘business as usual,’ the 2020 statewide target of 29 percent below ‘business as usual’ will also be achieved, but it does not supply evidence of this. Indeed, it seems that new development must be more GHG-efficient than this average, given that past and current sources of emissions, which are substantially less efficient than this average, will continue to exist and emit.” In its

administrative response to this comment, DFW observed that the Scoping Plan did call for emissions reductions from existing buildings (though these are not separately quantified) and that one air district's analysis of the Scoping Plan indicated the "land-use driven" economic sector would be required to make only a 26.2 percent reduction from business as usual.

DFW's responses to comments on the EIR do not suffice to demonstrate that a 31 percent reduction from business as usual at the project level corresponds to the statewide reductions called for in the Scoping Plan. In its brief, Newhall characterizes this question as one of competing expert opinions, on which the courts must defer to the lead agency. But Newhall points to no expert opinion stating generally that the Scoping Plan contemplates the same emission reductions from new buildings as from existing ones, or more particularly that the Scoping Plan's statewide standard of a 29 percent reduction from business as usual applies without modification to a new residential or mixed use development project.

Even if the state-wide and economy-wide percentage reduction set out in the Scoping Plan were shown to be generally appropriate for use as a criterion of significance for individual projects, the EIR's conclusion that greenhouse gas emissions will be less than significant would still lack substantial supporting evidence. This is because the EIR makes an unsupported assumption regarding statewide density averages used in the Scoping Plan, an assumption that if incorrect could result in a misleading business-as-usual comparison. As plaintiffs point out, the EIR's business-as-usual scenario assumes residential density equal to that currently found in the Santa Clarita Valley. Because Newhall Ranch as designed would have greater residential density than the existing average for the Santa Clarita Valley, the EIR makes a downward adjustment from business as usual in projected vehicle miles traveled, and consequently in greenhouse gas emissions from mobile sources (a substantial part of the total emissions). As far as

the EIR reveals, however, the Scoping Plan's statewide business-as-usual model is not necessarily based on residential densities equal to the Santa Clarita Valley average.

The Scoping Plan's business-as-usual projection of vehicle miles traveled in 2020 was derived using an established growth model for such projections. (Scoping Plan, *supra*, appen. F, at pp. F-3—F-4.) But nothing DFW or Newhall points to in the administrative record shows the statewide density assumptions used in that model mirror conditions in the Santa Clarita Valley. To the extent the Scoping Plan's business-as-usual scenario assumes population densities greater than the Santa Clarita Valley density assumed in the EIR's business-as-usual projection, the EIR's comparison of project reductions from business as usual to reductions demanded in the Scoping Plan will be misleading. The administrative record does not establish a firm ground for the efficiency comparison the EIR makes and thus, for this reason as well, does not substantially support the EIR's conclusion that Newhall Ranch's 31 percent emissions savings over business as usual satisfies the report's significance criterion of consistency with the Scoping Plan's 29 percent statewide savings by 2020.

At bottom, the EIR's deficiency stems from taking a quantitative comparison method developed by the Scoping Plan as a measure of the greenhouse gas emissions reduction effort required by the state as a whole, and attempting to use that method, without consideration of any changes or adjustments, for a purpose very different from its original design: To measure the efficiency and conservation measures incorporated in a specific land use development proposed for a specific location. The EIR simply assumes that the level of effort required in one context, a 29 percent reduction from business as usual statewide, will suffice in the other, a specific land use development. From the information in the administrative record, we cannot say that conclusion is

wrong, but neither can we discern the contours of a logical argument that it is right. The analytical gap left by the EIR's failure to establish, through substantial evidence and reasoned explanation, a quantitative equivalence between the Scoping Plan's statewide comparison and the EIR's own project-level comparison deprived the EIR of its " 'sufficiency as an informative document.' " (*Laurel Heights Improvement Assn. v. Regents of University of California, supra*, 47 Cal.3d at p. 392.)

Justice Corrigan argues our conclusion on this point, requiring DFW to support its chosen quantitative method for analyzing significance with evidence and reasoned argument, is inconsistent with the deferential nature of our review. (Conc. & dis. opn. of Corrigan, J., *post*, at p. 4.) We disagree. A lead agency enjoys substantial discretion in its choice of methodology. But when the agency chooses to rely completely on a single quantitative method to justify a no-significance finding, CEQA demands the agency research and document the quantitative parameters essential to that method. Otherwise, decision makers and the public are left with only an unsubstantiated assertion that the impacts—here, the cumulative impact of the project on global warming—will not be significant. (See Guidelines, § 15064, subd. (f)(5) [substantial evidence to support a finding on significance includes "facts, reasonable assumptions predicated upon facts, and expert opinion supported by facts," but not "[a]rgument, speculation, [or] unsubstantiated opinion"].)

Nor is Justice Corrigan correct that our analysis "assumes project-level reductions in greenhouse gas emissions must be greater than the reductions California is seeking to achieve statewide." (Conc. & dis. opn. of Corrigan, J., *post*, at p. 2.) As discussed just above (*ante*, pp. 22–23), we hold only that DFW erred in failing to substantiate its assumption that the Scoping Plan's statewide

measure of emissions reduction can also serve as the criterion for an individual land use project.

We further agree with plaintiffs that DFW's failure to provide substantial evidentiary support for its no significant impact conclusion was prejudicial, in that it deprived decision makers and the public of substantial relevant information about the project's likely impacts. (*Neighbors for Smart Rail v. Exposition Metro Line Construction Authority* (2013) 57 Cal.4th 439, 463 (lead opn. of Werdegar, J.); *Environmental Protection Information Center v. California Dept. of Forestry & Fire Protection* (2008) 44 Cal.4th 459, 485–486; *Sierra Club v. State Bd. of Forestry* (1994) 7 Cal.4th 1215, 1236–1237.) In this EIR, DFW employed the business-as-usual comparison as its sole criterion of significance. In the absence of substantial evidence to support the EIR's no-significance finding, as noted above, the EIR's readers have no way of knowing whether the project's likely greenhouse gas emissions impacts will indeed be significant and, if so, what mitigation measures will be required to reduce them. This is not the sort of “[i]nsubstantial or merely technical omission[.]” that can be overlooked in deciding whether to grant relief. (*Neighbors for Smart Rail v. Exposition Metro Line Construction Authority*, *supra*, at p. 463.)

We briefly address some of the potential options for DFW on remand and for other lead agencies faced with evaluating the cumulative significance of a proposed land use development's greenhouse gas emissions. While the burden of CEQA's mandate in this context can be substantial, methods for complying with CEQA do exist. We do not, of course, guarantee that any of these approaches will be found to satisfy CEQA's demands as to any particular project; what follows is merely a description of potential pathways to compliance, depending on the circumstances of a given project.

First, although we have found the particular comparison made here lacking in support, and although doubt has been cast on the Scoping Plan's project-level appropriateness (see Final Statement of Reasons, *supra*, at pp. 24–25), a business-as-usual comparison based on the Scoping Plan's methodology may be possible. On an examination of the data behind the Scoping Plan's business-as-usual model, a lead agency might be able to determine what level of reduction from business as usual a new land use development at the proposed location must contribute in order to comply with statewide goals.

Second, a lead agency might assess consistency with A.B. 32's goal in whole or part by looking to compliance with regulatory programs designed to reduce greenhouse gas emissions from particular activities. (See Final Statement of Reasons, *supra*, at p. 64 [greenhouse gas emissions “may be best analyzed and mitigated at a programmatic level.”].) To the extent a project's design features comply with or exceed the regulations outlined in the Scoping Plan and adopted by the Air Board or other state agencies, a lead agency could appropriately rely on their use as showing compliance with “performance based standards” adopted to fulfill “a statewide . . . plan for the reduction or mitigation of greenhouse gas emissions.” (Guidelines, § 15064.4, subds. (a)(2), (b)(3); see also *id.*, § 15064, subd. (h)(3) [determination that impact is not cumulatively considerable may rest on compliance with previously adopted plans or regulations, including “plans or regulations for the reduction of greenhouse gas emissions”].)

A significance analysis based on compliance with such statewide regulations, however, only goes to impacts within the area governed by the regulations. That a project is designed to meet high building efficiency and conservation standards, for example, does not establish that its greenhouse gas emissions from transportation activities lack significant impacts. (Final Statement of Reasons, *supra*, at p. 23.) Although transportation accounts for almost 40

percent of the state's greenhouse gas emissions, and transportation emissions are affected by the location and density of residential and commercial development, the Scoping Plan does not propose statewide regulation of land use planning but relies instead on local governments. (Scoping Plan, *supra*, at pp. 11, 27.)

Local governments thus bear the primary burden of evaluating a land use project's impact on greenhouse gas emissions. Some of this burden can be relieved by using geographically specific greenhouse gas emission reduction plans to provide a basis for the tiering or streamlining of project-level CEQA analysis. Guidelines section 15183.5, added in 2010 along with section 15064.4, explains in detail how a programmatic effort such as "a general plan, a long range development plan, or a separate plan to reduce greenhouse gas emissions" (*id.*, § 15183.5, subd. (a)) may, if sufficiently detailed and adequately supported, be used in later project-specific CEQA documents to simplify the evaluation of the project's cumulative contribution to the effects of greenhouse gas emissions (*id.* at subd. (b)). (Guidelines, § 15183.5, subds. (a), (b).) The Scoping Plan encourages local jurisdictions to develop " 'climate action plans' " or greenhouse gas " 'emissions reduction plans' " for their geographic areas, and several jurisdictions have adopted or proposed such plans as tools for CEQA streamlining. (Final Statement of Reasons, *supra*, at p. 65; see, e.g., City of Milpitas, Climate Action Plan and Qualified Greenhouse Gas Reduction Strategy (May 2013), p. 1-1; City of San Bernardino, Sustainability Master Plan (Public Review Draft, Aug. 2012), p. 4.)

In addition, CEQA expressly allows streamlining of transportation impacts analysis for certain land use projects based on metropolitan regional "sustainable communities strategies." Under follow-up legislation to A.B. 32 (Stats. 2008, ch. 728, p. 5065, commonly known as S.B. 375) each metropolitan planning organization in the state is to prepare a "sustainable communities strategy" or

alternative plan to meet regional targets set by the Air Board for greenhouse gas emissions from cars and light trucks. (Gov. Code, § 65080, subd. (b)(2).) CEQA documents for certain residential, mixed use and transit priority projects that are consistent with the limits and policies specified in an applicable sustainable communities strategy need not additionally analyze greenhouse gas emissions from cars and light trucks. (§§ 21155.2, 21159.28; Guidelines, § 15183.5, subd. (c).)

Third, a lead agency may rely on existing numerical thresholds of significance for greenhouse gas emissions, though as we have explained (*ante*, p. 14), use of such thresholds is not required. (Guidelines, § 15064.4, subd. (b)(2); see, e.g., Bay Area Air Quality Management Dist. (BAAQMD), CEQA Guidelines Update: Proposed Thresholds of Significance (May 3, 2010), pp. 8–21 [regional air quality district for the San Francisco Bay Area proposes a threshold of 1100 MTCO<sub>2</sub>E in annual emissions as one alternative agencies may use in determining CEQA significance for new land use projects].)<sup>7</sup> Thresholds, it should be noted, only define the level at which an environmental effect “normally” is considered significant; they do not relieve the lead agency of its duty to determine the

---

<sup>7</sup> BAAQMD approved its greenhouse gas thresholds along with other CEQA thresholds of significance in June 2010, but has refrained from recommending their use pending the completion of litigation challenging its promulgation of thresholds. (BAAQMD, CEQA Air Quality Guidelines (May 2012 update), p. 2-5.) The litigation is currently pending in this court (*Cal. Building Industry Association v. Bay Area Air Quality Management District*, review granted Nov. 26, 2013, S213478), but the question we granted review to decide relates solely to certain BAAQMD thresholds for analyzing the effect of existing pollution sources on projects bringing more users or residents to a location. The validity of the greenhouse gas source thresholds is not under examination in this court. (*Id.*, order Nov. 26, 2013.)

significance of an impact independently. (Guidelines, § 15064.7, subd. (a)); *Mejia v. City of Los Angeles* (2005) 130 Cal.App.4th 322, 342.)

For a large land use project such as Newhall Ranch, using a numerical threshold may result in a determination of significant greenhouse gas emission impacts. In that circumstance, the lead agency must adopt feasible mitigation measures or project alternatives to reduce the effect to insignificance; to the extent significant impacts remain after mitigation, the agency may still approve the project with a statement of overriding considerations. (§§ 21002, 21002.1, subd. (b), 21081; Guidelines, §§ 15091, 15093, 15126.6.) Were DFW to determine on remand that adding hundreds of thousands of tons of greenhouse gasses to the atmosphere has a cumulatively significant effect, therefore, it would not necessarily be required to disapprove the project on that basis. The agency could instead adopt whatever feasible alternatives and mitigation measures exist beyond the efficiency and conservation features already incorporated in the project design and, to the extent those measures do not reduce the cumulative impact of the project below the chosen threshold of significance, DFW could add a discussion of these impacts, and the countervailing benefits of the project, to the statement of overriding considerations the agency previously adopted in approving the project.

#### **B. The EIR's Mitigation Measures for Protection of Unarmored Threespine Stickleback**

Finding that infrastructure construction and building of Newhall Ranch could result in significant impacts to special status wildlife and plant species, DFW adopted numerous biological impact mitigation measures. Mitigation measures BIO-44 and BIO-46 provide for collection and relocation of special status fish, including the unarmored threespine stickleback, during construction in, or diversion of, the Santa Clara River. Such actions would be performed by United States Fish and Wildlife Service personnel or their agents.

We agree with plaintiffs that specifying these actions as mitigation in an EIR violates the Fish and Game Code section 5515's prohibition on authorizing the taking or possession of fully protected fish in mitigation of project impacts under CEQA. DFW may conduct or authorize capture and relocation of the stickleback as a conservation measure to protect the fish and aid in its recovery, but the agency may not rely in a CEQA document on the prospect of capture and relocation as mitigating a project's adverse impacts.

Fish and Game Code section 5515 lists 10 species of “fully protected” fish, including the unarmored threespine stickleback, *Gasterosteus aculeatus williamsoni*. (*Id.*, subd. (b)(9).) Subdivision (a) of that statute provides in pertinent part: “(1) Except as provided in Section 2081.7 or 2835, *fully protected fish or parts thereof may not be taken or possessed at any time. . . .* However, the department may authorize the taking of those species for necessary scientific research, including efforts to recover fully protected, threatened, or endangered species. . . . [¶] (2) *As used in this subdivision, ‘scientific research’ does not include any actions taken as part of specified mitigation for a project, as defined in Section 21065 of the Public Resources Code.*” (Fish & G. Code, § 5515, subd. (a), italics added.)<sup>8</sup>

---

<sup>8</sup> Parallel provisions govern the taking or possession of other fully protected animals. (See Fish & G. Code, §§ 3511 [fully protected birds], 4700 [fully protected mammals], 5050 [fully protected reptiles and amphibians].) The fully protected species laws are distinct from the more familiar endangered species laws (*id.*, §§ 2050–2115.5), though many species are covered by both statutory schemes.

The listed exceptions to Fish and Game Code section 5515's taking prohibition, Fish and Game Code sections 2081.7 and 2835, deal respectively with taking resulting from an agreement on Colorado River water and taking provided for in a “natural community conservation plan.” Neither exception applies here.

Fish and Game Code section 86 defines “take” as to “hunt, *pursue, catch, capture*, or kill, or attempt to hunt, pursue, catch, capture, or kill.” (Italics added.) This definition governs construction of the Fish and Game Code generally unless particular provisions or context require otherwise. (*Id.*, § 2.)

In light of the definition of take in section 86 as including an animal’s “pursu[it],” “catch,” or “capture,” the capture and relocation of stickleback contemplated by mitigation measures BIO-44 and BIO-46 violates Fish and Game Code section 5515. Although trapping and transplantation are defined as possible conservation measures for *endangered* species under Fish and Game Code section 2061,<sup>9</sup> the stickleback, as a *fully protected* species, is subject to the stricter prohibitions against taking set forth in Fish and Game Code section 5515, including an express prohibition on taking as mitigation for a project under CEQA. (*Id.*, subd. (a)(2).)

DFW and Newhall argue the references to “pursue,” “catch” and “capture” in Fish and Game Code section 86 should be understood to exclude trapping and transplantation done for conservation purposes. Because the stickleback is listed as an endangered species (Cal. Code Regs., tit. 14, § 670.5, subd. (a)(2)(L)) as well as a fully protected one, they argue, the prohibition on taking stickleback as a fully protected species must be harmonized with the Endangered Species Act’s permission to trap and transport endangered species for protective purposes. (Fish

---

<sup>9</sup> Fish and Game Code section 2061, part of the California Endangered Species Act, defines “conservation” to mean “all methods and procedures which are necessary to bring any endangered species or threatened species to the point at which the measures provided pursuant to this chapter are no longer necessary,” including “research, census, law enforcement, habitat acquisition, restoration and maintenance, propagation, *live trapping, and transplantation*, and, in the extraordinary case where population pressures within a given ecosystem cannot be otherwise relieved, may include regulated taking.” (Italics added.)

& G. Code, § 2061.) In the context of the Fish and Game Code’s solicitude for conservation of endangered and threatened species, the prohibition on taking should, DFW maintains, be understood as referring to “[a]ctivities . . . that adversely affect fish and wildlife—not . . . activities intended to move fish and wildlife out of harm’s way.”

We must reject the claim DFW may authorize, *as CEQA mitigation*, actions to protect a fully protected species from harm when, as here, those actions are otherwise prohibited as takings. The Legislature has expressly precluded this interpretation of the statutes by providing, in Fish and Game Code section 5515, subdivision (a), that permitted taking of a fully protected species for “scientific research” may include “efforts to recover” the species but that such “scientific research” does *not* include “any actions taken as part of specified mitigation for a project” as defined in CEQA. We cannot give effect to this provision and at the same time hold that DFW may, as CEQA mitigation, authorize the trapping and transplantation of stickleback—actions that plainly call for the fish’s “catch,” or “capture” (Fish & G. Code, § 86). That such catch or capture is intended to protect the stickleback from harm caused by the project’s construction is inherent in its adoption as CEQA mitigation and is expressly barred under section 5515.

Legislative history supports our conclusion. The language allowing taking for recovery efforts but not for CEQA mitigation was added to Fish and Game Code section 5515, subdivision (a) in 2003. (Stats. 2003, ch. 735, § 4, pp. 5521-5522.) As introduced on February 20, 2003, the bill simply defined “scientific research” to include recovery efforts for fully protected species. (Sen. Bill No. 412 (2003–2004 Reg. Sess.) as introduced Feb. 20, 2013.) An Assembly committee analysis of the bill as introduced, explained that the Natural Resources Agency secretary had testified that the fully protected species law’s absolute prohibition on taking had led to certain problems: “1) Fully protected status

conflicts with recovery efforts because there is no allowance for management pursuant to a recovery effort. For example, the fully protected species statute is in direct conflict with regional, multi-species conservation planning, such as the Natural Community Conservation Planning Program. [¶] 2) Fully protected status does not allow for incidental take of species due to otherwise lawful activities. [¶] 3) The law does not provide for mitigation of fully protected species. Because mitigation is not an option, the Department's only recourse is to initiate legal proceedings to address conflicts with fully protected species.” (Assem. Com. on Water, Parks & Wildlife, analysis of Sen. Bill No. 412 (2003–2004 Reg. Sess.) as introduced Feb. 20, 2003, p. 2.) The analysis continued: “According to the author this measure is intended to address the problem identified by Secretary Nichols in #1 above. In order to ensure broader recovery planning efforts can take place some take may be necessary.” (*Ibid.*)

The bill was subsequently amended in the Assembly to add the proviso that “scientific research” does *not* include “any actions taken as part of specified mitigation for a project, as defined in Section 21065 of the Public Resources Code.” (Sen. Bill No. 412 (2003–2004 Reg. Sess.) as amended Aug. 28, 2003.) A new committee analysis noted that the bill now “[e]xcludes, from ‘scientific research,’ any actions taken to mitigate a project under the California Environmental Quality Act (CEQA).” (Assem. Com. on Appropriations, analysis of Sen. Bill No. 412 (2003–2004 Reg. Sess.) as amended Aug. 28, 2003, pp. 1-2.)

Though not explicitly noted in the legislative history, the August 28, 2003, amendment was consistent with the earlier report's observation that, of the three problems identified by Secretary Nichols, the bill was intended to address only the first problem: the prohibition on taking members of a fully protected species tended to hinder management programs for the species' recovery. (Assem. Com. on Water, Parks & Wildlife, analysis of Sen. Bill No. 412 (2003–2004 Reg. Sess.)

as introduced Feb. 20, 2003, p. 2.) It was not aimed at the separate asserted problem of mitigation of the effects other actions would have on a fully protected species. (*Ibid.*) The August 28 amendment, by reaffirming the taking prohibition as to CEQA mitigation measures, effectuated this distinction in legislative intent.

Consistent with this history and the statutory language, we read Fish and Game Code section 5515, subdivision (a) as allowing the trapping and transplantation of fully protected fish species as part of a species recovery program, but *not* as mitigation for a project. Mitigating the adverse effect of a land development project on a species is not the same as undertaking positive efforts for the species' recovery, a distinction recognized in the 2003 legislation by its explicit exclusion of CEQA mitigation measures from the definition of scientific research. The Legislature evidently believed the prohibition on taking or possessing fully protected species should be relaxed to permit the use of wildlife management techniques needed for species recovery, but that agencies should not be allowed to rely on the availability of such techniques in approving or carrying out projects that would have significant adverse effects on a fully protected species. We therefore say nothing to preclude DFW's use or authorization of trapping and transplantation to protect the stickleback from threats to its survival and recovery, as expressly allowed under Fish and Game Code section 5515, subdivision (a)(1); based on subdivision (a)(2) of that statute, we hold only that such actions may not be relied on or "specified" as project mitigation measures pursuant to CEQA.

In the context of Fish and Game Code section 5515, limiting the definition of "taking" — which includes but is not limited to hunting and killing animals (Fish and G. Code, § 86) — to actions intended to harm a fully protected animal, as DFW urges, would also render unnecessary, or at least very puzzling, the Legislature's proviso that taking is not permitted as CEQA project mitigation.

(*Id.*, subd. (a)(2).) Hunting and killing animals might sometimes be necessary as a conservation measure, for example, to obtain biological samples or to relieve a dangerous local population pressure, but one struggles to imagine the circumstances in which a CEQA document would propose mitigating a project's adverse impacts on a fully protected species by killing or otherwise intentionally harming members of the species. If Fish and Game Code section 5515, subdivision (a)(1)'s prohibition on "tak[ing] or possess[ing]" a fully protected fish referred only to intentionally harmful acts, the Legislature would not likely have thought it necessary to specify in subdivision (a)(2) that such taking or possession could not be proposed as a means of mitigating adverse project effects.

In addition, narrowing Fish and Game Code section 86's definition of "take" to actions intended to harm an animal could in theory allow unauthorized persons found pursuing and catching a protected species to assert as a complete defense that their intent was not to harm the animal but to restore or transplant it to a safe habitat, a result we doubt very much the Legislature intended. We are loath to adopt a construction that would, for example, sanction an amateur conservationist capturing and moving a southern sea otter (fully protected under Fish & G. Code, § 4700, subd. (b)(8)) from its established habitat to a cove where the person believes it will be safer and healthier. On this point, Justice Chin observes that the Legislature did not intend such a result for endangered species any more than for fully protected ones. (Dis. opn. of Chin, J., *post*, at p. 13.) We agree: the broad definition of "take" in Fish and Game Code section 86 ensures that DFW can maintain legal control over actions interfering with threatened, endangered and fully protected animals even where those actions may not have been intended to kill or hurt the animal.

DFW urges deference to its interpretation of Fish and Game Code provisions, an area in which it has both expertise and substantial administrative

responsibility. We consider an agency's interpretation of statutes and regulations in light of the circumstances, giving greater weight where the interpretation concerns technical and complex matters within the scope of the agency's expertise. (*Yamaha Corp. of America v. State Bd. of Equalization* (1998) 19 Cal.4th 1, 12.) Even in substantive areas of the agency's expertise, however, our deference to an agency's statutory interpretation is limited; determining statutes' meaning and effect is a matter "lying within the constitutional domain of the courts." (*Id.* at p. 11.) That said, we acknowledge DFW's superior expertise in the administration of the Fish and Game Code, and we would not lightly adopt an interpretation of that code's provisions the department persuasively argued would defeat its ability to pursue species conservation and recovery. Again, however, we do not hold trapping and transplantation of fully protected fish species is prohibited as part of a species recovery effort. We hold only that such actions may not be specified as project mitigation measures in an EIR or other CEQA document. Nothing we say precludes DFW from using its expertise and judgment in determining, at any time, how best to protect a fully protected species from an imminent threat to its habitat.

Justice Chin points out that Fish and Game Code section 2061, relating to endangered species, refers separately to "taking," "live trapping," and "transplantation," implying these actions differ from one another. (Dis. opn., of Chin, J., *post*, at pp. 10–11.) That this provision uses "taking" in a limited sense denoting mortality or other permanent removal from the ecosystem, a meaning far narrower than the generally applicable definition of Fish and Game Code section 86, does not compel or even suggest the same limited meaning was intended in Fish and Game Code section 5515, relating to fully protected fish species. Indeed, we observe that a closely analogous statute, Fish and Game Code section 3511, while prohibiting the taking or possession of fully protected birds, provides an

exception allowing permits for “live capture and relocation” of such birds to protect livestock, suggesting those actions would otherwise be within the statutory prohibition on taking or possession, the same prohibition contained in Fish and Game Code section 5515.

Justice Chin further argues our interpretation of Fish and Game Code section 5515 as distinguishing between capture and translocation performed for conservation purposes and the same actions specified as CEQA mitigation measures has “little substance.” (Dis. opn. of Chin, J., *post*, at p. 9.) To the contrary, we see a significant distinction between discussing in an EIR measures that might be taken as part of an ongoing species recovery effort and specifying those actions as binding mitigation measures upon which project approval is conditioned. (See Guidelines § 15126.4, subd. (a)(2) [“Mitigation measures must be fully enforceable through permit conditions, agreements, or other legally-binding instruments.”].) Decision makers and the public could well be influenced in their evaluation of a project by the existence or nonexistence of such enforceable mitigation measures.

### **C. Timeliness of Plaintiffs’ Comments on Cultural Resources and Steelhead Smolt Impacts**

The Court of Appeal held two of plaintiffs’ challenges to the EIR, regarding impacts on Native American cultural resources and on steelhead smolt (juveniles), were not preserved because they were not timely brought to DFW’s attention in the administrative process. The issue turns on plaintiffs’ compliance with section 21177, which sets out the requirement that a CEQA claim be administratively exhausted before forming the basis for a judicial challenge to the agency’s actions.

Section 21177, subdivision (a) provides that before an alleged ground for noncompliance with CEQA may be brought to court it must have been “presented

to the public agency orally or in writing by any person during the public comment period provided by this division or prior to the close of the public hearing on the project before the issuance of the notice of determination.” DFW held no public hearing on final approval of the present project (the Resource Management and Development Plan and the Spineflower Conservation Plan); the question is therefore whether plaintiffs’ claims regarding Native American cultural resources and steelhead smolt were presented to DFW “during the public comment period provided by [CEQA].” (*Ibid.*)

As noted earlier, what we have referred to as the EIR was actually a combined environmental impact statement and environmental impact report (EIS/EIR) prepared jointly under NEPA and CEQA by the Corps and DFW, the lead federal and state agencies, respectively. (*Ante*, at pp. 2–3.) CEQA requires a public comment period on the draft EIR, but not on the final EIR; a comment period on the final EIR before project approval is optional with the lead agency. (§ 21091, subd. (a); Guidelines, § 15089, subd. (b).) NEPA regulations, in contrast, allow agencies and members of the public to submit comments on a final EIS at any time before the final agency decision, which ordinarily may not be issued earlier than 30 days after notice of the final EIS. (40 C.F.R. §§ 1503.1(b), 1506.10(b)(2).) In compliance with its federal obligations, the Corps published a notice of availability of the final EIS/EIR, inviting public comments during the period June 18, 2010 through July 19, 2010, later extended through August 3, 2010. Plaintiffs raised the disputed issues regarding Native American cultural resources and steelhead smolt impacts in comment letters during this period.

Because plaintiffs’ comments were made during the Corps-noticed comment period for the final EIS/EIR, rather than during the earlier CEQA-mandated period for comments on the draft EIS/EIR, DFW and Newhall contend

they came too late to preserve plaintiffs' claims under section 21177, subdivision (a). Under the circumstances of this case, we disagree.

In the final EIR, DFW stated that while CEQA did not require a comment period on it, DFW would make the final EIR available to the public "at the time the Corps begins its required 30-day public review." In its findings on project approval, DFW noted that "CEQA allows, but does not require, public review of a Final EIR" and that the Corps' 45-day comment period (extended from 30 days) is "equivalent" to the 45-day period required by CEQA for draft EIR's submitted for review by other agencies. The findings further explained that comments on the final EIS/EIR were given to the applicant (Newhall) for preparation of draft responses, that DFW "coordinated with the Corps and the applicant during the initial discussions" regarding these comments, and that "[b]ased on the input received from both DFG [now DFW] and the Corps, the applicant and its consultant team completed responses to the comments." In sum, "DFG has provided input and coordinated with the Corps and the applicant with respect to the draft responses on the Final EIS/EIR."

On completion of the response and revision process, the lead agencies together prepared an addendum containing portions of the final EIS/EIR that had been modified in response to comments on that document. The agencies included that addendum, together with the final EIS/EIR itself and the comments and responses to comments, in their final decision documents. This addendum adopted a new mitigation measure for Native American cultural resources, and the responses by DFW to plaintiffs' comments on the final EIR include responses on impacts on steelhead.

We need not decide whether every federally mandated comment period on a final combined EIS/EIR also constitutes a CEQA comment period for purposes of section 21177, subdivision (a). In this case, the lead state agency, DFW,

participated fully in the post-final EIS/EIR process, helping to prepare responses to the comments received and including those comments and responsive changes in the version of the final EIR it certified as compliant with CEQA when approving the project. Where the lead agency under CEQA has treated a federal comment period on a final EIS/EIR as an opportunity to receive additional comments on CEQA issues as well and has responded to those comments and included the responses in its final decision document, the lead agency has effectively treated the federal period as an optional comment period on the final EIR under Guidelines section 15089, subdivision (b). Such an optional comment period is “provided by” CEQA for purposes of section 21177. (See *Environmental Protection Information Center v. California Dept. of Forestry & Fire Protection*, *supra*, 44 Cal.4th at p. 484 [lead federal agency’s notice of availability of final EIS/EIR, which also invited comments to be sent to lead state agency, reopened public comment period for CEQA purposes]; *Galante Vineyards v. Monterey Peninsula Water Management Dist.* (1997) 60 Cal.App.4th 1109, 1120 [“the phrase ‘during the public comment period provided by this division,’ . . . includes optional comment periods.”])

The purposes of requiring exhaustion of administrative remedies, as section 21177 does, are to lighten the judicial burden by providing a remedy at the administrative level and, where a judicial remedy is nonetheless sought, facilitating a complete record that draws on the administrative agency’s expertise and has already been sifted for relevant evidence. (*Tomlinson v. County of Alameda* (2012) 54 Cal.4th 281, 291.) In this case, where DFW independently reviewed plaintiffs’ comments on the final EIS/EIR, contributed its expertise to the drafting of responses and revisions based on those comments, and included those responses and revisions in the final version of the EIR it certified and relied on in making its approval decision, the statute’s purpose has been served. We

conclude the disputed comments were timely under section 21177, subdivision (a) because they were submitted during a public comment period provided by CEQA.

The Court of Appeal, after holding plaintiffs had not administratively exhausted their claims on these topics, went on to reject those claims on the merits, finding the EIR's determinations to be supported by substantial evidence. DFW and Newhall argue the Court of Appeal's judgment may be upheld on this alternative ground, whereas plaintiffs insist the merits must be revisited because the Court of Appeal's disregard for information presented in the comments it deemed untimely tainted its evaluation of the merits. We leave for the appellate court the question of whether its determinations on the merits require reexamination.

### **III. CONCLUSION**

We conclude, contrary to the holdings of the Court of Appeal, that DFW abused its discretion by making the determination, without the support of substantial evidence, that the project's greenhouse gas emissions would have no significant impact, and in imposing biological resource mitigation measures that call for the trapping and translocation of a fully protected fish species. We further conclude the Court of Appeal erred in holding plaintiffs failed to preserve their claims regarding Native American cultural resource and steelhead smolt impacts. On remand, the Court of Appeal shall decide whether, in light of our exhaustion holding, the Native American cultural resource and steelhead smolt claims warrant reexamination on the merits. The Court of Appeal shall further decide, or remand for the superior court to decide, the parameters of the writ of mandate to be issued. (See § 21168.9.)

Justice Chin suggests that by reversing and remanding in this case, we inordinately delay the construction of Newhall Ranch and push its thousands of potential residents into housing that "will undoubtedly be far less green than this

project promises to be.” (Dis. opn. of Chin, J., *post*, at p. 15.) It is not the courts’ role, of course, to decide where in the state new housing should be built, and our review of a lower court’s CEQA ruling does not turn on our independent assessment of the project’s environmental merits. Even if Newhall Ranch offered the environmentally best means of housing this part of California’s growing population, CEQA’s requirements for informing the public and decision makers of adverse impacts, and for imposition of valid, feasible mitigation measures, would still need to be enforced.

Nor is Justice Chin’s assumption regarding the project’s superlative environmental profile necessarily supported by the record. As plaintiffs point out, the hypothetical business-as-usual model used in the EIR to assess greenhouse gas emissions counterfactually assumes the continuation of building and vehicle efficiency standards and an electricity generation source mixture that have, in actuality, been superseded by stricter standards and practices. The EIR’s calculation of a 31 percent reduction in comparison to this model therefore does not mean Newhall Ranch would emit 31 percent fewer greenhouse gasses than other mixed use projects that could actually be built under current standards. Finally, one should not assume a sizeable new housing development planned for a site relatively far from major urban centers, to be built largely on undeveloped land with habitat for several sensitive species, will have comparatively minor impacts either on greenhouse gas emissions or on fish and wildlife. The dissent’s claim that today’s decision threatens the “subver[sion]” of CEQA into a tool for delay of a uniquely meritorious project (dis. opn. of Chin, J., *post*, at p. 13) is neither warranted by the facts nor consonant with the scope of judicial review under CEQA.

#### **IV. DISPOSITION**

The judgment of the Court of Appeal is reversed and the matter is remanded to that court for further proceedings consistent with our opinion.

**LIU, J.**

**CUÉLLAR, J.**

**KRUGER, J.**

## CONCURRING AND DISSENTING OPINION BY CORRIGAN, J.

I agree with most of the majority opinion's holdings. Specifically, I agree that mitigation measures described in the environmental impact report (EIR) for the unarmored threespine stickleback would constitute a taking prohibited by the Fish and Game Code. I also agree that the methodology used to assess the significance of greenhouse gas emissions was consistent with the California Environmental Quality Act (CEQA; Pub. Resources Code, § 21000 et seq.). The Department of Fish and Wildlife (DFW) did not violate CEQA by using the statewide emissions reduction goal in Assembly Bill No. 32 (2005-2006 Reg. Sess.)<sup>1</sup> as a significance criterion or by comparing Newhall Ranch's projected emissions to a business-as-usual model instead of to a baseline of existing emissions. (See maj. opn., *ante*, at pp. 17, 19.) Having determined the methodology was permissible, however, the majority finds insufficient evidence supporting DFW's application of it. Here our views diverge. Because the level of detail the majority demands from this EIR is contrary to both our deferential standard of review and our approval of the methodology used to assess greenhouse gas significance, I respectfully dissent from that portion of its opinion.

### A. *Correlation with Statewide Goal*

All members of the court agree the developers could use consistency with Assembly Bill 32 as a threshold for determining the significance of greenhouse gas emissions under CEQA. Assembly Bill 32 set a goal of reducing statewide

---

<sup>1</sup> Statutes 2006, chapter 488, page 3419 (Assembly Bill 32).

emissions 29 percent from business as usual. Under the methodology we approve today, if expected emissions from the project are “consistent” with this statewide goal, they are not significant for purposes of CEQA. Experts project that Newhall Ranch will achieve a 31 percent reduction from business as usual, two percentage points better than Assembly Bill 32’s goal. Nevertheless, the majority concludes this projection is insufficient to support a finding of consistency with Assembly Bill 32 because the EIR does not explain how project-level reductions correlate with statewide reductions.

The majority’s analysis implicitly assumes project-level reductions in greenhouse gas emissions must be greater than the reductions California is seeking to achieve statewide. It reasons that, because new developments can incorporate the most advanced technology, they may presumably achieve greater efficiency than is possible through retrofitting existing buildings. Thus, considering all greenhouse gas sources across the state, regulators may expect greater emissions reductions from new developments. (See maj. opn., *ante*, at p. 20.) This argument may be reasonable in the abstract, but in my view it is too amorphous a ground for invalidating a carefully prepared and thorough EIR. Although lead agencies must consider whether a project’s impacts are “cumulatively considerable” in light of existing and future projects (Pub. Resources Code, § 21083, subd. (b)(2)), no CEQA provision places the responsibility on developers to mitigate environmental impacts caused entirely by *other* projects. Moreover, the majority does not identify just how much better than the statewide goal new projects must be. The “Scoping Plan” for Assembly Bill 32 did not suggest, let alone mandate, specific efficiency levels for new development projects. Nor does the majority opinion indicate what specific level of reduction would be sufficient for Newhall Ranch to demonstrate consistency with Assembly Bill 32. It is not clear why a 31 percent reduction, to be achieved by the one of the largest development projects in the state’s history, is *necessarily* inadequate.

The majority's substantial evidence conclusion would also seem to render our approval of DFW's methodology illusory. Although the majority nominally approves of determining CEQA significance by measuring a project's improvements from business as usual against Assembly Bill 32's statewide goal, it faults the EIR here for failing to demonstrate "a quantitative equivalence between the Scoping Plan's statewide comparison and the EIR's own project-level comparison." (Maj. opn., *ante*, at p. 23.) But we have no assurance it is even possible to calculate how a statewide goal corresponds to specific, quantitative efficiency measures for individual projects. The majority opinion discusses several approaches for assessing the significance of greenhouse gas emissions. However, only one option addresses the methodology actually used by DFW and approved in this case. DFW assessed significance by comparing the project's reduction of emissions from business as usual to Assembly Bill 32's goal for such reductions statewide. According to the majority, the only way it "may be possible" to obtain a quantitative correlation between these business-as-usual models is if "an examination of the data behind the Scoping Plan's business-as-usual model" allowed the lead agency "to determine what level of reduction from business as usual a new land use development at the proposed location must contribute in order to comply with statewide goals." (Maj. opn., *ante*, at p. 25.) The speculation that underlying data might yield a satisfactory answer gives little practical aid to the agencies that will have to implement our decision on remand.

As Justice Chin observes, many experts from many different agencies have scrutinized this project. (Dis. opn. of Chin, J., *post*, at pp. 4-5.) Despite their efforts, there is no scientific consensus as to how large a reduction at the project level is needed to establish consistency with Assembly Bill 32's statewide goal. Under these circumstances, the lead agency had discretion to conclude that a project-level reduction exceeding the statewide goal by two percentage points was consistent with Assembly Bill 32 and demonstrated that greenhouse gas emissions would not be significant for purposes of CEQA. (See *Save Our Peninsula*

*Committee v. Monterey County Bd. of Supervisors* (2001) 87 Cal.App.4th 99, 120.)

The majority's contrary conclusion is inconsistent with our deferential standard of review. Under substantial evidence review, " 'the reviewing court *must* resolve reasonable doubts in favor of the administrative finding and decision.' " (*Laurel Heights Improvement Assn. v. Regents of University of California* (1988) 47 Cal.3d 376, 393, italics added.) Our "task is not to weigh conflicting evidence and determine who has the better argument when the dispute is whether adverse effects have been mitigated or could be better mitigated. We have neither the resources nor scientific expertise to engage in such analysis, even if the statutorily prescribed standard of review permitted us to do so." (*Ibid.*) Here, the lead agency determined the greenhouse gas emissions from Newhall Ranch would not be significant for purposes of CEQA based on a methodology this court now validates. On substantial evidence review, the burden was on parties attacking the EIR to show that this determination was insupportable. Specifically, they had to demonstrate that, despite being slightly better than Assembly Bill 32's statewide goal, the project's 31 percent reduction in greenhouse gas emissions is too low to be "consistent" with Assembly Bill 32. They have not done so.

#### B. *Population Density Comparison*

The majority opinion's second reason for rejecting the EIR's conclusion about the significance of greenhouse gas emissions is both hyper technical and insufficiently deferential to the lead agency's expertise.

The EIR's business-as-usual model assumes a population density equal to that currently existing at "full build out" in Santa Clarita Valley, where the project is located. Because the project is designed to have a higher density than this existing development, it is expected to significantly reduce greenhouse gas emissions from business as usual. The majority opinion criticizes the EIR for failing to correlate this comparison with the business-as-usual comparison used in

the Scoping Plan. It notes that, “[t]o the extent” the Scoping Plan’s business-as-usual model is based on areas with higher population densities than Santa Clarita Valley, the EIR’s comparison of emissions reductions from those demanded in the Scoping Plan would be misleading. (Maj. opn., *ante*, at p. 22.)

It is not immediately obvious that there is anything wrong with comparing the Newhall Ranch project with development in the surrounding area. The majority’s criticism rests on assumptions about the Scoping Plan’s business-as-usual model, but technical details about that model are not in the record. Although the majority opinion views this shortcoming as a lack of substantial evidence, I am not convinced CEQA imposed a burden on the developer or lead agency to research and document a one-to-one correspondence with all details of the Scoping Plan’s model. Again, the level of evidentiary support the majority demands is inconsistent with our deferential standard of review.

C. *Conclusion*

I share Justice Chin’s concerns about delay and the possibility that CEQA compliance will become a moving target, impossible to satisfy. Here, the majority nominally approves DFW’s solution to a novel and difficult problem: how to measure the significance of a project’s greenhouse gas emissions. Yet, after approving the methodology for assessing significance, the majority undermines this outcome by challenging technical details that are inherent in that methodology. Having approved of DFW’s methodology, I would defer to its conclusion that the Newhall Ranch project’s emissions will fall below CEQA’s threshold of significance.

**CORRIGAN, J.**

### **DISSENTING OPINION BY CHIN, J.**

I respectfully dissent. I would affirm the judgment of the Court of Appeal. Its opinion, authored by Presiding Justice Turner, and joined by Justices Mosk and Kriegler, contains an extraordinarily thorough and careful review of the issues and reaches the correct result.

The majority decides three issues under the California Environmental Quality Act (CEQA; Pub. Resources Code, § 21000 et seq.).

Regarding the first issue, I agree with the majority that the lead agencies — the California Department of Fish and Wildlife (DFW) and the United States Army Corps of Engineers — used a proper methodology in the environmental impact report (EIR) to determine whether the development would significantly impact the environment by its discharge of greenhouse gases. As the majority notes, CEQA is not a population control measure. (Maj. opn., *ante*, at p. 12.) If the development is not built, the 58,000 or so residents the planned community is intended to house, along with the necessary infrastructure and the proposed commercial enterprises, will be someplace else. Accordingly, the majority correctly rejects the project opponents' argument that the only permissible method is to compare the development with no development. It makes eminent sense, and comes within the lead agencies' discretion, to compare the proposed

development's greenhouse gas emissions with the emissions projected in a business-as-usual model to measure the emission reduction needed to comply with legally established goals for greenhouse gas reductions. I disagree, however, with the majority's conclusion that the EIR does not adequately explain why a projected 31 percent reduction in greenhouse gas emissions is consistent with legally mandated reduction goals.

Regarding the second issue, I disagree with the majority's holding that the proposal to move the unarmored threespine stickleback fish out of harm's way is a taking under the Fish and Game Code, and that, therefore, the EIR may not call the program a mitigation measure.

Regarding the third issue, compliance with the time requirements for making objections under CEQA is critically important so that litigation over an EIR does not become a never-ending battle of attrition with ever-changing targets for project opponents to aim for. However, under the very specific circumstances of this case, including the fact that the EIR fully addresses the objections, I agree with the majority that the Court of Appeal should not have found two of the objections forfeited. But because the Court of Appeal also rejected the arguments *on the merits*, convincingly showing that the EIR adequately considered the objections, the error provides no basis to reverse the judgment.

#### **A. Preliminary Comments**

“The Legislature has made clear that an EIR is ‘an informational document’ and that ‘[t]he purpose of an environmental impact report is to provide public agencies and the public in general with detailed information about the effect which a proposed project is likely to have on the environment; to list ways in which the significant effects of such a project might be minimized; and to indicate alternatives to such a project.’ [Citations.]” (*Laurel Heights Improvement Assn. v.*

*Regents of University of California* (1988) 47 Cal.3d 376, 391.) “The EIR is also intended ‘to demonstrate to an apprehensive citizenry that the agency has, in fact, analyzed and considered the ecological implications of its action.’ ” (*Id.* at p. 392, quoting *No Oil, Inc. v. City of Los Angeles* (1974) 13 Cal.3d 68, 86.)

The EIR in this case is one of the longest ever prepared under CEQA — which is appropriate, given that the project is one of the largest ever proposed in California. It was prepared over a period of at least five years, with ample opportunity for public input. The EIR does just what it is supposed to do. It has fully informed those who are entrusted to make the decisions, as well as the general public, of the project’s environmental impacts. Now it is time finally to let the decision makers make decisions.

As the majority summarizes, “[t]o be developed over about 20 years on almost 12,000 acres along the Santa Clara River west of the City of Santa Clarita, the proposed Newhall Ranch would consist of up to 20,885 dwelling units housing nearly 58,000 residents as well as commercial and business uses, schools, golf courses, parks and other community facilities.” (Maj. opn., *ante*, at p. 3.)

After much community and regulatory input, the project also promises to be very “green,” with large reductions in the amount of greenhouse gas emissions to be expected. The developer, the Newhall Land and Farming Company, summarizes that, as documented in the EIR, the proposed development will reduce greenhouse gas emissions “by providing, for example, improved insulation and ducting, low E glass, high efficiency heating and air conditioning, and radiant barriers in attic spaces.” Additionally, it will rely on various other design features to reduce the emissions, including:

- “(a) close proximity of homes to jobs and services;
- “(b) public transit;
- “(c) trails, paseos, and pathways for walking and biking;

- “(d) tree planting and native and drought-tolerant landscaping;
- “(e) energy efficient lighting;
- “(f) use of solar water heating for all Newhall Ranch recreational center pools;
- “(g) silver certification for the design and construction of Newhall Ranch fire stations and public library consistent with the ‘Leadership in Energy and Environmental Design’ . . . standards;
- “(h) comprehensive recycling;
- “(i) park-and-ride lot, bus stops, transit station, bus transfer station; and
- “(j) reservation of right-of-way for a Metrolink light rail line to facilitate residents relying less on vehicle travel.”

Neither the majority nor the project opponents dispute this summary.

The Newhall Ranch project has been thoroughly reviewed over a period of many years, resulting in an extraordinarily thorough EIR. (The portion concerning greenhouse gas emissions alone is hundreds of pages long.) After earlier litigation delayed the proposed project for several years, work on the current EIR began around 2005. After some five years of work, public comment, and revisions, the final EIR was certified in 2010. As the amicus curiae brief supporting the project filed by former Governors George Deukmejian, Pete Wilson, and Gray Davis notes, at different times and during different steps in the review process, eight different governmental agencies, representing every level of government, federal, state, and local, have studied, imposed conditions on, and, ultimately, approved the project: (1) the DFW, (2) the United States Army Corps of Engineers, (3) the United States Environmental Protection Agency, (4) the United States Fish and Wildlife Service, (5) the Los Angeles Regional Water Quality Control Board, (6) the Los Angeles County Local Agency Formation Commission, (7) the Los

Angeles County Board of Supervisors, and (8) the Los Angeles County Regional Planning Commission.

Each of these agencies has far greater expertise than this court in judging the merits of the proposal and determining what mitigation measures are appropriate and what conditions to impose. They also are responsible for planning and managing California's inevitable future population growth. Now project opponents have turned to the courts in their final effort to invalidate the 2010 EIR and derail the project, culminating in this action. This court should be cautious about overturning the considered judgment of these eight agencies. California's environmental laws are not intended to prevent development that is needed to accommodate the state's growing population. Instead they are designed to encourage *planned* development by ensuring that decisions regarding how to accommodate the state's growing population while protecting the environment are *informed*. The instant project is very thoroughly planned, and the detailed and careful EIR has fully informed the decision makers.

The majority finds two flaws in the EIR, which I discuss in order.

#### **B. Greenhouse Gas Emissions**

California has mandated substantial future reductions in greenhouse gas emissions. The mandate is critically important to our environment and must be treated very seriously. The EIR and the reviewing agencies had to consider very carefully the project's emission impact. And they did just that. As the EIR explains, the project, with the proposed mitigation measures, will result in a 31 percent reduction in greenhouse gas emissions from a business-as-usual model. The EIR fully explains this calculation. Neither the majority nor the project opponents disputes it. Indeed, the Court of Appeal opinion explains that evidence exists that this figure is actually "conservative."

The EIR also compares the 31 percent reduction to the reduction goal the Legislature established under the California Global Warming Solutions Act of 2006, commonly known as Assembly Bill No. 32 (2005-2006 Reg. Sess.) (Assembly Bill 32). As the majority explains, the EIR's method was modeled on the California Air Resources Board's determination that the reduction goal under Assembly Bill 32 is 29 percent from business as usual. (Maj. opn., *ante*, at p. 9.) It appears the lead agencies could have, in their discretion, used an even lower goal as its measurement. According to an analysis of the scoping plan conducted by the Bay Area Air Quality Management District (BAAQMD), “ ‘land use-driven’ sectors” will be expected to demonstrate only a 26.2 percent reduction in greenhouse gas emissions. (BAAQMD, Cal.) Environmental Quality Act Guidelines Update: Proposed Thresholds of Significance (May 3, 2010) pp. 12-13, 15.) But because the EIR used the higher goal of a 29 percent reduction, I will also.

Three recent Court of Appeal opinions have made clear that comparing the proposed reduction with Assembly Bill 32's reduction goal is a proper methodology within the agencies' discretion. (*Friends of Oroville v. City of Oroville* (2013) 219 Cal.App.4th 832, 841 [“The City properly adopted Assembly Bill 32's reduction targets for [greenhouse gas] emissions as the threshold-of-significance standard in determining whether the Project's [greenhouse gas] emissions constituted a significant environmental impact.”]; *North Coast Rivers Alliance v. Marin Municipal Water Dist. Bd. of Directors* (2013) 216 Cal.App.4th 614, 652 [“[T]he EIR concluded the Project would not interfere with achieving a 15 percent reduction in countywide [greenhouse gas] emissions, compared to 1990 levels, by 2020. This analysis more than satisfied the requirements of CEQA.”]; *Citizens for Responsible Equitable Environmental Development v. City of Chula Vista* (2011) 197 Cal.App.4th 327, 336 [“Here, the City properly exercised its

discretion to utilize compliance with Assembly Bill No. 32 (2005-2006 Reg. Sess.) as the threshold.”]; see also *id.* at p. 337 [a reduction of greenhouse gas emissions 4 percent greater than Assem. Bill 32’s goal was sufficient].)

Here, the reduction was 2 percent greater than the established goal, rather than the 4 percent found adequate in *Citizens for Responsible Equitable Environmental Development v. City of Chula Vista*, *supra*, 197 Cal.App.4th 327. But the holding in that case did not turn on the exact amount the reduction exceeded the goal. The agencies did not abuse their discretion in adopting a methodology that three Courts of Appeal have approved.

Contrary to this authority, the majority holds that the EIR does not adequately explain how a 31 percent reduction in greenhouse gas emissions is consistent with Assembly Bill 32’s goal of a 29 percent reduction. Citing a letter from the California Attorney General’s Office, it suggests that a new development should exceed that goal by some amount — presumably an amount greater than 2 percent. (Maj. opn., *ante*, at p. 20.) For example, one expert group has proposed, as one possibility, a criterion of 50 percent reduction for new developments. (Cal. Air Pollution Control Officers Assn., CEQA & Climate Change: Evaluating and Addressing Greenhouse Gas Emissions from Projects Subject to the Cal. Environmental Quality Act (Jan. 2008) p. 33.) A 50 percent reduction would be impressive and certainly would be wonderful. But what might be ideal does not have the force of law. If the Legislature had enacted a statute requiring new developments to exceed the goal by a specified amount — or perhaps if an authoritative governmental agency charged with implementing the legislation had so specified — then we should enforce it. But the Attorney General’s letter and the project opponents’ arguments are not legally binding.

Indeed, recognizing that a 50 percent reduction is not legally required, the same expert group suggested other possibilities. As a recent law review article

explains, that group also stated that a possible approach would be to conclude that “an individual project that has greenhouse gas emissions that are 28-33 % less than such a project would otherwise have under a [business-as-usual] scenario could be considered less than significant for purposes of CEQA.” (Crockett, *Addressing the Significance of Greenhouse Gas Emissions under CEQA: California’s Search for Regulatory Certainty in an Uncertain World* (2011) 4 Golden Gate U. Envtl. L.J. 203, 215-216.) Additionally, as Justice Corrigan explains, the majority’s criticism of the EIR for failing to correlate its population density comparison with the business-as-usual comparison used in the Scoping Plan is unduly hyper technical and inconsistent with our deferential substantial evidence review. (Con. & dis. opn., *ante*, at pp. 4-5, citing Maj. opn., *ante*, at p. 22.) Given the absence of any expert or regulatory consensus regarding the best methodology, the lead agencies acted within their discretion in adopting their chosen methodology. The EIR fully explains that the proposed reduction in greenhouse gas emissions is greater than AB 29’s goal. No legal basis exists to determine that this is insufficient. Accordingly, the agencies acted within their discretion in finding that exceeding the targeted reduction would not significantly interfere with meeting the targeted reduction.

I would also find no prejudice. Only so much can be expected of an EIR. The EIR informed the decision makers and general public exactly what the project’s likely impacts would be. More is not required. (See *Environmental Protection Information Center v. California Dept. of Forestry & Fire Protection* (2008) 44 Cal.4th 459, 485.)

### **C. The Unarmored Threespine Stickleback**

To the extent the proposed project threatens harm to the unarmored threespine stickleback fish (stickleback), the EIR describes mitigation measures

that will be taken to protect it. Briefly stated, the project managers have developed a program whereby United States Fish and Wildlife Service employees and their agents (and *only* those personnel) will move the stickleback out of harm's way as necessary to protect them. No one seems to challenge this program's efficacy in protecting and preserving the species. But the majority interprets the Fish and Game Code as prohibiting the EIR from calling the program a mitigation measure.

I note, first, that the majority's holding has little substance. The majority makes clear that the United States Fish and Wildlife Service is *allowed* to protect the stickleback in this way. (Maj. opn., *ante*, at pp. 28, 33-34.) The majority is clearly correct in this regard. The Fish and Game Code does not prohibit this federal agency from protecting the stickleback. (See *Biological Diversity v. U.S. Fish, Wildlife* (9th Cir. 2006) 450 F.3d 930, 941-943.) All that the majority prohibits is referring to the program as a binding mitigation measure in the EIR. Because the EIR's purpose is to provide “ ‘*detailed information* about the effect which a proposed project is likely to have on the environment’ ” (*Laurel Heights Improvement Assn. v. Regents of University of California, supra*, 47 Cal.4th at p. 391, italics added), even the majority permits the EIR to discuss the program as a way to avoid harm to the stickleback. All the majority presumably requires the EIR's drafters to do is to use a phrase such as “avoid harm” or “protect the species,” and not use a word like “mitigate.”

The majority is also wrong as a matter of statutory interpretation. The stickleback is officially designated as both an “endangered species” and a “fully protected fish.” (Fish & G. Code, §§ 2062, 5515, subd. (b)(9); all further statutory citations are to this code.) “The Legislature . . . finds and declares that it is the policy of this state to *conserve*, protect, restore, and enhance any endangered species or any threatened species and its habitat and that it is the intent of the

Legislature, consistent with conserving the species, to acquire lands for habitat for these species.” (§ 2052.) Section 2061 defines “ ‘[c]onserve’ ” as using methods necessary to make the species no longer endangered, including “*live trapping*, and *transplantation*, and, in the extraordinary case where population pressures within a given ecosystem cannot be otherwise relieved, may include regulated *taking*.” (Italics added.) Between them, sections 2052 and 2061 permit, and indeed encourage, the program here, whereby the federal agency moves an endangered species like the stickleback out of harm’s way.

But the majority concludes that a provision concerning fully protected fish *prohibits* as a mitigating measure what the statutes concerning endangered species *encourage*. “[F]ully protected fish or parts thereof may not be taken or possessed at any time.” (§ 5515, subd. (a)(1).) The section excepts takings “for necessary scientific research,” but the exception does not include actions taken to mitigate a project. (*Id.*, subd. (a)(1), (2).) The question before us, therefore, is whether moving the stickleback out of harm’s way would be a prohibited taking. The majority concludes it is. The DFW and I disagree.

“ ‘Take’ means hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill.” (§ 86.) Viewed in isolation, it is plausible (but far from compelled) to conclude that the program at issues does involve a taking within this definition. However, “[w]e do not examine [statutory] language in isolation, but in the context of the statutory framework as a whole in order to determine its scope and purpose and to harmonize the various parts of the enactment.” (*Coalition of Concerned Communities, Inc. v. City of Los Angeles* (2004) 34 Cal.4th 733, 737.)

Section 86’s definition of “take” applies to the entire Fish and Game Code, including section 2061, and not just to section 5515. (See § 2.) Section 2061 refers *separately* to “live trapping,” “transplantation,” *and* “taking,” which is

permitted in an extraordinary case. These separate references, and the special rule for taking, necessarily imply that “taking” is different than “live trapping” and “transplantation.” The majority does not explain what the difference is between “taking” and “live trapping” or “transplantation,” or why the program constitutes taking rather than live trapping or transplantation, as the DFW argues.

Viewed in light of section 2061, the DFW is correct that the planned movement is not a taking within the meaning of the code. Any reasonable interpretation of that word is that it has some connotation of harm to the species, although not necessarily mortal harm. Obtaining possession of the fish just long enough to move them from a place of danger to a place of safety, then letting them go, is not a taking; it is live trapping and transplantation.

The statutory scheme provides other clues that this is the correct interpretation. Section 2061 permits “regulated taking” as a method to conserve an endangered species in “the extraordinary case where population pressures within a given ecosystem cannot be otherwise relieved.” What this means is that if excessive population is itself threatening the species — perhaps due to insufficient resources to sustain the population — and the population excess cannot otherwise be relieved, the agency may employ regulated taking. This kind of taking must refer to a *permanent* taking that will reduce the population pressure, not merely a temporary movement of the fish from a place of danger to a place of safety. Section 5515 precludes such a regulated taking when used merely to mitigate the effects of a project, for example, when the project itself would reduce the resources and thus would itself cause the population pressure. All this would make sense. Contrary to the majority’s argument, my interpretation would give full effect to section 5515, subdivision (a). (See maj. opn., *ante*, at p. 30.) But nothing in section 5515 precludes the DFW’s interpretation of the proposed program as live trapping and transplantation, rather than a taking.

This interpretation harmonizes the entire statutory scheme, and does not make the scheme contain contradictory mandates — one mandate for endangered species and another mandate for fully protected fish. It is the interpretation the DFW — the agency charged with administering the law regarding endangered and fully protected species — has given it. We are not bound by the agency’s interpretation if it is obviously wrong, but we should at least give it deference. The DFW is far more expert in conserving endangered and fully protected fish than we are. It is not obviously wrong for that agency to view the program as live trapping and transplantation rather than taking.

The majority cites section 3511 as somehow suggesting that “live capture and relocation” (a concept essentially the same as the live trapping and transplantation cited in § 2061) is either the same as taking or a subset of taking. (Maj. opn., *ante*, at pp. 35-36.) The section contains no such suggestion. It states that “fully protected birds or parts thereof may not be taken or possessed at any time,” but the DFW “may authorize the live capture and relocation of those species pursuant to a permit for the protection of livestock.” This language prohibits taking but permits, in some circumstances, live capture and relocation, thus suggesting that the concepts are separate, not the same.

The majority’s reference to “hunting and killing animals” (maj. opn., *ante*, at pp. 33-34) is puzzling. Moving an endangered and fully protected species from a place of danger to a place of safety bears no resemblance to hunting and killing. Hunting and killing can readily be viewed as a taking, not live trapping and transplantation. But doing so does not compel the conclusion that moving a species to a place of safety is also a taking rather than live trapping and transplantation.

The majority invokes the specter of self-help by self-appointed amateur conservationists. (Maj. opn., *ante*, at p. 34.) Interpreting the program to be a

permitted live trapping and transplantation rather than a prohibited taking has nothing to do with self-help. The DFW and the United States Fish and Wildlife Service are not self-appointed experts, but governmental agencies mandated to protect and conserve endangered and protected species. I agree with the majority that the Legislature did not intend that “unauthorized persons found pursuing and catching a protected species seemingly could assert as a complete defense that they had no intent to harm the animal and would have restored or transplanted it to a safe habitat.” (*Ibid.*) The Fish and Game Code does not allow unauthorized persons to so act. Indeed, because the special rule concerning taking applies to fully protected fish only and not more generally to *endangered* species, the majority’s analysis would mean that “unauthorized persons found pursuing and catching” an endangered species “seemingly could assert as a complete defense that they had no intent to harm the animal and would have restored or transplanted it to a safe habitat.” The Legislature cannot have intended that either.

In short, to protect the stickleback as needed, the United States Fish and Wildlife Service can implement the program of the live trapping and transplantation of the fish from a place of danger to a place of safety. And, in describing the program, the EIR can call it a “mitigation measure” without violating the Fish and Game Code.

#### **D. Conclusion**

We have “caution[ed] that rules regulating the protection of the environment must not be subverted into an instrument for the oppression and delay of social, economic, or recreational development and advancement.” (*Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 576.) Today’s opinion threatens this very subversion.

The Newhall Ranch project has been very long in planning, approval, and litigation. The current EIR was finalized some five years ago. The two flaws the majority has found in the EIR can easily be fixed. (See maj. opn., *ante*, at pp. 23-27 [describing how the supposed error in finding that a 31 percent reduction in greenhouse gas emissions would not significantly interfere with meeting a targeted reduction of 29 percent can be fixed].) As noted, regarding the program to protect the stickleback, the lead agencies seemingly need only delete from the EIR any terms that sound like “mitigation” and use instead some other term such as “avoiding harm” or “protecting the species.” So, in one sense, one might ask what is the harm in sending the case back to fix these flaws.

The harm is in delay. This litigation has already delayed implementing the EIR some five years or so. Now this court is sending the case back to the Court of Appeal. Among other things, it is permitting the project opponents to relitigate some already decided issues even though the Court of Appeal fully rejected the arguments the first time. It also leaves it to the Court of Appeal, or perhaps to the superior court on a further remand, to decide the exact parameters of the writ of mandate to be issued. (Maj. opn., *ante*, at p. 40.) At some point, this appeal will end, and the writ will issue. At some point after that, the EIR will have to be revised, with the necessary period of public comment, etc. (although presumably limited to the two flaws the majority has found). Then it is predictable that yet more litigation will follow the finalization of the new EIR. Given the glacial pace of litigation, this will easily take years.

And it gets worse. The majority strongly hints that the time will come when compliance with goals established for the year 2020 will not be sufficient, and the proposed project will have to meet some different goals established for the future beyond 2020. (Maj. opn., *ante*, at pp. 16-17.) By the time this litigation ends, and the new EIR is prepared and finalized, we will be much closer to 2020

than when the current EIR was finalized in 2010. Delay can become its own reward for project opponents. Delay the project long enough and it has to meet new targets, and then perhaps new targets after that. All this is a recipe for paralysis. But CEQA is not meant to cause paralysis. Carefully planned green communities are needed to accommodate California's growing population. CEQA ensures the informed planning, but it does not prohibit the planned communities.

CEQA does nothing to control California's population growth. The 58,000 or so people the proposed project is intended to accommodate will not just go away. They will be living and working *somewhere*. And that somewhere will undoubtedly be far less green than this project promises to be. The longer the project is delayed, the longer the workplaces and residences of 58,000 people will be emitting business-as-usual amounts of greenhouse gases, rather than the greatly reduced amount projected under this project. Today's opinion will delay the project even longer.

I would affirm the judgment of the Court of Appeal and put an end to this litigation.

San Francisco, CA 94103-2479  
Subject: Draft GHG Reduction Strategy

Dear Mr. Wycko:

Bay Area Air Quality Management District (District) staff reviewed the City and County of San Francisco's (City's) Draft Greenhouse Gas Reduction Strategy (Strategy). We understand that the Strategy is a compilation of policies, programs and regulations that comprise San Francisco's greenhouse gas reduction efforts. The City's climate protection goal is to reduce the City's communitywide greenhouse gas (GHG) emissions 25% below 1990 levels by 2017. The Strategy includes a variety of documents characterizing the City's GHG emissions and describing approaches to reduce those emissions, including the City's Climate Action Plan.

The District applauds the City's proactive approach to reducing GHG emissions and supports its efforts in developing the GHG Reduction Strategy. The District's intent in creating the Qualified GHG Reduction Strategy as an operational threshold of significance in its CEQA Guidelines is to ensure that communities will develop in such a manner as to enable the State to meet its GHG reduction goals under AB 32. In its own GHG Reduction Strategy, the City has demonstrated that it is not only supporting the State in this endeavor, but is exceeding the State's own climate protection goals.

In some areas, the City has surpassed the minimum standard elements of a Qualified GHG Reduction Strategy as laid out in the District's CEQA Guidelines:

- the City's GHG reduction goal is more stringent than the State's AB 32 goal
- the City's 2008 GHG emissions inventory analysis and third party review indicates that the City is on track for meeting this aggressive target
- the City is committed to updating the GHG inventory every two years, exceeding the Guideline's recommendation that this be done a minimum of every five years
- the Strategy identifies 42 specific regulations required of new developments

*Sparks Air*

The Air District is a Certified Green Business

8857

939 ELLIS STREET • SAN FRANCISCO CALIFORNIA 94109 • 415.771.6000 • WWW.BAAQMD.GOV

The District has the following suggestions for the City's future climate protection work:

- revise the 1990 community GHG baseline inventory to include emissions from the solid waste sector, wastewater/sewage treatment processes, and direct access electricity use (the District acknowledges that at the time the City conducted the 1990 baseline inventory, these sources of emissions were not typically included in all Climate Action Plans)
- extend the forecast/projection of emissions out to 2017 and 2020 in order to analyze progress toward meeting the City's 2017 target as well as the State's AB 32 goal
- ensure that emissions from policies adopted prior to the base year are not inappropriately credited against the target – only emission reductions due to expansions of policies, additional funding, etc. should be counted against the target, as the policies themselves would be considered "business as usual" when the baseline was conducted
- develop a mechanism to enable new projects to easily judge their consistency with the Strategy (for example, turn the tables in Chapter 9 into a project application checklist)

District staff believes the City's Strategy meets the criteria for a qualified GHG reduction strategy as described in the District's CEQA Guidelines. Aggressive GHG reduction targets and comprehensive strategies like San Francisco's help the Bay Area move toward reaching the State's AB 32 goals, and also serve as a model from which other communities can learn. District staff looks forward to working with the City and County of San Francisco as you move forward with your climate protection efforts.

If you have any questions, please do not hesitate to contact Abby Young, Principal Environmental Planner, at (415) 749-4754.

Sincerely,

A handwritten signature in black ink, appearing to read "Jean Roggenkamp", with the letters "JCR" written below it.

Planning  
Information:  
**415.558.6377**

### A. GENERAL PROJECT INFORMATION:

Instructions: Complete Sections A and B, below. Generally, only projects within the City and County of San Francisco can apply for a determination of consistency with the GHG Reduction Strategy.

**Date:** May 26, 2015

**Project name:** Golden State Warriors Event Center & Mixed-Use Development

**Case No:** 2014.1441E

**Project address and block and lot:** Mission Bay Blocks 29-32

**EP planner:** Brett Bollinger

**Brief Project description:** GSW Arena LLC (GSW), an affiliate of Golden State Warriors, LLC, which owns and operates the Golden State Warriors National Basketball Association (NBA) team, proposes to construct a multi-purpose event center and a variety of mixed uses, including office, retail, open space and structured parking on an approximately 11-acre site on Blocks 29-32 within the Mission Bay South Redevelopment Plan Area of San Francisco. The project site is bounded by South Street on the north, Third Street on the west, 16th Street on the south, and by the future planned realigned Terry A. Francois Boulevard on the east. The proposed event center would host the Golden State Warriors basketball team during the NBA season, and provide a year-round venue for a variety of other uses, including concerts, family shows, other sporting events, cultural events, conferences and conventions.

While many Planning Code requirements in Section B are largely not applicable to the project, Section B details the project sponsor's intent to meet these Planning Code requirements and also addresses compliance with other regulations which are required of the project (Building Code, etc.). Section C details the rationale for the project's compliance with San Francisco's GHG reduction strategy.

### B. COMPLIANCE CHECKLIST TABLE

Complete and attach to this form the appropriate compliance table by determining project compliance with the identified regulations and providing project-level details in the discussion column. Please note that Table 1 applies to Private Development Projects, Table 2 applies to Municipal Projects, and Table 3 is for plan-level analysis. Projects that do not comply with an ordinance/regulation may be determined to be inconsistent with San Francisco's qualified GHG reduction strategy.

Compliance Checklist Table attached: ☒ Table 1. Private Development

☐ Table 2. Municipal Project

☐ Table 3. Area Plan for \_\_\_\_\_

## C. DETERMINATION OF COMPLIANCE WITH CITY'S GHG REDUCTION STRATEGY

☒ Project Complies with San Francisco's *Strategies to Address Greenhouse Gas Emissions*

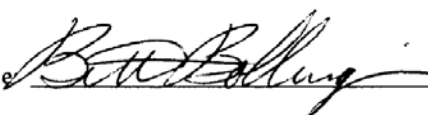

### Project Notes:

In addition to compliance with the applicable provisions of the GHG Reduction Strategy or their equivalents as detailed in the attached Compliance Checklist Table, the project sponsor applied for certification by the California State Governor as a leadership project under the Jobs and Economic Improvement Through Environmental Leadership Act of 2011 (AB 900). As discussed in the GHG section of the SEIR, one of the requirements for a project to qualify for streamlining under AB 900 is that the project may not result in any net additional GHG emissions. On April 20, 2015, the California Air Resources Board determined that based on the documentation submitted by the project sponsor, the proposed project would not result in any net additional GHG emissions for purposes of certification under AB 900.<sup>1</sup>

The proposed project would be subject to and required to comply with several regulations adopted to reduce GHG emissions as identified in the GHG Reduction Strategy. The proposed project would comply with the following regulations or their equivalent: Commuter Benefits Ordinance, Emergency Ride Home Program, Transportation Management Programs (see Project Description), Transit Impact Development Fee, Bicycle Parking requirements (the project would exceed these requirements and provide a total of 586 bicycle parking spaces), Fuel Efficient Vehicle and Carpool Parking (providing 51 carpool spaces and 51 fuel efficient spaces), San Francisco Green Building Requirements (increased energy efficiency, purchase of renewable energy credits, reduction of potable water consumption by about 35 percent, enhanced energy commissioning, San Francisco Stormwater Management Ordinance, San Francisco Water Efficient Irrigation Ordinance, Mandatory Recycling and Composting Ordinance, San Francisco Construction and Demolition Debris Recovery Ordinance, Street Tree Planting Requirements for New Construction (the project includes 79 new street trees), Light Pollution Reduction, Construction Site Runoff Control, Enhanced Refrigerant Management, Finished Material Pollutant Control, and Regulation of Diesel Backup Generators.

☐ Project Does Not Comply

If Project does not comply, provide discussion of non-compliant features:

Planner Name  Date of Determination: 05/26/2015

## Compliance Checklist Table for Greenhouse Gas Analysis: Table 1. Private Development Projects

### A. GENERAL PROJECT INFORMATION:

**Date:** May 22, 2015

**Project Name:** Event Center and Mixed-Use Development at Mission Bay Blocks 29-32

**Case Number, Planning Department:** 2014.1441E

**Case Number, Office of Community Investment and Infrastructure:** ER 2014-919-97

**Project Address and Block/Lot:** Mission Bay South Redevelopment Plan Blocks 29-32;  
Assessor's Block 8722, Lots 001 and 008

**Standard to be Met (Select one)<sup>1</sup>:** LEED® Gold

**Compliance Checklist Prepared By:** Orion Environmental Associates

**Date:** May 22, 2015

**Brief Project Description:** GSW Arena LLC, an affiliate of Golden State Warriors, LLC that owns and operates the Golden State Warriors National Basketball Association (NBA) team, proposes to construct a multi-purpose event center and a variety of mixed uses on an approximately 11-acre site on Blocks 29-32 of the Mission Bay South Redevelopment Plan area of San Francisco. The rectangular-shaped project site is bounded by South Street on the north, Third Street on the west, 16th Street on the south, and the future planned realigned Terry A. François Boulevard on the east. The proposed event center would host the Golden State Warriors basketball team during the NBA season and would provide a year-round venue for a range of other uses, including concerts, family shows, other sporting events, cultural events, conferences, and conventions. The mixed-use development would support office and retail uses, open space, and structured parking.

---

<sup>1</sup> Refers to the standard to be met per the San Francisco Green Building Code. See <http://sfdbi.org/administrative-bulletins> for latest "AB-093" to determine which standard your project is required to meet, if applicable.

# SAN FRANCISCO PLANNING DEPARTMENT

## B. COMPLIANCE CHECKLIST TABLE:

Table 1. Regulations Applicable to Private Development Projects

Regulation	Requirements	Project Consistency	Remarks
<b>Transportation Sector</b>			
Commuter Benefits Ordinance (San Francisco Environment Code, Section 427)	<p>All employers of 20 or more employees nationwide must provide at least one of the following benefit programs:</p> <p>(1) A Pre-Tax Election consistent with 26 U.S.C. § 132(f), allowing employees to elect to exclude from taxable wages and compensation, employee commuting costs incurred for transit passes or vanpool charges, or</p> <p>(2) Employer Paid Benefit whereby the employer supplies a transit or vanpool subsidy for each Covered Employee. The subsidy must be at least equal in value to the current cost of the Muni Fast Pass including BART travel, or</p> <p>(3) Employer Provided Transportation furnished by the employer at no cost to the employee in a vanpool or bus, or similar multi-passenger vehicle operated by or for the employer.</p>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not Applicable	<p>The project would be consistent with the Commuter Benefits Ordinance because all employers within the event center and mixed use development with 20 or more employees would participate in at least one of the benefit programs as required under this ordinance.</p> <p>The Golden State Warriors would have approximately 255 full-time equivalent (FTE) employees. There would be an additional 1,000 day-of-game non-Warriors employees on game days or an additional 675 to 1,000 day-of-event employees during other events. Retail and office uses are estimated to generate an additional 2,479 FTE non-Warriors employees, and individual employers with 20 or more employees would be required to comply with this ordinance.</p>
Emergency Ride Home Program	All San Francisco companies are eligible to register for the Emergency Ride Home program. Employers must register annually. Once registered, all San Francisco employees of the company are eligible to request reimbursement.	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not Applicable	The project would comply with the Emergency Ride Home Program because the project sponsor would enroll in the program either provide the City-prepared flier or program brochure describing the program, or disseminate comparable information through other generally accepted methods of communication, to all employees. The project sponsor would also encourage tenants to enroll and would provide the same information to all tenants.

Regulation	Requirements	Project Consistency	Remarks
Transportation Management Programs (San Francisco Planning Code, Section 163)	Requires new buildings or additions over a specified size (buildings >25,000 sf or 100,000 sf depending on the use and zoning district) within certain zoning districts (including downtown and mixed-use districts in the City's eastern neighborhoods and south of market) to implement a Transportation Management Program and provide on-site transportation management brokerage services for the life of the building.	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not Applicable	The project would be consistent with this regulation because the project sponsor would prepare and implement a Transportation Management Plan to manage on- and off-site access for all anticipated travel modes. As part of the plan, the San Francisco Municipal Transportation Agency would also prepare a Transit Service Plan to provide for Muni transit services and facilities to accommodate transit demand generated by the proposed project. In addition, the project would comply with the Mission Bay Transportation Management Plan requirements.
Transit Impact Development Fee (San Francisco Planning Code, Section 411)	Establishes fees for all commercial developments. Fees are paid to DBI and provided to SFMTA to improve local transit services.	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not Applicable	The project would be consistent with this regulation because the project sponsor will pay the fees in accordance with the Mission Bay Redevelopment Plan requirements.
Jobs-Housing Linkage Program (San Francisco Planning Code Section 413)	<p>The Jobs-Housing Program found that new large scale developments attract new employees to the City who require housing. The program is designed to provide housing for those new uses within San Francisco, thereby allowing employees to live close to their place of employment.</p> <p>The program requires a developer to pay a fee or contribute land suitable for housing to a housing developer or pay an in-lieu fee.</p>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not Applicable	The project would be consistent with this regulation because the project is located within and is consistent with the overall approved Mission Bay South Redevelopment Plan. This Plan has identified land uses on a block-by-block basis that provides housing in proximity to commercial/industrial uses, which is consistent with the intent of this program. The Plan includes 6,400 housing units, of which over 29 percent will be affordable housing at full buildout. With respect to this specific project, residential uses are designated less than ¼ -mile north of the project site.

Regulation	Requirements	Project Consistency	Remarks
Tenant Bicycle Parking in Existing Commercial Buildings Ordinance (San Francisco Environment Code, Chapter 4, Section 402)	The San Francisco Tenant Bicycle Parking in Existing Commercial Buildings Ordinance requires commercial property owners to:  (A) Allow tenants to bring their bicycles to their leased space, or  (B) Provide secure bicycle parking on-site, or  (C) Provide off-site bike parking access for tenants	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Not Applicable	This regulation does not apply because no existing buildings would be used or modified under the proposed project. The project consists only of construction of new buildings.
Bicycle Parking, Showers, and Lockers in New and Expanded Buildings (San Francisco Planning Code, Section 155.1-155.4)	<p>Requires bicycle facilities for new and expanded buildings, new dwelling units, change of occupancy, increase of use intensity, and added parking capacity/area. Refer to Section 155.2 and 155.3 for requirements by use.</p> <p>Non-residential projects that add 10 or more parking spaces: meet Planning Code section 155 or CalGreen Building Code Section 5.106.4 (provide short and long-term (secure) bicycle parking for at least 5% of motorized vehicle capacity), whichever is stricter.</p>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not Applicable	<p>The project would be consistent with this regulation because the project design for the event center and mixed use development would provide for a total of 586 bicycle parking spaces, including 111 Class 1 spaces within the office/retail buildings, 300 Class 2 spaces (which would be valet staffed on event days to make them Class 1 spaces), 100 Class 1 spaces in a temporary corral (as needed), and 75 Class 2 spaces for the office/retail buildings. In addition, the event center and the office/retail buildings would include showers and locker facilities.</p> <p>Based on the project's design of 950 on-site vehicle parking spaces, the CALGreen requirement calls for 5% of new off-street parking, or 48 bicycle spaces. Similarly, Planning Code Section 155 requires 1 bicycle space for every 20 new vehicle parking space or 48 bicycles spaces. The project would exceed these requirements.</p>
Bicycle parking in non-accessory parking garages (San Francisco Planning Code, Section 155.2)	No Class 1 spaces required. One Class 2 space for every 20 auto spaces, except in no case less than six Class 2 spaces. Where parking capacity is increased by 10 or more spaces, CalGreen Building Code Section 5.106.4 applies.	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not Applicable	The project would be consistent with this regulation because the project design for the event center and mixed use development includes 586 bicycle parking spaces (including 375 Class 2 spaces) compared to 950 vehicle parking spaces, exceeding these requirements.

Regulation	Requirements	Project Consistency	Remarks
Bicycle parking in Residential Buildings (San Francisco Planning Code, Section 155.2)	(A) For projects up to 50 dwelling units, one Class 1 space for every 2 dwelling units.  (B) For projects over 50 dwelling units, 25 Class 1 spaces plus one Class 1 space for every 4 dwelling units over 50.	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Not Applicable	The project does not include any residential uses, so this regulation does not apply.
Fuel Efficient Vehicle and Carpool Parking (San Francisco Green Building Code Section 5.103.1.10 and CalGreen Section 5.106.5)	Requires New Large Commercial projects, New High-rise Residential projects and Commercial Interior projects to provide designated parking for low-emitting, fuel efficient, and carpool/van pool vehicles. For projects with a parking capacity of more than 200 spaces, mark 8% of parking stalls for such vehicles.	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not Applicable	The project would be consistent with this regulation because the project design for the event center and mixed use development includes a total of 21 fuel efficient vehicle (FEV) parking spaces, 30 spaces with vehicle charging stations (VCS), and 51 spaces for carpool vehicles. In the event that installation of 30 VCS parking spaces is not commercially reasonable, the project would provide 51 FEV and 51 carpool spaces. This represents 10.6% percent of the 950 total parking, exceeding the 8% requirement.
Car Sharing Requirements (San Francisco Planning Code, Section 166)	New residential projects or renovation of buildings being converted to residential uses within most of the City's mixed-use and transit-oriented residential districts are required to provide car share parking spaces.	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Not Applicable	The project does not include any residential uses, so this regulation does not apply.

Regulation	Requirements	Project Consistency	Remarks
<b>Energy Efficiency Sector</b>			
San Francisco Green Building Requirements for Energy Efficiency (San Francisco Green Building Code 4.201.1, 5.201.1.1)	<ul style="list-style-type: none"> <li>Demonstrate compliance with California Energy Code (Title 24 Part 6 Energy Standards (2013)).</li> </ul>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not Applicable	The project would be consistent with the energy efficiency requirements of the San Francisco Green Building Code and California Energy Code. The proposed development would be designed to LEED® Gold standards and would incorporate a variety of energy conservation and efficiency design features, such as high efficiency mechanical systems and lighting design, in order to comply with code requirements.
San Francisco Green Building Requirements for Commissioning of Building Energy Systems (LEED EA3, San Francisco Green Building Code 5.103.1.4, CalGreen 5.410.2 and 5.410.4)	<p>New non-residential buildings and alterations to non-residential buildings must conduct design and construction commissioning to verify energy and water using components meet the owner's or owner representative's project requirements. Commissioning requirements apply to all building operating systems covered by Title 24 Part 6, as well as process equipment and controls, and renewable energy systems.</p> <ul style="list-style-type: none"> <li>New non-residential projects ≥25,000 sq ft: complete Enhanced Commissioning of Building Energy Systems (meeting LEED EAc3 – San Francisco Green Building Code Section 5.103.1.4 and CalGreen Building Code Section 5.410.)</li> <li>Non-residential new buildings and alterations &lt;25,000 square feet and ≥10,000 square feet: commission all energy systems (CalGreen Building Code Section 5.410)</li> <li>Non-residential new buildings and alterations less than 10,000 square feet, must complete testing and adjusting of energy systems. (CalGreen Building Code Section 5.410.4)</li> <li>New residential high rise, new commercial interior, and Major Alterations to Residential buildings must each commission building energy systems, meeting the LEED prerequisite EAp1.</li> </ul>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not Applicable	The project would be consistent with this regulation because the project would have a commissioning team performing the commissioning requirements per the Enhanced Commissioning of Building Energy Systems (meeting LEED EAc3 – San Francisco Green Building Code Section 5.103.1.4 and CalGreen Building Code Section 5.410).

Regulation	Requirements	Project Consistency	Remarks
San Francisco Stormwater Management Ordinance (Public Works Code Article 4.2, Section 147)	All projects disturbing more than 5,000 square feet of ground surface must manage stormwater on-site using low impact design. Comply with the Stormwater Management Ordinance, including SFPUC Stormwater Design Guidelines.	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not Applicable	The project would be consistent with this regulation because it would comply with the post-construction requirements of the Stormwater Management Ordinance, including the Stormwater Design Guidelines, which would be a condition of obtaining a building permit. Stormwater management features of the project include typical low impact development (LID) practices, such as filtration basins, rain gardens, and extensive green roofs, as well as unique and innovative systems, such as a filtration ring installed on the arena itself. 4% of the hardscape and impermeable surfaces of the site, including typical roofs, would be treated in SFPUC regulation filtration basins. In addition, approximately 50,000 square feet (sf) of self-treating green roofs are included.
San Francisco Green Building Requirements for water use reduction (San Francisco Green Building Code 4.103.2.2 and 5.103.1.2; and CalGreen 4.303.1 and 5.303.2)	<p>All new buildings must comply with current California water fixture and fitting efficiency requirements. All fixtures and fittings within areas of alteration, or serving areas of alteration, must be upgraded to current California and San Francisco fixture and fitting water efficiency requirements. (For local requirements applicable to alterations, see Commercial Water Conservation Ordinance and Residential Water Conservation Ordinance below.) Additionally:</p> <ul style="list-style-type: none"> <li>• New large commercial and high-rise residential projects: incorporate fixtures and fittings cutting water consumption by a total of 30% (LEED WEc3)</li> </ul>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not Applicable	The project would be consistent with this regulation because it would comply with the water efficiency requirements of the San Francisco Green Building Code as a condition of obtaining a building permit. Proposed water fixture and fittings would reduce water consumption by a minimum of 35%. The project would utilize auto-sensor restroom lavatories, pint flush (0.125 gallons per flush [gpf]) urinals, 1.28 gpf water closets, 1.5 gpm break room sinks, and 1.5 gpm showerheads.

Regulation	Requirements	Project Consistency	Remarks
Commercial Water Conservation Ordinance (San Francisco Building Code, Chapter 13A)	<p>Requires all alterations to existing commercial properties to achieve the following:</p> <ol style="list-style-type: none"> <li>1. If showerheads have a maximum flow &gt; 2.5 gallons per minute (gpm), replace with <math>\leq 2.0</math> gpm.</li> <li>2. All showers have no more than one showerhead per valve.</li> <li>3. If faucets and faucet aerators have a maximum flow rate &gt; 2.2 gpm, replace with unit meeting current code: <ul style="list-style-type: none"> <li>- Non-residential lavatory: <math>\leq 0.4</math> gpm</li> <li>- Kitchen faucet: <math>\leq 0.8</math> gpm</li> <li>- Metering faucet: <math>\leq 0.2</math> gal/cycle</li> </ul> </li> <li>4. If toilets have a maximum rated water consumption &gt; 1.6 gallons per flush (gpf), replace with <math>\leq 1.28</math> gpf toilet.</li> <li>5. If urinals have a maximum flow rate &gt; 1.0 gpf, replace with <math>\leq 0.5</math> gpf unit.</li> <li>6. Repair all water leaks.</li> </ol>	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Not Applicable	<p>This requirement does not apply to the project because the project consists of new construction of commercial properties and does not include the improvement of any existing commercial properties.</p>

Regulation	Requirements	Project Consistency	Remarks
Residential Water Conservation Ordinance (San Francisco Housing Code, Chapter 12A)	<p>Requires all residential properties (existing and new), prior to sale, to upgrade to the following minimum standards:</p> <ol style="list-style-type: none"> <li>1. If showerheads have a maximum flow &gt; 2.5 gallons per minute (gpm), replace with ≤2.0 gpm.</li> <li>2. All showers have no more than one showerhead per valve.</li> <li>3. If faucets and faucet aerators have a maximum flow rate &gt; 2.2 gpm, replace with unit meeting current code: <ul style="list-style-type: none"> <li>- Non-residential lavatory: ≤0.4 gpm</li> <li>- Residential lavatory: ≤1.5 gpm</li> <li>- Kitchen faucet: ≤0.8 gpm</li> <li>- Metering faucet: ≤0.2 gal/cycle</li> </ul> </li> <li>4. If toilets have a maximum rated water consumption &gt;1.6 gallons per flush (gpf), replace with ≤1.28 gpf toilet.</li> <li>5. If urinals have a maximum flow rate &gt;1.0 gpf, replace with ≤0.5 gpf unit.</li> <li>6. Repair all water leaks.</li> </ol> <p>Although these requirements apply to existing buildings, compliance must be completed through the Department of Building Inspection, for which a discretionary permit (subject to CEQA) would be issued.</p>	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Not Applicable	This requirement does not apply to the project because the project does not include any residential uses.
San Francisco Water Efficient Irrigation Ordinance (San Francisco Administrative Code, Chapter 63)	<p>Projects that include 1,000 square feet (sf) or more of new or modified landscape are subject to this ordinance, which requires that landscape projects be installed, constructed, operated, and maintained in accordance with rules adopted by the SFPUC that establish a water budget for outdoor water consumption.</p> <p>Tier 1: 1,000 sf ≤ project landscape &lt; 2,500 sf</p> <p>Tier 2: Project landscape area is greater than or equal to 2,500 sf. Note: Tier 2 compliance requires the services of landscape professionals.</p> <p>See the SFPUC Web site for information regarding exemptions to this requirement. <a href="http://www.sfwater.org/landscape">www.sfwater.org/landscape</a></p>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not Applicable	The project would be consistent with this requirement because the project would comply with San Francisco's Water Efficient Irrigation Ordinance as a condition of obtaining a building permit. Proposed water efficiency features for landscaped areas include low-water use planting selections, including extensive use of sedum and allium-based green roof materials, as well as soil mix design for a high available water holding capacity.

Regulation	Requirements	Project Consistency	Remarks
Residential Energy Conservation Ordinance (San Francisco Housing Code, Chapter 12)	<p>Prior to transfer of title as a result of sale (including condominiums), residential properties that received a building permit prior to July 1978 the seller must provide the buyer a certificate of compliance, and the certificate must be recorded with the San Francisco Recorder's Office. To comply, install the following measures as applicable:</p> <ul style="list-style-type: none"> <li>• attic insulation; weather-stripping all doors leading from heated to unheated areas; insulating hot water heaters and insulating hot water pipes; installing low-flow showerheads; caulking and sealing any openings or cracks in the building's exterior; and insulating accessible heating and cooling ducts.. Apartment buildings and hotels are also required to insulate steam and hot water pipes and tanks, clean and tune their boilers, repair boiler leaks, and install a time-clock on the burner.</li> <li>• Maximum required expenditure: \$1300 for 1-2 unit dwellings, and for buildings with 3 or more units, 1% of the assessed value or purchase price as applicable.</li> </ul> <p>Although these requirements apply to existing buildings, compliance must be completed through the Department of Building Inspection, for which a discretionary permit (subject to CEQA) would be issued.</p>	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Not Applicable	The project does not include any residential uses, so this regulation does not apply.
San Francisco Existing Commercial Buildings Energy Performance Ordinance (San Francisco Environment Code Chapter 20)	<p>Owners of nonresidential buildings in San Francisco with <math>\geq 10,000</math> square feet that are heated or cooled must conduct energy efficiency audits, as well as to annually measure and disclose energy performance. Certain exceptions apply for new construction or if specified performance criteria are met.</p>	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Not Applicable	This requirement does not apply to the project because the project includes only new construction and no existing commercial buildings would be retained onsite.

Regulation	Requirements	Project Consistency	Remarks
<b>Renewable Energy</b>			
San Francisco Green Building Code: Renewable Energy (San Francisco Green Building Code 5.103.1.5)	New commercial buildings of $\geq 25,000$ square feet must either generate 1% of energy on-site with renewables (EAc2), or purchase renewable energy credits equal to 35% of total electricity use for at least 2 years (LEED EAc6), or achieve at least a 10% compliance margin beyond Title 24 2013.	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not Applicable	The project would be consistent with this regulation because it would purchase Renewable Energy Certificates (RECs) equal to 70% of total electricity use for at least 2 years for those buildings $\geq 25,000$ square feet.
<b>Waste Reduction Sector</b>			
Mandatory Recycling and Composting Ordinance (San Francisco Environment Code, Chapter 19 and CalGreen 5.410.1)	<p>All persons in San Francisco are required to separate their refuse into recyclables, compostables and trash, and place each type of refuse in a separate container designated for disposal of that type of refuse. (San Francisco Environment Code Chapter 19)</p> <p>All new construction, renovation and alterations must provide for the storage, collection, and loading of recyclables, compost and solid waste in a manner that is convenient for all users of the building. (San Francisco Environment Code Chapter 19 and CalGreen Building Code Section 5.410.1)</p>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not Applicable	The project would be consistent with this requirement because the project sponsor and its tenants would implement the requirements of San Francisco's Mandatory Recycling and Composting Ordinance and CalGreen Building Code for recycling. The project design would include the following features: Paper, glass, corrugated cardboard, plastic, and metals would be collected on site for recycling. Recycling bins and composting containers would be conveniently located throughout the buildings. They would then be collected and stored near the loading dock for hauling from the site.

Regulation	Requirements	Project Consistency	Remarks
San Francisco Construction and Demolition Debris Recovery Ordinance (San Francisco Environment Code, Chapter 14, San Francisco Building Code Chapter 13B, and San Francisco Health Code Section 288)	<p>Applies to all projects: No construction and demolition material may be taken to landfill or placed in the garbage. All (100% of) mixed debris must be transported by a registered hauler to a registered facility to be processed for recycling. Source separated material must be taken to a facility that recycles or reuses those materials.</p> <p>Additionally, projects that include full demolition of an existing structure must submit a waste diversion plan to the Director of the Department Environment and the plan must provide for a minimum of 65% diversion from landfill of construction and demolition debris, including materials source separated for reuse or recycling.</p>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not Applicable	The project would be consistent with these requirements because as part of the construction specifications, the project sponsor would require its contractors to comply with and implement San Francisco's requirements for recycling of construction debris.
San Francisco Green Building Code: Construction and demolition debris recycling (5.103.1.3 and 4.103.2.3)	In addition to complying with Construction and Demolition Debris Recovery Ordinance, new commercial buildings of ≥25,000 square feet and new residential buildings of 4 or more occupied floors must develop a plan to divert a minimum of 75% of construction and demolition debris from landfill, and meet LEED Materials & Resources Credit 2.	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not Applicable	The project would be consistent with these requirements because as part of the construction specifications, the project sponsor would require its contractors to comply with and implement San Francisco's mandatory requirements for diverting at least 75% of all wastes from landfills.
<b>Environment/Conservation Sector</b>			
Street Tree Planting Requirements for New Construction (San Francisco Planning Code Section 138.1)	Planning Code Section 138.1 requires new construction, significant alterations or relocation of buildings within many of San Francisco's zoning districts to plant one 24-inch box tree for every 20 feet along the property street frontage.	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not Applicable	The project would be consistent with these requirements because the project's landscaping design incorporates the requirements of the South Plan Area Streetscape Master. The project would include planting of 79 street trees along Third Street, 16th Street, and future alignment of Terry A. François Boulevard, approximately every 25 feet where possible.

Regulation	Requirements	Project Consistency	Remarks
Light Pollution Reduction (CalGreen 5.106.8)	For nonresidential projects, comply with lighting power requirements in CA Energy Code, CCR Part 6. Meet California Energy Code minimum for Lighting Zones 1-4 with Backlight/Uplight/Glare ratings meeting CalGreen Building Code Table 5.106.8.	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not Applicable	The project would be consistent with this requirement project because the project design complies with and implements the light pollution reduction requirements of the CalGreen Building Standards Code, which would be a condition of obtaining a building permit. Light pollution reduction features of the project design include exterior lighting fixture selections that will have minimum Backlight, Uplight, and Glare (BUG) ratings as allowed by required illuminance levels.
Construction Site Runoff Control (Public Works Code Article 4.2, Section 146)	<p>San Francisco's Construction Site Runoff Control requirements apply to any project disturbing ≥5,000 square feet of ground surface. Covered projects must obtain a Construction Site Runoff Control Permit. Applicants must submit and receive approval of an Erosion and Sediment Control Plan prior to commencing any construction-related activities. The plan must be site-specific, and provide details of the use, location, and emplacement of the sediment and erosion control devices at the project site. For projects that involve disturbance of more than one acre of land and are located in an area served by a separate storm sewer system, applicants may submit a Storm Water Pollution Prevention Plan (SWPPP) that complies with the State of California's General Permit for Discharges of Storm Water Associated with Construction Activity in lieu of an Erosion and Sediment Control Plan.</p> <p>All construction sites, regardless of size, must implement BMPs to prevent illicit discharge into the sewer system. For more information on San Francisco's requirements, see <a href="http://www.sfwater.org">www.sfwater.org</a>.</p>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not Applicable	The project would be consistent with this requirement because as part of the construction specifications, the contractors would be required to obtain and comply with the General Construction Activity Storm Water Permit. The project is located in an area served by a separate storm sewer system and as such, the project sponsor or its contractors would prepare and submit a site-specific SWPPP for all construction activities. During construction, the contractors would implement best management practices (BMPs) and comply with the conditions of the approved SWPPP.

Regulation	Requirements	Project Consistency	Remarks
Enhanced Refrigerant Management (CalGreen 5.508.1.2, and 5.508.2)	<p>Commercial buildings must not install equipment that contains chlorofluorocarbons (CFCs) or halons. Applies to new construction and all alterations.</p> <p>New commercial refrigeration systems containing refrigerants with Global Warming Potential (GWP) of 150 or greater, installed in food stores with 8,000 square feet or more of refrigerated display cases, walk-in coolers or freezers connected to remote compressor units or condensing units: Piping shall meet all requirements of 5.508.2 (all sections), and shall undergo pressure testing during installation prior to evacuation and charging. System shall stand unaltered for 24 hours with no more than a one pound pressure change from 300 psig.</p>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not Applicable	The project would be consistent with this requirement because the project sponsor and its tenants (including the proposed food hall) would implement and comply with the CalGreen Building Code requirements for enhanced refrigerant management.

Regulation	Requirements	Project Consistency	Remarks
Finish Material Pollutant Control: Low-emitting Adhesives, Sealants, Caulks, Paints, Coatings, Composite wood, and Flooring (CalGreen 5.504.4 – all sections.)	<p>These requirements apply to nonresidential projects:</p> <p>Adhesives, sealants, and caulks - Comply with VOC limits in SCAQMD Rule 1168 VOC limits and California Code of Regulations Title 17 for aerosol adhesives.</p> <p>Paints and coatings - Comply with VOC limits in the Air Resources Board Architectural Coatings Suggested Control Measure and California Code of Regulations Title 17 for aerosol paints.</p> <p>Carpet - All carpet must meet one of the following:</p> <ol style="list-style-type: none"> <li>1. Carpet and Rug Institute Green Label Plus Program,</li> <li>2. California Department of Public Health Standard Practice for the testing of VOCs (Specification 01350),</li> <li>3. NSF/ANSI 140 at the Gold level,</li> <li>4. Scientific Certifications Systems Sustainable Choice, OR</li> <li>5. California Collaborative for High Performance Schools EQ 2.2 and listed in the CHPS High Performance Product Database</li> </ol> <p>and carpet cushion must meet Carpet and Rug Institute Green Label, and indoor carpet adhesive &amp; carpet pad adhesive must not exceed 50 g/L VOC content.</p> <p>Composite wood - Meet CARB Air Toxics Control Measure for Composite Wood, including meeting the emission limits in CalGreen Building Code Table 5.504.4.5.</p> <p>Resilient flooring systems - For 80% of floor area receiving resilient flooring, install resilient flooring complying with:</p> <ol style="list-style-type: none"> <li>1. Certified under the Resilient Floor Covering Institute (RFCI) FloorScore program,</li> <li>2. Compliant with the VOC-emission limits and testing requirements of California Department of Public Health 2010 Standard Method for the Testing and Evaluation Chambers v.1.1,</li> <li>3. Compliant with the Collaborative for High Performance Schools (CHPS) EQ2.2 and listed in the CHPS High Performance Product Database, OR</li> <li>4. Certified under the Greenguard Children &amp; Schools Program to comply with California Department of Public Health criteria.</li> </ol>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not Applicable	The project would comply with these requirements because the project sponsor and its tenants would require that contractors implement and comply with the Finish Material Pollutant Control Requirements of the CalGreen Building Code, which would be a condition for obtaining a building permit.

Regulation	Requirements	Project Consistency	Remarks
Pollutant Control: Low-emitting Adhesives, Sealants, Caulks, Paints, Coatings, Composite wood, and Flooring (CalGreen 4.504 all sections.)	<p>These requirements apply to residential projects:</p> <p>Interior paints and coatings: Comply with VOC limits in the Air Resources Board Architectural Coatings Suggested Control Measure and California Code of Regulations Title 17 for aerosol paints. See CalGreen Table 4.504.3 for details.</p> <p>Aerosol paints and coatings -- Meet BAAQMD VOC limits (Regulation 8, Rule 49) and Product-Weighted MIR Limits for Reactive Organic Compound. (CCR Title 17, Section 94520)</p> <p>Caulks, Construction adhesives, and Sealants – Meet SCAQMD Rule 1168. See CalGreen Tables 4.504.1 and 4.504.2.</p> <p>Composite Wood – Meet California Air Resources Board Airborne Toxic Control Measure formaldehyde limits for composite wood. See CalGreen Building Code Table 4.504.5</p>	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Not Applicable	The project does not include any residential uses, so this regulation does not apply.
Wood Burning Fireplace Ordinance (San Francisco Building Code 3111.3; CalGreen 4.503.1 and 5.503.1)	<p>Wood burning fire places must be a direct-vent or sealed combustion unit and must be compliant with EPA Phase II limits (except those that are designed for food preparation in new or existing restaurants or bakeries). The combustion unit must be at least one of the following:</p> <ul style="list-style-type: none"> <li>• Pellet-fueled wood heater</li> <li>• EPA approved wood heater</li> <li>• Wood heater approved by the Northern Sonoma Air Pollution Control District</li> </ul>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not Applicable	The project would be consistent with this requirement because if the project were to include wood burning fireplaces, the project design would implement and comply with the San Francisco Building Code and CalGreen Building Code requirements for use of wood burning fireplaces.

Regulation	Requirements	Project Consistency	Remarks
Regulation of Diesel Backup Generators (San Francisco Health Code, Article 30)	<p>Requires (among other things):</p> <ul style="list-style-type: none"> <li>• All diesel generators to be registered with the Department of Public Health</li> <li>• All new diesel generators must be equipped with the best available control technologies as determined by the California Air Resources Board or the Bay Area Air Quality Management District.</li> </ul>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not Applicable	The project would be consistent with this requirement because the project sponsor would implement and comply with, and would require its tenants to implement and comply with, the requirements of Article 30 of the San Francisco Health Code addressing the use of diesel back up generators.

**Subject:** California Environmental Quality Act Appeal - Tentative Map Appeal - Golden State Warriors Event Center Project - December 8, 2015 Hearing Date

Good afternoon,

Today the Office of the Clerk of the Board received numerous documents relating to the appeals of the Final Subsequent Environmental Impact Report Certification and the Tentative Map for the proposed Golden State Warriors Event Center in Mission Bay South. In total, these documents add up to nearly 7000 pages of materials for the appeal files. For your convenience, this email links each document individually below.

Relating to the FSEIR certification appeal:

[Appellant Brief and Exhibits - November 30, 2015](#)

[Office of Community Investment and Infrastructure Appeal Response Brief and Exhibits - November 30, 2015](#)

[Draft Subsequent Environmental Impact Report - Published June 5, 2015](#)

[DSEIR Response to Comments - Published October 23, 2015](#)

[Mission Bay Alliance Brief - November 30, 2015](#)

[Golden State Warriors/National Basketball Association Brief and Exhibits - November 30, 2015](#)

Relating to the Tentative Map appeal:

[Appellant Brief and Exhibits - November 30, 2015](#)

**The appeal hearings for these matters are scheduled for 3:00 p.m. special order before the Board on December 8, 2015.**

I invite you to review the entirety of both matters on our [Legislative Research Center](#) by following the link below:

Re: OCII Case No. ER 2014-919-97; Planning Department Case No. 2014.1441E –  
Event Center and Mixed-Use Development at Mission Bay Blocks 29-32

Dear President Breed and Members of the Board:

On November 3, 2015, the Commission on Community Investment and Infrastructure certified the Final Subsequent Environmental Impact Report ("FSEIR" or "SEIR") for the Golden State Warriors Event Center and Mixed-Use Development on Blocks 29-32 in Mission Bay South (the "Event Center" or "Project"). The Commission also adopted CEQA findings and approved the Project based on the determination by the Executive Director of the Office of Community Investment and Infrastructure ("OCII") that the Project is consistent with the Mission Bay South Redevelopment Plan.

On November 13, 2015, the Mission Bay Alliance ("Appellant") appealed to this Board the Commission's decision to certify the SEIR. As Project sponsor, the Warriors believe the SEIR complies with the California Environmental Quality Act ("CEQA"), and urge the Board to affirm the certification of the SEIR and reject the appeal.

OCII, Planning Department Staff and the City's environmental consultants have prepared an exhaustive analysis of the issues raised in the appeal. In fact, that analysis is so detailed and comprehensive that we have little to add. We write separately to provide our perspective on the appeal as a whole, and to provide the Board with information that might not otherwise be reflected in the record.

**1. Appellant Is Abusing the CEQA Process as a Means of Trying to Delay, if not Kill, the Project.**

In our view the record makes it clear – in fact, obvious to any objective observer – that Appellant has abused, and is abusing, the CEQA process. Appellant is not a longstanding, grass-roots organization. Appellant does not represent environmental or neighborhood advocates. Appellant initially claimed to be concerned with protecting the interests of the University of California, San Francisco (“UCSF”); following UCSF’s endorsement of the Project, however, Appellant re-characterized its concern as protecting Mission Bay’s biotech companies. As evidenced from the letter dated October 20, 2015, from the Mission Bay Life Sciences Community (Attachment A), Mission Bay’s biotech companies support the Project as well.

Notably, no individual member of Appellant has appeared at a hearing. Instead, public statements are made by hired spokespeople. Every document sent to OCII on behalf of Appellant has come from a lawyer or a consultant. At the OCII Commission’s hearing, 35 people spoke. 32 spoke in support.<sup>1</sup> Three spoke in opposition. Of these, two spoke on behalf of Appellant. Both were lawyers hired by Appellant. Individuals who are members of Appellant are nowhere to be found in OCII’s record.

Appellant’s lawyers are experienced and able. They know which levers to pull in order to attempt to bog down the CEQA process. They have set about their task with zeal. They recruited a team of consultants in an attempt to pick apart virtually every section of the SEIR. Their hired consultants are also well known. In fact, these consultants are generally hired by economic interests, such as business competitors, in order to use the CEQA process to force economic concessions, or to obstruct projects that pose a competitive threat. Their credibility as experts should, in our view, be taken with a very large grain of salt.<sup>2</sup>

The logical conclusion is that Appellant represents a handful of very wealthy people who, although they neither live nor work in the vicinity of the Event Center, are determined to stop the Project. Nothing else can explain the blizzard of comments produced by the team of lawyers and consultants, the sheer volume of which suggests the practical equivalent of an unlimited budget –

---

<sup>1</sup> / That 32 of 35 people spoke in favor illustrates the breadth and depth of support for the Project. This support comes from a broad spectrum of neighbors, businesses, labor, and other stakeholders, representing all segments of the City’s diverse community. These supporters have shown their enthusiasm for the Project at countless community and agency hearings over the last 12+ months.

<sup>2</sup> / Our CEQA counsel, Remy Moose Manley LLP, has considerable experience with two of Appellant’s key consultants: traffic consultant Dan Smith and economist Dr. Philip King. It is fair to say that Mr. Smith and Dr. King are prolific critics of CEQA analyses performed throughout the state. Counsel’s observations are provided in a letter appearing as Attachment B to this letter.

something almost never associated with a true grass-roots environmental organization. Press reports quote Appellant's spokesperson as saying on July 28, 2015 – the day after the comment period closed – that Appellant's strategy is to "fight the Warriors' owners until Hell freezes over – and then we are going to fight them on the ice."<sup>3</sup> In keeping with this strategy, Appellant has seized every opportunity to carpet-bomb OCII with comments in hopes of inflicting as much pain and costly delay as possible.

From the outset, the actions of Appellant's lawyers and consultants make clear that Appellant has no authentic interest in the environment. Appellant's representatives publicly attacked the Project as early as April 2015, more than a month before the Draft SEIR had even been released for review. Appellant's comments on the Draft SEIR span 326 pages, not including exhibits. On October 13, 2015 – 11 months after OCII launched the environmental review process, more than four months after OCII published the Draft SEIR, and more than two months after the deadline for submitting comments – Appellant unveiled a "new" alternative site near Pier 80.<sup>4</sup> On November 2 and 3, on the eve and morning of the OCII Commission's hearing, Appellant submitted another eight letters with further attached reports from hired consultants spanning an additional 328 pages (not including exhibits or duplicates). These last-second comments attack virtually every nook and cranny of the SEIR; they essentially re-litigate all the issues raised in their comments on the Draft SEIR. Even after OCII certified the SEIR and approved the Project, the deluge continued; Appellant's lawyers submitted another five letters with attached reports from consultants.

Appellant has repeatedly asked for delays and extensions, and has accused OCII of a "rush job." But OCII's public review opportunities uniformly exceed those required by CEQA. No part of OCII's environmental review process has been truncated or abridged. In fact, although all prior projects in the Mission Bay Redevelopment Plan area have been approved by OCII pursuant to addenda to the 1998 Final SEIR for Mission Bay, OCII prepared a Subsequent EIR for the proposed Event Center, thereby analyzing in detail environmental impacts that would not have been included as part of an addendum. The certification of the Final SEIR represents the culmination of more than three years of planning since the Warriors first announced their intention to move to a new arena in San Francisco.

The only aspect of the Project that is subject to an accelerated time frame is the litigation that appears likely to follow an affirmative decision by the Board. In May 2015, Governor Brown certified the Project as an Environmental Leadership Development Project under

---

<sup>3</sup> / KQED News, *The Big 'If' in UCSF's 'Support' for Golden State Warriors Arena* (July 28, 2015) (Attachment C).

<sup>4</sup> / The site proposed by Appellant is located well south of the Mission Bay site. The Planning Department considered this area months ago, and concluded it offered no environmental advantages over Blocks 29-32. The alternative site is owned by a mosaic of private and public landowners. None of the land is for sale. In approving the Project, OCII found that the alternative site was infeasible, and cited the reasons why. We agree.

Assembly Bill 900 (Pub. Resources Code, § 21178 et seq.). On May 27, 2015, the Joint Legislative Budget Committee of the State Senate and Assembly concurred in that determination. Governor Brown's decision is non-reviewable and final. (Pub. Resources Code, § 21184, subd. (b).) The Governor's certification did not relax any of the rules governing OCII's preparation of the SEIR, or shortcut any opportunities for public review. Quite the contrary: in order to gain the Governor's certification, among other things, the Warriors had to demonstrate the Project met a number of criteria, including:

- The Project will not result in a net increase in greenhouse gas emissions pursuant to a methodology determined by the State Air Resources Board;
- The Project will result in a minimum investment of \$100 million;
- The Project will create high-wage, highly skilled jobs that pay prevailing wages and living wages; and
- As lead agency, OCII had to prepare and post its record of proceedings (at the Warriors' expense) concurrently with the administrative process.

(Pub. Resources Code, §§ 21183, 21186.)

Having met these criteria, the Governor's certification means simply that litigation challenging OCII's decision to certify the SEIR must be resolved within 270 days. (Pub. Resources Code, § 21185.) Thus, Appellant no longer has the threat of bogging down OCII's decision in years of CEQA litigation. If litigation is filed, the lawsuit will be promptly resolved. It is hard to understand exactly what is wrong with that, or how expeditious resolution of CEQA litigation somehow threatens the environment, or the agency's environmental review process. What it does threaten, if anything, is Appellant's public pronouncement that it plans to "litigate until the cows come home."

The CEQA process is designed to be open and iterative. The agency prepares and shares its analysis; interested persons and agencies weigh in; the agency responds; and the project evolves to address legitimate concerns. The Courts recognize that the CEQA process is designed to operate in this way. As the First District Court of Appeal recently observed, "CEQA allows, if not encourages, public agencies to revise projects in light of new information revealed during the CEQA process." (*Citizens for a Sustainable Treasure Island v. City and County of San Francisco* (2014) 227 Cal.App.4th 1036, 1062.)

As part of this process, the CEQA Guidelines state that the Final EIR should include "good faith" responses to comments on the Draft EIR that raise significant environmental issues. (CEQA Guidelines, § 15088, subd. (c).) Because the process is open, anyone who wishes to submit comments on the Draft EIR can do so, and these comments (and the agency's responses) become part of the agency's record. Most of those who participate do so in a constructive spirit.

Board President London Breed and  
Members of the Board of Supervisors  
November 30, 2015  
Page 5

But there is nothing to prevent commenters from heaping voluminous comments on the agency, for no other reason than to enlarge the agency's burden of responding to those comments.

In this case, we urge the Board not to equate volume with substance. We believe the sheer volume of comments is not, in itself, reason enough to go back and repeat the CEQA process. If it were, project opponents would possess a powerful weapon to stall indefinitely even the most benign projects. "A project opponent . . . can always imagine some additional study or analysis that might provide helpful information. It is not for them to design the EIR. That further study . . . might be helpful does not make it necessary." (*Laurel Heights Improvement Assn. of San Francisco, Inc. v. The Regents of the University of California* (1988) 47 Cal.3d 376, 415.) Indeed, the Fourth District Court of Appeal recently confronted another instance in which a commenter dumped a barrage of comments on an agency, and then argued in litigation that the agency's responses were inadequate. In rejecting this argument, the Court observed:

At its best, the comment-and-response process in CEQA produces a *better EIR*, by bringing to the attention of the public and decision makers significant environmental points that might have been overlooked. After all, an EIR is an informational document [citation] and when comments [] reveal a significant, overlooked environmental effect, the necessity of a non-conclusory response forces decision makers to confront the real downsides to a development project. [Citations.]

But the comment-and-response process can also be abused. At its worst, it could become an end in itself, simply a means by which project opponents can subject a lead agency's staff to an onerous series of busywork requests and "go fetch" demands. As Presiding Justice McConnell wrote in *Citizens for Responsible Equitable Environmental Development v. City of San Diego* (2011) 196 Cal.App.4th 515, 524 [129 Cal. Rptr. 3d 512], the point of CEQA, "is to inform government decision makers and their constituency of the consequences of a given project, not to derail it in a sea of administrative hearings and paperwork." This case is an example of the drowning in "paperwork" Presiding Justice McConnell warned about.

(*City of Irvine v. County of Orange* (2015) 238 Cal.App.4th 526, 557-558, emphasis in original.)

If anything, the current record reflects a particularly egregious example of such abuse.

As the California Supreme Court has emphasized, "[t]he wisdom of approving this or any other development project, a delicate task which requires a balancing of interests, is necessarily left to the sound discretion of the local officials and their constituents who are responsible for such decisions. The law as we interpret and apply it simply requires that those decisions be informed, and therefore balanced. Concurrently, we caution that rules regulating the protection

of the environment must not be subverted into an instrument for the oppression and delay of social, economic, or recreational development and advancement.” (*Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 576.)

Here, OCII, Planning Department staff and consultants have painstakingly reviewed the comments submitted by Appellant’s lawyers and consultants, and provided extensive responses. None of Appellant’s comments raises a serious environmental issue. We urge the Board to reject the appeal.

**2. Appellant’s Opposition Is Based on the Misplaced Notion that the Site Should Be Left Fallow for an Indefinite Period in Hopes Viable Biotech Uses Emerge Someday.**

Appellant states that uses in Mission Bay were intended and should be limited to biotech and life science R & D facilities, presumably arguing that the property at Blocks 29-32 should be remain undeveloped or “land-banked” until such time as a biotech user materializes to utilize the site. However, the claim that Mission Bay was designed and entitled to prohibit land uses other than biotech is incorrect, as explained in the Response to Comments and in OCII’s responses prepared to Late Comments. The clinical uses located at UCSF’s Mission Bay Medical Center, not originally anticipated in the Mission Bay South Redevelopment Plan, represent just such an alternative land use.

As described in staff report to the San Francisco Redevelopment Agency (“Agency” or “SFRA”) Commissioners for the Commission’s meeting of September 20, 2011 (see Attachment D), a prior owner of Blocks 29-32, Alexandria Real Estate Equities, obtained approval of a Major Phase application for Blocks 29-32 in 2006 and, in 2008, obtained approval of Schematic Design drawings for buildings on Blocks 30 and 32. Alexandria is a leading developer of life science lab and office space and the fully entitled property would have been available for purchase and/or lease and use for life science and biotech uses at that time. No biotech or life science users materialized, so in 2010, Alexandria sold the site to salesforce.com along with other parcels held by Alexandria in Mission Bay, for use by salesforce.com as its corporate office campus.

The salesforce.com proposal was for general office use, not life sciences or biotech. In 2011, salesforce.com submitted a Major Phase/Master Plan application from salesforce.com that included Blocks 29-32. As described in the September 20, 2011 staff report, the Major Phase application called for an approximately two million square-foot corporate office headquarters for a technology company on 14 acres in Mission Bay South, including Blocks 29-32, Blocks 26-28 and Blocks 33-34. As described in the staff report, the Major Phase was intended to serve as a detailed Master Plan for the salesforce.com campus, including eight new main buildings with a large new open space in the center. In addition to office space for salesforce.com, the project also included retail, childcare facilities, automobile and bicycle parking, service and loading areas

and a series of smaller open spaces, and was estimated to house between 8,000 and 10,000 employees. None of the 14-acre site was to be used for life sciences or biotech facilities.

On September 20, 2011, the Agency approved the Major Phase application (SFRA Resolution 97-2011 – see Attachment E). On January 31, 2012, the Agency approved Schematic Design drawings for four salesforce.com office buildings on Blocks 29-32 (SFRA Resolution Nos. 2012-10 through 13, described in the staff report for the January 31, 2012, meeting – see Attachment F). Again, none of these buildings was intended for life science or biotechnology companies.

In 2012, the salesforce.com office campus project was calendared for consideration and approval by the San Francisco Planning Commission (a copy of the Planning Commission staff report is at Attachment G). Shortly before proceeding to approval hearings in February 2012, salesforce.com announced that it was abandoning its plans to build a campus in Mission Bay. At that time, it was widely known that the property was for sale. In fact, UCSF quickly engaged in discussion with salesforce.com to buy a portion of the property at Blocks 33 and 34. (A copy of a news article about that negotiation is at Attachment H.) Life science and biotech users had an opportunity to acquire the property after salesforce.com announced it was abandoning its plans and locating its headquarters in downtown San Francisco, but no such buyer materialized and the Warriors acquired the property instead.

In summary, the property at Blocks 29-32 is private property and has been available for acquisition on at least two separate occasions in recent years.

The Warriors submitted a letter into the record from Rick Welts, president of the Project sponsor, which attached a copy of a letter from the Master Developer of Mission Bay, Mission Bay Development Group (“MBDG”). The MBDG letter explains the Mission Bay development construct in which infrastructure that serves the entire area, including affordable housing development, was financed with tax increment bonds. The use of such a financing structure mandates that the “increment” or increase in the tax base in the area must be created in projected amounts and at projected times in order to repay the bonds and to finance other benefits in the plan area, such as affordable housing. As a consequence of the repayment obligations of the tax increment bonds, the private sale transactions among the various property owners in Mission Bay includes an interlocking set of obligations to construct certain amounts of new development within particular time frames. Failure to commence and complete the amount of square footage required on any given parcel within specified time periods gives rise to liquidated damage payments on the part of the defaulting owner. These payments are necessary to ensure the projected revenue stream required to support the bonds. Consequently, properties within Mission Bay cannot be “land banked” without consequence. Appellant’s proposal could cause the land to remain unused for an indefinite period, which runs counter to the entire financing structure of Mission Bay.

**3. The Record Shows the Warriors Have Worked in Good Faith with OCII, the City, and other Stakeholders to Address Legitimate Concerns.**

We acknowledge that the Event Center is not a “typical” office building. In particular, basketball games, other sporting events, and concerts will attract up to 18,000 patrons, some of whom will travel to the site by car. Our neighbors, including UCSF, have a legitimate interest in ensuring that the Event Center does not cause gridlock, particularly on those few occasions when events overlap with San Francisco Giants’ games at AT&T Park.

We have worked hard to address these concerns. Since as early as November 2014, the Warriors have engaged in lengthy and continual outreach to the Mission Bay Citizen Advisory Committee and other key stakeholders, including UCSF, the Mission Bay life science community, neighborhood leaders from South Beach, Rincon Hill, Mission Bay, Dogpatch and Potrero Hill, the SF Giants, the San Francisco Bicycle Coalition, and local businesses and merchants. Working with the San Francisco Metropolitan Transportation Authority, UCSF, the Mayor’s Office, the Planning Department, and others, the Warriors have continually refined plans to manage Project-related traffic. The SEIR describes these measures. The analysis is detailed and specific, and need not be repeated here. We believe, however, that the following facts bear emphasis:

- Traffic to and from the Event Center is in large measure counter-cyclical and off-peak. Night-time events begin after the rush hour, and many of those coming to the site are traveling in the opposite direction from many commuters.
- The site is on a transit stop on the T-Third line, which will be connected to the new Central Subway by 2019. Revenue from the Project will be finance expanding this stop, upgrading the T-Third line, and purchasing additional light-rail cars. Revenue from the Project will also be used to pay for increased shuttle service between Mission Bay and regional transit providers, and for deployment of an expanded network of “parking control officers” (“PCOs”), including PCOs specifically aimed at ensuring that those traveling to the Event Center do not interfere with access to UCSF or its hospital.
- We have reached out to key stakeholders in the area, particularly UCSF. These efforts culminated in a memorandum of understanding (“MOU”) with UCSF committing the Warriors to control peak-event traffic around the UCSF campus, particularly as a means to maintain hospital access. The MOU also commits the Warriors to scale back the number of peak events overlapping with Giants’ games, if certain traffic targets are not met. No other sports arena in the country has made such commitments. We appreciate UCSF’s willingness to work with us in a constructive way.
- The record shows that the Warriors have been flexible about finding a site that works. The Warriors initially proposed to locate the Event Center at Piers 30-32. As the

Board President London Breed and  
Members of the Board of Supervisors  
November 30, 2015  
Page 9

SEIR explains, during the course of the environmental review process for that site, regulatory and financial hurdles emerged that raised questions about the feasibility of that site. The Warriors responded by identifying a site that did not pose those same hurdles, while at the same time working with responsible stakeholders to ensure that legitimate concerns would be addressed.<sup>5</sup>

The Project approved by OCII is the culmination of these efforts. The Warriors are committed to implementing the mitigation measures and improvement measures that have been identified in the course of this process. We look forward to working with OCII, the City, UCSF, and the Mission Bay community to those ends. We urge the Board to reject the appeal.

Very truly yours,

David J. Kelly  
General Counsel

---

<sup>5</sup> / The Warriors' efforts are not limited to traffic. For example, based on consultations with UCSF, we have adjusted our construction plans to ensure we will not interfere with use of UCSF's helipad. We are also taking steps to ensure the Project will be a safe and comfortable place for patrons and members of the community to gather; thus, although not an environmental issue, the Project incorporates landscaping and design features to protect the plaza area from wind.

## MISSION BAY LIFE SCIENCE COMMUNITY

---

October 20, 2015

Mr. Rick Welts  
President and Chief Operating Officer  
Golden State Warriors  
1011 Broadway, Oakland, CA 94607

Re: Warriors Mission Bay Arena Project

Dear Rick:

We, a group of Mission Bay life science companies, are writing to express our support for the Warriors' Mission Bay Arena Project. Over the last several months, we have participated in the collaborative planning discussions for this project, and appreciate the commitment shown by both the Warriors and the City of San Francisco to understanding and addressing the concerns of the various parties.

Our growing life science businesses are proud to fuel San Francisco's innovation economy by focusing on a full spectrum of life science research and development addressing life-changing therapies for patients with cancer, Alzheimer's disease, heart disease, kidney disease, hepatitis B, blood disorders, and other health problems, pioneering diagnostic tools and clean energy solutions.

Our operating needs extend beyond those of traditional office tenants, and include laboratories and sensitive equipment that require careful protection, monitoring and calibration. Our ongoing Arena Project discussions have demonstrated that our companies, along with the Warriors, UCSF, and others co-located in this exciting part of the city, share a joint concern about keeping Mission Bay vibrant and accessible at all times, including days of scheduled events.

The planning discussions have brought us all together to resolve these concerns. We believe we will be able to reach consensus on resolutions that are in the long-term interest of the Mission Bay community, and of the City of San Francisco as a whole.

Sincerely,

Re: Mission Bay Alliance – Traffic and Urban Decay Consultants

Dear Mr. Kelly:

As you are aware, the Mission Bay Alliance has submitted voluminous comments claiming nearly every aspect of the Subsequent Environmental impact Report (“SEIR”) fails to comply with the California Environmental Quality Act (“CEQA”). The Alliance has been forthright in its objective to delay the project by any means. To maximize delay, project opponents will sometimes hire consultants to bombard public agencies with comments on particular topics regardless of the content, or adequacy, of an EIR’s analysis. In our experience, this abuse of the CEQA process is much too common and severely undermines the goals of the Act.

You have asked us whether our firm has had experience with the Alliance’s traffic and urban decay consultants – Mr. Daniel T. Smith and Dr. Phillip King, respectively – and whether we could provide insight regarding their proclivity for writing letters on behalf of project opponents.

Our firm has worked on a wide variety of projects throughout the State. We represent a diverse array of public agencies and private entities. In our role as CEQA counsel, we help public agencies navigate the CEQA process and defend CEQA documents when litigation ensues. Throughout the years, we have encountered both Mr. Smith and Dr. King on a fairly regular basis. The sheer volume of projects these consultants challenge suggests that they are not discerning in the analyses they will attack. We are not aware of any instances in which either Mr. Smith or Dr. King has stated on the record that they believed an agency’s analysis was adequate; rather, their comments appear to consist solely of criticizing the work of others.

In several cases in which we have been involved, petitioners have sued and, in the litigation, cited comments from Mr. Smith or Dr. King to support their view that the agency violated CEQA. The following summary provides information on the outcome of those cases.

**Daniel T. Smith (Smith Engineering and Management)**

Mr. Smith is a well-known and prolific traffic consultant. We have had numerous encounters with Mr. Smith over the years. In our experience, he is a “go to” consultant for those who wish to attack an agency’s transportation analysis. Certain of his criticisms appear again and again. A few of our encounters with Mr. Smith are highlighted below.

1. Jesuit High School Chapel Use Permit and Design Review (Carmichael, CA; 2012)

Mr. Smith was hired to challenge the transportation analysis in an EIR prepared by Sacramento County for a modest expansion of a private catholic high school. Mr. Smith’s comments were submitted on behalf of the petitioner in the case – a neighbor who opposed the project because he did not agree with the school’s religious mission. (See Attachment 1 [Final Judgment, p. 2, fn. 2].)

In his comment letter, Mr. Smith disputed nearly every aspect of the traffic analysis. (See Attachment 2 [Mr. Smith’s comment letter].) Mr. Smith disputed the methodology used by the County and the results of the analysis. Among other claims, Mr. Smith argued (1) the baseline traffic counts were unrepresentative of existing conditions; (2) the assumptions in the traffic analysis were wrong; (3) the EIR’s queuing analysis was flawed; (4) the EIR overstated traffic impacts for the alternatives; (5) the EIR failed to adequately address traffic safety; and (6) the EIR failed to mitigate traffic impacts on neighbors.

The litigation focused solely on whether the EIR’s traffic analysis complied with CEQA. The petitioner pointed to Mr. Smith’s letter as evidence showing the traffic analysis was defective. The court upheld the EIR. (Attachment 1 [Final Judgment].)

2. Placer Vineyards Specific Plan (Placer County, CA; 2004)

Mr. Smith was hired to challenge the transportation analysis in an EIR prepared by Placer County for the Placer Vineyards Specific Plan, which set forth the rules and policies that would define future development at a site located in southwest Placer County.

In his comment letter, Mr. Smith disputed nearly every aspect of the traffic analysis. (See Attachment 3 [Mr. Smith’s comment letter].) Mr. Smith disputed the methodology used by the County and the results of the analysis. Among other claims, Mr. Smith argued (1) the EIR failed to analyze, disclose, or mitigate traffic impacts for certain peak periods; (2) the Level of Service (LOS) analysis understated traffic impacts; (3) the EIR failed to analyze impacts on freeway merge ramps, diverge and weaving sections; (4) the methodology used to analyze intersection traffic impacts was obsolete and failed to disclose impacts; (5) the methodology understated traffic impacts at certain intersections; (6) the study area for the transportation analysis was too narrow; (7) the EIR failed to adequately analyze changes to transportation-related goals and policies; (8) the analysis of traffic loads on area roadways was inadequate; (9) the EIR failed to

adequately analyze construction-related traffic impacts; (10) the EIR's traffic forecasts were erroneous; and (11) mitigation for traffic impacts was inadequate.

The EIR's transportation analysis was a central focus in the ensuing litigation. The petitioners cited repeatedly to Mr. Smith's letter to support their arguments. After reviewing the evidence in Mr. Smith's letters, the court determined that petitioners and their expert – Mr. Smith – failed to demonstrate that the methodology and analysis of transportation impacts was flawed. The court found that all of the petitioners' arguments related to the EIR's transportation analysis were unfounded and upheld the EIR. (See Attachment 4 [Court's Ruling, pp. 15-17].)

### 3. Higgins Marketplace Project (Nevada City, CA; 2007)

Mr. Smith was hired to challenge the transportation analysis in an EIR prepared by Nevada County for the Higgins Marketplace project located in Nevada County. The project included three retail buildings and anticipated future development of light industrial and office space.

In his comment letter, Mr. Smith disputed nearly every aspect of the traffic analysis. (See Attachment 5 [Mr. Smith's comment letter].) Mr. Smith disputed the methodology used by the County and the results of the analysis. Among other claims, Mr. Smith argued (1) the EIR relied on understated estimates of project traffic; (2) the EIR relied on unsupported assumptions; and (3) the EIR failed to adequately analyze queuing impacts.

The project opponents challenged the EIR in court and presented the same arguments raised in Mr. Smith's letter. The trial court did not find Mr. Smith's arguments persuasive and upheld the EIR. (Attachment 6 [Statement of Decision].)

The petitioner appealed the trial court's decision to the Third District Court of Appeal. Relying again on Mr. Smith's letter, the petitioner's argument focused on whether the EIR's traffic analysis improperly relied on uncertain future traffic improvements in order to conclude that the project's level of service (LOS) impacts would be less than significant. In a published opinion (*South County Citizens for Smart Growth v. County of Nevada* (2013) 221 Cal.App.4th 316), the court of appeal rejected the petitioner's claims. The court noted that although the petitioner "may be unhappy" with the assumptions in the EIR, it did not provide evidence that the EIR's analysis was inadequate. (*Id.* at pp. 336-338.) Therefore, notwithstanding Mr. Smith's letter, the court held that the EIR's traffic analysis complied with CEQA and upheld the EIR.

### 4. Costco Wholesale Project (Ukiah, CA; 2013)

Mr. Smith was hired to challenge the traffic analysis in an EIR prepared by the City of Ukiah for a new Costco store in the City.

In his comment letter, Mr. Smith disputed nearly every aspect of the traffic analysis. (See Attachment 7 [Mr. Smith's comment letter].) Mr. Smith disputed the methodology used by the

City and the results of the analysis. Among other allegations, Mr. Smith argued (1) the EIR relied on unrepresentative and outdated traffic counts; (2) the EIR's trip generation analysis was flawed; (3) the EIR made improper assumptions, including trip generation; (4) the EIR's analysis of traffic queues was flawed; (5) the EIR's mitigation for traffic impacts was inadequate; (6) the EIR's traffic analysis was too narrow; (7) the EIR failed to adequately analyze emergency access; (7) the EIR failed to adequately analyze impacts on bicyclists and pedestrians; and (8) the thresholds of significance were inadequate.

At trial, the petitioners relied on Mr. Smith's letter to support their arguments that the traffic analysis was defective. The court did not find Mr. Smith's comments persuasive, stating: "The record establishes that the City's expert prepared a comprehensive traffic study. A detailed traffic impacts analysis section was included in the EIR along with extensive responses to comments . . . . There is substantial evidence to support a finding that the traffic analysis was adequate and that the City Council was fully informed at the time they made their findings and decision." (See Attachment 8 [Court's Decision].) The court determined that the EIR's traffic analysis was adequate and upheld the EIR. The case is currently on appeal.

### **Philip King, Ph.D.**

At the request of the Alliance, Dr. King submitted two letters alleging the project will result in significant urban decay impacts in Oakland. As explained below, his credibility has been called into question by at least one court.

We have worked on a number of projects where the lead agency received comments from Dr. King alleging that the project will result in urban decay impacts. As noted in CEQA case law, urban decay is potentially relevant when the proposed project consists of a big-box retail store; the concern is that the discount retailer will force less efficient retailers out of business. Dr. King, however, appears to believe that all types of projects will result in urban decay, or is at least willing to advance such arguments on behalf of project opponents. Dr. King has submitted comments alleging urban decay impacts on behalf on project opponents for a wide array of projects, ranging from retail projects of various sizes to a fitness center located in suburban Roseville.

Although our firm has had numerous encounters with Dr. King, our experience with one project in particular – the Lifetime Fitness Center Project in Roseville – encapsulates our overall impression of Dr. King's credibility as a purported expert on urban decay.

The Lifetime Fitness Center Project is a 120,000 square-foot fitness facility located in Roseville, California. The City of Roseville prepared an EIR for the project in 2013. For several obvious reasons, chiefly the nature of the project – a fitness center – there was no plausible basis for assuming that the project might result in significant urban decay impacts, and therefore, an analysis of urban decay was not included in the Draft EIR. On the very night of the City Council hearing, well after the date on which the Final EIR had been published, a lawyer representing project opponents submitted a letter from Dr. King alleging that the project will result in

significant urban decay impacts. In response, the City Council chose to close the public hearing on the project, but to continue its deliberations until such time as City staff could review the late comments from Dr. King. Staff thereafter retained an economist – ALH Economics – to review Dr. King’s urban decay claims. As submitted to the City upon completion, the report prepared by the economist concluded that urban decay was *not* a reasonably anticipated consequence of the project and went on to assert that, based on his history in predicting urban decay for many other projects around California, Dr. King lacked credibility on the subject.

The ALH report concluded that Dr. King’s analysis was “based upon faulty and undocumented assumptions” and that his work was “sloppy and often unsubstantiated[.]” (See Attachment 9 [ALH Report, p. 23].) The report also explained:

Dr. King’s submission at the very end of a project’s administrative process of materials insisting that a CEQA document is inadequate and must be redone is not a one-time event, but rather is part of an established pattern of inaccurate doom and gloom urban decay predictions made repeatedly by him throughout California and beyond. . . . [I]t is common practice for Dr. King to submit an 11th hour claim that a project seeking EIR certification has an inadequate EIR due to an insufficient urban decay analysis. These claims are accompanied by memos similar to the one Dr. King submitted regarding Life Time Fitness . . . . Oftentimes there are math or other errors in Dr. King’s reports (such as referenced earlier by the Court of Appeal, Fifth Appellate District, State of California), but even more critically, his predictions regarding business closure and resulting urban decay are repeatedly proven to be inflammatory and wrong.

(See Attachment 9 [ALH Report, p. 24].)

The report includes detailed case studies analyzing Dr. King’s previous predictions of urban decay. The report concludes that, in each instance, Dr. King’s predictions proved to be wrong. The case studies involved Walmart stores and represented Walmart development over a span of time and throughout California, including Fairfield, Yuba City, and Gilroy. These cases were selected because they are instances where development Dr. King claimed would cause urban decay had been built and where ALH Economics had familiarity or conducted previous research following upon Dr. King’s predictions. In every case where Dr. King predicted urban decay would occur, the investigation showed that, contrary to Dr. King’s prediction, the Walmart stores had not caused urban decay. (See Attachment 9 [ALH Report, pp. 24-33].) Based on its review of the record, including the ALH Report, the City Council ultimately found that the contentions made by Dr. King were without merit. (See Attachment 10 [Roseville City Council Resolution 13-471].)

In the ensuing litigation, the petitioners relied on Dr. King’s letter to support their argument that the EIR failed to adequately analyze urban decay impacts. The court rejected the argument and upheld the EIR. Notably the court pointed to the report prepared by the City’s

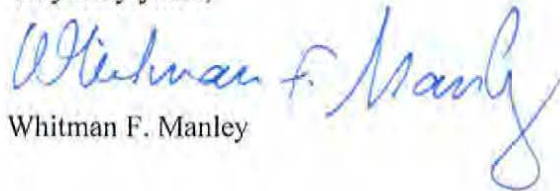

Mr. David J. Kelly, Esq.  
November 30, 2015  
Page 6

urban decay consultant and found it affirmed the City's determination that Dr. King's submitted documentation on urban decay lacked credibility. (See Attachment 11 [Judgment].)

[PROPOSED] FINAL JUDGMENT DENYING PETITION FOR WRIT OF MANDATE

1 On October 2, 2014, pursuant to a request of the court, Petitioner DR. MICHAEL G.  
2 ADELBERG, filed an Amended Notice of Hearing, setting the trial in this matter for October 17, 2014,  
3 at 10:30 am in Department 42 of the Sacramento Superior Court. On October 16, 2014, this Court  
4 issued a tentative ruling on the merits pursuant to Local Rule 1.06(A). A copy of the tentative ruling is  
5 attached here as Exhibit A. As indicated in Local Rule 1.06(B), the tentative ruling becomes the final  
6 ruling of the court unless a party requests a hearing before 4:00 p.m., the court day before the scheduled  
7 hearing. No party requested a hearing. Accordingly, the Court's tentative ruling is hereby the final  
8 ruling of the Court.

9 IT IS HEREBY ORDERED, ADJUDGED, AND DECREED as follows:

10 1. The Verified Petition for Writ of Mandate is denied in its entirety. The Court finds and  
11 rules that, with respect to the claims alleged by Petitioner, Respondents and Defendants COUNTY OF  
12 SACRAMENTO et al. complied with the California Environmental Quality Act (Pub. Resources Code,  
13 § 21000 et seq.). The basis for this ruling is set forth in the Court's final ruling in the matter, which is  
14 attached as Exhibit A to this judgment. Exhibit A is incorporated by reference in its entirety.

15 2. Final judgment shall be, and hereby is, entered in favor of Respondents and Defendants,  
16 and against Petitioner, on all claims set forth in the Petition.

17 3. Respondent is the prevailing party in this action and may recover its costs of suit from  
18 Petitioner by timely filing of a memorandum of costs. Petitioner retains the right to file a timely motion  
19 to strike or tax costs.

20  
21 IT IS SO ORDERED AND ADJUDGED.

22  
23 Dated: 10/31/2014

24  
25 The Honorable Allen Sumner  
26 Judge, Sacramento County Superior Court

EXHIBIT A

## **EXHIBIT A**

**SUPERIOR COURT OF CALIFORNIA  
COUNTY OF SACRAMENTO**

<b>DATE/TIME</b>	<b>October 17, 2014, 10:30 a.m.</b>	<b>DEPT. NO</b>	<b>42</b>
<b>JUDGE</b>	<b>HON. ALLEN SUMNER</b>	<b>CLERK</b>	<b>M. GARCIA</b>
<b>DR. MICHAEL G. ADELBERG,</b>  Petitioner,  v.  <b>COUNTY OF SACRAMENTO, SACRAMENTO COUNTY BOARD OF SUPERVISORS, et al.,</b>  Respondents		<b>Case No.: 34-2012-80001624</b>	
<b>JESUIT HIGH SCHOOL OF SACRAMENTO,</b>  Real Party in Interest			
<b>Nature of Proceedings:</b>		<b>PETITION FOR WRIT OF MANDATE</b>	

Following is the court's tentative ruling denying the petition for writ of mandate scheduled for October 17, 2014, at 10:30 a.m., in Department 42.

In this mandamus action under the California Environmental Quality Act. ("CEQA"; Pub. Resources Code, § 21000 et seq.)<sup>1</sup> Petitioner Adelberg challenges the decision by Respondent County of Sacramento ("County") approving construction of a chapel and related infrastructure by real party in interest Jesuit High School. For the reasons discussed below, the petition is denied.

**INTRODUCTION**

Jesuit High School ("Jesuit") is a private Catholic boys' school located in a residential neighborhood in the County. It has operated at the same location for nearly 50 years. In 2008 Jesuit applied to the County for a permit to construct a chapel, parking lot, access drive and

---

<sup>1</sup> Unless otherwise noted, all statutory references are to the Public Resources Code.

traffic signal adjacent to its campus (collectively the "project"). Thus began a five-year environmental review process leading to the County's approval of the project in July of 2013. (See generally Administrative Record ["AR"] 72-74.)

The project was opposed by Petitioner and other residents of Lantern Court, a small cul-de-sac backing up to the Jesuit High School campus. The residents of Lantern Court raised numerous complaints about the project, including land use, aesthetics, traffic, circulation and safety, air quality, noise, biological resources, hazards and hazardous materials, privacy, cumulative impacts, growth inducing impacts, greenhouse gas emissions and property values. (AR 507.) The number of complaints and complainers winnowed over the years.

Petitioner alone now brings this challenge. He opposed the project since its inception, but for differing reasons over time.<sup>2</sup> In this petition he challenges only the project's impact on traffic. More specifically, where a new traffic signal should be installed to provide access from the nearby main thoroughfare of Fair Oaks Boulevard to the school located in a residential neighborhood. The County explains:

[One] important purpose of the project is to provide safe, direct access to the campus from Fair Oaks Boulevard. (AR 200.) Under current operations, traffic from Fair Oaks Boulevard arriving on campus must snake through neighborhood streets to arrive at campus. (AR 237, 2257-2258, 2262.) Youthful drivers exiting the school parking lot must brave an unsignalized left-turn onto busy Fair Oaks Boulevard. (AR 2258.) The Project includes a new driveway directly connecting to Fair Oaks. (AR 200.) The access will be signalized for safe operations and will relieve surrounding residential streets, especially Gordan Lane, of school-related traffic and congestion that they have experience for years. (AR 134, 153, 432-424, 2279-2280.)

(Opposition 1:12-19.)

The new access drive and traffic signal on Fair Oaks Boulevard will be approximately 400 feet west of Lantern Court, where Petitioner lives. Petitioner argues the County failed to comply with CEQA because it relied on a flawed environmental impact report ("EIR"). (Pet. ¶

---

<sup>2</sup> Some of his objections had little to do with any impact the project would have on the environment. For example: "Jesuit thinks they are erecting a statue of God. [¶] By contrast, I think their statue represents an extreme instance of persecution of one particular Jew, symbolizing more than 2000 years of Christian persecution of Jews, including every conceivable outrage from rape to wanton massive genocide." (AR 550.)

25.) Specifically, the EIR failed to adequately disclose, analyze or mitigate the project's impact on "traffic and circulation."<sup>3</sup> (Pet. ¶¶ 27.) Petitioner seeks a writ of mandate ordering the County to set aside its approval of the project and prepare a new EIR.<sup>4</sup>

The petition is denied.

## BACKGROUND

### Procedural History

The County initially concluded an EIR was not necessary because the project's environmental impacts could be reduced to a less than significant level through mitigation measures. (AR 1672.) Ultimately, however, the County decided to prepare a full EIR in hopes of avoiding litigation. (AR 629 and 2498.)

The County released a draft EIR on December 27, 2012. (AR 609-913.) The draft EIR included a detailed "Transportation Study." (AR 914-1170.) The County received six comment letters – including three from Petitioner and one from his traffic expert. (AR 507-580.) Petitioner's expert provided a lengthy critique of the Transportation Study, which now forms the bulk of Petitioner's opening brief.<sup>5</sup>

The County's final EIR, released in May 2013, responded thoroughly to all comments received on the draft EIR. (AR 113-608.) The County Planning Commission certified the final EIR and approved the project on June 10, 2013. (AR 103-113.)

---

<sup>3</sup> The petition also mentions aesthetics and land use. (Pet. ¶ 27.) However, Petitioner's opening and reply briefs focus entirely on traffic and circulation. The court thus finds Petitioner has waived any argument based on aesthetic or land use impacts not briefed. (*Doe v. Lincoln Unified School Dist.* (2010) 188 Cal.App.4<sup>th</sup> 758, 767)

<sup>4</sup> Work on the project proceeded during the pendency of this action. It appears the chapel, parking lot and access drive are complete. The traffic signal has been installed, but is not operational. Notwithstanding completion of the chapel, the County does not argue Petitioner's challenge is now moot. (See *Woodward Park Homeowners v. Garreks* (2000) 77 Cal.App.4<sup>th</sup> 880; compare *Santa Monica Baykeeper v. City of Malibu* (2011) 193 Cal.App.4<sup>th</sup> 1538.)

<sup>5</sup> Indeed, much of the expert's critique is simply inserted verbatim into Petitioner's opening brief, with no explication or argument. (*Doe v. Lincoln Unified School Dist.*, *supra*, 188 Cal.App.4<sup>th</sup> at 767 [a brief should contain legal argument with citation of authorities on point. If none is furnished on a particular point, the court may treat it as waived and pass it without consideration].)

Petitioner appealed to the County Board of Supervisors. (AR 1397-99.) The Board denied his appeal and approved the project on July 30, 2013. (AR 71-102.) This petition followed.

#### Environmental Impact

The court notes at the outset what this case is *not* about. In approving the project, the County considered numerous potential impacts on: land use; drainage and water quality; public services; *traffic*; noise; air quality; aesthetics; biological resources; climate change; hazardous materials; and cultural resources. (See generally AR 82-102.) The County found eight significant, or potentially significant, environmental impacts, but concluded they could be mitigated to less than significant levels.<sup>6</sup> (AR 88-90, 92-101.) Petitioner does not challenge these findings.

The County found the project's remaining environmental impacts would be less than significant. The County made 36 such findings. Petitioner challenges only the County's finding the project would not result in any significant adverse impact to intersection operations or traffic safety. (AR 86, 87.)

Over the course of the five-year environmental review process, several changes were made to Jesuit's initial plans. As finally approved by the County, the project includes: (1) a use permit allowing Jesuit to construct a 10,500 square foot chapel, and develop related parking and site improvements, including *a new access drive on Fair Oaks Boulevard with a new traffic signal*; (2) a use permit to increase the maximum number of students from 1,000 to 1,100; (3) a use permit allowing the chapel to be used as a private social center, including weddings, baptisms and funerals; and (4) a design review to comply with the County's Commercial and Mixed Use Design Guidelines. (AR 1.) This petition challenges only the new access drive and traffic signal.

---

<sup>6</sup> For example, the project would increase noise levels, which could be mitigated by installing a masonry sound wall. (AR 87-90.) The project would also remove some native trees, which could be mitigated by planting equivalent native trees. (AR 93.)

## EIR

The fundamental goal of the EIR is to inform the County and public of any significant adverse impact the Jesuit project is likely to have on the environment. (§ 21061; *Neighbors for Smart Rail v. Exposition Metro Line* (2013) 57 Cal.4<sup>th</sup> 439, 505.) The EIR compares what will happen if a project is built with what will happen if it is not. (See *Woodward Park Homeowners Assn., Inc. v. City of Fresno* (2007) 150 Cal.App.4<sup>th</sup> 683, 707.) The EIR is also intended to “demonstrate to an apprehensive citizenry that the agency has, in fact, analyzed and considered the ecological implications of its actions.” (*Laurel Heights Improvement Assn. v. Regents of the University of California* (1988) 47 Cal.3d 376, 392.) If CEQA is followed, the public will know the basis on which the County approved the Jesuit project so the public can respond if it disagrees. (*Ibid.*)

### The Jesuit High School Project

The County’s CEQA Findings of Fact, final EIR and the Transportation Study describe the Jesuit project in detail, including possible impacts on traffic. (AR 71-102, 113-608, 914-1170.)

The project is located on the south side of Fair Oaks Boulevard, approximately half way between Gordon Lane and Lantern Court. The existing Jesuit High School campus is located immediately to the south and southeast. The new access drive and traffic signal are located on Fair Oaks Boulevard, directly across from Arden Hills Country Club Lane and approximately 440 feet west of Lantern Court. Petitioner lives on Lantern Court.

There are currently four ways to access the Jesuit High School campus by car: Gordon Lane, north Jacob Lane, south Jacob Lane and American River Drive.

Gordon Lane is a two-lane residential street off Fair Oaks Boulevard that extends south to Jesuit’s main parking lot. There is a stop sign on Gordon Lane where it intersects with Fair Oaks Boulevard. Students parking on campus generally use the Gordon Lane access.

Jacob Lane is a two-lane street that extends from Fair Oaks Boulevard to the American River Parkway. There is a traffic light at the intersection of Fair Oaks Boulevard and Jacob Lane. The main entrance to Jesuit High School is on Jacob Lane. This is the entrance to the designated drop-off and pick-up area, as well as limited faculty and visitor parking.

There is another access point further south on Jacob Lane used by campus residents.

The fourth access point is off of American River Drive on the south side of campus. This leads to athletic fields and is used primarily for after-school activities.

### Traffic Study

CEQA addresses projects that will have a "significant" impact on the environment. (See § 21002.) The CEQA Guidelines in turn encourage agencies such as the County to develop their own local "thresholds of significance."<sup>7</sup> Compliance with these thresholds will normally mean the project's effect on the environment will be deemed "less than significant." (Guidelines § 15064.7.)

Here the County's Traffic Impact Analysis Guidelines ("Traffic Guidelines") require a traffic study if the project will generate either 100 or more "peak hour" vehicles trips, or 1,000 or more total daily vehicle trips. Petitioner does not challenge these Traffic Guidelines.

The County concluded the increased enrollment from the project would lead to approximately 81 additional morning peak hour trips and 17 additional afternoon peak hour trips. (AR 228-229.) The County thus concluded the increased enrollment was not significant as defined by its Traffic Guidelines and therefore did not require a traffic study. (AR 228-29.) Petitioner does not challenge this conclusion.

The Traffic Guidelines also require a traffic study if the project will "substantially change the off-site transportation system or connections to it." (AR 935.) The County concluded a traffic study was required because of "potential modifications to traffic patterns on Fair Oaks Boulevard as a result of the project." (*Id.*) The traffic study was also required to evaluate whether the project's new signal-controlled access to the campus would have a significant effect on traffic operations at nearby intersections. (AR 230.)

The County's Traffic Guidelines measure traffic impact by "level of service." (AR 238-39.) The level of service measures the delay and congestion experienced by drivers using an intersection or roadway. The level of service is rated by a grade from A (free flowing traffic) to F (jammed conditions and extreme delay). (AR 231, 233.) The County designated the minimum acceptable level of service in the Jesuit project area as E ("very long" delays). (AR 233, 238.)

---

<sup>7</sup> The CEQA Guidelines ("Guidelines") are regulations adopted to implement CEQA and are codified at California Code of Regulations, title 14, chapter 3, sections 15000-15387.

The County concluded the majority of people entering and exiting the campus use either Gordon Lane or the main entrance on Jacob Lane,<sup>8</sup> (AR 931.) Petitioner does not challenge this conclusion. The County also concluded the project would not affect traffic or circulation at the south Jacob Lane or American River Drive access points. (AR 939-943.) Petitioner does not challenge these conclusions either.

The County then analyzed how the Jesuit project would affect the level of service at seven intersections along Fair Oaks Boulevard: Mariemont Avenue, Gordon Lane (current access point), Carter Road, Arden Hills Country Club Lane (proposed new access point), Lantern Court (where Petitioner lives), Genessee Court, and Jacob Lane (current access point). (AR 918-20.) Petitioner does not challenge the choice of these intersections to gauge the project's impact on traffic.

Using the thresholds of significance defined by its Traffic Guidelines, the County concluded the project would not cause a significant impact on traffic at any of the seven intersections studied. (AR 86, 242-43.) Petitioner challenges this conclusion, arguing the EIR is insufficient to support the County's decision the proposed traffic signal on Fair Oaks Boulevard near Lantern Oaks will not have a significant impact.

#### STANDARD OF REVIEW

In evaluating Petitioner's CEQA challenge, the court reviews the administrative record to determine whether the County abused its discretion. (*Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal.4<sup>th</sup> 412, 426.) Abuse of discretion can be established in two ways: (1) the County did not *proceed in the manner required by law*, or (2) the County's decision is not *supported by substantial evidence*. (*Id.*) The type of error alleged determines the standard of review the court will apply.

The court determines de novo, as a matter of law, whether the County proceeded in the manner required by law. (*Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 564.) In contrast, the court accords much greater deference to the County's factual

---

<sup>8</sup> For example, in the morning 85 to 90 percent of all traffic entering the campus uses these two access points. (AR 931.) After school, 75 to 90 percent of traffic uses these two access points. In the evening (5 to 6 pm) 70 to 75 percent use these two access points. (*Id.*) Petitioner does not challenge these findings. At one point his expert complained these numbers were suspect (AR 526), but Petitioner did not pursue this in his briefing.

determinations, upholding the County's conclusions if supported by substantial evidence in the record. (*Vineyard Area Citizens, supra*, 40 Cal.4<sup>th</sup> at 435; *Preserve Wild Santee v. City of Santee* (2012) 210 Cal.App.4<sup>th</sup> 260, 275.) Substantial evidence "means enough relevant information and reasonable inferences from this information that a fair argument can be made to support a conclusion, even though other conclusions might also be reached." (Guidelines § 15384.) It includes facts, reasonable assumptions predicated upon facts and expert opinion supported by facts. (*Id.*)

The substantial evidence standard is "highly deferential." (*California Native Plant Society v. City of Santa Cruz* (2009) 177 Cal.App.4<sup>th</sup> 957, 984.) The court must indulge all reasonable inferences that would support the County's determinations and resolve all conflicts in the evidence in favor of the County's decision. (*Id.*) The court must also resolve reasonable doubts in favor of the County's finding and decision. (*Laurel Heights Improvement Assn. of San Francisco v. Regents of the University of California, supra*, 47 Cal.3d at 393.) The court may not set aside the County's approval of the EIR simply because an opposite conclusion would have been equally reasonable. (*Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 564.) "A court's task is not to weigh conflicting evidence and determine who has the better argument. These questions are left to the discretion of the agency and its environmental consultants; it is they who decide how best to prepare an EIR to achieve CEQA's informational purpose." (*San Diego Citizenry Group v. County of San Diego* (2013) 219 Cal.App.4<sup>th</sup> 1, 12.)

#### REVIEW OF THE EIR

The EIR is the "heart" of CEQA. (*Citizens for a Sustainable Treasure Island v. City and County of San Francisco* (2014) 227 Cal.App.4<sup>th</sup> 1036, 1045.)

The purpose of an [EIR] is to provide public agencies and the public in general with detailed information about the effect which a proposed project is likely to have on the environment; to list ways in which the significant effects of such a project might be minimized; and to indicate alternatives to such a project. [Citation.] An EIR should be prepared with a sufficient degree of analysis to provide decisionmakers with information which enables them to make a decision which intelligently takes account of environmental consequences. An evaluation of the environmental effects of a proposed project need not be exhaustive, but the

sufficiency of an EIR is to be reviewed in the light of what is reasonably feasible. ... The courts have looked not for perfection but for adequacy, completeness, and a good faith effort at full disclosure of service.

(*Id.* [internal quotes omitted].)

Determining if the County's EIR is adequate is "essentially pragmatic." (*Berkeley Keep Jets Over the Bay Com. v. Board of Port Comrs.* (2001) 91 Cal.App.4th 1344, 1356.) Preparing an EIR requires exercise of judgment.

The court does not pass on the "correctness" of the EIR's conclusions, but only upon the EIR's "sufficiency as an informative document." (*Laurel Heights Improvement Assn' v. Regents of the University of California, supra*, 47 Cal.3d at 392.) Thus the court will not set aside the County's approval of its EIR simply because an opposite conclusion would have been equally reasonable. The court's task is not to weigh conflicting evidence regarding the project's impact on traffic and determine who has the better argument. (*Ibid.*)

The court may not substitute its judgment, but instead is limited to ensuring the County considered the environmental consequences of its action. (*Berkeley Keep Jets Over the Bay Com. v. Board of Port Comrs., supra*, 91 Cal.App.4th at 1356) The County's EIR must be upheld if it "reasonably sets forth sufficient information to foster informed public participation and to enable the decision makers to consider the environmental factors necessary to make a reasoned decision." (*Id.*)

The court has reviewed the County's EIR; it satisfies these requirements.

Petitioner has the burden of showing the County's EIR is legally inadequate. (*Save Our Peninsula Committee v. Monterey County Bd. of Supervisors* (2001) 87 Cal.App.4th 99, 117.) Petitioner fails to meet this burden.

Again, the EIR identifies the project's *significant* impacts on the environment, identifies alternatives to the project and indicates how significant impacts can be mitigated or avoided. (§ 21002, 21002.1.) A significant impact on the environment "means a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or aesthetic significance." (Guidelines § 15382.) The County may determine an environmental impact is not significant if it concludes the impact is not a substantial or potentially substantial adverse change to the environment. (Guidelines § 15382; *North Coast Rivers Alliance v. Martin*

*Municipal Water District* (2013) 216 Cal.App.4<sup>th</sup> 614, 624.) The County's conclusion a particular effect of the project will not be significant is an abuse of discretion if that conclusion is not supported by substantial evidence in the administrative record. (*Protect the Historic Amador Waterways, supra*, 116 Cal.App.4<sup>th</sup> at 1113.)

The EIR does not have to provide a detailed analysis supporting the County's conclusion the Jesuit project will not have a significant impact on traffic. (See *Protect the Historic Amador Waterways v. Amador Water Agency* (2004) 116 Cal.App.4<sup>th</sup> 1099, 1112-13.) Instead, the EIR need only contain a "brief statement addressing the reasons for that conclusion." (*North Coast Rivers Alliance, supra*, 216 Cal.App.4<sup>th</sup> at 625; § 15128.)

#### ANALYSIS

Petitioner argues the County's EIR (and Transportation Study upon which the EIR is based) is legally inadequate for four reasons: (1) it fails to properly analyze traffic impacts to nearby streets; (2) it contains assumptions biased against the project's alternatives; (3) its "queuing analysis" is flawed; and (4) it ignores substantial evidence the project will impact traffic.

Petitioner's arguments are not easy to understand. This is due in part because much of Petitioner's brief simply repeats his expert's comments verbatim, without explanation or analysis. Additionally, it is not always clear whether Petitioner contends the flaws he alleges in the EIR constitute a failure by the County to proceed in the manner required by law as opposed to a failure of evidence supporting the County's decision.

Again, the court accords deference to the County's factual findings and conclusions. It thus appears Petitioner seeks to argue that, in failing to include certain information in the EIR, the County *failed to proceed in the manner required by law*. Failure to proceed in the manner required by law is a legal question the court would review de novo. However, a failure to include information in the EIR will not rise to a failure to proceed in the manner required by law unless the EIR's analysis is "clearly inadequate or unsupported." (*Citizens for a Sustainable Treasure Island, supra*, 227 Cal.App.4<sup>th</sup> at 1046.) Certainly the County would abuse its discretion if it failed to include information in the EIR so as to "preclude informed decision making and informed public participation, thereby thwarting the statutory goals of the EIR

process.” (*Rialto Citizens for Responsible Growth v. City of Rialto* (2012) 208 Cal.App.4th 899, 925.)

Here the difference between the two standards of review is of little importance. Petitioner’s challenge fails under either test because the County’s EIR provided sufficient information to identify and assess the project’s potential impact on traffic.

**1. The EIR properly analyzed impacts to nearby streets**

Petitioner first asserts (1) the project will shift traffic from the Gordon Lane and Jacob Lane entrances to the school to a “more dangerous” location on Fair Oaks Boulevard; and (2) there is inadequate space at the new entrance to accommodate queuing. (Opening at 11:2-4.) He supports these assertions by three citations to the administrative record: pages 1594, 1443, and 5337. None persuades.

- Page 1594 was not included in the administrative record provided to the court and thus provides no support.
- Page 1443 is a letter Petitioner wrote the County Planning Commission in 2013 stating the proposed location for the new access drive and signal is “terrible,” suggesting the County consider Gordon Lane as an alternative. It did.
- Page 5337 is a 2011 letter to the Planning Commission by residents of Lantern Court, including Petitioner, stating the proposed entrance is unsafe because it is at the crest of a hill with poor visibility, and the new signal will cause queue lengths of 400 to 500 feet.<sup>9</sup>

The latter two citations do not establish the project will shift traffic to a more dangerous location or will cause excessive queue lengths.

Petitioner argues: “In response to comments, the County asserts that it is not an assumption, but what occurs at the campus and what makes sense. (AR 464-65.)” (Opening 11:5-6.) But Petitioner provides no explanation what comments or assumptions he refers to, or why these make the EIR inadequate.

Petitioner cites pages 464 and 465 of the administrative record. This is of little help. It is a portion of the County’s response to comments from Petitioner’s expert on the inadequacy of the Transportation Study. The comments of Petitioner’s expert run for almost four single-spaced

---

<sup>9</sup> This letter was written approximately one year before the Transportation Study.

pages; the County's response is almost three single-spaced pages. (AR 460-66.) Petitioner does not identify what specific portion he considers applicable. (See *Bernard v. Hartford Fire Ins. Co.* (1991) 226 Cal.App.3d 1203, 1205 [party must provide page citations to record]; Cal. Rule Court, rule 3.1113, subd. (k) [party must reference specific page and, if applicable, paragraph or line number].)

Petitioner also cites pages 1461, 2663 and 2672 of the administrative record. Pages 1461 and 2663 contain one paragraph of the reply from Petitioner's expert to the County's response to comment 3.3. Page 2672 contains a portion of the County's comment on the expert's reply. Petitioner's expert focuses on two criticisms of the Transportation Study: (1) it assumes a large percentage of current traffic approaches the school from the west on Fair Oaks Boulevard, and (2) a large number of those approaching from the west bypass the Gordon Lane access and continue on to the Jacob Lane access. Petitioner's expert maintains both assumptions are "highly questionable." (AR 1461.)

In determining if the County's determination is supported by substantial evidence, the court may consider "reasonable assumptions predicated on facts and expert opinion supported by facts." (*Parker Shattuck Neighbors v. Berkeley City Council* (2013) 222 Cal.App.4th 768, 777.) If Petitioner is trying to argue the County's assumption is unreasonable, and thus cannot constitute substantial evidence, the court is not persuaded.

The County assumes a significant portion of current school traffic using Fair Oaks Boulevard approaches the school from the west. (AR 465.) This assumption is based on the following facts:

- Many of the area's jobs are located to the west in downtown Sacramento, suggesting many working parents who drop off their children continue on to jobs located to the west. When those same parents pick up their children, they would approach from the west.
- The closest access to Jesuit from a freeway is to the west at Watt Avenue and Highway 50. Thus, anyone using Highway 50 would likely approach Jesuit from the west.
- Student zip code data suggests approximately 70 percent of students live in areas where the shortest travel path to Jesuit would access the school from the west on Fair Oaks Boulevard.

(AR 465.)

The court finds the County's assumptions are reasonable and supported by substantial evidence. The fact Petitioner's expert disagrees does not demonstrate the County abused its discretion.

Petitioner appears to fault the County for not including the zip codes of all Jesuit students in either the Transportation Study or the EIR. Petitioner cites no authority requiring the County to include such information. Again, the EIR is an "informational document which provides detailed information to the public and to responsible officials about significant environmental effects of a proposed project." (*Defend The Bay v. City of Irvine* (2004) 119 Cal.App.4th 1261, 1265.) The court must uphold the County's EIR if there is substantial evidence in the record supporting the County's decision the EIR is adequate and complies with CEQA. CEQA requires only "a good faith effort at full disclosure; it does not mandate perfection." (*Id.*) Accordingly, the failure to include student zip codes in the EIR does not render it insufficient.

The County also assumes a significant number of drivers approaching the school from the west bypass Gordon Lane and continue on to the main entrance on Jacob Lane. (AR 464-65.)

This assumption is based on the following facts:

- Jacob Lane has a traffic signal. This makes it easier to turn onto Jacob Lane from Fair Oaks Boulevard, and easier to get back onto Fair Oaks Boulevard from Jacob Lane.
- In contrast, Gordon Lane only has a stop sign. This makes it more difficult to turn onto Gordon Lane from Fair Oaks Boulevard, and more difficult to get back onto Fair Oaks Boulevard from Gordon Lane.
- The Transportation Study shows an average delay of 271 seconds (4 ½ minutes) to make a left turn from Gordon Lane onto Fair Oaks Boulevard, but only 48 seconds to make a left hand turn from Jacob Lane onto Fair Oaks Boulevard. It is thus much quicker to get back onto Fair Oaks Boulevard from Jacob Lane than from Gordon Lane.
- The main entrance on Jacob Lane is the school's designated area to drop-off and pick-up students. It is reasonable to assume parents dropping off and picking up their children use the area designated for that purpose.

(AR 464-65.)

Again, the court finds the County's assumption reasonable and supported by substantial evidence in the record.

## 2. Bias

Petitioner argues the County's Transportation Study is biased against the alternatives Petitioner urges. The court is not persuaded.

CEQA requires the County to analyze the environmental impacts of both the project and reasonable alternatives to it. (§ 21002.1; *Mira Mar Community v. City of Oceanside* (2004) 119 Cal.App.4<sup>th</sup> 477, 487 [public agencies must consider, and EIR must identify, feasible alternatives that could substantially lessen any significant environmental impacts of a project].) The CEQA Guidelines provide: "An EIR shall describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives." (Guidelines § 15126.6, subd. (a).)

The County's decision as to which alternatives to study will be upheld as long as there is a reasonable basis. (*City of Maywood v. Level of Service Angeles Unified School Dist.* (2012) 208 Cal.App.4<sup>th</sup> 362, 414.) Petitioner must demonstrate the alternatives the County considered are manifestly unreasonable and do not contribute to a reasonable range of alternatives. (*California Native Plant Society v. City of Santa Cruz* (2009) 177 Cal.App.4<sup>th</sup> 957, 988.)

The County considered four alternatives to the project:

- (1) Leaving the site as is;
- (2) Gordon Lane access alternative (same as the project but instead of a new signalized access across from Arden Hills Country Club, a traffic signal would be installed at the Gordon Lane/Fair Oaks Boulevard intersection);
- (3) Gordon Lane access alternative with the chapel relocated to the west of the proposed site);<sup>10</sup> and
- (4) Constructing 17 single-family residences on the site, with access via a new roadway connecting to Fair Oaks Boulevard.<sup>11</sup> (AR 154.)

---

<sup>10</sup> As analyzed by the traffic study, the two Gordon Lane access alternatives would have an identical impact on traffic. Petitioner does not suggest otherwise.

Petitioner does not directly challenge the County's selection of these alternatives. Instead, he argues the Transportation Study was "biased" against these alternatives and in favor of the project.<sup>12</sup>

This argument fails aborning. The County determined the project will not have a significant impact on traffic. The County was thus not required to consider whether alternatives might have less impact. (See *Laurel Hills Homeowners Assn. v. City County* (1978) 83 Cal.App.3d 515, 521 [if significant impacts can be avoided "there is no need to resort to a consideration of the feasibility of environmentally superior alternatives identified in the environmental impact report"].) As our Supreme Court explains: "... CEQA does not mandate the choice of the environmentally best feasible project if through the imposition of feasible mitigation measures alone the appropriate public agency has reduced environmental damage from a project to an acceptable level." (*Id.*; see also *Kings County Farm Bureau v. City of Hanford* (1990) 221 Cal.App.3d 692, 731.)

The fact alternatives would have even less impact does not make the County's decision to proceed with the project an abuse of discretion.

Petitioner's specific challenges to the County's analysis of the alternatives also fail to show the County abused its discretion.

**a. The Gordon Lane approach**

Petitioner argues the Transportation Study erroneously assumed the Gordon Lane approach to Fair Oaks Boulevard is a single-lane approach. He maintains it is actually a two-lane approach: the right lane is used for right turns, and the left lane for left turns. Petitioner

---

<sup>11</sup> This alternative would meet none of the project's objectives. (*Watsonville Pilots Assn. v. City of Watsonville* (2010) 183 Cal.App.4<sup>th</sup> 1059, 1089 [purpose of EIR is not to identify alternatives that meet few if any of the project's objectives].) However, Petitioner does not argue the alternative is improper.

<sup>12</sup> For example, the Transportation Study concluded the project would improve the level of service during the peak morning hour at each of seven intersections studied. (AR 932 to 945.) Based on the County's Traffic Guidelines, the project would cause no significant impact on traffic. In contrast, the two Gordon Lane access alternatives would improve the level of service at five intersections, but traffic would be worse at two intersections.

From this Petitioner argues the Transportation Study is biased in favor of the project and against the alternatives. The court does not find this establishes any "bias" by the County.

raised this complaint with the County. The County responded its Transportation Study assumed a two-lane approach. (AR 469.)

Petitioner argues the County's response is not supported by substantial evidence, explaining: "[T]he sub-appendices to the Appendix A of the Draft EIR that contain the computation sheets were not included in the Appendix A or the administrative record." (Opening at 12:24-25.)

Here, again, the court is unclear what documents Petitioner maintains are missing from the administrative record. It appears Petitioner claims the missing documents consist of (1) sub-appendices to (2) Appendix A to (3) the Draft EIR. According to the index to the administrative record, Appendix A to the Draft EIR is the Transportation Study. The Transportation Study, in turn, contains four appendices (A, B, C, and D). (AR 974-1170.) . (See Guideline § 15148 [EIR should cite documents used in preparation but need not include them in EIR]; *Ebbetts Pass Forest Watch v. California Dept. of Forestry & Fire Protection* (2008) 43 Cal.4<sup>th</sup> 936, 958 [nothing in CEQA requires source materials available to public to be physically incorporated into official response to comments].)

If Petitioner is asserting the sub-appendices were omitted from the administrative record, this is incorrect. Obviously, they were not.

To the extent Petitioner complains the County referred generally to "sub-appendices" rather than citing page numbers, the court finds this is sufficient. (See *El Morro Community Assn. v. California Dept. of Parks & Recreation* (2004) 122 Cal.App.4<sup>th</sup> 1341, 1354 ["the Department could have included more detail about the titles of the technical reports. But we simply cannot say the DEIR failed to advise the public about the existence of this technical information or that the lack of specific titles constitutes a failure to comply with CEQA's procedural requirements."].)

Petitioner's argument fails to demonstrate bias by the County.

**b. Gordon Lane as a drop off point**

Petitioner argues the EIR is biased against the Gordon Lane alternatives because it assumes "a large percentage of the drop-off traffic approaching from the west along Fair Oaks Boulevard bypasses the potential drop-off point accessed via Gordon Lane in the existing condition to make the drop-offs at the more distance Jacob Lane but assumes that 90 percent of

these would use the westerly drop-off point [i.e., the new access point] in the Existing plus Project condition. (AR 736-740.)" (Opening at 13:1-6.) Once again the pages cited do not support this allegation.<sup>13</sup>

Petitioner then states the "EIR's traffic analysis . . . subjectively and unreasonably assumes that only 50 percent of this drop-off traffic would use the westerly drop-off point in the case of the Chapel Project Gordon Lane Access Alternatives. (AR 677-679.)" Again, the cited pages are not on point.<sup>14</sup>

Petitioner finally cites page 536, a letter by Petitioner's expert commenting on the draft EIR. Petitioner's expert believes people approaching the school from the west bypass Gordon Lane to use Jacob Lane which has a traffic light, making it easier to get back onto Fair Oaks Boulevard. He thus believes whether a traffic light is installed at Gordon Lane or the proposed site near Lantern Court, the same amount of traffic will shift to the earlier, lighted access. As a result, "the amount of drop-off traffic from the west shifted from the Jacob Lane facility to the westerly drop-off should be assumed equal under the Proposed Project and the Chapel Project Gordon lane Access Alternatives."

The County's analysis assumes more people will use the project's new access point rather than a signal at Gordon Lane for two reasons. First, total trip length using the project's new access is slightly shorter than total trip length using the Gordon Lane access. (AR 470.) Second, Gordon Lane is slower because it has speed bumps. (AR 471.) Again, the County's assumption is supported by the record and not unreasonable.

**c. Level of Service at Arden Hills Country Club Lane**

Petitioner argues the EIR "unfairly" attributes an unsatisfactory level of service at the Arden Hills Country Club Lane/Fair Oaks Boulevard intersection because the Country Club closes a gate at one of its entrances. (Opening, 13:24-26.) Petitioner believes this will force people leaving the Club to exit via Fair Oaks Boulevard. Petitioner faults the County for failing to evaluate an alternative that would assume the Club would open its gate to improve the level of service at the intersection. Petitioner cites no authority requiring the County to consider such a hypothetical alternative.

---

<sup>13</sup> They deal primarily with level of service and queue length.

<sup>14</sup> These deal primarily with level of service and queue length.

**d. Pedestrian improvements**

Petitioner complains the EIR "unreasonably" assumes the project will provide more pedestrian improvements than would either of the Gordon Lane access alternatives. Petitioner's expert believes it would be safer and "more pleasant" for pedestrians to get off busy Fair Oaks Boulevard at Gordon Lane than at the new intersection. But the County is not required to accept the conclusion of Petitioner's expert that Gordon Lane would be a safer and "more pleasant" place to put the new traffic signal. (*Browning-Ferris Indus. V. City Council* (1986) 181 Cal.App.3d 852, 863.) The County noted there are no sidewalks on Gordon Lane or along Fair Oaks Boulevard adjacent to Gordon Lane. (AR 473.) Again the County's response is reasonable and sufficient.

**e. The housing alternative**

Petitioner complains the EIR is biased against the housing alternative, largely based on arguments discussed above. Petitioner also faults the County for assuming it would not install a traffic signal at Gordon Lane under the housing alternative. The County responds the Gordon Lane intersection is not listed on its current Transportation Improvement and Program Guide. (AR 474.) Again, the County's response is reasonable and sufficient.

**3. The queuing analysis is adequate**

Petitioner argues the Transportation Study's "queuing analysis" contains two flaws rendering it "legally inadequate."

As discussed above, the County found the project would not significantly decrease the level of service at the seven intersections studied. The project thus would not have a significant impact on traffic as defined by the County's Traffic Guidelines. The County's expert nonetheless also conducted a "queue length analysis" of whether a line of cars stopped at the traffic signal would be so long as to block other intersections. (AR 243-44.) The queue length analysis showed the project would not cause queues to extend to the nearest intersections to the east (i.e., Lantern Court) or west (Carter Road). (AR 947.) In other words, cars stopped at the new traffic signal or Jacobs Lane would generally not extend down Fair Oaks Boulevard to either Lantern Court or Carter Road.

Petitioner argues this analysis is flawed. First because it “ignores fundamental engineering principles.” (Opening at 16:25-27.) But it is unclear what fundamental principles the County failed to consider.<sup>15</sup> Petitioner’s second alleged flaw is the queuing analysis relies on a theoretical traffic model rather than measurements of actual queue length.<sup>16</sup>

Neither argument persuades. The County’s Traffic Guidelines define significant traffic impacts in terms of decreased level of service – not queue length. The County nevertheless considered queue length.

The issue is not whether the County’s queuing analysis is irrefutable or could have been better. The relevant issue is only whether the studies are sufficiently credible to be considered as part of the total evidence that supports the agency’s decision. (See e.g., *Save Round Valley Alliance v. County of Inyo* (2007) 157 Cal. App. 4th 1437, 1467-68.) The County’s queue analysis meets this test, particularly where it was used to *supplement* the County’s other findings the project would not cause a significant impact on level of service. Additionally, the County included the criticisms of Petitioner’s expert in the final EIR, thereby alerting decision makers to the differing opinions. (*Id.* at 1468.) Far from misleading the public and decision makers, the County went beyond what was required by its own Guidelines.

**4. The county did not ignore substantial evidence the project will impact transportation**

Petitioner’s final argument is the County ignored substantial evidence the project will impact traffic on Fair Oaks Boulevard. Specifically, a “sight distance survey” conducted at the intersection to determine if the project would have a significant impact on safety. (AR 948.)

---

<sup>15</sup> Petitioner asserts a “significant impact” occurs when the 95<sup>th</sup> percentile queue in a turn lane approaches an intersection exceeds the storage length in that lane, thereby blocking traffic flow in the approach to the intersection. (Opening 16:25-27.) But the County’s queuing analysis did not ignore this principle. Indeed, the County’s analysis is based on 95<sup>th</sup> percentile queue lengths. (AR 947.)

<sup>16</sup> Petitioner argues this is flawed because on one weekday evening his expert observed queues extending back to Lantern Court. (AR 534.) Petitioner maintains his expert’s observations undermine the validity of the County’s queue length study. It does not.

The sight distance survey assessed whether the new access point on Fair Oaks Boulevard near Lantern Court would meet the visibility standards of Caltrans' Highway Design Manual.<sup>17</sup> (AR 948.) Would a driver turning onto Fair Oaks Boulevard have adequate visibility to complete the turn? The County's expert concluded the proposed access point met the sight distance requirement in both directions. (*Id.*; AR 245-46.) The County thus concluded the project would not adversely impact traffic safety. (AR 139.)

Petitioner contends the County ignored substantial evidence demonstrating the sight distance survey was flawed. Specifically, a letter from residents of Lantern Court stating (1) most drivers on Fair Oaks Boulevard exceed the speed limit and (2) the proposed new access point is at crest of a hill poor visibility. (AR 509.) The County did not ignore this evidence. Indeed, it spent over 30 pages in the EIR addressing every point raised in the residents' letter. (AR 417-51.)

Petitioner complains the County accepted the sight distance survey notwithstanding the residents' comments. But the sight distance survey was based on visibility standards set by Caltrans. Petitioner does not challenge the Caltrans standards. Indeed, Petitioner does not suggest the new intersection fails to meet the Caltrans standards.

Again, the County's reliance on Caltrans' visibility standards is substantial evidence supporting the County's conclusion the project would not have a significant impact on safety.

### CONCLUSION

CEQA encourages public review and comment, and is often enforced by neighbors concerned a development will impact their immediate environment. But the CEQA review is to prevent significant, adverse impacts on the environment in general – not the environment of particular persons. (*Mira Mar Mobile Community v. City of Oceanside* (2004) 119 Cal.App.4<sup>th</sup> 477, 492; *Friends of Davis v. City of Davis* (2000) 83 Cal.App.4<sup>th</sup> 1004, 1019.) As one court explained, "... all government activity has some direct or indirect adverse effect on some persons. The issue is not whether [the project] will adversely affect particular persons, but whether [the project] will adversely affect persons in general." (*Topanga Beach Renters Assn. v. Dept. of General Services* (1976) 58 Cal.App.3d 188, 195.) The CEQA review is not intended to

---

<sup>17</sup> Although not defined by either party, it appears "sight distance" refers to how much of Fair Oaks Boulevard is visible to a driver from the intersection.

simply "generate paper," but to compel government at all levels to make decisions with environmental consequences in mind. (*Laurel Heights Improvement Assn. v. Regents of University of California, supra*, 47 Cal.3d at 393.) The County did that here.

The County initially concluded all environmental impacts of the Jesuit High School project could be mitigated to less than significant levels. Therefore, no EIR was necessary. Petitioner disagreed. Hoping to avoid the cost of litigation, the County then prepared a full BIR. This took almost two years of studies, draft EIR's, public comment, responses by the County and preparation of a 500-page EIR. The administrative record of these proceedings exceeds 7,000 pages. In the end, the County once again concluded all of the project's environmental impacts could be mitigated to less than significant levels. The County made over 40 specific findings. Petitioner here challenges a few related to traffic.

Petitioner objects the Jesuit High School project may increase traffic on his street. It might. But that does not mean the County abused its discretion or violated CEQA in approving the project.

For the reasons discussed above, those challenges fail. The County proceeded in the manner required by law and its findings are supported by substantial evidence in the record. According, the petition for writ of mandate is denied.

The tentative ruling shall become the court's final ruling and statement of decision unless a party wishing to be heard so advises the clerk of this department no later than 4:00 p.m. on the court day preceding the hearing, and further advises the clerk that such party has notified the other side of its intention to appear. In the event this tentative ruling becomes the final ruling of the court, counsel for the prevailing party is directed to prepare a formal judgment, incorporating this ruling as an exhibit; submit it to opposing counsel for approval as to form; and thereafter submit it to the court for signature and entry of judgment in accordance with Rule of Court 3.1312.

The court prefers that any party intending to participate at the hearing be present in court. Any party who wishes to appear by telephone must contact the court clerk by 4:00 p.m. the court day before the hearing. (See Cal. Rule Court, rule 3.670; Sac. County Superior Court Local Rule 2.04.)

In the event that a hearing is requested, oral argument shall be limited to no more than thirty (30) minutes per side.

If a hearing is requested, any party desiring an official record of the proceeding shall make arrangement for reporting services with the clerk of the department not later than 4:30 p.m. on the day before the hearing. The fee is \$30.00 for civil proceedings lasting under one hour, and \$239.00 per half day of proceedings lasting more than one hour. (Local Rule 9.06(B) and Gov't. Code § 68086.) Payment is due at the time of the hearing.

SMITH ENGINEERING & MANAGEMENT

March 29, 2013

Mr. Don Mooney  
Law Office of Donald B. Mooney  
129 C Street, Suite 2  
Davis, CA 95616

**Subject:** Jesuit High School Expansion Project Chapel Use Permit and  
Design Review Project (SCN 2011082080)

Dear Mr. Mooney:

Per your request, I have reviewed the Draft Environmental Impact Report ("the DEIR") on the Jesuit High School Chapel Use Permit and Design Review Project ("the Project") in Sacramento County and the Appendix A Transportation Study prepared in support of the DEIR.

My qualifications to perform this review include registration as a Civil and Traffic Engineer in California and over 40 years professional consulting engineering practice in the traffic and parking field. I have both prepared and reviewed the traffic and parking sections of environmental review documents, including studies of high school campuses. I am familiar with the surroundings of the proposed Project and previously commented on the November 24, 2010 Initial Study/Mitigated Negative Declaration Jesuit High School Chapel Use Permit and Design Review. My professional resume is attached.

Findings of my review are summarized below.

TRAFFIC • TRANSPORTATION • MANAGEMENT

5311 Lowry Road, Union City, CA 94587 tel: 510.489.9477 fax: 510.489.9478

Letter # 3

Mr. Don Mooney  
 March 29, 2013  
 Page 2

### **Baseline Traffic Counts Appear Unrepresentative**

Observant neighbors to Jesuit High School noticed that the intersection turning counts for the May 2012 Transportation Study were apparently taken on Thursday, September 15, 2011. The neighbors noted that although the Transportation Study states on page 11 that schools were in full session, and point out that elementary, middle and high schools in the entire San Juan Unified School District dismiss at 1:00 – 1:30 pm on Thursdays. The missing school traffic from the early-closed public schools would result in understated traffic in the 'after-school' period that started at 2:30 pm and perhaps even in the pm peak hour. The neighbors also note that September 15, 2011 was 'Back To School Night' for Jesuit High School. They question whether Jesuit had early dismissal on this particular day.

In consideration of these concerns, I compared the existing traffic counts on Figure 3 of the May, 2012 Transportation Study to those on Figure 1 of the Traffic Study in support of the 2010 IS/MND. Only 6 of the 7 intersection count locations taken in 2012 were subject to comparison because the intersection of Fair Oaks Boulevard with Genesee Court was not analyzed in the 2010 work. Also, the comparisons are only for the am and pm commute peak periods because the 2010 work did not take counts in the immediate after school dismissal period. The comparisons between the two sets of counts that are able to be made are as follows.

For the am peak, the September 2011 counts have lower numbers of total movements at all 6 intersections than the 2010 counts by percentages ranging between 4.8 and 6.4 percent with an average percentage decrease of 5.6 percent. These percentage decreases in traffic are well within the range of day-to-day traffic variation experienced on a street carrying 31,000 vehicles daily as Fair Oaks Boulevard does, so the lower am counts are not different to an extent

TRAFFIC • TRANSPORTATION • MANAGEMENT

Letter # 3

Mr. Don Mooney  
March 29, 2013  
Page 3

that would suggest the am counts were taken on a seriously anomalous day. Nonetheless, the fact that they are consistently lower than previous counts is noteworthy.

The comparison of total movements at each intersection for the pm peak period presents a significantly different picture. At 4 of the 6 intersections, total traffic movements in the September 2011 counts were lower than those in the prior study by between 1.6 to 5 percent. As noted above, these variations are within the normal day-to-day traffic variations along a street carrying 31,000 vehicles. However, total movements in the pm peak at the other two intersections were lower than those in the 2010 study by 10.1 and 11.8 percent. These variations are well above the normal day-to-day traffic variation that would be expected along Fair Oaks Boulevard. Also significant is the fact that both of these abnormally low-count intersections along Fair Oaks Boulevard are the ones most directly related to provision of access to Jesuit High School, those at Jacob Lane and at Gordon Lane.

We compared the specific movements to-and-from Gordon Lane and to-and-from Jacob Lane in the 2011 counts with those in the prior study. In the am peak, these specific movements were in the expected range of normal day-to-day fluctuation of traffic (in fact, the am movements to/from Gordon Lane were actually 6.2 percent higher than in the prior study). However, in the pm peak the movements to/from Gordon Lane and to/from Jacob Lane are vastly lower than in the prior study's counts. At Gordon Lane the 2011 pm peak movements are 23.3 percent lower; at Jacob Lane the 2011 pm peak movements are 54.8 percent lower than in the prior counts. Something unusual was clearly affecting traffic, at least in the pm peak on the day the September 2012 counts were taken.

Since the entire traffic analysis flows from the quantification of existing conditions, the transportation study's consultants should repeat the counts on a

date confirmed to not be an unusual day at Jesuit and not on a Thursday when other area schools have early dismissal.

**Purported Improvements In Traffic Operations at Intersections along Fair Oaks Boulevard in the Existing + Project Condition Are Substantially the Result of Unsupported and Illogical Assumptions Regarding Shifts in Drop-Off/Pick-Up Traffic and the Approach/Departure Paths of this Traffic**

I was surprised at the extent of operational improvements at intersections along Fair Oaks Boulevard that experienced no actual physical improvements and should have experienced little if any decrease in the volume and pattern of traffic flows; intersections such as those of Fair Oaks Boulevard with Mariemont and with Mission/Lantern. Improvements to operations at these intersections in the Existing + Project scenario are ostensibly the result of platooning effects of the new signal at the intersection of Fair Oaks with Arden Hills CC/new Project Driveway. That is to say, the new signal should create some additional gaps in Fair Oaks traffic flows for sidestreet traffic at these other intersections. However, because the operational improvements at these intersections were so extensive, particularly in the am peak, I wanted to make sure there wasn't something else going on, such as a mis-calculation that eliminated trips in the 'with Project' scenarios. As a result, I compared the Existing to the Existing + Project traffic counts for the am peak.

According to Table 6 on page 20 of the Transportation Study, the Project would generate some 39 more am peak trips than the existing condition. Because the major change in traffic volume resultant from the Project's access improvement should be a shifting of some traffic between Gordon Lane and the new driveway as well as shifting some drop-offs to the away from the drop-off accessed from Jacob Lane north drop-off accessed via Gordon Lane or the new driveway, the net amount of traffic coming into the area along Fair Oaks Boulevard in the am

TRAFFIC • TRANSPORTATION • MANAGEMENT

Letter # 3

Mr. Don Mooney  
March 29, 2013  
Page 5

peak should increase somewhat. However, in reviewing the DEIR traffic projections for the Existing + Project condition, it seemed there was no such increase.

First I looked to the east end of the study corridor, the intersection of Fair Oaks Boulevard and Jacob Lane. Here, the pattern of movements will change to reflect shifts from the Jacob Lane drop-off to the north drop-off served by the new driveway, but I expected the change in the net number of movements through the intersection would not be large. However, comparing the total existing am peak traffic movements at this intersection (from Figure 3 in the Transportation Study) to those for the Existing + Project scenario (from Figure 6)<sup>1</sup>, reveals that the sum of the am peak traffic movements in the Existing Condition is 3253; the sum in the Existing + Project condition is 2966. In other words, instead of adding a few trips, somehow the Project purportedly causes 287 trips to *disappear* from this intersection.

Next I drew an imaginary cordon around Fair Oaks Boulevard from just east of the intersection with Arden Hills/new Driveway and extending to just west of the intersection with Gordon/Stewart and separately summed, for the am peak hour, all the entries and all the exits to the cordoned segment for each of the Existing Condition (from data on Figure 3) and the Existing + Project scenario (from Figure 6). The cordon analysis reveals the following:

For the Existing Condition in the am peak:

- A total of 3203 vehicles entered the cordon. Entering from the access serving Jesuit HS and the Gordon Lane residences were 90 vehicles. Entering from other locations were 3113 vehicles.

<sup>1</sup> These correspond to Plates TC-2 and TC-3 in the DEIR

Letter # 3

Mr. Don Mooney  
March 29, 2013  
Page 6

- A total of 3201 vehicles were reported to exit the cordon. Exiting to the access serving Jesuit HS and the Gordon Lane residences were 336 vehicles. Exiting the cordon at other points were 2865 vehicles.
- The difference between 3203 observed entries to the cordon and only 3201 exits (difference of 2) is inconsequential observational error – probably 2 vehicles entered the cordon area in the last seconds before the peak hour cut-off but hadn't yet reached their exit point. For simplicity, we assume that the total of both am peak entries and exits to the cordon was 3203.
- Of the 3203 vehicles passing through the cordon in the am peak, 90 enter from the Jesuit HS/Gordon Lane residents access and 336 exit the cordon to that same access. So in the am peak, 426 trips passing through the cordon are to/from the Jesuit HS/Gordon Lane residents' access. The remaining 2777 involve travelers to other locations.

For the Existing + Project Condition in the am peak:

- A total of 3240 vehicles entered the cordon. Entering from the 2 access points now serving Jesuit HS and the Gordon Lane residences were 253 vehicles. Entering from other locations were 2987 vehicles.
- A total of 3238 vehicles were reported to exit the cordon. Exiting to the 2 access points now serving Jesuit HS and the Gordon Lane residences were 508 vehicles. Exiting the cordon at other points were 2730 vehicles.
- The difference of 2 between vehicles entering the cordon and leaving it (3240 vs 3238) is inconsequential and the result of the timing-related observational error in the existing condition data described above. For simplicity, we assume that the total of both entries and exits to the cordon in the Existing + Project condition is 3240.

Of the 3240 vehicles passing through the cordon in the am peak in the Existing + Project scenario, 236 enter from the two Jesuit HS/Gordon Lane residents access points and 508 exit the cordon to those same two access Points. So in

TRAFFIC • TRANSPORTATION • MANAGEMENT  
5311 Lowry Road, Union City, CA 94587 tel: 510.489.9477 fax: 510.489.9478

Letter # 3

Mr. Don Mooney  
 March 29, 2013  
 Page 7

the am peak for the Existing + Project scenario, a total of 744 trips passing through the cordon are to/from the two Jesuit HS/Gordon Lane residents' accesses. This is an *increase* of 318 vehicles over the existing condition. The remaining 2496 passing through the cordon involve travelers to other locations. This is a *decrease* of 281 vehicles from the existing condition.

The only ways there could be such a large net decrease from the existing condition in the number of vehicles passing through the cordon to/from locations other than Gordon Lane and the proposed new driveway are 1) if there were an error in the traffic assignment or 2) if it is assumed that there are a very large number of trips involving drop-offs to Jesuit that, in the existing condition, approach from west of the school along Fair Oaks Boulevard, bypass the opportunity to make the drop-off at the parking lot off Gordon Lane, continuing along Fair Oaks Boulevard to the drop-off point on Jacob Lane, then retrace their approach path in reverse, back to the west along Fair Oaks Boulevard.

The Transportation Study states on page 22 that it assumes 90 percent of the drop-off/pick-up traffic that approaches the Jacob Lane drop-off point from west of the school would shift to the new access point in the Existing + Project condition, but it presents no evidence indicating how many trips from west of the school currently bypass the facility off Gordon Lane to use the one at Jacob Lane. The Transportation Study also assumes that 10 percent of the existing drop-off trips at Jacob Lane that approach Jesuit from the east would also shift their drop-off point to the new driveway. These trips would be additive to the cordon volume in the Existing + Project scenario as would at least some of the 39 more am trips associated with increased enrollment. So to achieve a net decrease of 281 from existing am peak cordon volume traveling to/from somewhere other than Gordon Lane and the proposed new driveway, there would have to presently be in excess of 160 drop-off vehicles approaching west that bypass the Gordon Lane facility to use the more distant Jacob Lane drop-off,

 Page 8

then retrace their path in reverse, going back to the west along Fair Oaks Boulevard.

The DEIR and the Transportation Study do not document any factual evidence demonstrating knowledge of where the drop-off vehicles using the Jacob Lane facilities actually come from or where they go after making their drop-off. Nor is the assumption that 90 percent of the drop-off vehicles that approach from and return to the west along Fair Oaks Boulevard would alter their behavior and shift to the new driveway supported. Hence, the assumed shift of the large number of vehicle routes that decreases traffic at key locations along Fair Oaks Boulevard is nothing more than a combination of hypothetical assumptions on the part of the Transportation Study analysts. Moreover, the assumptions are extremely favorable to the Project since they eliminate nearly 300 existing vehicles from the analysis of several key intersections along Fair Oaks Boulevard.

Relying on such a favorable combination of unsupported assumptions without considering the outcome under other plausible less favorable assumptions is inconsistent with the good faith effort to disclose impact demanded by CEQA. In addition, the assumptions relied-on are highly questionable. It is very unlikely that the vast majority of drop-off drivers approaching from the west along Fair Oaks Boulevard in the existing condition would bypass the facility off Gordon Lane to use the more distant and congested Jacob Lane facility. It is also unlikely that all of those drivers who do so, after making their drop-offs, would retrace their paths in reverse, heading back to the west on Fair Oaks Boulevard. More likely, most of the drivers making drop-offs at Jesuit continue on to a place of employment rather than returning home, with their continuing journey to their place of employment on a different path than their reverse path home from Jesuit. Those who do come from the west and bypass the facility of Gordon to make their drop-offs at Jacob Lane probably do so because they are continuing on to a destination more easily accessed from the Jacob lane drop point. So it is

TRAFFIC • TRANSPORTATION • MANAGEMENT

Letter # 3

Mr. Don Mooney  
March 29, 2013  
Page 9

clear that the traffic assignment for the am Existing + Project condition is based on a flawed hypothetical speculation that is highly favorable to the Project.

The DEIR's analysts must either correct the error in the traffic assignment, provide substantial data demonstrating that in the existing condition large numbers of drop-off vehicles approaching via Fair Oaks Boulevard from west of the school bypass the facility off Gordon Lane to drop-off at Jacob Lane and return west or adjust the future traffic assignment to reflect numbers of drop-offs at Jacob Lane by vehicles approaching via Fair Oaks Boulevard from west of the school that can be supported by substantial data. When the Existing + Project am peak traffic forecast is corrected, the intersection level of service and queuing analysis computations must be completely recompiled.

#### **The DEIR's Queuing Analysis and It's Interpretation Are Flawed**

The DEIR's Appendix A Transportation Study performs a queuing analysis at each study intersection and for each scenario evaluated. However, at each point at which the queuing analysis is discussed, the DEIR asserts that *"a queue length analysis provides additional information regarding the flow of traffic when there is not a volume to capacity impact. It should be noted that there are no significance thresholds for queue lengths; therefore this discussion of queue lengths has been provided to supplement the intersection LOS analysis above."* This statement is a distortion of fact. The only part of the statement that is true is that Sacramento County has not adopted any formal significance criteria related to queue length. However, traffic engineers have a clear understanding about when queue lengths are significantly impactful. One case is when the 95<sup>th</sup> percentile queue in a right turn or left turn lane approaches to an intersection exceeds the available storage length in that lane, so that the excessive queue blocks flow in the through approach to that intersection. In that case, the subject intersection will actually function (or be dysfunctional) at a worse LOS than

TRAFFIC • TRANSPORTATION • MANAGEMENT

## Letter # 3

Mr. Don Mooney  
 March 29, 2013  
 Page 10

indicated in the theoretical LOS calculations. The other situation is when, either as the result of turn lane queues overflowing the storage lanes or through lane volumes exceeding the capacity of a downstream intersection intersection, the queues from the downstream intersection extend into the limits of an upstream intersection, blocking some or all of its flows and causing it to operate at a worse LOS than predicted in theoretical LOS calculations. Because the DEIR ignores these fundamental traffic engineering principles and attempts to label the queuing analysis as, in essence, gratuitous information, it is misleading to the public and inadequate as an informational document.

The second problem with the DEIR's queue analyses is that all of it has been compiled hypothetically (including the existing condition queues) through the theoretical traffic simulation model called Sim Traffic. Though existing queues could have easily been measured, the DEIR has made no actual measurement of existing condition queues to verify and calibrate the accuracy of the Sim Traffic simulation. Unfortunately, the Sim Traffic model as applied in this instance is extremely inaccurate in predicting existing queues. In a recent weekday evening peak, this writer frequently observed eastbound queues in the through lanes approaching the intersection of Fair Oaks Boulevard with Jacob Lane extending back into the intersection Fair Oaks Boulevard with Lantern Court. The intersection of Lantern Court with Fair Oaks Boulevard is separated from the eastbound stop bar on Fair Oaks at its intersection with Jacob lane by about 565 feet. The DEIR's traffic simulation predicts the 95<sup>th</sup> percentile queue at this location to be only 276 feet, or only about 48 percent of the actual observed queues.<sup>2</sup> Obviously, the theoretical simulation grossly under-predicts queue lengths and actual LOS is considerably worse than predicted in the DEIR. The DEIR analysis must measure existing queues and adjust the Sim Traffic simulation so that it reasonably replicates existing observed queues.

<sup>2</sup> The intersection with Genesee Court is only feet from the eastbound stop bar at the intersection of Fair Oaks with Jacob Lane and is blocked by existing traffic queues with considerably greater frequency and for far longer duration than Lantern Court.

Letter # 3

Mr. Don Mooney  
March 29, 2013  
Page 11

**The DEIR Overstates the Adverse Traffic Consequences of the Two Alternatives that Construct the Chapel Project But Without the New Roadway Access to Fair Oaks Boulevard**

The DEIR analysis of the two alternatives that construct the chapel but without the new access road to Fair Oaks Boulevard unreasonably overstates adverse transportation consequences of dependence on site access/egress via the signalized intersection of Gordon Lane with Fair Oaks Boulevard, biasing the analysis against favorable consideration of those alternatives. It does this in several ways.

1. It analyzes the northbound approach of Gordon Lane to Fair Oaks Boulevard in the existing condition and in the two Chapel Project Gordon Lane Access Alternatives as if this were simply a single approach lane used by all possible movements. However, observation of actual usage reveals that this approach, although not striped as a two lane approach is used de facto as such, with the right lane used exclusively for right turns and the left lane used for left turns and the rare straight through movement. Moreover, in Jesuit's 1992 use permit approval, the institution was conditioned to improve the Gordon Lane approach to Fair Oaks Boulevard to actually be a 2-lane approach.<sup>3</sup> So the approach is not just a de-facto 2-lane approach; it was officially conditioned as such. If the DEIR transportation study had analyzed this intersection as it was officially conditioned and actually is used operationally, it would have found more favorable LOS and queue lengths reduced at this location in the Existing + Chapel Project Gordon Lane Access Alternatives and in the cumulative condition for these alternatives than the DEIR indicates. The analysis should be redone treating this approach as the two lane approach it currently operates as.

<sup>3</sup> A copy of the 1992 use permit conditions is attached.

## Letter # 3

Mr. Don Mooney  
 March 29, 2013  
 Page 12

2. As noted in a previous section, the DEIR assumes that a large percentage of the existing drop-off traffic approaching from the west along Fair Oaks Boulevard bypasses the potential drop-off point accessed via Gordon Lane in the existing condition to make the drop-offs at the more distant Jacob Lane but assumes that 90 percent of these would use the westerly drop-off point in the Existing + Proposed Project condition. However, the DEIR traffic analysis subjectively and unreasonably assumes that only 50 percent of this drop-off traffic would use the westerly drop-off point in the case of the Chapel Project Gordon Lane Access Alternatives. Logically, the primary reasons drivers coming from the west and returning to the west would bypass the westerly drop-off alternative is the difficulty in regaining access to Fair Oaks Boulevard with Fair Oaks Boulevard traffic uncontrolled in the existing condition or because they are continuing on to a secondary destination they consider more easily accessed from the Jacob Lane drop point. Signalization of Gordon Lane or a new access driveway would alleviate the first drawback to westerly drop-offs about equally to signalization of a proposed new access drive to Fair Oaks. Those coming from the west that now find it desirable to drop off at Jacob Lane for other reasons than difficulty getting back onto Fair Oaks will probably continue to use Jacob Lane. Consequently, the amount of drop-off traffic from the west shifted from the Jacob Lane facility to the westerly drop-off should be assumed equal under the Proposed Project and the Chapel Project Gordon Lane Access Alternatives. The subjective differential in diversion assumed by the traffic analysis biases the findings in favor of the Proposed Project and against the Chapel Project Gordon Lane Access Alternatives. The analysis should be recompiled under an assumption of equal diversion of this component of traffic including the cumulative analysis.
3. The DEIR unfairly attributes unsatisfactory LOS on the Arden Hills Country Club driveway approach to Fair Oaks Boulevard to nuances of the

TRAFFIC • TRANSPORTATION • MANAGEMENT  
 3311 Lowry Road, Union City, CA 94587 tel: 510.489.9477 fax: 510.489.9478

Letter # 3

Mr. Don Mooney  
 March 29, 2013  
 Page 13

Chapel Project Gordon Lane Access Alternatives. In fact, LOS problems at that location are the consequence of the decision to maintain a closed gate on the Country Club's original access drive from Mission. As a consequence of this closure, any travelers leaving the Club with the intent to go north must leave via the driveway to Fair Oaks, make a left against heavy traffic and then another immediate left onto Mission.

4. The DEIR embellishes the consequence from its transportation study's evaluation of sight distance at the intersection of Gordon Lane and with Fair Oaks Boulevard in a way that biases the analysis against the Chapel Project Gordon Lane Access Alternatives. The Appendix A Transportation Study conducted a 'by the book' analysis of sight distance the Gordon Lane approach to Fair Oaks Boulevard. It found that *"the Gordon Lane approach meets the sight distance requirement in the western direction but not in the eastern direction"* (presumably, given the subsequent finding, "eastern direction" is intended to mean sight distance from Gordon to eastbound traffic on Fair Oaks Boulevard). It concludes *"For this reason, northbound right-turns on red from Gordon Lane may have to be restricted at the signal proposed under the Gordon Lane access alternatives"*.<sup>4</sup> The DEIR embellishes this cautionary conclusion to an absolute requirement for a project condition prohibiting right turn on red for the Gordon Lane access alternatives. It states on page 2-33 *"Since the sight distance requirement is not met in the eastern direction, northbound right-turns onto Fair Oaks Boulevard on a red light would be prohibited under this alternative. This prohibition on right turns would have to be a mitigation measure or condition on the project."* The embellishment of the transportation study finding in the DEIR is an inappropriate misrepresentation of the professional finding. It is also an unreasonable action preempting ordinary design practice and biasing the analysis against the Gordon Lane access alternatives. Ordinarily, the

<sup>4</sup> See DEIR Appendix A, page 35.

Letter # 3

Mr. Don Mooney  
 March 29, 2013  
 Page 14

decision whether or not to prohibit right turns on red would be left to the discretion of the signal designer who would determine whether sight distance adequate to permit right turn on red can be accommodated within the design. This writer reviewed the specific circumstances in this case. The primary obstruction to sight distance is tree branches and foliage that are allowed to overhang the right of way. This can be cleared. We also note that Jesuit's 1993 Use Permit conditions required the institution to improve sight distance at this location to conforming distances. If sight distances are still inadequate, the institution is in violation of its existing use permit and must rectify the sight distance obstruction whether or not the new driveway is approved.<sup>5</sup> Furthermore, the engineering improvements necessary to provide pedestrian landings at the crosswalks that would be a feature of the signal installation would also clear sight lines, since that will probably require cutbacks and small retaining walls on side-slopes that now may be part of the sight distance limitation. Also, it is fact that traffic attempting to make right turns on red can, after stopping at the stop bar, ease forward closer to the edge of the traveled way where sight distance is even less limited. So it is by no means certain, in fact even unlikely, that prohibition of right turn on red at a signal at this location would be necessary.

5. The DEIR unreasonably denigrates pedestrian improvements under the Gordon Lane access alternatives in comparison to those under the Project as proposed, stating on page 2-33 "*The Gordon Lane intersection is located west of the main campus of Jesuit High School. The improvements at this intersection do not substantially improve pedestrian access to the school due to the distance from this intersection and the main campus*". The DEIR fails to document the basis for concluding more campus-related pedestrians or pedestrians in general would benefit from signal-protected crosswalks across Fair Oaks Boulevard to the

<sup>5</sup> As previously mentioned, a copy of the 1992 use permit conditions are attached hereto.

Letter # 3

Mr. Don Mooney  
March 29, 2013  
Page 15

private driveway of the Arden Hills Country Club than the persons walking from the west and north who would benefit from signal protected crossings at Gordon Lane. For pedestrians, getting off busy Fair Oaks Boulevard sooner rather than continuing south to a crossing at Arden Hills Country Club Drive is much safer and a more pleasant environment even though there are no sidewalks on Gordon Lane. Moreover, since Jesuit controls the properties on the east side of Gordon Lane, it could develop a sidewalk there as part of the Project.

**The Transportation Impact Study Exaggerates the Impacts of the Housing Alternative in Comparison to the Project Sponsor's Preferred Alternative**

The inferior traffic performance of the housing alternative as compared to the existing condition and the various Chapel alternatives is primarily the result of the transportation study's unsupported assumptions about Jesuit traffic and arbitrary and unsupported assumptions about how traffic might divert under the various Chapel 'build' alternatives and the assumption that a traffic signal at Gordon Lane and Fair Oaks Boulevard, already ranked a high priority by the County, would not be built with the housing alternative, not a consequence of rather the characteristics of traffic generated by the housing alternative itself. The assumptions about Jesuit traffic concern the afore-discussed presumptions that 1) in the existing condition large amounts of drop-off coming from and returning the west along Fair Oaks Boulevard bypasses the opportunity to make pick-ups and drop-offs from facilities accessed off Gordon Lane and instead continues to and returns west from the more distant facility off Jacob Lane and 2) differential amounts of this western originated drop-off/pick-up traffic would divert to the westerly access point with the Chapel construction because Jesuit would fund the signal construction either at Gordon or the proposed new driveway in the Chapel construction cases. But the analysis assumes that the County would not build the signal at Gordon it already places high priority on in the case of the

TRAFFIC • TRANSPORTATION • MANAGEMENT  
5311 Lowry Road, Union City, CA 94587 tel: 510.489.9477 fax: 510.489.9478

Letter # 3

Mr. Don Mooney  
 March 29, 2013  
 Page 16

housing project and hence the diversions of western Jesuit pick-up/drop-off traffic to the westerly facility would not happen without the signal. The assumption the County would not build the signal it already prioritizes in a timely way and hence that the diversions of Jesuit traffic would not occur biases the analysis against the housing alternative. The analysis of the housing alternative should be redone under the assumptions that the Gordon signal would be constructed in a timely manner and a fair diversion of the westerly Jesuit pick-up/drop-off traffic would ensue.

I also note that in the analysis for the 'after school dismissal' hour, the trip generation rate for the Project Alternative residential use was apparently compiled by dividing the observed movements during that period to and from Lantern Court and Genessee Court by the number of residential units on those courts. The observed rate so compiled is almost 17 percent higher than the typical average pm peak rate for this type of residential use per ITE's *Trip Generation*. This leads to the obvious question of whether one or both of these courts is being used as a surreptitious pick-up point for some students or for sub-rosa student parking or involves some other anomaly that creates an artificially high rate.

**The Transportation Study's Collision Data Analysis Fails To Provide Any Basis for Assessing Whether the Project Will Adversely Impact Traffic Safety**

The so called 'Collision Data Analysis' section of the Transportation Study simply presents two tables categorizing traffic collision events that occurred along a segment of Fair Oaks Boulevard between Saverien Drive and Jacob Lane over a 5 year period. The first table presents the aggregate number of collisions by year of occurrence and severity (total/injury/fatal). The second tabulates the number of collisions by type (i.e., broadside, rear-end, etc).

TRAFFIC • TRANSPORTATION • MANAGEMENT  
 5311 Lowry Road, Union City, CA 94587 tel: 510.489.9477 fax: 510.489.9478

Letter # 3

Mr. Don Mooney  
 March 29, 2013  
 Page 17

The Transportation Study fails to provide any information about where the collisions were located or concentrated. Obviously, if there were concentrations at the Gordon/Stewart intersection or at the Arden Hills CC intersection, this might have traffic safety implications for the Project but the report is silent on this. The Transportation Study contains no information comparing the actual collision occurrence to expected rates for the types of streets involved. There is no information of how many of the collisions occurred while school was in session versus out-of-session and for the ones occurring in-session, how many occurred within versus outside of normal school commute hours. There is no information regarding how many of the collisions involved people traveling to/from Jesuit High School versus elsewhere or how many involved teenaged drivers. The lack of actual relevant analysis makes obvious that the report authors simply inserted two tables of readily available collision information into the Transportation Study so that it could be claimed that impacts on traffic safety had been analyzed while in fact no relevant analysis was performed. A meaningful analysis of the traffic safety data should be performed.

#### **The Project Fails to Incorporate to Ameliorate Irritant Impacts on Neighbors**

The proposed Project could, but does not incorporate proposals to ameliorate conditions that have irritant impacts on neighbors. An example of this is the use of the campus to host events by outside groups. For instance, the campus has recently been used to host a weekend rugby game by two university teams that attracted many spectator vehicles. The playing fields are used to host events and practices of pre-high school football and cheerleading leagues, the gymnasium to host independent basketball events. The parking lots have been used as formal overflow parking for large events at Arden Hills Country Club. Obviously, the school attempts to be a good neighbor to these outside organizations, but in doing so it intensifies the irritation to its most immediate

Page 18

individual residential neighbors. It could ameliorate this irritation by committing, as a condition of the Project, to limit the use of Jesuit High School facilities to events directly related to Jesuit High School.

#### Conclusion

Based on all of the above, the traffic analysis in support of the forthcoming DEIR is inadequate. The entire traffic analysis should be redone in light of the comments herein.

Sincerely,

Smith Engineering & Management  
A California Corporation

Daniel T. Smith Jr., P.E.

APPLICANT/OWNER:

JESUIT HIGH SCHOOL  
1200 Jacob Lane  
Carmichael, CA 95608

REPRESENTATIVE:

MARCUS LO DUCK, Attorney  
P. O. Box 15208  
Sacramento, CA 95851-0208

ENGINEER:

DENNIS DALEIDEN  
500 Morse Avenue  
Sacramento, CA 95864

PERMISSION IS GRANTED TO USE THE SUBJECT PREMISES FOR THE FOLLOWING  
DESCRIBED USES: To allow the expansion and improvement of an existing private  
high school, including faculty residences and additional parking provision on  
40.15+ acres. A Variance from provisions of Section 320.05 of the County Zoning  
Code pertaining to fencing and landscape requirements for adjacent residential  
properties.

DESCRIPTION OF PREMISES: Located at 1200 Jacob Lane in the Arden-Arcade  
area.

CONDITIONS OF APPROVAL:

1. Final Development Plans shall be in substantial compliance with Exhibits "S", "S-1", "B", "C", "D" and "E".
2. The maximum number of students allowed under this permit is 1,000.
3. Remove the existing gate at the north property line lying at the southerly end of Gordon Lane.
4. Construct a turnaround facility at the southerly end of Gordon Lane to the satisfaction of the Department Public Works.
5. Install Class "C" public street improvements on Gordon Lane between the school limits and Fair Oaks Boulevard, based on 28 feet of pavement width pursuant to Sacramento County Improvement Standards.
6. If existing County right-of-way exists within the Gordon Lane approach to Fair Oaks Boulevard, to allow for two outbound lanes at the intersection to the satisfaction of the Public Works Department. The intersection improvements shall provide the minimum visibility requirements pursuant to County Standards.

## Letter # 3

**DANIEL T. SMITH, Jr.**  
**President**

**EDUCATION**

Bachelor of Science, Engineering and Applied Science, Yale University, 1967  
 Master of Science, Transportation Planning, University of California, Berkeley, 1968

**PROFESSIONAL REGISTRATION**

California No. 21913 (Civil) Nevada No. 7969 (Civil) Washington No. 29337 (Civil)  
 California No. 938 (Traffic) Arizona No. 22131 (Civil)

**PROFESSIONAL EXPERIENCE**

Smith Engineering & Management, 1993 to present, President.  
 DKS Associates, 1979 to 1993, Founder, Vice President, Principal Transportation Engineer.  
 De Leuw, Cather & Company, 1968 to 1979, Senior Transportation Planner.  
 Personal specialties and project experience include:

**Litigation Consulting.** Provides consultation, investigations and expert witness testimony in highway design, transit design and traffic engineering matters including condemnations involving transportation access issues; traffic accidents involving highway design or traffic engineering factors; land use and development matters involving access and transportation impacts; parking and other traffic and transportation matters.

**Urban Corridor Studies/Alternatives Analysis.** Principal-in-charge for State Route (SR) 102 Feasibility Study, a 35-mile freeway alignment study north of Sacramento. Consultant on I-280 Interstate Transfer Concept Program, San Francisco, an AA/EIS for completion of I-280, demolition of Embarcadero freeway, substitute light rail and commuter rail projects. Principal-in-charge, SR 238 corridor freeway/expressway design/environmental study, Hayward (Calif.) Project manager, Sacramento Northeast Area multi-modal transportation corridor study. Transportation planner for I-80N West Terminal Study, and Harbor Drive Traffic Study, Portland, Oregon. Project manager for design of surface segment of Woodward Corridor LRT, Detroit, Michigan. Directed staff on I-80 National Strategic Corridor Study (Sacramento-San Francisco), US 101-Sonoma freeway operations study, SR 92 freeway operations study, I-880 freeway operations study, SR 152 alignment studies, Sacramento RTD light rail systems study, Tasman Corridor LRT AA/EIS, Fremont-Warm Springs BART extension plan/EIR, SRs 70/99 freeway alternatives study, and Richmond Parkway (SR 93) design study.

**Area Transportation Plans.** Principal-in charge for transportation element of City of Los Angeles General Plan Framework, shaping nations largest city two decades into 21st century. Project manager for the transportation element of 300-acre Mission Bay development in downtown San Francisco. Mission Bay involves 7 million gsf office/commercial space, 8,500 dwelling units, and community facilities. Transportation features include relocation of commuter rail station; extension of MUNI-Metro LRT; a multi-modal terminal for LRT, commuter rail and local bus; removal of a quarter mile elevated freeway; replacement by new ramps and a boulevard; an internal roadway network overcoming constraints imposed by an internal tidal basin; freeway structures and rail facilities; and concept plans for 20,000 structured parking spaces. Principal-in-charge for circulation plan to accommodate 9 million gsf of office/commercial growth in downtown Bellevue (Wash.). Principal-in-charge for 64 acre, 2 million gsf multi-use complex for EMC adjacent to San Jose International Airport. Project manager for transportation element of Sacramento Capitol Area Plan for the state governmental complex, and for Downtown Sacramento Redevelopment Plan. Project manager for Napa (Calif.) General Plan Circulation Element and Downtown Riverfront Redevelopment Plan, on parking program for downtown Walnut Creek, on downtown transportation plan for San Mateo and redevelopment plan for downtown Mountain View (Calif.), for traffic circulation and safety plans for California cities of Davis, Pleasant Hill and Hayward, and for Salem, Oregon.

## Letter # 3

**Transportation Centers.** Project manager for Daly City Intermodal Study which developed a \$7 million surface bus terminal, traffic access, parking and pedestrian circulation improvements at the Daly City BART station plus development of functional plans for a new BART station at Colma. Project manager for design of multi-modal terminal (commuter rail, light rail, bus) at Mission Bay, San Francisco. In Santa Clara Long Range Transit Development Program, responsible for plan to relocate system's existing timed-transfer hub and development of three satellite transfer hubs. Performed airport ground transportation system evaluations for San Francisco International, Oakland International, Sea-Tac International, Oakland International, Los Angeles International, and San Diego Lindbergh.

**Campus Transportation.** Campus transportation planning assignments for UC Davis, UC Berkeley, UC Santa Cruz and UC San Francisco Medical Center campuses; San Francisco State University; University of San Francisco; and the University of Alaska and others. Also developed master plans for institutional campuses including medical centers, headquarters complexes and research & development facilities.

**Special Event Facilities.** Evaluations and design studies for football/baseball stadiums, indoor sports arenas, horse and motor racing facilities, theme parks, fairgrounds and convention centers, ski complexes and destination resorts throughout western United States.

**Parking.** Parking programs and facilities for large area plans and individual sites including downtowns, special event facilities, university and institutional campuses and other large site developments; numerous parking feasibility and operations studies for parking structures and surface facilities; also, resident preferential parking.

**Transportation System Management & Traffic Restraint.** Project manager on FHWA program to develop techniques and guidelines for neighborhood street traffic limitation. Project manager for Berkeley, (Calif.), Neighborhood Traffic Study, pioneered application of traffic restraint techniques in the U.S. Developed residential traffic plans for Menlo Park, Santa Monica, Santa Cruz, Mill Valley, Oakland, Palo Alto, Piedmont, San Mateo County, Pasadena, Santa Ana and others. Participated in development of photo/radar speed enforcement device and experimented with speed humps. Co-author of Institute of Transportation Engineers reference publication on neighborhood traffic control.

**Bicycle Facilities.** Project manager to develop an FHWA manual for bicycle facility design and planning, on bikeway plans for Del Mar, (Calif.), the UC Davis and the City of Davis. Consultant to bikeway plans for Eugene, Oregon, Washington, D.C., Buffalo, New York, and Skokie, Illinois. Consultant to U.S. Bureau of Reclamation for development of hydraulically efficient, bicycle safe drainage inlets. Consultant on FHWA research on effective retrofits of undercrossing and overcrossing structures for bicyclists, pedestrians, and handicapped.

## SMITH ENGINEERING & MANAGEMENT

May 11, 2006

Mr. William D. Kopper  
Attorney at Law  
417 E Street  
Davis, CA 95616

**Subject: Placer Vineyards Revised Draft Environmental Impact Report**

P06003

Dear Mr. Kopper:

Per your request, I have reviewed the Revised Draft Environmental Impact Report on the proposed Placer Vineyards Specific Plan (hereinafter the RDEIR). My review has concentrated on the transportation and circulation component of the RDEIR. This letter-report summarizes my comments on the RDEIR for transmission to Placer County.

My qualifications to perform this review include registration as a civil and traffic engineer in California and thirty-eight years of professional consulting practice in those fields in this state, including considerable experience in both preparation and review of the transportation/circulation components of environmental documents. I am familiar with the project area and its environs and have had involvement in various capacities in a number of projects in Placer County affecting transportation and circulation. My resume is attached.

### **RDEIR Fails To Analyze, Disclose And Mitigate Project Traffic Impacts For AM Peak Period**

The analysis of traffic impacts and mitigation requirements for intersections in unincorporated Placer County, Sutter County, the City of Roseville and at intersections under Caltrans jurisdictions is carried out only for the PM peak period. Only in the case of intersections studied within Sacramento County is the analysis carried out for the AM peak. Because AM peak traffic normally exhibits different directional patterns than PM peaks, the lack of an AM peak analysis may result in this RDEIR's failure to disclose significant traffic impacts by the project that are different (possibly at different locations or, though at the same intersection, requiring mitigation on different approaches or movements)

EE

from those disclosed by the PM analysis. This is why most communities require both an AM peak and a PM peak traffic analysis. Without the AM analysis, the RDEIR's traffic section fails to carry out the good faith effort to disclose impact that CEQA demands. Furthermore, because in the analysis of the future scenarios, many of the mitigation measures proposed in response to those project traffic impacts that are disclosed based solely on the PM analysis are directionally specific (such as the adding of an additional left turn lane for one particular approach), the mitigations defined in the RDEIR may be completely ineffective at mitigating the impacts that would have been disclosed had an AM peak analysis been carried out, and much more extensive mitigation than disclosed may be required. The text of the RDEIR in the first paragraph of page 4.7-31 concedes this point, stating, "*As individual development projects within the Specific Plan area are proposed, additional traffic analysis may reveal the need for additional improvements to provide acceptable operations for the AM peak period operations as well.*" Hence, it is clear that the RDEIR has not disclosed to the County Board of Supervisors and the public what the full extent of traffic impacts and mitigation needs of this Specific Plan are, thus not complying with CEQA requirements for disclosure of impacts and mitigation.

At best, delaying disclosure of AM peak traffic impacts and mitigation requirements to possible subsequent traffic studies constitutes a deferral of mitigation that is improper under CEQA. However, such subsequent traffic studies that would disclose AM traffic impacts may never happen at all. Because the subject RDEIR is billed as a "project level" EIR (as contrast with a "programmatic-level" EIR), as stated on page 2-8 of the RDEIR, for residential projects, if County staff determine that the projects are consistent with the Specific Plan and with land use patterns and assumptions anticipated in detail in this RDEIR, Government Code Section 65457 and CEQA Guidelines Section 15182 provide that no EIR or Negative Declaration need be prepared prior to approving such residential projects. Pages 2-9 and 2-10 of this RDEIR also detail how individual non-residential projects in the Specific Plan area could also be exempt from any requirements for further EIR or Negative Declaration preparation provided that the proposed, provided that the proposed tentative map is consistent with the densities assumed for the affected area in the Specific Plan and this RDEIR, provided it complies with the mitigation requirements adopted in connection with the Specific Plan approval, unless there are impacts that are peculiar to the individual proposed parcel and project or unless there is substantial new information shows that previously-identified impacts will be more significant than previously assumed. Given these circumstances, it seems unlikely that any analysis to disclose and mitigate the AM peak traffic impacts of the Specific Plan project will ever be performed.

EE cont.

#### **Segment Level Of Service Analysis Understates Traffic Impacts**

The roadway segment level of service analysis reflected in Table 4.7-4 (and others) assumes that the maximum daily traffic for each Level Of Service (LOS)

FF

gradation for arterial roadways would be per the "moderate access control" category. In reality, most of the roadways analyzed would be more reasonably characterized as having "low access control" (and consequently able to serve lower maximum daily traffic within each LOS gradation) with a few segments having "high access control" (greater traffic capacity within each gradation). As a result, the analysis probably understates the severity of impact on many segments relative to existing conditions. However, since the project or its mitigations upgrade most of the arterial roadways affected in ways that will inherently create a "high" level of access control, (except possibly in some situations where existing fronting uses will retain current access), this inaccuracy does not affect the assessment of the mitigated conditions.

FF cont.

#### **RDEIR Fails To Analyze Traffic Impacts On Freeway Ramp Merge, Diverge And Weaving Sections**

Yet another glaring omission in the RDEIR traffic impact analysis is the failure to analyze traffic impacts relative to freeway ramp adequacy considering merge, diverge and weaving section LOS. The analysis of the project's effects on freeway ramps is limited to a presentation of the daily ramp volume changes caused by future development scenarios. Because of the lack of merge, diverge and weaving section LOS calculations, the RDEIR offers no reasonable basis for knowing what impacts the project may have on freeway ramps.

GG

#### **Methodology Relied-on For Intersection Traffic Impacts Is Obsolete And Provides Insufficient Information For Full Disclosure Of Impacts.**

Placer County, Sacramento County, Sutter County and the City of Roseville rely on intersection Level Of Service (LOS) analysis by various adaptations of Circular 212 procedure. Circular 212 is now a quarter-century old methodology that was created as an interim analysis procedure pending updating of the Highway Capacity Manual (hereinafter the HCM). It has now been rendered obsolete by multiple subsequent editions of the HCM. While analysis under Circular 212 procedures does provide a relative measure of the differences in transportation effects of various development scenarios, it may not disclose the full severity of impacts that might be disclosed if the analysis had employed the more modern Highway Capacity Manual techniques that are generally accepted in the traffic engineering profession. The desire to maintain a consistency with techniques employed in earlier planning work is not a reasonable justification for failure to employ accepted best practices. Continuing to rely on Circular 212 procedure is akin to navigating by sextant or 'dead reckoning' when modern navigation devices like LORAN and global positioning systems are available.

HH

Current traffic analysis practice over the past two decades evaluates Level Of Service relative to delay experienced by motorists. Delay to motorists generally increases at exponentially higher rates as traffic approaches or surpasses the capacity of a road or intersection. HCM level of service procedures compute

delay experienced by motorists and grade LOS based on amount of delay experienced. By contrast, the obsolete Circular 212 procedures relied on in the RDEIR grade LOS based on an abstract value, the volume-to-capacity ratio (hereinafter v/c). The issue is that, in laymen's terms, v/c that is the criterion in the Circular 212 method increases roughly proportionate with traffic whereas, as capacity is approached or exceeded, the delay, which is the criterion in the HCM method and which is the actual impact the public perceives, increases at increasingly higher rates. Hence, the real traffic impacts that the subject Specific Plan project causes, which are often in the LOS E or F range where the exponential increases in delay that the public perceives as impact are considerably greater than the apparent impacts indicated by the linear and abstract v/c measure of the obsolete Circular 212 method. Thus, because of the obsolete analysis methodology the involved jurisdictions have been accustomed to relying upon, the RDEIR presents an abstract and understated disclosure of the significance of the significant impacts the Specific Plan project would have.

HH cont.

A second significant reason why reliance on the obsolete Circular 212 analysis methodology understates traffic impacts is because it does not provide information regarding traffic queues (stacking) at the intersections analyzed whereas the current HCM method does so. Queue length information is critical to the analysis of impacts of busy intersections because, if queues in turn storage lanes exceed the length of the lanes (thereby blocking flows in the through lanes) or queues in the through lanes extend beyond the length of the turning lanes (thereby blocking access to the turn lanes), a kind of condition the public refers to as "gridlock" will occur where the actual traffic impacts, the LOS experienced and the delay suffered, will be worse than indicated in the theoretical LOS computations. With the queue length information provided by the current HCM method, the analyst is able to disclose the significant impact problem and propose appropriate mitigation such as adding lanes or extending turning lanes. Because the Circular 212 method provides no queue information, significant traffic impacts caused by excessive queue lengths remain undisclosed.

#### **RDEIR Analysis Methodology Understates Traffic Impacts Where Low Volume Crossroads Intersect Busier Roads At Two-Way Stops**

A nuance of the analysis methodology employed to analyze unsignalized intersections may understate the impacts at intersections controlled by two-way stop signs (but not 4-way stops). The analysts have chosen to use as the criterion of impact the *average delay total for all approaches* (whereas they could have chosen some criterion that would have considered the possibility of intolerable delay on any one approach). Consider the situation where a minor roadway with stop control intersects a major road without stop control (the classic rural 2-way stop condition). In the existing condition, traffic on the minor road approaches must wait for a safe gap in traffic on the major road before it can proceed, but with light to moderate traffic, the waits are not intolerable. Under

II

the analysis criterion selected, in a future development scenario that adds considerable traffic to the major road but very little to the minor road, traffic on the minor road approaches might have to wait forever for a safe gap in traffic, but the analysis would show no significant impact because the *average delay for all approaches* computation would be dominated by traffic on the major street approaches that experiences zero delay. The RDEIR subtly admits this consideration in footnotes to tables (see, for example, footnote 1 to Table 4.7-17), stating: "*Average delay for all movements at intersection, including uncontrolled movements. Delay on some stop-controlled left turn movements may be substantial, but typically impacts a limited number of vehicles.*" The analysis criterion or significance in this procedure is unreasonable. If the same few individuals repeatedly suffer interminable delays every time they attempt to leave or return home through an intersection they cannot reasonably avoid, that is a significant impact. Since the delay on individual movements is reported by the analytic computation procedure, the analysts could easily have established some reasonable level of delay for low volume approaches that would be considered a threshold of significant impact, even if that delay is experienced by a relatively small number of drivers.

II cont.

#### **No Basis To Conclude RDEIR Has Evaluated Conditions Over Broad Enough Area To Disclose Full Extent Of Specific Plan Traffic Impacts**

One of the fundamental questions one must examine in reviewing a traffic impact analysis is whether the analysis searched far enough in seeking to disclose impact. The RDEIR discloses that the project would generate in excess of 152,000 daily trips onto the area street and highway network external to the project limits. This amount of generated traffic would reasonably be expected to affect roadway facilities over a very broad area. While the RDEIR does disclose extensive traffic impacts of the project, it provides no indication regarding what methods of investigation, if any, were undertaken to assure that the project's traffic impacts do not extend over a broader area than that encompassed by the impacts disclosed. For instance, it appears entirely likely that, in the Roseville area, the project's traffic impacts could well extend to intersections to the east of Interstate 80. However, no intersections in this area have been studied. Likewise, it is reasonable to expect that the project's impacts on I-80, Business 80, and 70-99 might extend farther from the project area than the segments for which significant impacts were disclosed. Unless the RDEIR provides some assurance that its analysis limits extend to the farthest reaches of the area where the project produces significant traffic impacts, it cannot be said to have made the good faith effort to disclose impact required by CEQA.

JJ

#### **Specific Plan Proposes County General Plan Policy Change That Would Create Confusion With Respect To CEQA Requirements**

CEQA Article 21002 requires that for a project to be approved all *feasible* mitigation measures that would lessen the project's significant environmental

KK

impacts must be implemented. CEQA Article 21061.1 provides an explicit definition of "feasible". Placer County General Plan Policy 3.A.7 provides policy guidance for development and management for its roadway system including a listing of considerations under which exceptions to the County's level of service policy goals for developing and maintaining its roadway system could be made. The project applicants seek to modify another Placer County General Plan policy, Policy 3.A.12, that requires each development project to construct or fund improvements necessary to mitigate the effects of traffic from the project by adding the words "consistent with Policy 3.A.7". The apparent objective of the amended language is to attempt to substitute the more flexible terms of General Plan Policy 3.A.7 regarding the County's development and management of its roadway system for CEQA's explicit definition of feasibility with regard to mitigation, thereby making it more likely that the County might create exceptions that would obviate mitigation requirements. While this artifice seems unlikely to withstand an actual test of law, the proposed change to Policy 3.A.12 would create confusion wherein public policymakers might take actions believing they were in compliance with CEQA when they were not, thereby forcing the interested public to seek recourse through a test of law. Therefore, the proposed amendment to should be rejected.

KK cont.

**Traffic Impacts of Specific Plan Project's Proposed Changes To County Transportation and Circulation-Related Goals and Policies Not Analyzed In RDEIR. All Analysis Of Impacts and Mitigation Requirements In RDEIR Based On Presumption That Proposed Degradation Of County Standards Is In Force**

Under Specific Plan Transportation and Circulation-Related Goals and Policies, in proposed Policy 5.1, the Specific Plan proposes to insert an exception to Placer County *General Plan* Policy 3.A.7 wherein Level Of Service on the roadway system within the Project's Specific Plan Area and on its boundaries would be allowed to be degraded to LOS D (as contrast with *General Plan* Policy 3.A.7's requirement that LOS C be maintained except within a half-mile of state highways where LOS D is accepted). Nowhere does the RDEIR analyze the traffic impact of this blanket degradation of County LOS standards over the extended roadway system within the Specific Plan and on its boundaries. Since the project being evaluated under CEQA is the Specific Plan, the RDEIR is deficient in failing to disclose the traffic impacts of the Specific Plan's goal and policy component involving proposed degradation of LOS standards. It would be reasonable to expect that, at a minimum, the RDEIR would disclose estimates of increased daily or annual vehicle-hours of delay that degradation of the LOS standard would result in, and summarize the differences in mitigation requirements that would result from maintaining the established LOS standards or implementing the degraded LOS standards proposed, as well as evaluating the implications of the increased traffic congestion on air quality. It is noteworthy that the entire RDEIR analysis for the roadways within the Specific Plan area and

LL

on its boundaries is presumptive that the proposed LOS standard is already in place. Hence, there is no analysis of the proposed project's impacts and mitigation relative to the existing conditions (that would include the prevailing LOS standard) that CEQA requires.

LL cont.

**RDEIR Provides No Analysis Of Specific Plan's Proposed Transportation Policies And Goals. Some Are Impractical, Internally Conflicting Or Meaningless**

Many of the Specific Plan's Transportation Policies and Goals embrace attractive-sounding concepts and ideals, but thoughtful examination reveals them to be impractical, internally conflicting or meaningless. Consider, for instance, Roadway Design Guideline 7 and Policy 5.15. Roadway Design Guideline 7 (Page 4.7-20) states that *"neighborhoods should be designed with internal connecting streets to encourage a more open and accessible network for residents and improve the distribution of traffic throughout the roadway network"*, a street configuration that is known to inherently lead to resident concerns about traffic volume, speed, noise, safety and quality of life on residential streets unless a considerable application of traffic calming treatments is made. Policy 5.15 (pages 4.7-22 & 23) states that *"use of traffic calming roadway design techniques in the design of residential streets and intersections is required. Techniques may include corner bulb-outs at intersections, traffic circles and rotaries, chokers, chicanes, etc. In all cases, traffic calming devices shall be designed not to restrict access by emergency vehicles or inadvertently limit emergency response times below the required level of service standard. Yet traffic calming devices inherently adversely affect emergency response, individually and cumulatively.*

MM

We note that the RDEIR only presents these guidelines and policies; it is deficient in failing to provide any critical assessment of them. Had the RDEIR provided the objective assessment it should have, it would have pointed out that traffic calming devices inherently restrict emergency response times, and that gaining the values of an open and accessible street network while providing enough traffic calming to maintain resident satisfaction about the quality of residential life relative to traffic without degrading emergency response below reasonable norms requires a delicate and not-always-successful process of compromise and balance among these three considerations:

Consider Policy 5.20 which provides that a park-and-ride lots will be provided. If the RDEIR provided the objective assessment of this policy that it should have, but fails to do, it would have noted that the minimum 193 spaces to be created under this policy are a minuscule total relative to the 152,300 external vehicle trips that the RDEIR estimates the project generates daily and that implementation of the policy as proposed, wherein it would serve less than 0.13 percent of the project's external daily traffic (even presuming that all the parking

spaces get filled by Specific Plan area travelers and are not occupied by travelers from more distant hinterlands) renders the policy inconsequential and meaningless.

Transportation and Circulation-related Policies 5.16 through 5.19 concern provision of physical facilities in support of public transit. If the RDEIR contained the objective comment on these proposed policies that it should, it would state that, absent a regional commitment to massive increased funding for transit operations that elsewhere the RDEIR admits is highly doubtful, the effect of these policies is largely meaningless.

A similar example involves Policy 5.6 on Regional Transportation Improvements which states that Placer Vineyards landowners and the County will define (*but not necessarily enter into*) development agreements that ensure the project pays for its fair share of transportation improvements. While this weasel-worded policy gives the impression that the Project will provide funding to mitigate its transportation impacts, if the RDEIR had actually objectively assessed the policy as it should have, it would have commented that the funding provision and mitigation would only take place at those many locations of significant project traffic impact that are outside direct control of Placer County if the responsible jurisdiction agrees to implement the specific improvement identified as mitigation for Placer Vineyards and is able to assemble the funds over-and-above Placer Vineyard's "fair share" needed to actually complete the improvement. Although it repeatedly makes this comment in comment on numerous individual project mitigation measures proposed outside Placer County's direct jurisdiction, the RDEIR leaves it to the public to "connect the dots" to realize that, on the whole, outside the direct jurisdiction of Placer County, the purported commitment of the project to fund fair share traffic mitigation improvements may be meaningless in the sense that it in no way guarantees implementation of those improvements.

MM cont.

Including a narration of the Specific Plan's proposed transportation and circulation-related goals and policies in the RDEIR without providing an objective point-by-point assessment of them is the equivalent of inserting a public relations and marketing brochure for the project that says everything about transportation and circulation is going to be perfect. This is not consistent with the EIR's CEQA-defined purpose as an information document.

#### **Assessment Of Internal Traffic Loads On Localized Project Area Roadway Network Uncertain**

In the RDEIR computation of project trip generation, of the 233,273 trips estimated to be generated by the project daily, some 40,500 trips are estimated to have both origin and destination within the project. Approximately 152,300 trips daily (233,300 minus 81,000 trip ends for the 40,500 trips that have both origin and destination within the project area) are estimated to be made between the project area and external locations. These estimates are reasonable as long

NN

as the 40,500 "internal" trips are actually assigned to the local roadway network and considered in the LOS analyses (as contrast with being "erased" from all further computations at the conclusion of the trip generation stage. The RDEIR and its Appendices provide no indication whether the "internal" trip component is actually assigned to the roadway network for LOS analysis or whether it has simply been disregarded after the trip generation stage. The RDEIR should provide a clarification on this issue and, if the internal trips have in fact been disregarded in analyses subsequent to the trip generation stage, the traffic impact LOS analyses should be recompiled with the internal traffic assigned to project area roadways including the boundary streets.

NN cont.

**RDEIR Traffic Analysis Has Not Been Performed On Project As Currently Defined.**

Footnotes to Tables 4.7-14 and 4.7-15 each note that the traffic analysis contained in the RDEIR is based on different land use assumptions than the plan currently proposed in the RDEIR. The footnotes make the unsupported assertion that "*the differences are minor and would not affect the outcome of the analysis.*" In order to reasonably demonstrate that a traffic impact analysis performed for a different plan remains adequate to disclose the impacts and required mitigations for the currently proposed Specific Plan, the RDEIR must, at a minimum, document the differences in land use, both quantitatively by use category and by location, between the plan reflected in the traffic impact assessment and the one currently proposed, and must document the differences in trip generation. The RDEIR should be revised to provide this clarification.

OO

**Finance Plan For Project Internal And Off-Site Roadway Improvements And Traffic Mitigations Is Not Reviewed In RDEIR**

The RDEIR states that the Specific Plan applicants are developing a Public Facilities Financing Plan that will outline the funding and timing of transportation infrastructure within the Specific Plan area boundaries as well as required off-site improvements, including traffic mitigation fee programs. The RDEIR states that it assumes the Finance Plan will be approved concurrently with the Specific Plan. However, since the Finance Plan is critical to a) whether the internal and off-site roadway improvements will actually be in place at the various stages of "with project" scenarios assumed in the analysis and b) whether recommended traffic mitigations are likely to be completed, it is incumbent upon the RDEIR to perform an objective review of the soundness of the Finance Plan. Absent this review, the RDEIR's assumptions about certain internal and off-site roadway improvements and project traffic mitigations being in place by certain development stages or points in time is purely speculative, which is inadequate under CEQA. Obviously, the RDEIR has not made an objective review of the Finance Plan, so all of the assumptions in the RDEIR with respect to the timing of completion of transportation infrastructure and mitigation improvements to be

PP

completed or financed by the Specific Plan applicants must be regarded as speculative.

PP cont.

### **Failure To Adequately Disclose And Mitigate Construction Impacts On Traffic**

The RDEIR briefly examine construction traffic impacts of the Specific Plan. However, that analysis is limited to consideration of the additional traffic that would be created by the travel of construction workers and transport of construction materials during the construction period. This analysis is inadequate in two major respects. First, the RDEIR completely fails to examine the construction traffic impacts of the traffic impacts caused by the construction of the project's internal and off- site roadway improvements which involve major reconstruction of significant lengths of existing major roadways and the construction of project traffic mitigations which involve major reconstruction of many busy intersections. Such major road and intersection reconstruction, many occurring in simultaneous time periods, will require multiple road closures and lane closures over lengthy periods of time that will result in massive congestion on the routes where reconstruction is taking place and cause massive traffic diversions to other routes, producing significant additional congestion in those places. The RDEIR is defective in that these significant construction impacts on traffic are not disclosed or mitigated. Second, the mitigation the RDEIR proposes for the limited construction traffic impact it does disclose, that of the movement of construction workers and materials, is simply an abstract promise to, in the future, develop construction traffic management plans for all construction activity that would seek to minimize the impacts of construction traffic. This type of abstract promise to develop future mitigation plans constitutes a deferral of mitigation that is improper under CEQA.

QQ

### **Questions Concerning RDEIR Traffic Forecasts**

RDEIR pages 4.7-35 and 36 provide a brief narrative description of how the traffic forecasts that underlie its traffic impact assessment were carried out. However, a number of key considerations in the forecasts are not clarified in the narrative and supporting materials.

1. As previously noted, some 81,000 of the 233,000 new trip ends generated by the project were assumed to comprise some 40,500 trips that are completed between trip origins and destinations internal to the project area. The question is, were these "internal trips" assigned to the local roadway network by the traffic forecast model, or were they simply "erased" from the analysis at the trip generation stage?
2. The narrative is unclear how the output from the traffic model was adjusted to provide input to those aspects of the impact analysis that are performed in terms of daily traffic volume versus those that are performed in terms of pm peak traffic. Please provide clarification. Please include in the clarification an explanation of how model output was treated for input to the ultimate LOS

RR

analyses to replicate both peak period flows that tend to have directional dominance and daily flows that tend to have directional balance.

3. As the narrative explains, for each analysis stage, the traffic model was used to define the differential on each roadway between the "no project" condition and the "with project" condition and this differential was then added to existing traffic to create the actual traffic input to the LOS impact analysis. It is acknowledged that this is a useful procedure to overcome the possibility of errors where anomalies exist in the forecast model that cause consistent underreporting or over-reporting of traffic on certain individual roadway segments. Such a procedure is reliable and reasonable where the anomalies in the forecast model are limited to scattered isolated roadway segments or specific limited roadway corridors (a common example of this latter problem occurs in models where an arterial roadway closely parallels a freeway). However, sometimes forecast models stubbornly exhibit a systematic difficulty producing reasonable forecasts over a particular subarea even though the model provides reliable results over the majority of the modeled area. If this kind of subarea anomaly exists and coincides with the Specific Plan project study area, it is inappropriate to rely on the model at all in the analysis. Please provide assurance that whatever anomalies in the Placer County traffic model that caused the incremental procedure described on RDEIR pages 4.7-35 and 36 to be adopted are isolated and not systematic to the study area or to corridors critical to the study area.
4. The RDEIR narrative on this topic indicates that, in the runs of the Placer County traffic model for the "with project" condition, the completion of roadway improvements in the project area and the presence of project generated traffic may have caused other non-project traffic to be redistributed to other destinations or to be reassigned to alternate routes in avoidance of routes that would be heavily loaded by project traffic. The question is whether the analysis looked broadly enough at the output to determine whether these redistributions and reassignments of non-project traffic caused significant traffic impacts in areas where large direct increments of project traffic would be unexpected. The fact that the RDEIR did not evaluate LOS at any intersections east of I-80 suggests that the analysis may not have been sufficiently broad-seeking to disclose all of the project's traffic impacts.

RR cont.

**Project's Significant Traffic Impacts At Intersection Of Walerga Road And PFE Road Only Mitigated To LOS D. Similar Condition True In Cumulative Analysis For Baseline Road.**

The RDEIR indicates on page 4.7-42 that the project's significant traffic impact at the intersection of Walerga Road and PFE Road would be mitigated to LOS D. Mitigation to LOS D would only qualify as mitigation to conditions of less than significance if it were to be considered on the project boundary streets (possibly a plausible interpretation since both intersecting streets do front on the project boundaries in some segments though not at this intersection) *and also* only if another proposal of the Specific Plan project, that of degrading existing Placer

SS

County criteria for acceptable LOS to LOS D (itself a significant impact of the project undisclosed as such in the RDEIR), is considered to have been approved. Since approval of the degraded LOS standard is uncertain, the proposed mitigation cannot be said to have mitigated the project's significant traffic impacts at this location.

In the cumulative analysis, a similar situation exists for segments of Baseline Road along the project's northern border. In that scenario, the RDEIR concludes that Baseline Road is not significantly impacted because it would operate at LOS D. The RDEIR fails to mention that this would be a significant impact requiring mitigation unless another facet of the Specific Plan project, that of degrading Placer County standards to allow LOS D to be considered acceptable within the project and on its boundaries, is approved.

SS cont.

**Project's Transit Impacts Not Mitigated To Less Than Significant. Also, Consequent Increase To Project Traffic Impacts Not Discussed.**

On pages 4.7-54 through 4.7-57 the RDEIR presents an extended discussion of the potentially significant impacts on transit and identifies the critical issue of financing future transit operations so that otherwise unmet transit needs can be met. However, in concluding that the project's transit impacts would be mitigated to less than significant by a significant addition of transit services that it outlines, the RDEIR fails to address the critical transit finance issue with any certainty. What it proposes is that a Community Service Area (CSA) be established to fund the extensive services and facilities the RDEIR identifies as necessary for mitigation of the project's transit impacts. In essence, this is passing on the obligation for mitigating the project's impacts to the eventual property owners of the project area (and possibly those in other areas if a broader CSA proved most appropriate. This approach appears to be a deferral of mitigation that is improper under CEQA. Furthermore, there is no guarantee that the ultimate property owners of any such CSA will approve taxing themselves to fund of transit operations and services needed to mitigate the project's impacts. Consequently, the project's transit impacts must be regarded as *unmitigated*. Furthermore, those mitigations that the project does propose to directly provide such as rights of way for bus lanes and a streetcar system, and waiting shelters are all meaningless and ineffective as mitigation unless the actual transit operations are funded by others.<sup>1</sup>

TT

Given the failure to mitigate the project's transit impacts as documented above, a further consideration is evident. To the extent that effective transit mitigation is not provided, the traffic impacts of the project will be proportionately greater than the RDEIR discloses.

<sup>1</sup> We have also previously noted that the project's provision of 193 park and ride spaces, also listed in this section as a transit mitigation, is so minuscule in relation to the scale of overall external traffic generation of the project as to be inconsequential in its mitigative effect.

Mr. William D. Kopper  
May 11, 2006  
Page 14

these instances, it does so solely on a location by location basis. It provides no assessment of the cumulative consequences of these significant traffic impact conditions that cannot be mitigated practically. Had the RDEIR considered the cumulative effect of these individual locations where mitigations are impractical as it should have, it would have concluded that the impacts, taken together, constitute a complete functional breakdown of the freeway and arterial circulation system in the project's environs of such a grave extent that no responsible government could reasonably consider approving the project under any findings of overriding considerations.

VV cont.

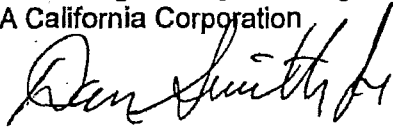

### Conclusion

This completes my current comments on the RDEIR. For the above-stated reasons, I do not believe the traffic and circulation component of the document is adequate. Furthermore, modifications to the document that appear necessary to respond to these comments may warrant recirculation of the document in draft status.

**Subject: Placer Vineyards Partially Recirculated Revised Draft  
Environmental Impact Report**

P06003

Dear Mr. Kopper:

Per your request, I have reviewed the Partially Recirculated Revised Draft Environmental Impact Report (hereinafter the PRRDEIR) on the proposed Placer Vineyards Specific Plan (hereinafter "the project"). My review has concentrated on the transportation and circulation component of the PRRDEIR. I have previously commented on the Revised Draft Environmental Impact Report on this project in a letter dated May 11, 2006. This current letter-report summarizes my comments on the PRRDEIR for transmission to Placer County.

The numerous changes in significant impacts disclosed at specific roadway segments and intersections presented in the PRRDEIR do not change the pattern of massive transportation impacts that the project would cause. Mitigation of some of the project's impacts is infeasible; for some other impacts, feasibility of mitigation is disclosed as doubtful. Mitigation of many of the impacts depends on conclusion of interagency agreements with other governmental jurisdictions and, although in some cases the project will directly pay to implement mitigations, in a vast majority of cases, actual implementation of the mitigation is dependent on the emergence of other land use developments that will be fair share or fee contributors. In fact, the PRRDEIR discloses that other fee and fair share contributors will be expected to fund the vast majority of the cost of the necessary mitigations. Hence, mitigation of the project's transportation impacts is dependent

A

TRAFFIC • TRANSPORTATION • MANAGEMENT

3311 Lowry Road, Union City, CA 94587 tel: 510.489.9477 fax: 510.489.9478

on the speculative presumption that sufficient other fee- and fair share- paying developments will actually be developed in a timely manner such that sufficient funds will be raised to implement the necessary mitigation measures.

A cont.

The purported finance plan for infrastructure improvements disclosed in the PRRDEIR is vague and unspecific; it provides no more solid detail than the finance plan that was absent in the RDEIR. The two page finance plan presented in Appendix W of the PRRDEIR is simply an unsubstantiated assertion that private development will pay for the infrastructure improvements needed, either by directly funding construction of backbone infrastructure or by contributing to existing or new development fee programs or new Community Facilities Districts. It is worthy of note that formation of a Community Facilities District under the Mello-Roos Act would tend to force development on property owners inside the District since the obligation to pay since the obligation to pay the annual tax levies that such a district would involve would tend to maintain the lands in agricultural use infeasible.

B

The cost estimates contained in the "fair share traffic impact fee study" (Appendix Z) create additional doubt rather than assurance. Although the PRRDEIR asserts that the information contained in Appendix Z will "demonstrate to reviewers that, although the dollar amounts at issue are very high, they are not so high as to render the County's approach infeasible from an economic standpoint," this overconfident assertion is rendered doubtful by several considerations, as follows.

C

- Because no details are provided for the preliminary cost estimate of mitigation measures that underlies the fair share traffic impact fee analysis, the public has no way of judging how reliable these cost estimates are. If the estimates are based on purely conceptual plans and generic aggregate unit costs per foot or per mile for the various roadway types, a high level of uncertainty must be associated with the costs. If the costs are estimated from purely conceptual plans but involve rough estimates of quantity take-offs and unit prices by quantity, with consideration of necessary structures and construction difficulty based on topographic and geotechnical mapping, somewhat less but still substantial uncertainty would be associated with the cost estimates. If the costs are based on quantity take-offs from actual preliminary engineering drawings for the improvements (materials not likely to be commonly available for most improvements at this stage of project development), the cost estimates might be regarded as more reliable. Unless information is provided that allows the public to know the basis of the cost estimates and such considerations as what contingency percentage is assumed and what construction cost inflation is assumed over what duration, the cost estimates that underlie the analysis must be regarded as an issue in doubt.

D

- As we have previously noted, the project's mitigation program is dependent on other expected development materializing as fair share fee payers contributing to the pool of funds that will allow the presumed mitigations to be fully funded and implemented in a timely fashion. As we have observed, whether all of the other development assumed will actually take place in a timely fashion to implement the mitigations is a matter of speculation. Hence, the proposed mitigations themselves remain speculative. The "fair share traffic impact fee study" presented in Appendix Z provides some dimension to this concern. It shows Placer Vineyards contributing only some \$39.7 million toward a traffic mitigation program whose total costs (according to the still unsubstantiated Appendix Z estimates) would be some \$309.6 million. That is to say, other development is being counted on to provide more than 87 percent of the funding needed for mitigation projects. If 15 to 20 percent of other anticipated development scattered throughout the analysis area failed to take place in the anticipated time frame (an occurrence relative to both deferred development timing and scattered location that is often characteristic), the net traffic mitigation needs for the area would likely remain about the same but there would be a \$46 million to \$62 million shortfall in fair share fee contributions to implement the needed mitigations.
- The Appendix Z analysis unreasonably assumes that other fair share payers will emerge to pay half the fair share of project trips made to "external" (outside the Placer Vineyards project) origins or destinations. While this assumption may prove reasonable where the "external" end of the trip is at another new development within the general area where the proposed mitigation measures are to be implemented (presuming hypothesized intergovernmental agreements are implemented), fair share contributions are unlikely to happen where the "external" end of the trip is at an existing development location (whether that existing development is near or distant) or when the "external" trip end is at a new development located outside the area where mitigation improvements are being made by the project. The shortfall in mitigation funds resultant from this loophole in the fair share contribution methodology cannot be estimated from the information provided in the PRRDEIR since it does not identify how many of the project external trips will be made to existing development or to destinations outside the area of mitigation. However, it is reasonable to conclude that the shortfall could significantly impair implementation of the assumed mitigation program.

### Conclusion

Based on the foregoing, it is my opinion that the PRRDEIR previously expressed concerns about the uncertain nature of the proposed mitigation program. Due to

E

F

G

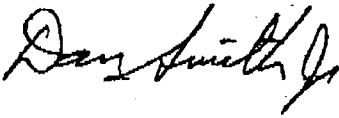

Mr. William D. Kopper  
September 12, 2006  
Page 4

this substantial uncertainty, the proposed mitigation program does not qualify as mitigation under CEQA.

SUPERIOR COURT OF CALIFORNIA  
COUNTY OF SACRAMENTO

COUNTY OF SUTTER et al.,  
Petitioners and Plaintiffs,

No. 34-2007-00028334-CU-WM-GDS  
Department 33

v.

RULING ON SUBMITTED MATTER

COUNTY OF PLACER et al.,  
Respondents and Defendants.  
PLACER VINEYARDS PROPERTY  
OWNERS GROUP et al.,  
Real Parties in Interest.

ROB COLLINS et al.,  
Petitioners and Plaintiffs,  
v.  
COUNTY OF PLACER et al.,  
Respondents and Defendants.  
CARMEN DOYLE, CO-TRUSTEE et al.,  
Real Parties in Interest.

SIERRA CLUB et al.,  
Petitioners,  
v.  
COUNTY OF PLACER et al.,  
Respondents.  
CARMEN DOYLE, CO-TRUSTEE et al.,  
Real Parties in Interest.

1 On July 16, 2007, the Placer County Board of Supervisors ("Board") approved a  
2 mixed-use development, the Placer Vineyards Specific Plan ("PVSP" or "Plan" or "project") on  
3 5,230 acres in the southwest corner of Placer County. The approved project will build out over a  
4 20- to 30-year period, reach a population of approximately 33,000, and include 14,132 residential  
5 units of in low, medium and high density configurations, 274 acres of retail and commercial uses,  
6 210 acres of parks, 714 acres open space, and 851 acres of schools, roadways and other public  
7 facilities.

8 Concurrent with its approval of the PVSP, the Board certified the environmental  
9 documents prepared for the project under the California Environmental Quality Act ("CEQA"),  
10 including a Revised Draft Environmental Impact Report ("RDEIR") released for public comment  
11 in April 2006, a Partially Recirculated RDEIR ("PRRDEIR") released for public comment in  
12 August 2006, a Final EIR ("FEIR") released in October 2006, a Second PRRDEIR  
13 ("SPRRDEIR") released for public comment in April 2007, and a Supplement to the FEIR  
14 ("SFEIR") released in June 2007.<sup>1</sup> Petitioners challenge the adequacy of the environmental  
15 documents in a number of areas discussed below.

#### 16 Water Supply

17 As approved by the Board, the potable water supply for the PVSP included a long-  
18 term surface water supply of 11,500 acre feet annually ("afa") to meet the needs of the PVSP at  
19 buildout and an initial surface water supply of 6,000 afa to meet the needs of the PVSP prior to  
20 the availability of the long-term surface water supply in approximately 2016. The initial water  
21 supply would be provided by the Placer County Water Agency ("PCWA") from its Middle Fork  
22 Project on the American River where it has appropriative rights to water diverted at Auburn or at  
23 Folsom Reservoir. The long-term water supply would be provided by the PCWA using 35,000  
24 afa of water it receives under a contract with the U.S. Bureau of Reclamation ("USBR") from the  
25 Central Valley Project ("CVP") operated by the USBR. The CVP water would be diverted from  
26 the Sacramento River or, alternatively, from the American River at Auburn or Folsom Reservoir.

27 <sup>1</sup> These environmental documents are referred to collectively in this ruling as the "EIR."  
28 References to the administrative record state the volume number followed by a colon and the page  
number(s).

1           The Sacramento River diversion providing the long-term water supply for the PVSP  
2 is a project generated by the Sacramento Area Water Forum, a group of local governments, water  
3 managers, business and agricultural leaders, environmentalists and citizen groups in the  
4 Sacramento-Placer region who have joined together for the co-equal purposes of providing a  
5 reliable and safe water supply for the region's economic health and planned development to 2030  
6 and preserving the fishery, wildlife, recreational, and aesthetic values of the lower American  
7 River. The Forum members entered an agreement in 2000 to accomplish these objectives  
8 through specified actions and commitments, including a commitment by the PCWA to transfer a  
9 portion of its diversions from the American River to the Sacramento River, either by negotiating  
10 an exchange of its Middle Fork Project water rights with an entity like the USBR with rights to  
11 divert from the Sacramento River or by obtaining an amendment of its CVP water contract  
12 authorizing it to divert CVP water from the Sacramento River.

13           To develop a water supply consistent with the Water Forum Agreement, the USBR  
14 and PCWA initiated the Sacramento River Water Reliability Study ("SRWRS") in 2002 on  
15 behalf of the Sacramento Suburban Water District ("SSWD"), the City of Roseville, and the City  
16 of Sacramento pursuant to Public Law 106-554. This congressional legislation requires the  
17 Secretary of the Interior to conduct a feasibility study for a Sacramento River diversion project  
18 consistent with the Water Forum Agreement, including a diversion by the PCWA of 35,000 afa  
19 of water as well as 29,000 afa for delivery to the SSWD. In 2005, the SRWRS issued an Initial  
20 Alternatives Report identifying and discussing diversion facility alternatives at Elkhorn/Elverta  
21 and the American River Pumping Station ("ARPS") near Auburn for further evaluation in a  
22 feasibility report and EIR/EIS.

23           A long-term surface water supply diverted from the American River at Folsom  
24 Reservoir or the ARPS near Auburn would serve as an alternative to the long-term water supply  
25 from the Sacramento River. The RDEIR indicated this alternative water supply would be  
26 diverted at Folsom Reservoir. (29:8418.) However, after the SRWRS assumed that the  
27 alternative water supply would be diverted at the PCWA's ARPS near Auburn, the SPRRDEIR  
28 changed the diversion point to the ARPS. (37:10870, 11905.) The SPRRDEIR indicates that

1 “[t]his change in diversion point has de minimus effect on the analysis performed for the in-  
2 stream effects of diversion, as modeled and presented in the [RDEIR] because the American  
3 River Pump Station is located close to the upper reaches of Folsom Reservoir, and because the  
4 Lower American River below Folsom Reservoir is the most environmentally sensitive portion of  
5 the American River and most important from a regulatory standpoint.” (29:8418.)

6           Until the long-term water supply from the Sacramento River diversion becomes  
7 available in 2016, the potable water needs of the PVSP would be met by an initial surface water  
8 supply of 6000 afa. This initial supply would be diverted by the PCWA from the American  
9 River at the ARPS, conveyed and treated at the existing Foothill Water Treatment Plant, and  
10 delivered through the transmission pipeline systems of the City of Roseville and then the PCWA  
11 to a location near the PVSP area where a proposed pipeline would deliver the water to the PVSP  
12 area. Because the capacity of the Roseville pipeline for the transmission of the PCWA’s water is  
13 limited to 10 million gallons per day (“MGD”), the pipeline capacity could be exhausted by 2013  
14 or 2014 before the long-term water supply for the PVSP becomes available in 2016. A proposed  
15 treatment plant at Ophir Road and a transmission pipeline system connecting to the PCWA’s  
16 existing transmission system, scheduled for completion by the PCWA in 2011, would avoid  
17 these Roseville capacity limitations. (37:10849-10852, 10871, 10895-10896, 10934; 32:9345.)

18           A secondary initial surface water supply of 6000 afa could be provided by the PCWA  
19 from 29,000 afa of its American River Middle Fork Project water that the PCWA contracts to the  
20 SSWD. This supply would be diverted from Folsom Reservoir and treated at a plant owned and  
21 operated by the San Juan Water District. An agreement between the PVSP developers, PCWA,  
22 Placer County, San Juan Water District, SSWD and California American Water Company (a  
23 retail water provider in western Placer County where the PVSP is located) would be necessary to  
24 provide the treatment and transmission pipeline capacity needed to make this water supply  
25 available to the PVSP. Additional focused CEQA review of this secondary initial surface water  
26 supply would also be necessary.

1 Finally, a groundwater supply is proposed as a redundant water source to back up a  
2 deficiency in the long-term water supply from the CVP during a maximum dry year reduction by  
3 the USBR. (25:7203; 37:10870; 32:9343.)

4 In *Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova*  
5 (2007) 40 Cal.4th 412 (“*Vineyard*”), the California Supreme Court specified the requirements for  
6 an analysis of future water supplies for a proposed project in an EIR under CEQA. The EIR must  
7 analyze the reasonably foreseeable environmental impacts of supplying water to the entire  
8 project. (*Id.* at pp. 430-431, 434.) The availability of the water supplies identified for the project  
9 must be reasonably certain; speculative sources and unrealistic allocations are insufficient. (*Id.* at  
10 p. 432.) Where “it is impossible to confidently determine that anticipated future water sources  
11 will be available,” the EIR must discuss possible replacement or alternative sources and their  
12 environmental impacts. (*Id.* at pp. 432, 434.) However, CEQA does not require assurances of  
13 certainty regarding long-term future water supplies at an early phase of planning for large land  
14 development projects; the EIR need not demonstrate that the water supplies are assured through  
15 enforceable agreements with a provider and already built or approved treatment and delivery  
16 facilities. (*Id.* at p. 432.) When uncertainty regarding the availability of sufficient future water  
17 supplies for the project remains after a sincere and good faith analysis of likely water sources, the  
18 EIR may acknowledge the uncertainty, provide a measure for the curtailment of the project if the  
19 water sources fail to materialize, analyze the environmental impacts of curtailing the project, and  
20 identify measures to mitigate any such significant impacts. (*Id.* at pp. 432, 434, 444.)

21 With respect to the long-term water supply for the PVSP, petitioners Sierra Club and  
22 Sierra Foothills Audubon Society contend that the PVSP EIR violates CEQA and *Vineyard* by  
23 evaluating the cumulative environmental impacts of the long-term water supply from the  
24 Sacramento River without evaluating the diversion’s direct and indirect impacts; by deferring  
25 environmental analysis of the construction and operation of PCWA diversion, treatment and  
26 storage facilities for the Sacramento River diversion to a joint environmental impact  
27 study/environmental impact report (“EIS/EIR”) being prepared by the PCWA and the USBR; and  
28 by failing to adequately disclose and discuss the circumstances and factors affecting the likely

1 availability of the long-term water supply from the Sacramento River. Petitioners also contend  
2 that the EIR fails to evaluate direct and indirect impacts of diverting the alternative long-term  
3 water supply from the American River and, in particular, fails to evaluate the impacts of adding  
4 35,000 afa to the existing American River diversion of 35,500 afa at ARPS in the event that the  
5 long-term water supply from the Sacramento River does not materialize.

6 With respect to the secondary initial water supply for the PVSP, petitioners contend  
7 that the EIR fails evaluate the environmental impacts of providing the supply. Petitioners also  
8 contend that the EIR fails to adequately disclose and discuss the circumstances affecting the  
9 likely availability of the secondary initial water supply for the PVSP, in particular the restrictions  
10 of the Water Forum Agreement on the diversion of the secondary initial water supply after 2012.

11 The court finds that administrative remedies were not exhausted with respect to  
12 petitioners' contentions that the EIR violated CEQA by evaluating the cumulative environmental  
13 impacts of the long-term water supply from the Sacramento River without evaluating its direct  
14 and indirect impacts and by failing to evaluate the impacts of adding 35,000 afa to the American  
15 River diversion at the ARPS instead of Folsom in the event that the long-term water supply from  
16 the Sacramento River did not materialize. The comments in the administrative record cited by  
17 petitioners to demonstrate exhaustion of these issues deal with the availability of a long-term  
18 water supply for the PVSP, not with the adequacy of the impacts analysis for the long-term water  
19 supply. (See AR 34:100073-100075; 34:9907; 34:9941-9942.) A letter submitted by counsel for  
20 petitioner Sierra Club on July 16, 2007, criticizes the EIR for deferring an analysis of the  
21 environmental consequences of developing the water diversion and treatment facilities to deliver  
22 the long-term water supply to the project from either the Sacramento River or the American  
23 River ARPS; the letter does not comment on or question the PVSP EIR's use of a cumulative  
24 analysis to evaluate the impacts of diverting the long-term water supply or the absence of an  
25 analysis of the direct or indirect impacts. (143:42896-42903.)

26 In the absence of administrative exhaustion, petitioners are deemed to have waived  
27 these contentions. (See Pub. Resources Code § 21177, subd. (a); *California Native Plant Society*  
28 *v. City of Rancho Cordova* (2009) 172 Cal.App.4th 616-619; *Central Delta Water Agency v.*

1 *State Water Resources Control Bd.* (2004) 124 Cal.App.4th 245, 273-274.) The court is without  
2 jurisdiction to consider the contentions. (*Ibid.*)

3         The court rejects petitioners' contention that the EIR failed to evaluate the  
4 environmental impacts of the secondary initial water supply, 6000 afa diverted at Folsom  
5 Reservoir by the PCWA from 29,000 afa of its American River Middle Fork Project water that it  
6 currently contracts to the SSWD. When the DEIR was released in 2004, the environmental  
7 impacts of diverting this water supply and related infrastructure were modeled and analyzed as  
8 the only interim or initial water supply available from the PCWA for the PVSP. (12:3461-3462;  
9 13:3631-3633, 3635-3638, 3667, 3671-3775, 3708-3709, 3838-3882, 14:4016-4021, 16:4573-  
10 4582.) When the RDEIR was released in 2006, the SSWD contract water became an initial water  
11 supply secondary to a new interim or initial water supply of 6000 afa diverted at the ARPS.  
12 (24:7121, 7123, 7155.) The impacts of the ARPS initial water supply were modeled and  
13 evaluated in the 2006 RDEIR with the methodology used to model and evaluate the impacts of  
14 the SSWD contract water in the 2004 DEIR, the methodology essentially disclosing the impacts  
15 of a 6,000 afa withdrawal from the American River. (13:3667; 24:7195-7196; 37:10850-10852.)  
16 The resulting impact analysis is applicable to both the SSWD contract water supply and the  
17 ARPS water supply because of the proximity between the diversions points at the ARPS and  
18 Folsom Reservoir upstream of the environmentally sensitive Lower American River. (See  
19 37:10850-10852, 10870.) Thus, the impact analysis for the initial water supply in the RDEIR on  
20 water resources, biological resources, cultural resources and recreational resources discloses the  
21 impacts of diverting 6000 afa of SSWD contract water or 6000 afa of ARPS water. (See, e.g.,  
22 24:7199; 25:7201-7203.)

23         There is no basis for petitioners' claim that the 6000 afa of SSWD contract water is  
24 an initial water supply additive to the 6000 afa of ARPS water and, therefore, the EIR was  
25 required to model the impacts of an additional diversion of 6000 afa from the American River.  
26 Throughout the EIR, the initial water supply needs of the PVSP are assumed to be 6000 afa, no  
27 more and no less. (See 13:3667; 24:7155, 7195; 37:10850, 10852.) No comment submitted on  
28 the EIR questioned that assumption, and thus, it cannot be challenged in this proceeding directly

1 or indirectly by a claim that the SSWD contract supply comprising the secondary initial supply  
2 was additive to the ARPS water comprising the initial supply.

3 The court also rejects petitioners' contention that the EIR fails to adequately disclose  
4 and discuss the circumstances affecting the likely availability of the secondary initial water  
5 supply for the PVSP in light of the restrictions of the Water Forum Agreement on the diversion  
6 of the secondary initial water supply after 2012. If the restrictions were to preclude the diversion  
7 of the secondary initial supply in any year before the availability of the long-term water supply  
8 that the initial supply became unavailable, PCWA would release an equivalent volume of water  
9 from an upstream reservoir of its Middle Fork Project to continue supplying the necessary  
10 diversion. (13:3636-3637; 24:7176.) Modeling has confirmed that these upstream releases can  
11 occur in all years without reducing available water below acceptable levels in the reservoirs due  
12 to anticipated replenishment from rainfall in subsequent years. (*Ibid.*)

13 Moreover, as respondent and real party explain, it is unlikely that the secondary  
14 initial water supply would be required to meet PVSP needs at any time before a long-term water  
15 supply from the Sacramento River or the American River became available. Developments  
16 between the release of the DEIR in 2004 and the release of the SPRRDEIR in 2007 offset  
17 circumstances that would potentially restrict or preclude the availability of the initial water  
18 supply diverted at the ARPS: potential restrictions discussed in the RDEIR on the delivery of the  
19 ARPS water to the PVSP through the limited and diminishing capacity of the Roseville pipeline  
20 system would be avoided, as discussed in the SPRRDEIR, by an alternate pipeline route upon the  
21 PCWA's completion of conveyance and treatment facilities with adequate capacity by 2011.  
22 (24:7155; 27:7966-7968; 37:10849 (Initial Surface Water Supply (2) PCWA supply via pipeline  
23 from Ophir Water Treatment Plant), 10851-10852, 10895-10897, 10934.) Thus, the PVSP EIR  
24 establishes the availability of an interim or initial water supply for the PVSP with reasonable  
25 certainty.

26 The court also rejects petitioners' contention that the PVSP EIR violates CEQA and  
27 *Vineyard* by deferring environmental analysis of the construction and operation of PCWA  
28 diversion, treatment and storage facilities for a Sacramento River diversion to a joint EIS/EIR.

1 being prepared by the PCWA and the USBR under the aegis of the SRWRS and the Sacramento  
2 Area Water Forum Agreement. The EIR explains that the omission of that environmental  
3 analysis reflects the fact that, at the time the RDEIR was published, there was a lack of  
4 meaningful information to include in the RDEIR and the facilities were being separately  
5 evaluated in parallel fashion. (23:6895; 37:10855.) Indeed, that environmental analysis was and  
6 is outside the scope of the PVSP EIR: the proper scope of the EIR analysis is the reasonably  
7 foreseeable impacts associated with the diversion or withdrawal of water from the Sacramento  
8 River for the purpose of supplying water to the PVSP, not the impacts associated with the  
9 development of the diversion facilities whose likelihood of being approved may affect the likely  
10 availability of the water supply. Unlike the sewer expansion in *San Joaquin Raptor/Wildlife*  
11 *Rescue Center* (1994) 27 Cal.App.4th 713, the water delivery equipment in *Santiago County*  
12 *Water Dist. v. County of Orange* (1981) 118 Cal.App.3d 818, and the water delivery  
13 infrastructure which is specific to the PVSP development and is analyzed in the EIR (24:6903;  
14 34:10178), the study and proposed development of the Sacramento diversion facilities were  
15 motivated by the regionwide planning activities and agreements of Water Forum; the long-term  
16 water needs of the PVSP development may have been taken into consideration in the planning  
17 activities and agreements, but the study and proposed development of the Sacramento diversion  
18 facilities were not triggered by and are not part of the PVSP development.

19 As a practical matter, respondent County has no control over the study, design and  
20 development of the Sacramento diversion facilities which are the responsibility of the PCWA  
21 and the USBR. Until the PCWA and the USBR release information about the design and  
22 potential development of the facilities, respondent County lacks information about the facilities  
23 to disclose and analyze in the EIR. When the information does become available, its inclusion,  
24 discussion and analysis in the EIR is appropriate, as occurred with respect to the information  
25 about the diversion alternatives published in the SRWRS Initial Alternatives Report. (37:10859-  
26 10868.)

27 Lastly, the court rejects petitioners' contention that the PVSP EIR violates CEQA  
28 and *Vineyard* by failing to adequately disclose and discuss the circumstances and factors

1 affecting the likely availability of the long-term water supply from the Sacramento River. In  
2 accordance with the principles announced by the California Supreme Court in *Vineyard*, the EIR  
3 identifies alternative sources of long-term and interim water supplies for the PVSP, carefully  
4 identifies and considers the legal and practical uncertainties surrounding each source, and hones  
5 the selection of sources to increase the likely availability of water supplies for the PVSP (as in  
6 the case of the initial ARPS water whose transmission route through the Roseville pipeline is  
7 being reconsidered in light of PCWA's development of a new pipeline system). (37:10855-  
8 10860.) The EIR concludes that the supplies are reasonably certain to be available to the PVSP  
9 because they are premised on the PCWA's established water rights, are grounded in the regional  
10 planning activities and agreements of the Sacramento Area Water Forum, have the direct  
11 involvement of the USBR with congressional support, and are environmentally benign.  
12 (37:10855-10859.) Nonetheless, the EIR acknowledges the multiple regulatory requirements the  
13 long-term water supply from the Sacramento River diversion must satisfy in becoming  
14 operational and the unforeseen circumstances that may interfere with the ultimate availability of  
15 the supplies. To deal with such contingencies, the EIR identifies Mitigation Measures 4.11.7-1a  
16 and 4.11.7-1c, which provide for the curtailment of PVSP development should a water source  
17 fail to materialize, and analyzes the effects of curtailment. (37:10887-10893, 10934.) This  
18 analysis of reasonable certainty is supported by substantial evidence.

#### 19 Open Space

20 The PVSP area contains 4,251 acres of existing open space that may be converted to  
21 urban uses under the Placer County General Plan. Development of the PVSP would result in the  
22 conversion of approximately 3,520 acres of this open space to urban uses, and approximately 714  
23 acres of the PVSP area would remain designated as open space pursuant to an Avoidance and  
24 Open Space Plan. In accordance with PVSP goals and policies, these 714 acres would form an  
25 interconnected system or network that includes protected wildlife corridors, floodways, protected  
26 woodland areas, lakes, protected sensitive habitat area (i.e., wetlands and habitat for rare,  
27 threatened or endangered species), and greenways for trail development.

1           The EIR sets forth a mitigation program intended to simultaneously mitigate the  
2           significant impacts of PVSP development on open space as well as agricultural lands and  
3           biological resources. The program seeks to strike a reasonable balance between on-site  
4           avoidance and off-site preservation and restoration of these resources while providing strategies  
5           consistent with those likely to be included in a Placer County Conservation Plan ("PCCP") for  
6           Western Placer County.<sup>2</sup> Thus, the mitigation program sets forth standards for the amount of  
7           preservation or restoration that must occur for each acre of habitat lost to PVSP development:  
8           Mitigation Measure 4.4-1 provides detailed requirements for the preservation of one acre of open  
9           space in Placer County for each acre of open space and agricultural lands lost within the PVSP  
10          area. The preservation would be established in core preserves of approximately 1000 acres or in  
11          200 acre additions to existing preserves of at least 1000 acres. Potential mitigation sites that are  
12          designated for open space and agricultural uses in Placer County and which contain valuable  
13          existing habitat have been identified and are being acquired by the Placer Vineyards property  
14          owners to implement this mitigation measure.

15                 Petitioners Sierra Club and Sierra Foothills Audubon Society contend that the  
16          description of the 714 acres as natural open space is inaccurate and a misleading description of  
17          the physical environment in violation of CIA's informational requirements. Relying on  
18          comments by the California Department of Fish and Game on the PVSP EIR, petitioners indicate  
19          that, upon development of the PVSP, the 714 acres would be fragmented into isolated areas  
20          surrounded by incompatible urban uses and would lose their value as natural undeveloped habitat  
21          for wildlife. Thus, petitioners conclude, the EIR's description of the habitat adversely impacted  
22          by PVSP development should have included the 714 acres along with the 3,520 acres converted  
23          to urban uses. By failing to include the 714 acres as lost habitat, the EIR understated the total  
24          impacted habitat and failed to provide appropriate mitigation for the impacts to the 714 acres  
25          under Mitigation Measure 4.4-1.

---

26                 <sup>2</sup> At the time of EIR preparation and certification, the county and state and federal wildlife  
27          agencies were drafting the PCCP pursuant to the California Natural Community Conservation Planning  
28          Act and the federal Endangered Species Act to avoid and/or resolve potential conflicts between the  
        conservation of threatened and endangered species and otherwise lawful urban development activities in  
        Placer County.

1 Contrary to petitioners' contention, the EIR did not violate CIA's informational  
2 requirements in describing 714 acres within the PVSP as open space with continuing habitat  
3 value rather than as lost habitat. The EIR recognizes that PVSP development would urbanize the  
4 PVSP site and fragment the large mosaic of habitats that occur on-site and in the surrounding  
5 area, thereby diminish the habitat value of the 714 acres of open space, and produce a significant  
6 and unavoidable impact on existing open space. (25:7375, 7378; 39:11426.) The remaining  
7 habitat value of the 714 acres would be preserved pursuant to the PVSP Avoidance and Open  
8 Space Plan as an interconnected system with naturally occurring wetland/swale corridors  
9 providing connectivity of waters and watersheds and avoiding the isolation of wetlands.  
10 (39:11421.) The potential adverse effects of PVSP development would be minimized through  
11 measures to protect the preserved corridors from human disturbances through a Open Space  
12 Mitigation and Management Plan required pursuant to Mitigation Measure 4.4-1e. (*Ibid.*;  
13 39:11426-11427.) As evidenced by various studies and observations documenting the  
14 prevalence of plant and wildlife in urban open areas in the region, the preserved corridors could  
15 and would provide habitat for a variety of plant and wildlife species, including species having  
16 special status under the state and federal Endangered Species Acts. (39:11427-11428.) This  
17 discussion in the EIR constitutes substantial evidence that the 714 acres of open space would  
18 considerably lessen the significant impacts on open space in the PVSP area, although not to a  
19 level of insignificance. (*Ibid.*)

#### 20 Vernal Pools

21 The PVSP EIR reports on the basis of field studies that the 3,520 acres of open space  
22 converted by PVSP development would include 69 acres of vernal pool habitat consisting of  
23 vernal pools, seasonal depressional wetlands, seasonal swales and drainage swales. To mitigate  
24 the significant impact to the vernal pool habitat, Mitigation Measure 4.4-1b requires two acres of  
25 vernal pool habitat to be preserved, restored or recreated for each acre of vernal pool habit lost to  
26 PVSP development. Restoration pursuant to this mitigation measure must construct vernal pools  
27 at densities within the range of historical levels identified on 1937 aerial photos or other valid  
28 historical evidence. To maintain the value of the vernal pools, the restoration or recreation of

1 vernal pool habitat must include adequate upland grasslands. Consistent with a holistic  
2 watershed-level and comprehensive ecosystem approach that minimizes fragmentation and  
3 indirect impacts and disturbances from activities on adjacent lands, the mitigation measure  
4 provides for the acquisition of large parcels that encompass intact watersheds and comprehensive  
5 ecosystems involving a variety of aquatic habitats and their surrounding uplands.

6 A Final Recovery Plan for the Vernal Pool Ecosystems of California and Southern  
7 Oregon, prepared and approved by the U.S. Fish and Wildlife Service in 2005, identifies Western  
8 Placer County as a core area within the Southeastern Sacramento Vernal Pool Region. The  
9 Recovery Plan designates the Western Placer County core area as a "priority 2" recovery area  
10 with a recommendation for the protection of 85 percent of the suitable vernal pool habitat within  
11 the core area. The FEIR analyzes a project alternative retaining 85 percent of the vernal pool  
12 resource that would be impacted by PVSP development -- approximately 2,182 acres of all  
13 identified vernal pool complexes with 250-foot buffers -- and concludes that this 85 percent  
14 alternative would not achieve most project objectives and would be inconsistent with the Placer  
15 County General Plan designating the PVSP area for development.

16 Petitioners Sierra Club and Sierra Foothills Audubon Society contend that the PVSP  
17 inaccurately describes the existing vernal pool resource and understates the resource acreage by  
18 limiting the scope of vernal pools to wetted acres and omitting the upland grasslands which are  
19 ecologically connected to the pools by swales or drainages and constitute an essential component  
20 of the pools. Petitioners reference surveys, conducted in conjunction with the drafting of the  
21 PCCP, that identify 2,233 acres of vernal pool grasslands on the PVSP site in contrast to the 69  
22 acres of vernal pools identified in the EIR. Petitioners conclude that this substantial  
23 understatement of vernal pool acreage skews the EIR's description of baseline environmental  
24 conditions and results in an understatement of the PVSP's substantial impact on vernal pools and  
25 the mitigation needed to reduce the impacts; the provision in Mitigation Measure 4.4-1b,  
26 requiring the restoration of vernal pool habitat to include adequate upland grasslands, is vague  
27 and lacks any quantification of grassland acreage in the EIR to guide its implementation.  
28 Similarly, petitioners conclude that the EIR failed to quantify the acreage of "core area" vernal

1 pool habitat impacted by the PVSP or analyze the significance of the impacts from a regional  
2 perspective consistent with the Final Recovery Plan for the Vernal Pool Ecosystems of California  
3 and Southern Oregon.

4 The EIR did not inaccurately describe the environmental setting of the PVSP by  
5 defining and quantifying vernal pool habitat as wetted acreage without quantifying associated  
6 upland grasslands. Nor did the lack of grassland quantification skew the analysis of PVSP  
7 impacts on vernal pools and the mitigation required for the restoration of the pools. Rather the  
8 EIR recognizes pursuant to Mitigation Measure 4.4-1b that upland grasslands are an essential  
9 part of the vernal pool ecosystem and requires the restoration of vernal pool habitat to include  
10 adequate upland grasslands. (25:7381.) For purposes of 4.4-1b, restoration involves the  
11 construction of vernal pools at densities within the range of historical levels as identified on the  
12 1937 aerial photos or other valid historical evidence. (*Ibid.*) As explained in the FEIR, such  
13 restoration is the reestablishment of prior-existing naturally-occurring wetlands in their  
14 approximate prior-existing distribution with microtopography and hydrology appropriate to the  
15 formation of vernal pools and other seasonal wetlands. (34:10104.) Thus, quantification of  
16 grasslands associated with vernal pools on the PVSP site is unnecessary to an accurate  
17 description of the environmental setting, the analysis of PVSP impacts on the vernal pools, and  
18 the restoration of the impacted vernal pools with adequate grasslands under Mitigation Measure  
19 4.4-1b.

20 With respect to the Final Recovery Plan, the EIR accurately describes the Plan's  
21 characterization of Western Placer County, including the PVSP site, as a core, priority 2 recovery  
22 area with a recommendation for the protection of 85 percent of suitable vernal pool habitat in the  
23 area. (25:7294-7295.) The FEIR considers this recommendation by examining a project  
24 alternative to the PVSP that preserved 85 percent of the vernal pool habitat on the PVSP site,  
25 determined that the alternative was inconsistent with most PVSP development objectives and the  
26 Placer County General Plan designation of the PVSP for urban uses, and reasonably concluded  
27 that the alternative is infeasible. (34:10144-10146; 35:10329.) This consideration of an  
28

1 alternative based on the Final Recovery Plan satisfies CEQA requirements for consideration of  
2 the Plan's recommendations.

3 Traffic

4 The PVSP EIR analyzes the traffic impacts of the project on five jurisdictions in the  
5 area: Placer County, City of Roseville, Sacramento County, Sutter County and Caltrans. The  
6 RDEIR discloses that the project would generate approximately 192,788 vehicle trips of which  
7 40,500 would remain within the PVSP area and 152,300 would travel to and from external  
8 destinations. These figures are updated and increased approximately 1.5 percent in the  
9 SPRRDEIR to 195,246 trips generated by the project.

10 Petitioners Collins and Williams contend that the EIR does not adequately analyze  
11 and mitigate the PVSP's traffic impacts in a number of ways. In particular, relying on comments  
12 submitted by Caltrans and their expert Daniel Smith, petitioners contend that the Placer County  
13 Travel Demand Model used to analyze the traffic impacts is flawed and inadequate because it  
14 does not realistically reflect employment trip locations on primary access routes, including the  
15 state highways; it shows reduced traffic on some segments and only small increases on other  
16 segments of I-80 and Hwy. 70/99; it excessively re-pairs tripmakers to new destinations to an  
17 extent beyond the adjustments people with established trip patterns are likely to make; and it  
18 displaces and diverts non-project traffic away from the project area. (34:10014; 35:10241,  
19 10248-10249, 10259;38:11378-11381.)

20 As explained in the EIR, the Placer County Travel Demand Model is not designed to  
21 layer or add the amount of traffic that would be generated by the PVS onto existing travel counts  
22 and patterns. Rather, the model, which was revalidated in 2004 prior to its use in evaluating  
23 PVSP's traffic impacts, uses a trip distribution mechanism, based on SACOG's regional travel  
24 demand model SACMET, to predict how travel patterns would change when the PVSP land uses  
25 are added: it assumes other drivers will take different routes with PVSP improvements in place  
26 and redistributes trips, causing traffic on some roadways to decrease, offsetting PVSP traffic, and  
27 changing traffic movements at intersections. (26:7705; 35:10247-10249; 39:11406-11407.)  
28 Thus, the EIR explains the reasonable assumptions and programming on which the Placer

1 County Travel Demand Model is based. Petitioners and their expert fail to establish that the  
2 model is flawed.

3 Next, relying on the comments of Mr. Smith, petitioners contend that the traffic study  
4 for the PVSP was deficient in analyzing the project's impacts on road segments and intersections  
5 in Roseville in the PM peak hour but not in the AM peak hour, as it did in Sacramento, Sutter  
6 and Placer Counties and at state highway intersections. (34:9950-9951; 38:11376.) In response,  
7 the EIR explained that the PVSP's impacts at intersections in Roseville were analyzed only  
8 during PM peak hours on the basis of Roseville's policies and preferences which did not require  
9 an analysis of AM peak hour impacts. This same approach was used in each of the jurisdictions  
10 where the PVSP would increase peak hour traffic volumes; the policies and preferences of each  
11 jurisdiction were selected as thresholds of significance for the traffic analysis in that jurisdiction.  
12 Respondent was acting within its discretion in following this approach for the selection of  
13 thresholds of significance. (26:7636, 7685, 7736. See *Mira Mar Mobile Community v. City of*  
14 *Oceanside* (2004) 119 Cal.App.4th 477, 493.)

15 Petitioners' other claims related to the EIR's analysis of project traffic impacts lack  
16 merit. Contrary to petitioners' contention, the amendment of Policies 3.A.7, 3.A.3, and 3.A.12 of  
17 the Traffic and Circulation Element of the Placer County General Plan by the Board of  
18 Supervisors along with similar amendments of Community Plan Policy 9 and PVSP Policy 5.1  
19 did not, as petitioners contend, change the level of service ("LOS") policies in these plans and  
20 was not a blanket degradation of County LOS standards; the amendments merely incorporated  
21 procedures for establishing exceptions to the LOS on a case by case basis. Also contrary to  
22 petitioners' contention, the EIR uses an appropriate threshold of significance for traffic delays at  
23 unsignalized rural intersections based on methodology from the Transportation Research Board's  
24 Highway Capacity Manual; in any event, petitioners' contention is essentially moot because the  
25 one intersection to which the significance threshold applies is scheduled for the installation of a  
26 signal. (26:7636; 34:10010; 39:11403.) And contrary to petitioners' contention, the EIR  
27 provides an effective enforceable mitigation measure for the PVSP's traffic impacts in  
28 Sacramento County; Mitigation Measure 4.7-2a requires project applicants to pay their fair share

1 toward improvements in Sacramento County needed to alleviate project traffic impacts and  
2 requires the County to undertake efforts to establish an enforceable agreement with Sacramento  
3 County to ensure appropriate. (See 26:7690-7691, 7677. See *Anderson First Coalition v. City of*  
4 *Anderson* (2005) 130 Cal.App.4th 1173.)

5 Blueprint Alternative

6 The RDEIR released in April 2006 evaluated the environmental impacts of both the  
7 PVSP and the Placer Vineyards Blueprint Specific Plan ("Blueprint Alternative"), an alternative  
8 plan based on the Preferred Blueprint Scenario adopted by the Sacramento Area Council of  
9 Governments ("SACOG") in 2004 to guide land use and transportation development that will  
10 accommodate population growth in the Sacramento region over the next 50 years. (7:1869ff.;  
11 23:6873-6874; 24:6984ff.; 28:8292-8306.) To limit urban sprawl, reduce the number and length  
12 of vehicular transportation, facilitate public transit and conserve natural resources, the Preferred  
13 Blueprint Scenario proposes a compact, mixed-use development pattern for the region with a  
14 balance of employment, residential, shopping and recreational uses linked to transportation  
15 improvements. (*Ibid.*)

16 The Blueprint Alternative proposes a 53 percent increase in residential development  
17 over the PVSP. (28: 8294.) Specifically, the Blueprint Alternative proposes the development of  
18 21,631 residential units at low, medium and high densities substantially greater than the low,  
19 medium and high densities proposed by the PVSP for the development of 14,132 residential  
20 units. (28:8294-8295.) The Blueprint Alternative proposes this residential development for an  
21 anticipated population of approximately 50,000 at buildout, a process extending over a 20- to 30-  
22 year period. (28:8299.) In comparison, the PVSP anticipates a population of approximately  
23 33,000 at buildout. (*Ibid.*) To serve the increased population in the Blueprint Alternative, the  
24 PVSP acreage for commercial uses, schools, parks, and religious facilities would also increase.  
25 (28:8295-8298.)

26 In certifying the EIR, the Board found that the Blueprint Alternative was  
27 environmentally inferior to the PVSP and infeasible because it would have more significant  
28 environmental impacts than the PVSP in eight of the twelve categories of environmental impacts

1 analyzed in the EIR. (2:598; 3:625; 28:8435-8436.) By increasing the density of development  
2 and therefore the number of structures and residents, the Blueprint Alternative would increase  
3 impacts in visual quality and aesthetics; hydrology, water resources and water quality;  
4 archaeological/paleontological resources; transportation and circulation; air quality; noise; public  
5 services/infrastructure; and land use and planning policies. (*Ibid.*) Other impacts of the  
6 Blueprint Alternative would be the same as those of the PVSP. (*Ibid.*)

7         The EIR and the Board's findings recognize that, to the extent the higher population  
8 and densities of the Blueprint Alternative would reduce population growth and development and  
9 their attendant environmental impacts elsewhere in the Sacramento region over time, it would  
10 regionally conserve open space and other natural resources while decreasing vehicle miles  
11 traveled, traffic congestion and air pollution in the long-term. (3:625; 24:7017-7018; 28:8351,  
12 8436.) However, the Blueprint Alternative does not have a mechanism for ensuring that these  
13 regional environmental benefits would materialize: respondent County cannot control the land  
14 use decisions in surrounding jurisdictions such as Roseville, Lincoln, Rocklin, Sutter and  
15 Sacramento and thus cannot guarantee that such decisions on pending development projects  
16 would be compatible with the SACOG Preferred Blueprint Scenario and the Blueprint  
17 Alternative. (3:625; 24:7017-7018; 28:8436; 139:41617.) Absent such control, surrounding  
18 jurisdictions would not be required to refrain from approving residential development in areas  
19 inconsistent Preferred Blueprint Scenario. (*Ibid.*)

20         Relying on comments by SACOG, petitioners Collins and Williams contend that  
21 respondent was required to approve the Blueprint Alternative instead of the PVSP because the  
22 Blueprint Alternative would result in less air pollution, greenhouse gas emissions, traffic  
23 congestion, and water consumption per capita. Petitioners examine the evidentiary bases of each  
24 impact analysis in the EIR and conclude that no substantial evidence supports a finding that the  
25 Blueprint Alternative is environmentally inferior to the PVSP or infeasible. Rather, they  
26 conclude that the environmental effects of the Blueprint Alternative and the PVSP would be the  
27 same but that there would be greater environmental impacts associated with the PVSP; the  
28 Blueprint Alternative would be the environmentally superior and feasible alternative; and

1 respondent could not properly approve the PVSP under CEQA while rejecting the feasible  
2 alternative presented by the Blueprint Alternative. (Collins' Opening Brief, p. 30:5-11; Collins'  
3 Reply Brief, pp.12:24 -- 13:3, citing *Sierra Club v. Gilroy City Council* (1990) 222 Cal.App.3d  
4 30, 41.)

5 A review of the evidentiary basis of respondent's findings regarding the impacts of  
6 the PVSP and the Blueprint Alternative indicate that the findings are supported by substantial  
7 evidence in the administrative record, even though there may be substantial evidence to support  
8 petitioners' contrary view. In particular, there is substantial evidence and logic to support  
9 respondent's finding and policy concern that the potential environmental benefits of the  
10 Blueprint Alternative are uncertain and dependent on compliance by the jurisdictions in the  
11 region to make land use planning decisions consistent with SACOG's Preferred Blueprint and  
12 the Blueprint Alternative, circumstances beyond respondent's control. In these circumstances,  
13 the court must sustain respondent's findings and defer to its legislative discretion in approving  
14 the PVSP<sup>3</sup>. (*Laurel Heights Improvement Assn. v. City of Los Angeles* (1988)47 Cal.3d 376,  
15 393.)

#### 16 Greenhouse Gas Emissions

17 The SPRRDEIR released in March 2007 added a section to the RDEIR that analyzes  
18 the greenhouse gas emissions ("GHGs") generated by the PVSP and the Blueprint Alternative  
19 and the impact of these emissions on global climate change. (37:10837, 10971-10998.) This  
20 section was added in response to the enactment of the California Global Warming Solutions Act  
21 in 2006, providing for the reporting and reduction of GHGs in California. (37:10837-10838. See  
22 Stats. 2006, ch. 488 ("A.B. 32").)

23 In the absence of any identified significance threshold for GHGs or any recognized  
24 methodology for analyzing air quality impacts related to GHGs, the GHGs analysis uses a  
25 descriptive rather than a quantitative significance criterion that considers a project's incremental  
26

27  
28 <sup>3</sup> Unencumbered by the parameters of this lawsuit and the requirements of the law, the court recognizes that there are strong public policy arguments supporting the Blueprint Alternative.

1 contribution to global climate change to be significant if, due to the project's size or nature, it  
2 would generate a substantial increase in GHGs relative to existing conditions. (38:10981.)

3 The SPRRDEIR estimates GHGs for the PVSP and the Blueprint Alternative using  
4 carbon dioxide (CO<sub>2</sub>) emissions as a proxy for all GHGs. (37:10981.) Lacking detailed  
5 information about the type and amount of commercial operations and residential units to be  
6 ultimately developed in the Placer Vineyards project area, the analysis initially uses traffic study  
7 data to calculate the average vehicle miles likely to be generated annually by the PVSP and by  
8 the Blueprint Alternative at buildout, assumes a vehicle emissions factor of 366 grams per mile  
9 for future CO<sub>2</sub> published by the California Air Resources Board, and determines that the project-  
10 generated vehicle trips would emit 213,000 tons of CO<sub>2</sub> annually for the PVSP and 621,000 tons  
11 of CO<sub>2</sub> annually for the Blueprint Alternative. (37:10981-10983.) The analysis then assumes  
12 that the proportion of these annual tonnages of CO<sub>2</sub> emissions to the total CO<sub>2</sub> emitted by the  
13 PVSP and by the Blueprint Alternative are similar to the proportion of CO<sub>2</sub> emitted by the  
14 transportation sector statewide to the total CO<sub>2</sub> emitted by all sectors statewide. Applying this  
15 assumption, the analysis determines that the PVSP would emit approximately 523,000 tons of  
16 CO<sub>2</sub> annually and the Blueprint Alternative would emit 523,000 tons of CO<sub>2</sub> per year.

17 The SPRRDEIR indicates that these estimated CO<sub>2</sub> emissions are very general and  
18 may be high for a number of reasons. In addition to lacking detailed information about the type  
19 and amount of commercial operations and residential units at buildout, the estimates do not take  
20 into account that many of the project residents and businesses emitting CO<sub>2</sub> would be moving  
21 from an existing location to the project site and were not new emission sources contributing to a  
22 change in overall global GHGs and global climate change. (37:10982-10983.) Additionally, the  
23 estimates do not take into account the reductions in GHGs potentially resulting from the  
24 implementation of reduction requirements for stationary sources of CO<sub>2</sub> emissions pursuant to  
25 A.B. 32 and reduction requirements for vehicular GHG emissions under legislation enacted in  
26 2002. (Stats. 2002, ch. 200 ("A.B. 1493").) (37:10983-10984.)

27 Despite this uncertainty regarding the actual amount of CO<sub>2</sub> that the PVSP or  
28 Blueprint Alternative would emit, and notwithstanding the impossibility of determining how CO<sub>2</sub>

1 emissions attributable to the Placer Vineyards project may or may not physically impact global  
2 climate change, the SPRRDEIR concludes that the project would potentially make a  
3 cumulatively considerable incremental contribution to global climate change and that this  
4 contribution to global climate change would be significant and unavoidable. (37:10985-10987.)  
5 This conclusion is based on the very large size of the project and its potential emission of  
6 substantial amounts of CO<sub>2</sub> and other GHGs at much higher volumes than most other types of  
7 development at either a local or regional level. (37:10985.)

8 The measures proposed in the SPRRDEIR for the mitigation of the project's  
9 cumulatively considerable incremental contribution to global climate change mirror the "smart  
10 growth" principles directing the design of the project as a compact development promoting non-  
11 vehicular modes of transportation, decreasing travel distances between employment and housing,  
12 and promoting alternative low-emission energy sources. (37:10986-10987.) The SPRRDEIR  
13 incorporates measures to reduce the generation of air pollutants and energy consumption by  
14 residential and nonresidential development, promote bicycle and transit usage, encourage energy-  
15 saving design and operation of school facilities, prohibit open burning, mitigate traffic impacts,  
16 and encourage alternative fuel vehicles. (37:10987-10988.)

17 Petitioners Collins and Williams contend that the SPRRDEIR incorrectly calculates  
18 potential GHG emissions by the PVSP and by the Blueprint Alternative and erroneously  
19 concludes that the PVSP would generate more GHGs than the Blueprint Plan. Referencing  
20 comments by SACOG (38:11272-11302) and the Center for Biological Diversity (38:11307-  
21 11309), petitioners indicate that the SPRRDEIR fails to properly calculate the GHGs from  
22 stationary non-vehicular sources, fails to consider differences in vehicular GHGs produced by  
23 differences in vehicle speed and reduced-speed traffic conditions created by the PVSP, and fails  
24 to include GHGs from project construction. Petitioners further contend that the SPRRDEIR fails  
25 to properly analyze the cumulative impacts of project GHGs in combination with GHGs emitted  
26 by other present and foreseeable developments in the region.

27 In the absence of an accepted methodology for calculating GHGs emitted by a  
28 proposed project, in light of the reasoned explanation given in the SPRRDEIR for the

1 methodology used to calculate the GHGs for the PVSP and Blueprint Alternative, and given the  
2 SPRRDEIR's conclusion that the GHGs would be significant and unavoidable, the court finds no  
3 error in the GHG calculations.

4 The lack of separate calculations of CO<sub>2</sub> emissions from stationary non-vehicular  
5 project sources is not improper. Without detailed information about the type and amount of  
6 commercial operations and residential units to be ultimately developed in the project area, the  
7 calculations would likely be speculative. (38:11305, 11310-11311, 11313.) Further, a  
8 reasonable basis exists for assuming that the proportion of CO<sub>2</sub> emissions emitted by building  
9 operations and other non-transportation PVSP sources would be roughly proportional to the  
10 emissions tracked by the State of California: the majority of the project's electricity would come  
11 from the same grid as the rest of the state, and the project's ratio of non-mobile to mobile-source  
12 emissions from other pollutants such as ozone precursors is in line with other similar projects.  
13 (*Ibid.*)

14 The calculations do not fail to consider differences in vehicular GHGs produced by  
15 differences in vehicle speed: the CO<sub>2</sub> emission factor used to quantify GHG emissions from  
16 vehicle trips in grams per mile is based upon average vehicle fuel economy set by the Corporate  
17 Average Fuel Economy (CAFE) standards and includes assumptions that different vehicles  
18 would reach optimum performance/efficiency at different speeds. (38:11305.)

19 With respect to GHGs from construction vehicles and machinery, the SPRRDEIR  
20 reasonably addresses the matter in the course of responding to a comment by the Center for  
21 Biological Diversity, that the EIR had not conducted an adequate inventory of GHGs associated  
22 with the project from such sources and activities as construction vehicles and machinery and the  
23 manufacture/transport of building materials. (38:11308.) The SPRRDEIR explains that the  
24 calculation of GHGs from these activities would involve a good deal of speculation due to the  
25 unavailability of relevant information about the activities; then notes that the quantities of GHGs  
26 from some the activities would be relatively minor compared to operational emissions from the  
27 project because the lifetime of the project is an order of magnitude larger than the duration of  
28 construction of the project; and observes that the importance of the requested inventory was of

1 limited importance in light of the conclusion in the SPRRDEIR that, even with all feasible  
2 mitigation, GHGs would be significant and unavoidable. (38:11310-11312.) "It is inconceivable  
3 that, even with the kind of (speculative) analysis demanded by the commenter, this bottom line  
4 conclusion would change." (38:11312.) Petitioners have not submitted any evidence to indicate  
5 that the bottom line conclusion would change or that other mitigation could be identified and  
6 required by additional analysis.

7 Lastly, the SPRRDEIR correctly analyzes the cumulative impacts of project GHGs.  
8 Unlike air pollutants whose cumulative impacts are assessed in combination with other past,  
9 present and future projects in an air basin or region, climate change is effected by GHGs from  
10 human sources across the planet; (37:10972, 10981-10982); contrary to petitioners' contention,  
11 the relevant geographic area for an analysis of the project's cumulative impacts under CEQA  
12 Guidelines 15130 and 15355 is the globe, not Yuba and Placer Counties on which the SACOG  
13 analysis focused. (38:11279-11281, 11286-11287.) And it would appear that the contribution of  
14 either the PVSP or the Blueprint Alternative to climate change would be cumulatively  
15 considerable under the significance criteria set forth in the SPRRDEIR: the project "would  
16 generate a substantial increase in GHG emissions relative to existing conditions." (37:10980-  
17 10981, 10984-10985.)

18 The petitions are denied. Counsel for real party in interest shall prepare a proposed  
19 judgment, serve it on all parties for approval as to form, and submit it to this court for signature  
20 and entry pursuant to rule 3.1312 of the California Rules of Court.

## SMITH ENGINEERING &amp; MANAGEMENT

August 18, 2009

Mr. Tod Herman  
Nevada County Community Development Agency  
950 Maidu Avenue  
Nevada City, CA 95959-8617

**Subject: Higgins Marketplace (SCH# 2005022022)**

P09005

Dear Mr. Herman:

I am retained by concerned citizens to review the Final Environmental Impact Report (hereinafter "the FEIR") and its supporting documentation for the proposed Higgins Marketplace Project (hereinafter "the Project") in the Nevada County (hereinafter "the County") and have previously commented on traffic aspects in this matter. My qualifications to offer these comments include registration as both a Civil and Traffic Engineer in California and 40 years professional consulting practice in these fields. I have both prepared and reviewed and commented on the traffic and circulation components of numerous environmental impact documents under the California Environmental Quality Act (hereinafter "CEQA"). My professional resume has been attached to prior correspondence. My comments follow.

**The FEIR Traffic Analysis Continues To Rely On an Understated Estimate of Project Traffic**

Our prior correspondence pointed out that the trip generation for a portion of the Project has been estimated on the basis that it would be comprised of general retail uses appropriately evaluated under the land use category entitled "Shopping Center" in the trip generation reference source relied upon by the County's traffic consultant, a category that has a higher trip generation rate than the "specialty retail" category employed by the County's traffic consultant.

In responding on this issue, the County's traffic consultant, the applicant's traffic consultant, and, ultimately, County staff all base their conclusions on the assumption that portions of the site *might potentially be occupied* by uses reasonably characterized as "specialty retail" which clearly does have a lower trip generation rate than the "shopping center" use. However, uses of the site are not limited to those which fall into the category of "specialty retail" and could be occupied by any general retail use. In that circumstance, the good faith effort to disclose impact demanded by CEQA would require that the portions of the Project that have been evaluated at the "specialty retail" trip generation rate be evaluated at the "shopping center" trip generation rate that is more all-embracing of the potential uses of the

TRAFFIC • TRANSPORTATION • MANAGEMENT

5311 Lowry Road, Union City, CA 94587 tel: 510.489.9477 fax: 510.489.9478

site (and higher than the "specialty retail" rate). Hence, the County's analysis fails the test of good faith effort to disclose impact.

We also note that, although the applicants traffic consultant observes that the County's traffic consultant has assumed a lower percentage of the Project's traffic would be attracted from existing passers-by than the maximum rates cited in an authoritative reference source, thereby implying that the overall traffic estimated for the Project is conservatively high, such a conclusion would be improper. The diverted passerby rates assumed by the County's traffic consultant reasonably reflect the rural location of this Project. Most of the maximum attracted passerby rates in the source reference reflect uses in dense urban and suburban areas where high volumes of traffic can sustain high rates of attraction of passerby traffic. At rural sites, those rates imply unrealistically high frequency of visits by regular passers-by.

**The FEIR Assumption That Planned Changes In Combie Road Would Preclude Project Traffic Impacts Is Speculative**

With regard to Impact 4.2.2, the FEIR assumes that planned widening of the segment of Combie Road between Higgins Road and SR 49 to 5 lanes with a raised median by 2011 would preclude Project traffic impacts on this segment. However, this assumption is highly speculative because, although the County does have the authority to impose access restrictions, its likelihood of doing so to the existing developed uses on this segment by 2011 is highly speculative, especially considering that the uses include a fire station.

**The FEIR Response Is Dismissive Of Valid Concerns For Queuing Impacts on Two Approaches at the Intersection of Combie Road and SR 42 As Expressed By Caltrans and By Smith Engineering & Management**

Regarding the queuing and operational issue on the Combie approach that we previously identified, the County's traffic consultant admits there would be occasional blockages of the right lane, but concludes that would somehow be OK and that signage could somehow persuade knowledgeable peak hour travelers to drive in a way that conforms to the optimal theoretical functioning of the intersection instead of to their own individual advantage. In the case of the queuing issue raised by Caltrans, the response is to observe that the Highway Design Manual section cited by Caltrans is a guideline, not a standard, to observe that long range queue predictions may not be rigorously reliable, and to conclude that the vastly exceeded guideline can be dismissed. A second guideline from the Highway Design Manual, that regarding deceleration distance, is not addressed at all.

What the County is really doing in this case is disclosing impacts that are actually significant but instead of making findings of overriding considerations if it wishes to approve the Project and concludes the mitigations are infeasible for the Project to undertake, is simply denying the significance of the impacts.

Mr. Tod Herman  
August 18, 2009  
Page 3

### Conclusion

Based on the foregoing, we are convinced the FEIR traffic analysis of significant impacts and mitigations are inadequate and that the FEIR is not suitable for certification under CEQA.

Sincerely,

Smith Engineering & Management  
A California Corporation

Daniel T. Smith Jr., P.E.

GROWTH, and DOES 1 through 10,

*Petitioner and Plaintiff,*

vs.

COUNTY OF NEVADA, NEVADA  
COUNTY BOARD OF SUPERVISORS, and  
DOES 11 THROUGH 20,

*Respondents and Defendants.*

**CASE NO: 75402**

**STATEMENT OF DECISION  
ON PETITION FOR  
WRIT OF MANDATE  
(CEQA)**

**AND REAL PARTIES IN INTEREST.**

On December 2, 2010, this court issued its Tentative Ruling on the Petition for Writ of Mandate (CEQA). Oral argument was heard on Friday, December 10, 2010. Attorney Keith Wagner appeared on behalf of Petitioner South County Citizens for Smart Growth. Attorney Allison Barratt-Greene appeared on behalf of Respondent County of Nevada. Attorney James Moose appeared on behalf of Real Party in Interest KKP Lake of the Pines. At oral argument, Petitioner requested a Statement of Decision. After consideration of the arguments of the parties, the pleadings on file, and the administrative record lodged with the court, the court hereby issues its Proposed Statement of Decision pursuant to Code of Civil Procedure §632 and California Rule of Court 3.1590.

1 **I. Project Description and Procedural History**

2 The following description of the project and the procedural history of this case, which  
3 are undisputed, are recited nearly verbatim from the parties' briefs, with few additions and  
4 deletions made by this court.

5 In 2005, Real Party in Interest Katz Kirkpatrick Properties ("KKP") submitted a  
6 complete application for the Higgins Market Place Project with the County. (Administrative  
7 Record ["AR"] 7:3649.) As originally proposed, the Project consisted of the subdivision of  
8 the site into 10 parcels for commercial, light industrial, and office uses. (AR 7:3409.) On five  
9 of the parcels (approximately 10.58 acres), the originally proposed project called for a 59,800  
10 square-foot retail store (expected to be a Bel-Air Market), two retail buildings (one 13,200  
11 square feet and one 6,500 square feet), two 3,500 square-foot drive-through fast-food  
12 restaurant buildings, and 482 parking stalls. (AR 6:3409, 3:1553-1555, 3:1565-1566.) No  
13 development was proposed on the other four parcels (approximately 5.07 acres), although the  
14 Project allowed for future development of approximately 42,000 square feet of light industrial  
15 and office space on these parcels. The last parcel (approximately 3.26 acres) was designated  
16 to retain existing wetlands and to provide an approximately 25-foot buffer between the  
17 developed parcels and the onsite wetlands. (*Ibid.*) Because the wetland buffer would be less  
18 than 100 feet, the Project also included a proposed Habitat Management Plan ("Habitat  
19 Management Plan"), as required by the County Code. (AR 3:1553, 3:1556, 5:2674-2675.)

20 In November 2007, the County published a Draft EIR analyzing the Project's potential  
21 to significantly impact the environment, and identifying potentially feasible mitigation  
22 measures and alternatives that would minimize or avoid potential significant impacts. (AR  
23 3:1550-4:1986; 6:3413.) The Draft EIR identified two significant traffic impacts (impacts 4.4-  
24 1, 4.4-2) and one significant cumulative air quality (impact 4.6-5) that could not be reduced to  
25 less than significant levels even with implementation of the mitigation measures identified in  
26 the Draft EIR. (AR 3:1480-1549.) All remaining potentially significant impacts of the  
27 Project, however, would be reduced to less than significant levels with implementation of the  
28 recommended mitigation measures. (*Ibid.*)

1 The Nevada County Planning Commission held a public hearing to take comment on  
2 the Draft EIR on January 10, 2008. (AR 5:2650-2651.) At the request of members of the  
3 public, the Planning Commission agreed to extend the public comment period on the Draft  
4 EIR, which would have ended January 22, 2008, to February 15, 2008. (AR 5:2657; see Pub.  
5 Resources Code, § 21091, subd. (b); CEQA Guidelines, § 15105.) One of the comments  
6 submitted to the County during this extended public comment period came on behalf of KKP.  
7 KKP's letter included, among other things, a peer review of the Draft EIR's traffic analysis  
8 and a proposal to reduce the size of the proposed Bel-Air to help reduce the Project's traffic  
9 impacts. (AR 5:2657, 4:2146-2170, 4:2200:202-2202:290<sup>1</sup>, 2252-2310.) In addition, at the  
10 request of KKP, PitneyBowes Map Info (PitneyBowes) submitted a letter updating the  
11 distribution of projected patrons to the project site, which could influence traffic patterns.  
12 (AR 4:2313-2316.) In order to give the public opportunity to review and comment upon  
13 KKP's comments, the Planning Commission voted to extend again the public comment period  
14 until February 29, 2008. (AR 6:3413.)

15 Following close of the public comment period on the Draft EIR, the County's  
16 environmental consultant, PMC, prepared responses to the seventeen written comments  
17 received on the document and to the oral comments received at the Planning Commission's  
18 hearings on the Draft EIR. (AR 5:2662.) The Final EIR, consisting of the Draft EIR, the  
19 Responses to Comments, and associated appendices, was released for public review and  
20 posted on the County's website on October 30, 2008. (*Ibid.*) Following release of the Final  
21 EIR, but prior to the Planning Commission's hearing on the Final EIR, four additional  
22 comment letters were received, including a comment letter submitted by Petitioner's counsel.  
23 PMC thereafter prepared responses to the late comments and the County included the response  
24 and late comments in an appendix to the Final EIR (Final EIR Appendix K. (5:2392-2499.)

25 On January 8, 2009, the Nevada County Planning Commission held a public hearing  
26 on the Final EIR to consider whether to recommend that the Board of Supervisors (the  
27

---

28 <sup>1</sup> This citation format 4:2200:202 refers to volume 4, page 2200, line 202, of the  
administrative record.

1 “Board”) certify the Final EIR and whether to recommend that the Board approve the  
2 *legislative* approvals required for the Project (i.e., the General Plan Amendment and Rezone).  
3 (AR 5:2661, 6:3170.)

4 To address concerns over the Project’s air quality and traffic impacts, the staff report  
5 prepared for the January 8, 2009 hearing recommended that the Planning Commission vote to  
6 recommend that the Board approve a modified version of the Project. (AR 5:2667-2669,  
7 6:3408, 5:2976-2979.) Specifically, staff recommended that the Planning Commission  
8 recommend to the Board a 75,000 square foot cap on the commercial property, 10-acres of  
9 Open Space, an increase in the wetland buffer from 25 feet to 100 feet, and a prohibition  
10 against fast food restaurants due to their high traffic generation. (AR 5:2667-2669; 6:3170.)  
11 The Planning Commission voted 3-2 to recommend the Board approve staff’s proposed  
12 modifications to the Project. (AR 5:2667-2669, 6:3408, 5:2976-2979.) The Planning  
13 Commission also unanimously voted to recommend that the Board certify the Final EIR. (AR  
14 5:2975.)

15 Following the Planning Commission’s recommendation, KKP worked with County  
16 staff to revise the Project based on the Planning Commission’s recommendations and to  
17 address the Planning Commission’s concerns. (AR 12:6778-6783, 6:3410, 6:3170, 7:3919.)  
18 Although the Planning Commission’s January 8, 2009 recommendation was not unanimous,  
19 there did appear to be consensus that the traffic resulting from the project as originally  
20 proposed was a significant concern. (AR 7:3919, 5:2974-2979.) Based on the Planning  
21 Commission’s direction, KKP submitted two preliminary alternative designs for staff’s  
22 consideration. (AR 5:2974, 7:3919, 12:6782-6783.) Both would reduce the Project’s  
23 footprint and eliminate the fast-food restaurants. (AR 5:2978.) One design, however,  
24 depicted a 100-foot setback from the onsite wetlands, but would reduce landscaping and cause  
25 parking space conflicts with the major interior circulation routes. (AR 7:3776.) The other  
26 proposed a 50-foot non-disturbance setback from the wetland conservation area with a 20-foot  
27 buffer zone and provide greater landscaping. Staff reviewed the modified site plans and  
28 consulted with its biological consultant concerning the setback and buffer. (AR 5:2974,

1 7:3919-3921, 3776-3777, 12:6778-6783, 12:6819. 12:6782-6783, 12:7100 [showing  
2 landscaping].) Staff concluded that the second proposal was advisable and recommended that  
3 the Planning Commission recommend that version of the Project to the Board. (5:2974-2980.)

4 On May 28, 2009, the Planning Commission held a meeting to consider the revisions  
5 to the Project and whether to recommend that the Board certify the Final EIR for the modified  
6 Project. (AR 5:2973-2974.) Due to a procedural error with the noticing of that meeting,  
7 however, the Planning Commission only addressed whether to recommend the Board certify  
8 the Final EIR. The Planning Commission voted 5-0 that the Final EIR adequately  
9 encompassed the reduced-sized Project and therefore recommended that the Board certify the  
10 Final EIR. (AR 6:3170.) The Planning Commission met again on June 11, 2009, to deliberate  
11 on the revised Project. The Planning Commission voted to recommend the Board approve the  
12 legislative actions associated with the modified version of the Project. (AR 6:3170.)

13 On July 7, 2009, the Board held a public hearing to consider the Final EIR and whether  
14 to approve the Project's proposed legislative entitlements. (AR 6:3406, 6:3395-3404.)  
15 Counsel for Petitioner submitted a lengthy comment letter on the Final EIR at the beginning of  
16 that hearing. (AR 6:3406, 5:2548-2614.) To allow time to consider Petitioner's comment  
17 letter and based on concerns over the meeting's notice, the Board continued the hearing on the  
18 Project to August 18, 2009. (AR 6:3406.) Based on Petitioner's late comment letter, and  
19 other comment letters received since the Planning Commission's consideration of the Project,  
20 additional responses to comments were prepared, which were incorporated into the Final EIR.  
21 (AR 5:2535-2649 [Final EIR Appendix L].)

22 On August 18, 2009, the Board held two public hearings: one to consider the Final EIR  
23 and the other on the General Plan Amendment and Rezone (the legislative actions). The  
24 Board voted to certify the Final EIR and approve the General Plan Amendment and Rezone.  
25 (AR 7:3632, 1:178-179, 1:28-177, 1:24-27.) The Board also adopted CEQA Findings of Fact  
26 and a Statement of Overriding Considerations for the Project (i.e., for the legislative actions  
27 needed for the Project), pursuant to Public Resources Code section 21081. (AR 6:3407-  
28 7:3514; see also CEQA Guidelines, § 15091.)

1 Following the Board's certification of the Final EIR and approval of the Project's  
2 legislative items, on August 20, 2009, the County filed a Notice of Determination ("NOD")  
3 with the Office of Planning and Research pursuant to Public Resources Code section 21152  
4 and CEQA Guidelines section 15094, thus triggering the 30-day statute of limitations to file a  
5 CEQA challenge. (AR 1:8-10; Pub. Resources Code, §§ 21167, subds. (b), (c).)

6 Petitioner timely filed this action on September 18, 2009, followed shortly thereafter  
7 by a First Amended Petition and complaint filed on October 8, 2009. (See Petition for Writ of  
8 Mandate and Complaint for Declaratory Relief; First Amended Petition and Complaint [both  
9 on file in this action].)

10 On April 13, 2010, the County then issued subsequent adjudicatory approvals in  
11 furtherance of the Revised Project – including a use permit, tentative map, and habitat  
12 management plan (AR 1, 7977-8052.) On May 13, 2010, pursuant to a January 25, 2010  
13 Minute Order of the Court (on file in this action), Petitioner then timely filed its Second  
14 Amended Petition and Complaint (on file in this action), which now stands as the operative  
15 pleading in this action.

16 Petitioner requests the Court to issue a peremptory writ of mandate, invalidating and  
17 setting aside the following County determinations and actions in furtherance of the Revised  
18 Project for violations of CEQA and the State Planning and Zoning Law. Petitioners also  
19 request a mandate ordering the County and applicant to suspend all project activities in  
20 reliance on the foregoing invalid decisions and approvals.

## 21 **II. Standard of Review**

22 "Under CEQA, an EIR is presumed adequate, and the plaintiff in a CEQA action has  
23 the burden of proving otherwise." (*Al Larsen Boat Shop v. Board of Harbor Commissioners*  
24 (1983) 18 Cal.App.4th 729, 740; *See Also* Pub. Res. Code § 21167.3; *Mira Mar Mobile*  
25 *Community v. City of Oceanside* (2004) 119 Cal.App.4th 477, 486; *County of San Diego v.*  
26 *Grossmont-Cuyamaca Community College* (2006) 141 Cal.App.4th 86, 96; *State of California*  
27 *v. Superior Court* (1990) 222 Cal.App.3d 1416, 1419). "It is presumed that official duty has  
28 been regularly performed." (Evid. Code § 664). In the context of CEQA and Evidence Code

1 section 664, one Court has said: "In the absence of contrary evidence, we presume regular  
2 performance of official duty." (*City of Sacramento v. State Water Resources Control Bd.*  
3 (1992) 2 Cal.App.4th 960, 976). Evidence Code section 630 provides that "[t]he presumptions  
4 established by this article, and other rebuttable presumptions established by law that fall  
5 within the criteria of Section 603, are presumptions affecting the burden of producing  
6 evidence." (*See Also Kleist v. City of Glendale* (1976) 56 Cal.App.3d 770, 777 [Evidence  
7 Code section 664 goes to the burden of producing evidence]).

8 When reviewing the adequacy of an EIR, the trial court does not determine whether the  
9 agency's final decisions were correct, but only whether the agency arrived at them in  
10 accordance with the law and on the basis of substantial evidence. *Moss v. County of Humboldt*  
11 (2008) 162 Cal.App.4th 1041, 1050. A court must "resolve . . . substantive CEQA issues . . .  
12 by independently determining whether the administrative record demonstrates any legal error  
13 by the [lead agency] and whether it contains substantial evidence to support the [lead  
14 agency]'s factual determinations." *Vineyard Area Citizens for Responsible Growth v. City of*  
15 *Rancho Cordova* (2007) 40 Cal.4th 412, 427. "Only by requiring the [agency] to fully comply  
16 with the letter of the law can a subversion of the important public purposes of CEQA be  
17 avoided." *Rural Landowners Assn. v. City Council of Lodi* (1983) 43 Cal.App.3d 1012, 1022.

18 Where an agency has failed to proceed as prescribed by CEQA by *omitting* essential  
19 environmental review, this informational void is a "prejudicial abuse of discretion." *Sierra*  
20 *Club v. State Board of Forestry* (1994) 7 Cal.4th 1215, 1237. Although the court need not  
21 independently weigh the evidence, it *must* overturn an agency decision that fails to adequately  
22 address an environmental issue. *Citizens to Preserve the Ojai v. County of Ventura* (1985) 176  
23 Cal.App.3d 421, 428. This Court "can and must . . . scrupulously enforce all legislatively  
24 mandated CEQA requirements." *Vineyard*, 40 Cal.4th at 435.

### 25 **III. Need for Re-Circulation of EIR**

26 Petitioners first argue that the County violated CEQA's public participation and  
27 informed decision-making procedures by failing to prepare or circulate independent  
28

1 environmental review for the Revised Project ultimately presented to and approved by the  
2 County on August 18, 2009.

3 Respondent, however, argues that there is no requirement that an EIR be re-circulated  
4 if the Project changes only reduce potential environmental impacts. Respondent references  
5 CEQA's objective, which is "to foster better (more environmentally sensitive) projects  
6 through revisions which are precipitated by the preparation of EIR's." *County of Orange v.*  
7 *Sup. Ct.* (2003) 113 Cal.App.4th 1, 10.

8 Guidelines §15088.5 provides, "(a) A lead agency is required to recirculate an EIR  
9 when significant new information is **added** to the EIR after public notice is given of the  
10 availability of the draft EIR for public review under Section 15087 but before certification. As  
11 used in this section, the term "information" can include changes in the project or  
12 environmental setting as well as additional data or other information. New information added  
13 to an EIR is not "significant" unless the EIR is changed in a way that deprives the public of a  
14 meaningful opportunity to comment upon a substantial adverse environmental effect of the  
15 project or a feasible way to mitigate or avoid such an effect (including a feasible project  
16 alternative) that the project's proponents have declined to implement." [Emphasis added.]

17 In the present case, the Revised Project did not add new information to the EIR after  
18 public notice was given. Rather, the Revised Project modifications were designed to **reduce**  
19 the Project's impacts by reducing the size and uses of the Project, which in turn reduce the  
20 Project's environmental impacts. (AR 1:36, 6:3515-3516, 6:3408, 6:3410, 6:3414, 6:3422,  
21 6:3429, 6:3431 [revised Project would result in similar, if not reduced, hazardous materials  
22 impacts], 6:3433 [revised Project will result in reductions in traffic impacts to all study  
23 intersections], 6:3434-3435 [revised Project will reduce formerly significant traffic impact  
24 4.4.2 to a less than significant level], 6:3436-3439 [revised Project will result in less than  
25 cumulatively considerable traffic impacts], 6:3440-3442 [revised Project will result in similar,  
26 if not reduced, noise impacts], 6:3444-3448 [revised Project will result in similar, if not  
27 reduced, air quality impacts], 6:3448-3451 [revised Project will result in similar, if not  
28 reduced, hydrology and water quality impacts], 6:3452-3456 [revised Project will result in

1 similar, if not reduced, geology and soils impacts], 6:3457-3464 [revised Project will result in  
2 similar, if not reduced, impacts to biological resources], 6:3465-3466 [revised Project will  
3 result in similar, if not reduced, impacts to cultural resources], 6:3467- 3478 [revised Project  
4 will result in similar, if not reduced, public services and utilities impacts]; and 6:3479-3483  
5 [revised Project will result in similar, if not reduced, visual impacts]).

6 Moreover, the public was not deprived of a meaningful opportunity to comment upon a  
7 substantial adverse environmental effect of the project or a feasible way to mitigate or avoid  
8 such an effect. In fact, the Board allowed late filed comments by Petitioner. Thus, this court  
9 finds that the County did not violate CEQA's mandatory procedural requirements, as specified  
10 at CEQA Guidelines, section 15088.5(a)(3).

#### 11 **IV. Failure to Circulate Revised Analysis**

12 Petitioner next argues that CEQA required the County to consider the Planning  
13 Commission's January 8, 2009 recommendations for Project modifications in a revised EIR  
14 for the Project and to adopt CEQA findings regarding the feasibility of that alternative.  
15 Respondent, on the other hand, contends that CEQA imposes no such requirements.

16 The CEQA Guidelines set forth the lead agency's responsibilities regarding analysis of  
17 alternatives. "An EIR shall describe a range of reasonable alternatives to the project, or to the  
18 location of the project, which would feasibly attain most of the basic objectives of the project  
19 but would avoid or substantially lessen any of the significant effects of the project, and  
20 evaluate the comparative merits of the alternatives. An EIR need not consider every  
21 conceivable alternative to a project. Rather it must consider a reasonable range of potentially  
22 feasible alternatives that will foster informed decisionmaking and public participation. . . . The  
23 Lead Agency is responsible for selecting a range of project alternatives for examination and  
24 must publicly disclose its reasoning for selecting those alternatives. There is no ironclad rule  
25 governing the nature or scope of the alternatives to be discussed other than the rule of reason."  
26 (CEQA Guidelines, § 15126.6(a).

1 In this case, the court finds that the range of alternatives discussed in the EIR meets  
2 this standard. Specifically, the Draft EIR analyzed four alternatives to the proposed Project,  
3 which represent sufficient variation to allow informed decisionmaking.

4 **V. Failure to Analyze Sewer Facilities**

5 In the present case, as set forth in the Draft EIR, the Project will connect to the Lake of  
6 the Pines wastewater treatment plant via a pipeline conveyance down Higgins Road and  
7 Combie Road to the Lake of the Pines wastewater treatment plant. On August 5, 2009, the  
8 County's EIR consultant sent a memo to County staff ("Appendix L" to the Final EIR), which  
9 states: "[s]ince the EIR was drafted, the alignment of the sewer lines has been determined"  
10 (AR 2536). This document for the first time contains a description of the actual proposed  
11 location of the sewer line under Higgins Road and Combie Road; a map, showing the sewer  
12 line's proposed location and boundaries; and asserts that compliance with mitigation measures  
13 in the EIR, and conditions associated with a required encroachment permit and "a permit  
14 issued by the regional water quality control board," will "reduce or eliminate the need for  
15 mitigation." (AR 2536-2537.) The consultant's "Appendix L" memorandum was not  
16 circulated for public review, but rather was drafted and released by the County days before  
17 approving the Project on August 13, 2009. (AR 2535 ["Appendix L" memorandum, dated  
18 August 5, 2009].)

19 Petitioners argue the County violated CEQA's mandatory public participation and  
20 informed decisionmaking procedures because it failed to describe the boundaries, disclose,  
21 analyze or mitigate the impacts of an off-site sewer line required to serve the Project.  
22 Petitioners states that the County prejudicially abused its discretion by simply adding new  
23 information about the actual location and boundaries of the proposed sewer line (an integral  
24 part of the "whole" of the Project) to an "appendix" to its Final EIR produced just days before  
25 the County approved the Project, without circulating this new information as part of the Draft  
26 EIR.

27 Respondent, however, contends the Draft EIR properly analyzed the environmental  
28 impacts of the wastewater pipeline and included mitigation measures to reduce or avoid any

1 such impacts. Respondent argues that CEQA only requires that an EIR contain a “general  
2 description” of the technical characteristics of a project and that EIR preparers are instructed  
3 that a project description “should not supply extensive detail beyond that needed for  
4 evaluation and review of the environmental impact.” (§ 15124.) Respondents further cite to  
5 the case of *Dry Creek Citizens Coalition v. County of Tulare* (1999) 70 Cal.App.4th 20, which  
6 held that a challenged description met CEQA’s mandate to provide a “general description” of  
7 a stream  
8 diversion structures in sufficient detail to enable the public and the decisionmakers to  
9 understand their environmental impacts. (*Id.* at p. 36.)

10 The law is clear that the project description must contain sufficient specific  
11 information about the project to allow the public and reviewing agencies to evaluate and  
12 review its environmental impacts. A project description that omits integral components of the  
13 project may result in an EIR that fails to disclose the actual impacts of the project. *Santiago*  
14 *County Water Dist. v. County of Orange* (1981) 118 Cal.App.3d 818, 829.

15 The court finds that the EIR was legally adequate. Figure 3-10 in the Draft EIR  
16 denotes the sewer pipeline alignment. The DEIR did not omit the integral component of the  
17 project relating to wastewater pipelines. The general description of the pipelines are set forth  
18 in sufficient detail to enable the public and the decisionmakers to understand their  
19 environmental impacts. The court finds that the County did not violate CEQA’s mandatory  
20 procedural requirements as set forth at CEQA Guidelines section 15124(a), in that the County  
21 did not fail to describe in its publicly circulated Draft EIR the proposed location of, or the  
22 impacts or potential mitigation measures or alternatives that could reduce or avoid such  
23 impacts associated with installing and operating, a required off-site sewer line for the Revised  
24 Project.

## 25 **VI. Violations of CEQA as to Biological Resources**

### 26 **A. Habitat Mitigation Plan**

#### 27 **1. Failure to Disclose Habitat Mitigation Plan**

1           Petitioners next argue that the County also violated CEQA's procedures by failing to  
2 describe or disclose in its publicly circulated Draft EIR a proposed "Management Plan" to  
3 address the project's biological impacts. The November 2007 Draft EIR that was circulated  
4 for public review, argues Petitioner, contains no substantive disclosure or analysis at all of the  
5 content of the proposed "Management Plan," in violation of CEQA's procedures.

6           Respondent, however, states that the Draft EIR's Project Description explains that that  
7 the Project includes a wetlands mitigation plan and that the plan will address the displacement  
8 of the small portion of wetlands (for the access road) and the reduction in the otherwise  
9 required 100-foot buffer. (AR 3:1556, 3:1553). In evaluating the Project's potential impacts  
10 to threatened or endangered species, the Draft EIR concludes that impacts to species occurring  
11 in riparian and wetland habitats within the project area would be less than significant because  
12 the project includes "a proposed wetland preserve and buffer area," which would avoid  
13 impacts to those species. (See e.g., AR 3:1776, 3:1794-1795.) To mitigate the development's  
14 potential impacts to the preserved wetland area, Draft EIR Mitigation Measure 4.9.2(a)  
15 requires the applicant to retain a qualified biologist/restoration ecologist to *implement* a  
16 Habitat Management Plan. (AR 4:1817.) Such Habitat Management Plan was prepared by  
17 Susan Sanders in December 2004. AR 16:9179-9245.

18           This court agrees with Respondent. Nowhere in CEQA is there a directive to include  
19 the Habitat Management Plan in the EIR. In fact, CEQA Guidelines § 15087(c)(5) allows  
20 "documents referenced in the EIR" to be available for review at specified locations. Here, the  
21 lack of a more detailed discussion of the Habitat Management Plan did not leave the County's  
22 EIR missing any fundamental pieces. Therefore, this is not a situation in which the public and  
23 decisionmakers have been deprived of meaningful information concerning the Project. The  
24 County did not violate CEQA's procedural requirements as set forth at CEQA Guidelines  
25 section 15087(c)(5).

## 26           **2. Failure to Disclose Adverse Effects**

27           Petitioner next contends that the County's failure to describe how implementation of  
28 the proposed, revised Habitat Mitigation Plan may itself result in significant, adverse effects

1 on the physical environment constitutes an additional and distinct violation of CEQA's  
2 mandatory procedures.

3 The court finds this argument to be without merit. The Draft EIR makes it clear that  
4 the Habitat Management Plan will serve to *mitigate* the Project's impacts to wetlands and  
5 biological resources. (See AR 4:1816-1819 [requiring implementation of the Habitat  
6 Management Plan as mitigation], see also AR 7:3890.) Substantial evidence supports the  
7 County's conclusion that the Habitat Management Plan will not adversely affect the  
8 environment; rather it would protect and, indeed, *benefit* the environment. (AR 6:3459,  
9 7:3890.)

10 Furthermore, Petitioner's reliance on *Farm Bureau Federation v. California Wildlife*  
11 *Conservation Board* (2006) 143 Cal.App.4th 173, is misplaced. That case did not hold that  
12 creation of wetlands is always an activity that would cause significant environmental effects  
13 requiring CEQA review. Instead, the Court of Appeal determined that a project to convert  
14 *agricultural* land into a wetland (which could have had significant environmental effects to  
15 agriculture) was not categorically exempt from CEQA. (*Id.* at pp. 194-196.) In the present  
16 case, the Habitat Mitigation Plan describes an option of "removing the asphalt and culvert at  
17 the existing road access that will be abandoned for a new alignment, and restoring the historic  
18 wetland in place." AR 19:10887. Thus, unlike *Farm Bureau Federation*, agricultural land is  
19 not converted. The court finds that the County did not violate CEQA's procedural  
20 requirements as set forth at CEQA Guidelines section 15126.4(a)(1)(D).

### 21 3. Conclusions Supported by Evidence

22 Here, Petitioners argue that the "County violated CEQA because the County's  
23 assertions in its EIR and CEQA findings that the project's impact to biological resources have  
24 been reduced to less than significant levels are not supported by the evidence they cite. The  
25 EIR and the County's findings both acknowledge that the Project may have significant,  
26 adverse impacts to on-site biological resources, but assert that implementation of the Habitat  
27 Management Plan will reduce all such impacts to less than significant levels. (AR 1815-1821;  
28 3456-3464.)" POB 23: 5-13.

1           Petitioners refer to Habitat Management Plan where it states that implementation of the  
2 project will result in impacts to a “number of wildlife species,” and that only “*some*” (not *all*)  
3 of these impacts will be mitigated by implementation of the Plan.

4           Respondent, on the other hand, argues: “the fact that grassland is foraging habitat for a  
5 number of species, does not mean that the loss of such habitat would necessarily be  
6 significant. (See CEQA Guidelines Appendix G, § IV.) The Habitat Management Plan does  
7 not, for example, indicate that the species foraging in the existing grasslands are sensitive or  
8 special status species, or that the area serves as a wildlife migratory corridor. (*Ibid.*) Instead,  
9 the Draft EIR specifically considered the Project’s impacts to grasslands and found them to be  
10 less than significant.” ROB 35: 5-10.

11           The court agrees with Respondent. Because impacts to grassland would already be  
12 less than significant, the fact that the Habitat Management Plan would help offset *some* of  
13 those non-significant impacts does not mean the County must consider that impact significant.

#### 14           **B. Urban Decay Impacts**

##### 15                   **1. Fails to Address Non-Grocery Retail Centers**

16           In order to help evaluate whether the Draft EIR’s investigation and disclosure of urban  
17 decay impacts was complete and adequate, Petitioner commissioned a review of the Draft EIR  
18 and its economic studies by Dr. Phil King, Associate Professor with the SFSU Economics  
19 Department. Dr. King’s July 6, 2009 report (AR 7261-7276), concludes that County’s EIR  
20 and economic studies do not meet CEQA’s definition of “substantial evidence” because they  
21 are 1) incomplete, and 2) lack factual support for their conclusion that the Revised Project has  
22 no potential to result in urban decay. (§ 21080, subd. (e)(2).)

23           Petitioner argues that the first problem identified by Dr. King is that the Draft EIR’s  
24 analysis of potentially impacted markets is incomplete because the underlying PMBI study  
25 fails to analyze any retail sector other than grocery/food stores. (AR 7262-7264.)

26           In response to this argument, Respondent argues that additional analysis of previous  
27 economic studies prepared for the Project was performed by Bay Area Economics (“BAE”) to  
28 focus specifically on the potential competitive impacts of the proposed Bel-Air store on the

1 Holiday Market. (AR 4:2183 [Response to comment 6-4; 4:2244-2250 [Final EIR Appendix  
2 B].) Respondent cites to BAE's findings which indicated that there was a possibility that the  
3 Project could create competitive impacts that could render the Holiday Market store  
4 economically unviable. (AR 4:2183-2184.) The analysis concluded, however, that closure of  
5 the Holiday Market would not lead to significant effects on the *environment* because the  
6 Holiday Market building would be retenanted long before any "urban decay" could set in.  
7 (*Ibid.*)

8 Judicial review in a CEQA action is governed by Public Resources Code section  
9 21168.5, under which the court's inquiry extends only to whether there was a prejudicial  
10 abuse of discretion. In determining whether an agency prejudicially abused its discretion, the  
11 "court must adjust its scrutiny to the nature of the alleged defect, depending on whether the  
12 claim is predominantly one of improper procedure or a dispute over the facts." (*Vineyard*,  
13 *supra*, 42 Cal.4th at p. 435.) If the dispute is predominately one of facts, the court must  
14 uphold the agency's actions that are supported by substantial evidence, even if a different  
15 conclusion could have been reached. (*Id.* at p. 435; *Laurel Heights I, supra*, 47 Cal.3d at pp.  
16 392-393, 407.)

17 Here, there are competing expert reports. Petitioner relies on Dr. King's report and  
18 Respondent relies on the BAE's finding. It is "well established that disagreement among  
19 experts does not make an EIR inadequate." *Laurel Heights I, supra*, 47 Cal.3d at p. 409. This  
20 is a dispute predominately one of facts, and this court must uphold the agency's actions, as  
21 they are supported by substantial evidence.

## 22 **2. Impacts to Retail Outside of Lake of the Pines**

23 Petitioner next argues: "Another significant internal contradiction that Dr. King  
24 identifies in his review is that while the EIR and its underlying economic studies define the  
25 Project's "market area" (*i.e.*, the locations from which shoppers will come to the site) to  
26 include the City of Auburn, nothing in the EIR 1) provides any analysis of already  
27 "dangerously high" existing retail vacancies in Auburn, or 2) considers how (i) eliminating  
28 Lake of the Pines shoppers from the Auburn marketplace by "capturing" their sales at the

1 Higgins Marketplace Project, or (ii) drawing shoppers away from Auburn to instead shop at  
2 Lake of the Pines, might cause or exacerbate urban decay in the City of Auburn. (AR 7265-  
3 7269.)” POB 26:23-29.

4 Respondent counters this argument by again referring to the BAE, which concluded  
5 that it is unlikely that the effects of Bel-Air, “which is at a significant distance from any of the  
6 other stores in Auburn and Grass Valley[,] would be sufficient in the case of any individual  
7 store to cause closures.” (AR 7:3610.)

8 Again, this is an argument relating to competing experts’ analysis. This is a dispute  
9 predominately one of facts, and this court must uphold the agency’s actions, as they are  
10 supported by substantial evidence.

11 **3. Failure to Consider Cumulative, Future Projects & Findings**

12 Petitioner next argues that the County’s failure to consider and incorporate *future*,  
13 planned and proposed retail projects in the Project’s market area is another example of the  
14 inadequacy of the EIR. Petitioner also contends the County prejudicially abused its discretion  
15 in adopting CEQA findings regarding urban decay impacts that are unsupported by substantial  
16 evidence.

17 As set forth above, although Petitioner presented evidence attempting to undermine the  
18 County’s urban decay analysis, BAE has rebutted King’s opinions with its own reasonable  
19 interpretation of the facts and expert analyses. (AR 7:3611, 7:3613, 1:51-53, 7:3854-3856,  
20 11:6247-6249.) The County has discretion under CEQA to choose to believe its own experts  
21 over those retained by Petitioner. (See *Cadiz, supra*, 83 Cal.App.4th at pp. 97-100; see also  
22 *Laurel Heights I, supra*, 47 Cal.3d at pp. 392-393 [“the reviewing court must resolve all  
23 reasonable doubts in favor of the administrative finding and decision”]; *Assn. of Irrigated*  
24 *Residents v. County of Madera* (2003) 107 Cal.App.4th 1383, 1397 [lead agency has  
25 discretion “to give more weight to some of the evidence and to favor the opinion and estimates  
26 of some of the experts over the others”].) For these reasons, the court rejects Petitioner’s  
27 urban decay arguments.

28 ///

1           C. Traffic

2                   1. Failure to Circulate

3           In this section, Petitioner asserts that the EIR's analysis and the County's related  
4 CEQA findings regarding the project's traffic impacts are also inadequate to meet CEQA's  
5 procedural and substantive requirements. Specifically, Petitioner refers to the Draft EIR  
6 which stated that the project would have significant and unavoidable traffic impacts, but  
7 proposed a mitigation measure requiring the applicant to fund the Project's "fair share" of  
8 widening a segment of SR 49. Petitioner then points out that the Final EIR subsequently  
9 asserted that a new and different traffic study (that was not included in the Draft EIR's public  
10 disclosure or analysis) indicates that this impact is actually "less than significant" and,  
11 therefore, summarily deletes the Draft EIR's proposed fair share funding mitigation measure  
12 entirely. (AR 2129-2131.)

13           Respondent, however, refers to the fact that KKP decided to reduce the proposed Bel-  
14 Air store from 59,800 square feet to 57,022 square feet. (AR 4:1990, 4:2129, 4:2256.) With  
15 the updated traffic distribution and the reduced Bel-Air building size, the Project trips along  
16 SR 49 north of Combie Road were projected to decrease to 1,814 daily trips, compared to the  
17 2,300 trips shown in the Draft EIR. The revised traffic volume corresponded to an LOS "D,"  
18 meaning the impact would be less than significant. (AR 4:2129.) Thereafter, the County  
19 extended the comment period on the Draft EIR to give the public opportunity to review and  
20 comment upon this new traffic analysis. (AR 6:3413.)

21           It is very clear, then, that by reducing the size of the Bel-Air market, and as shown in  
22 the updated traffic distribution analysis, Impact 4.4.2 was reduced to a less than significant  
23 level. (AR 4:2393.) As such, the elimination of mitigation measures for that impact does not  
24 constitute "significant new information" requiring recirculation of the Draft EIR. (Pub.  
25 Resources Code, § 21092.1; CEQA Guidelines, § 15088.5, *Laurel Heights II*, *supra*, 6 Cal.4th  
26 at p. 1129.)

27   ///

28   ///

## **2. Redesignation of Combie Road**

Petitioner next argues that the County also violated CEQA in determining in its Final EIR and CEQA findings that the Revised Project's acknowledged LOS E impacts to Combie Road between Higgins Road and SR 49 can feasibly be "mitigated" to less-than-significant levels by redesignating the road from its current status as a "major collector" to a "minor arterial" roadway. (AR 7252-7253, 7282, 7433.) Petitioner then states the County's assumption in its Revised Traffic Study and CEQA findings that the County will be able to limit driveway access along this segment is unsupported by fact.

Respondent counters that the County did not redesignate Combie Road as a minor arterial as a *mitigation measure*. Rather, the County determined that, for the purposes of the traffic analysis, Combie Road is more accurately considered a minor arterial (which has limited driveway/street accesses), rather than a major collector (which allows unlimited driveway/street accesses and therefore results in slower conditions). (AR 12:6966-6970, 11:60-62, 6:3525, 6:3596-3597 [KD Anderson's response to comments], 7:3602-3604 [letter from MRO Engineers], 4:2109-2110 [Final EIR Response to Comment 1a-6].) Thus, contends Respondent, because substantial evidence supports the County's determination that Combie Road functions as a minor arterial, and not a major collector, the court must uphold the County's traffic analysis. (*Federation, supra*, 83 Cal.App.4th at p. 1259.

The court finds that MRO Engineers provided evidence that more than adequately supports the conclusion that, because Combie Road is more properly defined as a minor arterial, impacts to Combie Road will be less than significant. See AR 7:3603-3604, 6:3435-3436. Thus, the court finds that CEQA was not violated.

## **3. Queuing Impacts**

In this last section relating to traffic impacts, Petitioner argues the County also violated CEQA's procedures by failing to adequately address or mitigate the Revised Project's traffic impacts along the westbound approach to the intersection of Combie, Wolfe and SR 49.

1           However, it is clear that the County follows "standard traffic engineering practice" and  
2 bases its "determinations regarding the significance of project-related impacts on intersection  
3 and roadway level of service, not on queue lengths." (AR 7:3604, see also AR 4:2110.)

4           The County has discretion in defining what constitutes a significant effect on the  
5 environment and does not consider queuing impacts to qualify as such under CEQA. See  
6 CEQA Guidelines, §§ 15064.7 [agency discretion to define "thresholds of significance"],  
7 15382 [broad definition of "significant effect on the environment," which includes no  
8 language supporting any notion that, as a matter of law, "queuing impacts" must be treated as  
9 such].

10           Thus, because queuing does not have a significant effect on the environment, any  
11 alleged failure by the County to adopt mitigation measures relating to queuing is immaterial.

12 **VII. Subsequent Approvals**

13           Lastly, Petitioner contends the County's April 13, 2010 subsequent approvals must  
14 also be set aside as void *ab initio*, on the separate and additional ground that they are  
15 inconsistent with and would frustrate the implementation of the County's General Plan and  
16 zoning. It appears that Petitioner is arguing that, because it has *asserted* that the original  
17 legislative approvals for the Project were invalid, the later adjudicatory approvals were also  
18 invalid.

19           The court finds that such argument is without merit. Because this court has determined  
20 that the EIR was legally adequate, the April 2010 approvals are not void *ab initio*.

21 **VIII. Conclusion**

22           For the foregoing reasons, the Petition for Writ of Mandate (CEQA) is denied.

SMITH ENGINEERING & MANAGEMENT

March 8, 2013

Ms. Kim Jordan  
Planning and Community Development Department  
City of Ukiah  
300 Seminary Avenue  
Ukiah, CA 95482

**Subject: Costco Wholesale Project Draft Environmental Impact Report  
("DEIR") SCH # 2011112025**

Dear Ms. Jordan:

At the request of Attorney William Kopper, I have reviewed the traffic aspects of the Draft Environmental Impact Report (the "DEIR") and supporting documentation, particularly the Appendix - Transportation Impact Analysis report, for the Costco Wholesale Project in the City of Ukiah(the "Project"). My qualifications to perform this review include registration as a Civil and Traffic Engineer in California and over 44 years professional consulting engineering practice in the traffic and transportation industry. I have both prepared and reviewed traffic and circulation analyses of environmental review documents, including studies of shopping centers, freestanding discount stores and superstores and discount club stores and superstores. I am familiar with the surroundings of the proposed Project, having previously commented on the nearby proposed Walmart expansion project. My professional resume is attached.

Findings of my review are summarized below.

TRAFFIC • TRANSPORTATION • MANAGEMENT  
5311 Lowry Road, Union City, CA 94587 tel: 510.489.9477 fax: 510.489.9478

Ms. Kim Jordan  
 March 8, 2013  
 Page 2

**The DEIR Relies on Unrepresentative and Outdated Traffic Counts As the Fundamental Base for Most of Its Traffic Analyses**

The so-called existing traffic counts that the DEIR relies upon for evaluation of all traffic scenarios except long range cumulative ones are comprised of peak period intersection turning counts taken in February of 2010 and California Department of Transportation (Caltrans) traffic data collected in 2008. The intersection counts and traffic data were originally assembled for the traffic impact analysis of the Walmart Expansion Project DEIR that was circulated in the summer of 2011.

2

The Caltrans representative commenting on that Walmart DEIR noted that the peak hour turn counts taken in the month of February were grossly under-representative of the typical average peak hour throughout the year<sup>1</sup>. We ourselves, commenting on the Walmart FEIR, noted that the response to Caltrans comments on this issue were evasive, contrary to fact and that there was substantial evidence that the low February traffic counts lead to critical errors in traffic study conclusions as to whether, absent mitigation, project traffic would produce extended queues on the US 101 southbound off ramp to Talmage Avenue, resulting in critical compromises to public safety<sup>2</sup>. The substantial evidence documented at that time was:

3

1. The authoritative trip generation source document *Trip Generation, 8<sup>th</sup> Edition*, at Table 4 on page 1499<sup>3</sup> indicates that February shopping center traffic totals only 78.1 percent of annual monthly average shopping traffic, and is the absolutely lowest month of the year.
2. Caltrans maintains permanent traffic count stations at locations throughout northern California. The data from a nearby Caltrans permanent count station on US 101 shows that general traffic on the freeway in February is 7 percent lower

<sup>1</sup> Letter of comment on Walmart Expansion DEIR dated August 18, 2011 from Jesse Robertson, Caltrans District 1 to Kim Jordan, City of Ukiah.

<sup>2</sup> Letter dated January 17, 2012 from Daniel T. Smith Jr., P.E. to William D. Kopper, submitted as part of the formal record at the City Council hearing on the Walmart matter, January 18, 2012.

<sup>3</sup> The table is reproduced as Attachment A to this letter.

TRAFFIC • TRANSPORTATION • MANAGEMENT

5311 Lowry Road, Union City, CA 94587 tel: 510.489.9477 fax: 510.489.9478

Ms. Kim Jordan  
 March 8, 2013  
 Page 3

than the average annual month, 12.4 percent lower than the average of the busiest 6 months of the year and 18 percent lower than the busiest month of the year. Now, in the Costco DEIR, the Lead Agency and its consultants, rather than conducting new counts in a representative month, are again relying on the February 2010 traffic data it knows, or should know, to be critically flawed without performing any seasonal adjustment on it to make it representative of an average peak hour.

3 cont.

The DEIR makes the finding that there is a traffic impact condition at the intersection of Talmage Avenue and the U.S. 101 southbound ramps that is significant and unavoidable. A critical issue in that circumstance affecting whether it would be appropriate to approve the Project under findings of overriding considerations is whether the traffic queuing on the southbound off ramp with the Project without the mitigation improvement to the interchange would constitute an extreme hazard to public safety. The difference in baseline traffic as counted in an extremely low traffic month like February as compared to an average traffic month is, as we document in a subsequent section, of sufficient dimension to make a difference in whether or not it would be acceptable to approve the Project under overriding considerations.

4

The reuse of stale existing traffic condition data also raises CEQA compliance issues. CEQA guidelines section 15125(a) indicates that the normal baseline for measuring a Project's impacts is the environmental conditions that exist at the time of filing the Notice of Preparation (NOP) for the EIR. The date of the NOP in Costco's case is November 4, 2011. By that date, the unrepresentatively low February, 2010 counts were nearly 2 years old, were more than 2 years old before the DEIR traffic study was completed and were a month short of 3 years old when the Costco DEIR was actually circulated. By that time the economy had improved over 2010. In our above-referenced 1-17-12 letter, we pointed out that the 2010 counts at the Walmart driveways indicated that at that time Walmart was only generating trips at 71 percent of typical average rates for that type of store, so there is every reason to believe that by late 2011 or early 2012, even without any other significant development in the area, counts at the Talmage / U.S. 101 southbound

5

Ms. Kim Jordan  
 March 8, 2013  
 Page 4

ramps intersection would be significantly higher than in the unrepresentative counts of February, 2010. Given this, and given that the representativeness of the February 2010 counts had been already a matter of contention, the DEIR's failure to perform new traffic counts in a month as reasonably representative of average as practical after the time of the NOP is not only a procedural violation of CEQA Guidelines section 15125(a), it is also indicative of a lack of the good faith effort to disclose impact that CEQA demands.<sup>4</sup>

5 cont.

### **The Trip Generation Analysis Appears Excessively Favorable To the Project**

The trip generation estimate for the Project is based on data furnished by the applicant for three of its small-city establishments serving fairly large surrounding rural market areas that it considers most comparable to the proposed Project's circumstances. However, the three Costco sites from which trip generation data has been drawn are really quite different in terms of their market areas. In the case of Carson City, there are 2 Costco stores in Reno, only about 30 miles distant. In the case of the Turlock Costco, there are other Costcos about 14 miles away in Modesto, 26 miles away in Merced and 30 miles away in Manteca. The Eureka store has a very large market area, with the nearest Costcos being 148 miles away in Redding, 199 miles away in Medford Oregon, 210 miles away in Chico and 225 miles away in Santa Rosa. And in contrast to the Carson City and Turlock locations, these long mileages to the nearest Costco stores that define the Eureka Costco market area are mileages on difficult roads. If the Ukiah store is completed, the nearest Costco stores to it will be 60 miles away in Santa Rosa, 148 miles away in Chico and 152 miles away in Eureka. So the most similar store to Ukiah is the one in Eureka. Not surprisingly, the Eureka store with its vast market area, per Table 3.10-6, has a trip generation rate that is 13.5 percent higher than the Carson City store, 8.9 percent higher than the Turlock store and 7.1 percent greater than the overall average of the three that was relied on in the study. In keeping with the good faith effort to disclose impact that

6

<sup>4</sup> We also note that, insofar as the DEIR relied on the same 2008 Caltrans traffic counts as in the Walmart Expansion DEIR, by the time of the Costco NOP, Caltrans counts for 2009 and 2010 were already available and 2011 counts were available before the time of completion of the DEIR's draft traffic study in June of 2012.

Ms. Kim Jordan  
 March 8, 2013  
 Page 5

CEQA demands, it makes sense that the Eureka store should be the basis for the trip generation estimate rather than the average of the three locations.

6 cont.

#### **Assumed Attraction of Passer-by Traffic Unsustainable By Existing Traffic**

Before addressing the principal point in the above heading, we observe that the Project Trip Generation Summary, DEIR Table 3.10-7, makes it appear that the traffic analysis eliminated from further consideration those trips presumed attracted from passer-by traffic at the trip generation stage rather than tracing the paths of those trips from the point they divert from their existing route to the Project site and back to the point of resumption of their original trip. We note that the Project Traffic Volumes evidenced in Figure 3.10-3, particularly those for Intersection 10, seem to make evident that attracted passer-by trips were properly traced in from their point of diversion and back to their point of trip resumption. However, for the record, please confirm that this latter interpretation is in fact the case.

7

The aforementioned DEIR Table 3.10-7 and the narrative text associated with it indicates that 37 percent of the Project's pm peak hour trips, 411 trips in specific, would be attracted from drivers already passing nearby to the site, mostly from Talmage Avenue and the northern part of Airport Park Boulevard. This statistic is reportedly derived from data on Costco facilities nationwide. It is important to recognize that such a data base would reflect the characteristics of numbers of Costco facilities located near the crossroads of high-traffic urban arterials as well as some near the less-busy arterials of smaller communities like the proposed site in Ukiah. Logically, that overall national statistic of passer-by attraction may not be representative of what can be sustained at the proposed Ukiah site. Here we consider the specifics of the proposed site. Figure 3.10-2 indicates that in the February, 2010 counts, a total of 2288 vehicles passed through the intersection of Talmage Avenue with Airport Park Boulevard in the weekday pm peak hour. If, as projected in the DEIR, 411 pm peak hour trips to Costco are to be attracted from existing passers-by, then everyone normally passing through the

8

Ms. Kim Jordan  
 March 8, 2013  
 Page 6

intersection of Talmage with Airport Park Boulevard would have to divert to visit Costco once every 5 or 6 weekdays (average once every 5.57 weekdays). This frequency of visitation is unrealistic. The amount of traffic passing close by the site simply cannot sustain the share of Costco trip generation assumed to come from passer-by capture. The analysis should be redone assuming a more sustainable rate of passer-by capture, given the level of existing traffic near the site.

8 cont.

### Analysis of Traffic Queues Critically Flawed

Several traffic queuing issues are critical to the environmental analysis of the Project. They include:

- With the Project and proposed traffic mitigations, would traffic queues on Talmage between its intersections with Airport Park Boulevard and the U.S. 101 southbound ramps extend from the downstream intersection into the upstream intersection in either direction, or would excessive queues from turning lanes obstruct through lanes? 9
- With the Project and proposed traffic mitigations, would traffic queues on the U.S. 101 southbound off-ramp to Talmage be safely accommodated? 10
- With the Project and proposed traffic mitigations, would traffic queues on the other approaches to either the intersection of Talmage with Airport Park Boulevard or to the southbound ramp intersection create problems? 11
- If the Lead Agency were to consider approving the Project without the proposed mitigation to the intersection to Talmage and the U.S. 101 southbound ramps under findings of overriding considerations, would conditions so detrimental to public safety be likely that it would be unreasonable to approve findings of such overriding considerations? 12

The DEIR's information in response to these issues is inadequate on several counts. First, the DEIR's analysis of queues is entirely based on hypothetical simulations of 13

Ms. Kim Jordan  
 March 8, 2013  
 Page 7

queue lengths, even for the “existing condition”<sup>5</sup>. Although observations of existing queue lengths could easily have been made, this was never done. Hence, there is no way of knowing how well or poorly the simulation results presented in the DEIR reflect actual conditions. Because the queuing issue is so critical to the evaluation of this Project, the DEIR’s analysts should measure existing queues, compare the result of the actual measurements to the output of the simulations of existing conditions and use that metric to adjust the results of the simulations for other scenarios.

13 cont.

Another problem with the DEIR’s analysis of queues is the way it analyzes the queues on the southbound off ramp from U.S. 101 to Talmage. The DEIR makes the proper interpretation that queues on the southbound right (the southbound-to-westbound movement in the interchange) become impactful when the queue length exceeds 600 feet. When queues on the southbound-to-westbound movement exceed 600 feet, they extend past the point where the southbound-to-eastbound exit movements split from the southbound-to-westbound movements and the southbound-to-westbound queue begins to block those southbound-to-eastbound movements. Once that happens, a new dynamic kicks in and the queue on the southbound ramp begins to build at a rate as if the entire flow on the southbound off ramp were being processed through the southbound-to-westbound movement. The DEIR fails to assess this dynamic and, as a consequence, underestimates the actual length of queues that would build on the subject southbound off-ramp in situations where the interchange mitigation identified in the DEIR may not be built.<sup>6</sup> Consider the implications in each of the following scenarios:

14

- Existing Condition: DEIR Table 3.10-4 indicates the queue on the southbound-to-westbound movement on the subject off ramp is 728 feet. But, because the southbound-to-eastbound traffic becomes mired in the southbound-to-westbound queue, the actual queue will be in excess of 972 feet<sup>7</sup>. This places the back of the

<sup>5</sup> The DEIR relies on the average of six separate simulation runs of the analysis software SIMTRAFFIC to estimate queues for each analysis scenario (see DEIR page 3.10-8).

<sup>6</sup> Since this issue was raised in our letters of comment on the Walmart DEIR, the failure of the Lead Agency and its consultants to properly assess queue length in this DEIR is inexplicable and improper.

<sup>7</sup> In this and the immediately following queue estimates, we estimate that the added queue length would be proportional to the added approach volume participating in the queue as the result of the southbound-to-eastbound traffic flow being caught in the queue upstream of the ramp split and being processed past the

Ms. Kim Jordan  
March 8, 2013  
Page 8

queue in the high speed deceleration area of the off-ramp, a significant safety problem.<sup>8</sup>

- Existing + Project Condition: DEIR Table 3.10-10 indicates that, without mitigation, the queue on the southbound-to-westbound movement on the subject off-ramp would be 1037 feet. However, because traffic on the southbound-to-eastbound movement becomes additive to that queue, the actual queue would be in excess of 1325 feet. This places the back of the queue onto the freeway mainline, a very hazardous situation.
- Near Term + Project: DEIR Table 3.10-13 indicates that, without mitigation, the queue on the southbound-to-westbound movement on the subject off-ramp would be 1192 feet. However, because traffic on the southbound-to-eastbound movement becomes additive to that queue, the actual queue would be in excess of 1525 feet. The back of this queue would extend several hundred feet onto the freeway mainline, an extremely hazardous situation.

14 cont.

Based on the above information, there can be no doubt that unless the interchange configuration is mitigated, the impacts on the southbound off-ramp and southbound freeway mainline would be severe public safety hazard as well as significant delay. Given this, it would be utterly irresponsible and negligent for the Lead Agency to approve the Project under findings of overriding considerations without implementing mitigation improvements to the interchange or is to allow Project occupancy before committed mitigations to the interchange can be implemented.

split point at the rate of queue building and dispersal of the southbound-to-westbound movement. In an actual probabilistic computation of queue length, the 95<sup>th</sup> percentile queue would be longer than the values approximated through proportional techniques herein.

<sup>8</sup> The queue analysis of the existing traffic condition begs this question: Why, if the existing traffic volume inputs and road geometry are identical to those in the Walmart Expansion DEIR, and the same analysis program was employed by the same traffic consultants as produced the Walmart Expansion DEIR, why are the queue lengths for the existing condition predicted in the current study different from those predicted in the Walmart DEIR? The facile answer is that the queue lengths are predicted by a traffic simulation program; each simulation run produces somewhat different results, and that is why the predicted queues are the average of that predicted in six simulation runs. While all of that is factual, the differing results between the current and prior study suggest that six runs of SIMTRAFFIC is insufficient to reach a stable average value of maximum queue length that would be at least close to the average of a separate set of the same number of runs of the simulation on the same input data. In this commenter's experience, the normal standard of practice is to assume that it takes 10 runs of the simulation to reach a stable average prediction of maximum queue length.

TRAFFIC • TRANSPORTATION • MANAGEMENT

5311 Lowry Road, Union City, CA 94587 tel: 510.489.9477 fax: 510.489.9478

Ms. Kim Jordan  
 March 8, 2013  
 Page 9

We also note that all of the foregoing is based on the underlying data presented in the DEIR. If corrections were made for the understatement of traffic described in prior sections herein - low February traffic counts, for the low Walmart existing traffic generation (only 71 percent of norms at the time counted), understatement of this Project's trip generation, and for the excessive portion of the Project's trip generation assumed attracted from existing passers-by - then the queues on the southbound U.S. 101 off-ramp to Talmage would be significantly greater than we estimate above.

14 cont.

A final queuing issue concerns the queue projected in the right turn lane of the northbound approach on Airport Park Boulevard to its intersection with Talmage. Even with proposed mitigation, this queue is projected to be 261 feet in the Existing + Project scenario and 271 feet in the Near Term + Project scenario. The DEIR dismisses the significance of these queues because they do not extend into a "controlled" intersection. However, at these queue lengths, the queues will extend well past the driveway to the Quick Stop convenience store and gas station, probably blocking it almost full time, and into the northernmost driveway of the Walmart property. We suggest that the managements of these establishments be contacted and the DEIR should note whether or not they concur that the projected queues are not significant.

15

#### **Lead Agency Fails To Fully Disclose Its Knowledge of Design Details and Feasibility of Proposed Mitigation Improvements to U.S. 101/Talmage Interchange**

In early 2012, perhaps in reaction to our written and oral comments that the mitigation improvements To U.S. 101/Talmage Interchange proposed in the Walmart DEIR appeared infeasible, the City had GHD Inc., a civil engineering firm it was relying on for other work connected with Redwood Business Park, perform a civil engineering design feasibility review of the mitigation alternatives proposed for the interchange in that DEIR. At the City Council's March 7 meeting, staff reported that the roundabout designs favored as mitigation by the Walmart DEIR and its traffic consultant were far less feasible than the signalization mitigation scheme that relocated all southbound off-ramps

16

Ms. Kim Jordan  
 March 8, 2013  
 Page 10

to the southwest quadrant of the interchange. The staff report, which included a preliminary design plan for this latter mitigation dated January, 1012 at a scale of 1 inch to 80 feet, also indicated that this scheme would require Caltrans approval of certain undisclosed "design exceptions" (that is, waivers to nonconformance to Caltrans design standards). Subsequently, at its June 6, 2012 meeting, the City Council approved a contract with GHD to prepare full construction design documents for this mitigation

16 cont.

scheme and negotiate Caltrans approval of the scheme. However, in the Costco DEIR released in late January, 2013, this mitigation scheme for the interchange is only presented in the same crude conceptual detail that was presented in the Walmart DEIR in mid-summer 2011, an unscaled level of detail so conceptual that the traffic engineer for both DEIRs' described the sketches as 'cartoons' in City Council testimony.

The DEIR acknowledges the City is preparing design studies for the subject mitigation. It acknowledges that full funding for the mitigation is not guaranteed at this time. And it acknowledges that Caltrans approval of the design (and encroachment permit to construct it is required. On the basis of these considerations, it classifies the Project's traffic impact in the interchange area significant and unavoidable. But the language of the DEIR conveys the impression that this is all just a matter of procedure and timing – that approvals and funding are close to being lined up and the mitigation is really going to get built soon, leading the public and policymakers to the belief that it would be acceptable to approve Costco now with the expectation that the mitigation implementation will soon follow.<sup>9</sup> But such a view overlooks the complexities of the situation. Although the City has known since sometime in advance of March 7, 2012 that Caltrans approval will be contingent on Caltrans acceptance of violations of Caltrans design standards, the DEIR fails to disclose what the specifics of the needed "design exceptions" are. This must be disclosed so the public can form its own impression of whether or not the proposed mitigation will be built any time soon. The following vague statement contained on DEIR page 3.10-26 is insufficient and potentially misleading, "*The City has consulted with Caltrans and there is agreement on the need for improvements at that location.*"

17

<sup>9</sup> See DEIR page 3.10-26.

Ms. Kim Jordan  
 March 8, 2013  
 Page 11

*Preliminary designs of the intersection improvements have been shared and discussed with Caltrans staff.*" The public should be informed based on the City's best state of knowledge at the time of circulation of this DEIR whether Caltrans officials reviewing the design proposal have been favorable to the proposed design (not just in agreement that some improvement should be made), whether they have at least informally indicated openness to the design exceptions involved or been skeptical about the likelihood of granting them, been non-committal or even voiced preference for a different mitigation design.

17 cont.

The DEIR's entire presentation of the proposed mitigation fails to convey the inherent operational complexity and driver-challenging nature of the design. A key aspect of this is that the design presumes that all four westbound approach lanes on westbound Talmage to Airport Park Boulevard (two lefts, a through and a combined through-right) will extend all the way to the intersection with the 101 southbound ramps – that is, without the normal raised island bay taper protecting and channelizing access to the left turn lanes. Unless the lanes extend fully, there will be insufficient queue storage between the two intersections and the mitigation will be dysfunctional from the start. The DEIR Appendix D traffic study expresses the hope that drivers will be directed to the correct lane for their destination by signs and markings on the off ramp and intersection markings to avoid creating a trap lane for drivers in the left-most off ramp lane.<sup>10</sup> However, this facile view that guidance will allow drivers to sort themselves out appropriately ignores the geometry of the proposed off-ramp. The geometry is such that drivers will have to demerge from a single lane to the appropriate one of three lanes (leftmost for Airport Park Boulevard, center for Talmage westbound, right for Talmage eastbound) while simultaneously executing a 180-degree fishhook turn on an extremely short radius (approximately 200 foot outside radius on the outside lane) curve. And this must happen with the driver's view on the approach to the demerge and fishhook curve screened by the overcrossing structure. Since Costco as well as the existing Walmart and Friedmans in Redwood Business Park all draw customers from large, remote market

18

<sup>10</sup> DEIR Appendix D, pages 17 and 18.

Ms. Kim Jordan  
March 8, 2013  
Page 12

areas, many of the drivers on the ramp will be first time or infrequent users who, despite best efforts at signing and marking, will end up in the wrong lane on the ramp and still attempt to weave to lanes serving their intended destination. Ultimately, traffic operations on the proposed mitigation are likely to resemble those at the bumper-car arena at an amusement park. Hence, it is questionable that the design as proposed is approvable. DEIR Appendix E admits on the above-referenced page that the intent of the proposed mitigation design is to avoid the need for the more costly (and more conventional) solution of widening the freeway overcrossing to 4 lanes.

18 cont.

On the interchange mitigation funding issue, the DEIR should make clear to the public that that the City's intent had been to fund the majority of the cost that would not be funded by Costco and other fair share payers by using funds through the Successor Agency to the Ukiah Redevelopment Agency and that the State of California Department of Finance disputes the legality of the City using those funds for that purpose. The DEIR should reference the staff report to the June 6, 2012 City Council meeting or any subsequent report adding more clarification to the issue.

19

**Since the Project Cannot Be Implemented Without the Interchange Modification, the Interchange Modification Should Be Evaluated in the DEIR as Part of the Project**

The Costco Project cannot go forward without modification to the Talmage – U.S. 101 interchange area. The City's staff report for the June 6, 2012 City Council agenda item approving the design contract for the interchange modification stated in its first paragraph, 4<sup>th</sup> sentence: *"It is clear that the build out of the Park will require a significant improvement to the traffic facilities for the south bound freeway traffic."* Analyzed properly, the data in the current DEIR makes clear that the Costco Project cannot be reasonably approved unless an effective modification to the interchange is constructed simultaneously. Due to these considerations, the interchange modification should be treated as an element of the Costco Project. The DEIR's Project Description

20

Ms. Kim Jordan  
 March 8, 2013  
 Page 13

section fails to identify the interchange modification as an element of the Costco Project or to identify the full impacts of the interchange modification. The DEIR solely purports to evaluate the interchange modification's effectiveness in mitigating the traffic effects of the rest of the Costco Project. CEQA requires environmental analysis of 'the whole' of a project. In failing to identify the interchange modification as part of the Project Description and in failing to attempt to identify all of the interchange modification's environmental impacts, the DEIR improperly segments the real Project. The DEIR should be revised to evaluate the full environmental impacts of the Project including in specific those of the proposed interchange modification.

20  
 cont.

In any case, the interchange modification would be a major project that would require its own EIR, even if it were to be considered as an independent action. To date, there is no evidence of any effort to perform a complete environmental review of the interchange modification project. The fact that the City has acted to include this specific design of interchange modification in its Capital Improvement Program and funded in excess \$250,000 in development of construction plans for the modification without conducting any environmental analysis of the proposed modification may also be improper under CEQA.

#### **The DEIR Fails To Consider the Proposed Walmart Expansion in the Traffic Analysis**

The Walmart Expansion Project has an EIR (SCH 2010032042) certified December 14, 2011. Approval of the Walmart Project was withheld due to failure of the City Planning Commission to reach findings that the benefits of the project override the significant impacts of the Walmart expansion project that the EIR found. Those impacts included certain parking and landscape nonconformities, the traffic situation involving the U.S. 101 – Talmage interchange and other consideration. If the City implements the currently proposed interchange modifications which were identified as a potential mitigation measure in the Walmart EIR, Walmart could remedy its parking /landscape deficiencies

21

Ms. Kim Jordan  
March 8, 2013  
Page 14

and have nothing standing between its project and approval. Or even without changing anything else, with the traffic impacts purportedly mitigated per the already certified EIR, Walmart could refile and potentially convince the Planning Commission that the benefits of the project now outweigh the remaining significant impacts and gain approval under overriding considerations. In fact, much Planning Commission discussion about overriding considerations at its March 14 and April 11, 2012 meetings where the

Commission finally determined that it did not support findings of overriding considerations concerned how easily Walmart could resurrect the project if the City developed a solution to the interchange traffic problem and Walmart made small changes to their plan.

21  
cont.

However, despite the ease with which the Walmart Expansion project could be resurrected, the current Costco Project DEIR has not evaluated the consequences of Walmart Expansion traffic being added to the scene in any of the near term scenarios. This is a critical omission. The DEIR should be revised to include analysis of a near term traffic scenario that assumes the Walmart Expansion does get approved and constructed.

#### **The DEIR Fails To Address the Zoning Changes Needed by the Project Properly**

Part of the Project site is zoned Industrial/Auto Commercial, a zoning category that does not allow retail. In order to approve the Project, this zoning must be changed. Zoning must be consistent with the General Plan. The City needs a General Plan Amendment to change the zoning. As part of the General Plan Amendment, the City must complete a traffic study assessing the consequences and impacts of changes in traffic the specific Amendment would cause. The DEIR has not performed any analysis of whether changing the zoning on the Industrial/Auto Commercial portion of the site to Retail would be more detrimental from a traffic standpoint than development under the current zoning.

22

The DEIR discussion of conformance with General Plan Circulation policies, specifically CT 1.1 and CT 1.3 on DEIR pages 3.7-8 and -9 admits that the Project would have

23

TRAFFIC • TRANSPORTATION • MANAGEMENT

5311 Lowry Road, Union City, CA 94587 tel: 510.489.9477 fax: 510.489.9478

Ms. Kim Jordan  
 March 8, 2013  
 Page 15

significant near term and long term cumulative traffic impacts, but claims the Project remains in conformity with those General Plan policies because it offers to pay fair share fee contributions toward identified mitigations for those impacts. However, fee based mitigation must be effective mitigation, which means it is capable of being completed. In this case the fee-based mitigation is not feasible mitigation because there is no enforceable plan to complete the mitigation. In specific, the DEIR's own traffic study finds those traffic impact conditions to be significant and unavoidable because there is no assurance of securing full funding or getting Caltrans approval for the interchange modification mitigation measure. Therefore, the Project is inconsistent with the General Plan. The findings of consistency cannot be made. The EIR needs to discuss the Project's inconsistency with the General Plan and the impacts of this inconsistency.

23  
 cont.

On page 3.7-3, the DEIR asserts that the Project doesn't have to conform to every single policy of the General Plan; that it just needs to overall be judged by the community to be more in furtherance of General Plan policies than it is in obstruction of them. That standard doesn't apply when a Project is directly inconsistent with a fundamental policy of the General Plan. If the Project is inconsistent with a fundamental policy, then the City cannot proceed.

24

#### **DEIR Collision Analysis Ignores Critical Location**

The DEIR and its Appendix E reviews collision data for study intersections for the 5 years starting January, 2006 through December, 2010. Data for calendar year 2011 was available shortly after the NOP for the Project was circulated and certainly well before the Appendix E Draft Traffic Impact Study was completed in June, 2012. The 2011 collision data should have been considered in the analysis. More important, by confining the collision analysis to intersections, the traffic impact analysis avoids addressing the most critical traffic safety consideration of relevance to this DEIR. That consideration is whether the queuing on the southbound U.S. 101 off-ramp to Talmage in the interchanges current geometry constitutes such a significant hazard to public safety that it would be inappropriate to approve the Project under findings of overriding considerations without first implementing mitigation improvements to the interchange. The DEIR must examine the collision data for the subject off-ramp and the immediate freeway mainline approach to this off-ramp.

Ms. Kim Jordan  
 March 8, 2013  
 Page 16

#### **The DEIR's Consideration of Emergency Access Evades a Critical Issue**

The DEIR's cursory consideration of Emergency access is limited to the specific site of the proposed Project. The DEIR conclusorily asserts that because the site plan includes multiple access points suitable for all vehicle types that the Project would have no impact

on emergency access. However, this issue is not limited to whether there is adequate emergency access onto the specific Project site; it concerns all roadways and intersections that may be affected by Project traffic. If the Project is approved under findings of overriding considerations without implementing mitigation improvements to the interchange or is approved and allowed occupancy before committed mitigations to the interchange can be implemented, the fact that peak hour traffic queues will obstruct the southbound U.S. 101 off ramp to Talmage extending all the way onto the freeway mainline definitely creates inadequate emergency access in situations where emergency vehicles need to make use of that ramp.

26

#### **The DEIR's Assessment of Impacts on Bicyclists and Pedestrians Is Cursory and Mitigations Are Trivial**

Although the DEIR identifies that "implementation of the Project would conflict with adopted policies, plans, or programs regarding public transit, pedestrian, or bicycle facilities, or otherwise decrease the performance or safety of such facilities," its mitigation of these impacts is trivial, involving on-site and site-frontage facilities that should be ordinary site plan requirements. The DEIR proposes nothing to address the fact that the traffic mitigation measures proposed for the intersections of Talmage with Airport Park Boulevard and with the U.S. 101 southbound ramps create, even with signalization, hellish crossings for bicyclists and pedestrians.

27

#### **Assumed Trip Distribution Inadequately Documented**

The DEIR states on page 3.10-22 the following:

*"The distribution of project traffic was determined based on the population densities in the primary and secondary markets areas identified in "Costco Wholesale Warehouse Urban Decay Analysis prepared in April 2012 by ALH |*

28

TRAFFIC • TRANSPORTATION • MANAGEMENT

5311 Lowry Road, Union City, CA 94587 tel: 510.489.9477 fax: 510.489.9478

Ms. Kim Jordan  
 March 8, 2013  
 Page 17

*ECON. The potential route to and from each market area was determined based on current travel patterns to and from the project area, and a percentage of assigned Project-generated vehicle trips were derived from the share of each market area. These distribution percentages were then applied to the trip generation estimates to determine the number of vehicle trips on each route to and from the market destinations."*

DEIR Table 3.10-8 presents the percentages of Project traffic approaching/departing via major routes as the end result of this process. However, neither the DEIR nor its

Appendix E Transportation Impact Study the actual data and computation steps involved in deriving the results presented in Table 3.10-8. A vast portion of the market area lays to the north that would access and depart the Project via U.S. 101 to/from north of Talmage and an additional large portion of the market area lays generally to the east and would approach/depart along SR 20, ultimately also approaching and departing the immediate Project area via U.S. 101 north of Talmage. It seems odd that, given the size of the portion of the market area that would ultimately approach/depart via U.S. 101 to the north of Talmage, Table 3.10-8 would only show 34 percent of Project trips approaching and departing via this route. Obviously, this distribution percentage is critical because of the queuing problems on the southbound off-ramp to Talmage and the queuing problems on Talmage between that off-ramp intersection and the intersection with Airport Park Boulevard. Please present the initial data and computational steps that translate the market analysis into the end results shown on Table 3.10-8.

28 cont.

#### **Changed Threshold of Significant Traffic Impact at 2-Way Stop Intersections**

It appears that the City has changed the criteria for significant traffic impacts since certifying the Walmart Expansion EIR to eliminate direct consideration of side street delays per 2-way stops, now only considering whether the overall average delay on the combination of all approaches remains within an acceptable level. The implication of this policy is that drivers on the stopped minor approaches could vainly wait forever to find a safe opportunity to proceed without the condition being found to be a significant traffic impact. Is this change in the significance threshold where side street delay is now not even reported in the DEIR a change that was formally adopted by the City Council or is this a convention that was concocted by City staff and consultants in an effort to eliminate the inconvenient need to explain-away nuisance findings of significant impacts?

29

Ms. Kim Jordan  
March 8, 2013  
Page 18

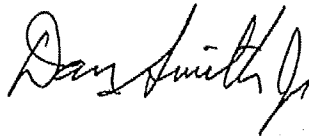

**Conclusion**

This concludes my current comments on the Draft Environmental Impact Report for Costco Project. Because of the many critical defects in the Transportation and Traffic section of the DEIR discussed above, that section should be completely revised and the document should be re-circulated for a full 45 day comment period in draft status. In closing, I emphasize my prior comment that, due to the considerable public safety consequences of traffic queues on the U.S. 101 southbound off ramp to Talmage that would occur if the Project were approved and in operation before an effective mitigation scheme for the interchange area were implemented, the Project cannot reasonably be approved under findings of overriding considerations.

California No. 938 (Traffic)      Arizona No. 22131 (Civil)

**PROFESSIONAL EXPERIENCE**

Smith Engineering & Management, 1993 to present. President.  
DKS Associates, 1979 to 1993. Founder, Vice President, Principal Transportation Engineer.  
De Leuw, Cather & Company, 1968 to 1979. Senior Transportation Planner.  
Personal specialties and project experience include:

**Litigation Consulting.** Provides consultation, investigations and expert witness testimony in highway design, transit design and traffic engineering matters including condemnations involving transportation access issues; traffic accidents involving highway design or traffic engineering factors; land use and development matters involving access and transportation impacts; parking and other traffic and transportation matters.

**Urban Corridor Studies/Alternatives Analysis.** Principal-in-charge for State Route (SR) 102 Feasibility Study, a 35-mile freeway alignment study north of Sacramento. Consultant on I-280 Interstate Transfer Concept Program, San Francisco, an AA/EIS for completion of I-280, demolition of Embarcadero freeway, substitute light rail and commuter rail projects. Principal-in-charge, SR 238 corridor freeway/expressway design/environmental study, Hayward (Calif.) Project manager, Sacramento Northeast Area multi-modal transportation corridor study. Transportation planner for I-80N West Terminal Study, and Harbor Drive Traffic Study, Portland, Oregon. Project manager for design of surface segment of Woodward Corridor LRT, Detroit, Michigan. Directed staff on I-80 National Strategic Corridor Study (Sacramento-San Francisco), US 101-Sonoma freeway operations study, SR 92 freeway operations study, I-880 freeway operations study, SR 152 alignment studies, Sacramento RTD light rail systems study, Tasman Corridor LRT AA/EIS, Fremont-Warm Springs BART extension plan/EIR, SRs 70/99 freeway alternatives study, and Richmond Parkway (SR 93) design study.

**Area Transportation Plans.** Principal-in charge for transportation element of City of Los Angeles General Plan Framework, shaping nations largest city two decades into 21st century. Project manager for the transportation element of 300-acre Mission Bay development in downtown San Francisco. Mission Bay involves 7 million gsf office/commercial space, 8,500 dwelling units, and community facilities. Transportation features include relocation of commuter rail station; extension of MUNI-Metro LRT; a multi-modal terminal for LRT, commuter rail and local bus; removal of a quarter mile elevated freeway; replacement by new ramps and a boulevard; an internal roadway network overcoming constraints imposed by an internal tidal basin; freeway structures and rail facilities; and concept plans for 20,000 structured parking spaces. Principal-in-charge for circulation plan to accommodate 9 million gsf of office/commercial growth in downtown Bellevue (Wash.). Principal-in-charge for 64 acre, 2 million gsf multi-use complex for FMC adjacent to San Jose International Airport. Project manager for transportation element of Sacramento Capitol Area Plan for the state governmental complex, and for Downtown Sacramento Redevelopment Plan. Project manager for Napa (Calif.) General Plan Circulation Element and Downtown Riverfront Redevelopment Plan, on parking program for downtown Walnut Creek, on downtown transportation plan for San Mateo and redevelopment plan for downtown Mountain View (Calif.), for traffic circulation and safety plans for California cities of Davis, Pleasant Hill and Hayward, and for Salem, Oregon.

TRAFFIC • TRANSPORTATION • MANAGEMENT

5311 Lowry Road, Union City, CA 94587 tel: 510.489.9477 fax: 510.489.9478

**Transportation Centers.** Project manager for Daly City Intermodal Study which developed a \$7 million surface bus terminal, traffic access, parking and pedestrian circulation improvements at the Daly City BART station plus development of functional plans for a new BART station at Colma. Project manager for design of multi-modal terminal (commuter rail, light rail, bus) at Mission Bay, San Francisco. In Santa Clarita Long Range Transit Development Program, responsible for plan to relocate system's existing timed-transfer hub and development of three satellite transfer hubs. Performed airport ground transportation system evaluations for San Francisco International, Oakland International, Sea-Tac International, Oakland International, Los Angeles International, and San Diego Lindberg.

**Campus Transportation.** Campus transportation planning assignments for UC Davis, UC Berkeley, UC Santa Cruz and UC San Francisco Medical Center campuses; San Francisco State University; University of San Francisco; and the University of Alaska and others. Also developed master plans for institutional campuses including medical centers, headquarters complexes and research & development facilities.

**Special Event Facilities.** Evaluations and design studies for football/baseball stadiums, indoor sports arenas, horse and motor racing facilities, theme parks, fairgrounds and convention centers, ski complexes and destination resorts throughout western United States.

**Parking.** Parking programs and facilities for large area plans and individual sites including downtowns, special event facilities, university and institutional campuses and other large site developments; numerous parking feasibility and operations studies for parking structures and surface facilities; also, resident preferential parking.

**Transportation System Management & Traffic Restraint.** Project manager on FHWA program to develop techniques and guidelines for neighborhood street traffic limitation. Project manager for Berkeley, (Calif.), Neighborhood Traffic Study, pioneered application of traffic restraint techniques in the U.S. Developed residential traffic plans for Menlo Park, Santa Monica, Santa Cruz, Mill Valley, Oakland, Palo Alto, Piedmont, San Mateo County, Pasadena, Santa Ana and others. Participated in development of photo/radar speed enforcement device and experimented with speed humps. Co-author of Institute of Transportation Engineers reference publication on neighborhood traffic control.

**Bicycle Facilities.** Project manager to develop an FHWA manual for bicycle facility design and planning, on bikeway plans for Del Mar, (Calif.), the UC Davis and the City of Davis. Consultant to bikeway plans for Eugene, Oregon, Washington, D.C., Buffalo, New York, and Skokie, Illinois. Consultant to U.S. Bureau of Reclamation for development of hydraulically efficient, bicycle safe drainage inlets. Consultant on FHWA research on effective retrofits of undercrossing and overcrossing structures for bicyclists, pedestrians, and handicapped.

ENDORSED-FILED

MAY 01 2015

CLERK OF MENDOCINO COUNTY  
SUPERIOR COURT OF CALIFORNIA

FRANCES FROTEAU

Case No. SCUk CVPT 14-63579

UKIAH CITIZENS FOR SAFETY FIRST, a  
California Association, RACHEL LAND and  
PATTY HERNANDEZ

Petitioners

DECISION AFTER COURT  
TRIAL ON PETITION FOR  
WRIT OF MANDATE (CCPS1094.5)

vs.

CITY OF UKIAH, a Municipal Corporation under  
the laws of the State of California, CITY  
COUNCIL OF THE CITY OF UKIAH, and DOES  
1 through 10, inclusive,

Respondents

DAVID E. BABCOCK, dba DAVID BABCOCK  
AND ASSOCIATES, et al.

Real Parties in Interest

STATEMENT OF THE CASE

In this Petition for Writ of Mandate, Petitioners, Ukiah Citizens for Safety First ("UCS"), Rachael Land and Patty Hernandez, have challenged Respondents' ("City") approval of Resolution 2013-35 which certified the Final Environmental Impact Report for the Costco Warehouse Project. ("Project") Specifically, Petitioners contend that:

1. The EIR failed to analyze the Project's energy use.
2. The addendum to the FEIR that was adopted by the City Council on December 3, 2014 was insufficient as a matter of law.
3. The City committed the CEQA error of improperly "piecemealing" by not including the 101/Talmage improvements project as part of the Costco project and analyzing the two projects in one EIR.
4. The EIR's analysis of traffic impacts does not comply with CEQA.

5. The air quality analysis is flawed and relied on inaccurate data.
6. The EIR does not adequately evaluate or mitigate the noise impacts to the surrounding businesses and hotels.
7. The City violated the State's planning and zoning laws by failing to determine that the Project was consistent with the Airport Industrial Park ("AIP") Specific Plan.

For the reasons that follow, the court has determined that the City proceeded in the manner required by law and that the decision made to approve the Project is supported by substantial evidence in the record.

### ANALYSIS

In a case challenging an agency's compliance with CEQA, "[t]he court's inquiry shall extend only to whether there was a prejudicial abuse of discretion. (Public Resources Code §21168.5). Such an abuse is established if the agency has not proceeded in the manner required by law or if the determination or decision is not supported by substantial evidence." (*Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal. 4<sup>th</sup> 412, 426, internal quotation marks omitted). Substantial evidence is "enough relevant information and reasonable inferences from this information that a fair argument can be made to support a conclusion, even though other conclusions might also be reached. (*Laurel Heights Improvement Assn. v. Regents of the University of Cal.* (1988) 47 Cal. 3d 376; *CEQA Guidelines* §15384 (a); *San Joaquin Raptor/Wildlife Rescue Center v. County of Stanislaus* (1994) 27 Cal.App.4<sup>th</sup> 713, 722, 32 Cal.Rptr.2d 704).

A reviewing court does not decide the correctness of the EIR's environmental conclusions, but only its sufficiency as an informative document. (*Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal. 3d 553; *Save Cuyama Valley v. County of Santa Barbara* (2013) 213 Cal. App. 4<sup>th</sup> 1059). Courts look "not for perfection but for adequacy, completeness, and a good faith effort at full disclosure." (*Sequoiah Hills Homeowners Assn. v. City of Oakland* (1993) 23 Cal. App. 4<sup>th</sup> 704; *CEQA Guidelines*, §15151). A reviewing court may not independently reweigh the evidence or substitute its judgment for the decision of the agency (*Laurel Heights, supra*). The court must presume that the City's decision is correct. (*Evidence Code* §664; *State Water Control Board Cases* (2006) 136 Cal. App. 4<sup>th</sup> 674).

Petitioners have the burden of affirmatively demonstrating the inadequacy of the environmental review conducted in this case. (*Id.*; see also, *Al Larson Boat Shop v. Board of Harbor Comm.* (1993) 18 Cal. App. 4<sup>th</sup> 729). Disagreements between experts do not make an EIR inadequate. (*Assn. of Irrigated Residents v. County of Madera* (2003) 107 Cal. App. 4<sup>th</sup> 1383). An agency is entitled to choose between differing expert opinions or rely on the opinion of its own staff. (*Oakland Heritage Alliance v. City of Oakland* (2011) 195 Cal. App. 4<sup>th</sup> 884). The court must "...indulge all reasonable inferences from the evidence that would support the agency's determinations and resolve all conflicts in the evidence in favor of the agency's decision." (*CNPS v. City of*

*Rancho Cordova* (2009) 172 Cal. App. 4<sup>th</sup> 603, 613-614. "The issue is not whether the studies are irrefutable or could have been better...only whether they are sufficiently credible to be considered part of the total evidence that supports the findings." (*Assn. of Irrigated Residents*, *supra* at 1401).

Petitioners bear the burden of demonstrating that any errors in the City's environmental analysis were prejudicial. (*Public Resources Code* § 21005(a); *Sunnyvale West Neighborhood Assn. v. City of Sunnyvale City Council* (2010) 190 Cal. App. 4<sup>th</sup> 1351, 1385). An error is prejudicial when an agency fails to comply with a mandatory CEQA procedure or when a report omits information and thereby precludes informed decision making. (*Citizens for a Sustainable Treasure Island v. City and County of San Francisco* (2014) 227 Cal. App. 4<sup>th</sup> 1036, 1046-1047; *Neighbors for Smart Rail v. Exposition Metro Line Const. Auth.* (2013) 57 Cal. 4<sup>th</sup> 439,463).

1. Respondents Adequately Analyzed the Project's Energy Use.

Petitioners contend that the EIR did not directly address the Project's energy use, and in particular, transportation energy use. Petitioners claim that the City failed to calculate the energy use attributable to vehicle trips generated by the Project. Petitioners further argue that there was a failure to calculate the operational and construction energy use of the Project. According to Petitioners, failure to address these issues violated the provisions set forth in Appendix F of the CEQA Guidelines.

There is substantial evidence in the record that the EIR contains an analysis of the Project's energy use in several sections. As set forth in the City's response to comments 8 and 9, "Nowhere in CEQA does it require every EIR to provide an accounting of energy usage in a specific format. The focus of an EIR is on the potentially significant physical effects the project may have on the environment. The DEIR analyzes the usage of energy, including direct and indirect, stationary and mobile. The potential increase in electrical and natural gas usage are discussed in Section 3.9 (see Impact 3.9.8), and a discussion of whether the project would result in wasteful, inefficient, or unnecessary energy consumption, as recommended in Appendix F of the Guidelines.

Most importantly, the EIR analyzes the effects of this energy usage on the existing environment, specifically air quality and greenhouse gas (GHG) emissions. This is consistent with the objective of CEQA that an EIR concentrate on the potentially significant physical effects of a project. Conservation measures and energy efficiency measures, as discussed in Appendix F of the CEQA Guidelines, are discussed in the EIR (see pages 2-8 to 2-9, 3.9-9, 3.9-14, and 3.11-16 to 3.11-18). As explained in the EIR and in the Response to Comment 133-7, Costco routinely includes many energy-efficient or energy-saving design features in its projects, and proposed to do so here for this Project too." (AR 604-605).

Impact 3.9.8 provides: "The Costco Wholesale warehouse Project would not exceed existing gas and electric supply or result in wasteful, inefficient, or unnecessary consumption of energy. The proposed Project would intensify development on the Project site, thereby increasing demand for gas and electric service. On-site employment and uses, such as the warehouse store and tire center, would use gas and electricity. These uses would generate demand for 2.44 million kilowatt hours of electricity per year

(kWh). The Project area has existing distribution facilities and capacity to serve the Project.

The energy consumption demands of the proposed Project would conform to the State's Title 24 energy conservation standards such that the development would not be expected to wastefully use gas and electricity. The proposed Project would also be designed to include several sustainable features. Among these features are regional sourcing of building materials, higher solar reflectivity metal wall panels, reflective roof materials, and tripled-glazed skylights (Costco, 2011). In addition, energy service to the Project site would be provided to meet the needs of the proposed Project as required by the California Public Utilities Code, which obligates electric providers to provide service to existing and potential customers. Since the proposed Project would comply with Title 24 conservation standards, implement additional sustainable features, and be served by the City of Ukiah, the proposed Project would not directly require the construction of new energy generation or supply facilities, or result in wasteful, inefficient, or unnecessary consumption of energy. Consequently, the impact would be less than significant." (AR 949).

2. The Use of an Addendum to Augment and Clarify the Energy Analysis is Authorized by CEQA Guidelines and is Supported by Substantial Evidence.

Subsequent to the certification of the EIR, and the filing of the Petition, the case of *California Clean Energy Committee v. City of Woodland* (2014) 225 Cal. App. 4th 173 was published. In that case, the court held that the City's reliance on California Building Standards Code and Green Building Standards Code (Title 24), did not suffice to address issues of transportation, construction and operation energy impacts and that a more detailed discussion of energy use pursuant to CEQA Guidelines Appendix F was required.

In response to *CCER*, the City adopted an Addendum that contained the required energy use discussion. (CEQA Guideline §15164) Absent the occurrence of new significant impacts which would require a revision of a previously adopted EIR, an addendum is an appropriate procedure to use when clarifying or providing technical detail that does not alter the conclusions previously adopted. (*Fund for Environmental Defense v. County of Orange* (1988) 204 Cal. App. 3d 1538.) The addendum must provide a brief explanation of the decision not to prepare as a subsequent EIR (§15164(e)).

The City met this obligation by providing the following explanation. "This Addendum also clarifies and provides additional discussion of Project energy consumption and electrical utilities. The City is clarifying its determination that "the Project would not exceed existing gas and electric supply or result in the wasteful, inefficient, or unnecessary consumption of energy" in part based on the recent court decision, *CCEC v. City of Woodland* (2014) 225 Cal. App. 4th 173, which was published after the City certified the EIR. That decision held that CEQA requires a more detailed discussion of energy use than was previously understood at the time the EIR was certified. This discussion augments, but does not alter, the conclusions of the EIR regarding the effects of Project-related energy usage. As analyzed below, the approval of the Improvement Agreement by the City and the PSA by the Successor Agency, the minor Project Site Plan revisions, and the additional information on energy consumption do not constitute a substantial change to the project, substantial new information, or

*otherwise require preparation of a supplemental or subsequent EIR under CEQA Guidelines Sections 15162 or 15163. The information set forth herein constitutes only minor changes and additions to the certified EIR. Therefore, preparation of an Addendum is the appropriate approach under CEQA." (SAR 243)*

If the agency's decision to rely on an addendum is supported by substantial evidence in the record, the court must defer to the agency's decision, even if a contrary conclusion can be reached. (*Public Resources Code §§21168, 21168.5*).

The addendum consolidated all of the EIR's energy use analysis into one location and divided the information into four categories.

**A. Project Energy Conservation Measures**

As set forth in both the EIR and Addendum the City identified and adopted energy-related mitigation measures intended to conserve energy and natural resources. (*Mitigation Measure 3.2.2a, AR 528-529, 590*). The mitigation measures were expressly imposed in order to reduce energy consumption and associated GHG emissions. (SAR 253).

*"Parking lot light standards are designed to provide even light distribution and use 20% less energy compared to a greater number of fixtures at lower heights. The use of metal halide lamps provide a color corrected white light and a higher level of perceived brightness with less energy than other lamps such as high pressure sodium. New building materials are typically extracted and manufactured within the region. Pre-manufactured building components, including structural framing and metal panels, are designed to minimize waste during construction. Pre-manufactured metal wall panels with insulation are designed to conserve energy by increasing R-value and solar reflectivity. Building heat absorption is reduced by a decrease in the thermal mass of the metal wall when compared to a typical masonry block wall. Reflective roof material will meet the requirements for the USEPA's Energy Star energy efficiency program. Reflective roofs produce lower heat absorption and thereby lower energy usage during the summer months. Triple glazed skylights are used on the roof to reduce the need for interior lighting. A "daylight harvesting" system monitors and adjusts the mechanical and lighting systems in order to conserve energy. The system includes the skylights, light monitors, energy efficient lighting fixtures, and associated control systems. On a typical sunny day, fewer than one third of the interior lights are needed." (See AR 783-784).*

Further, *"the Heat-Reclaim system, which captures heat from the refrigeration lines and uses it to heat water for the building. High efficiency restroom water fixtures, which result in a water savings of 40% beyond the building standard. Reduced water usage results in a reduction in energy usage, due to the energy needed to pump, clean, and distribute potable water. The draft Title 24 (California Code of Regulations) compliance report for the Project indicates that the above features, plus efficient internal heating and cooling, will result in a building energy performance that is 12% more efficient than the Title 24 performance standards (Title 24 Performance Certificate of Compliance, dated 12/17/13, included as Attachment B). As such, the Project would more than comply with state and federal energy standards, including Title 24 of the California Code of Regulations." (AR 97, 604, 606; SAR 251,253; Mitigation Measure 3.2.2b).* The EIR also included measures to reduce employee vehicle trips and improvements to the bicycle and pedestrian network. (AR 98-99; SAR 253-256)

#### B. Project Construction Energy Use Including Transportation

The City found that Project construction is typical for the region and building site and that there were no unusual circumstances at the site that would require an unusually high construction related energy usage. Both the EIR and Addendum describe the Project building and construction energy usage. Specifically, *"The Heat-Reclaim system, which captures heat from the refrigeration lines and uses it to heat water for the building. High efficiency restroom water fixtures, which result in a water savings of 40% beyond the building standard. Reduced water usage results in a reduction in energy usage, due to the energy needed to pump, clean, and distribute potable water. The draft Title 24 (California Code of Regulations) compliance report for the Project indicates that the above features, plus efficient internal heating and cooling, will result in a building energy performance that is 12% more efficient than the Title 24 performance standards (Title 24 Performance Certificate of Compliance, dated 12/17/13, included as Attachment B). As such, the Project would more than comply with state and federal energy standards, including Title 24 of the California Code of Regulations.*

*Project construction will require grading, utility installation, foundation construction, building construction, paving, and landscaping installation. All construction is typical for the region and building type, and the Project site does not include unusual circumstances that would require unusually high energy usage. Some import of fill will be required in order to allow gravity flow of water and sewer, as opposed to pumping and/or installing extremely deep lines below surface grade- both of which would be more energy intensive.*

*The building system is pre-engineered metal (see Draft EIR pp. 2-8 to 2-9). The metal building system contains 80% recycled content and is itself 100% recyclable. The Project design team estimates that by designing a metal warehouse, fewer building materials are consumed in construction compared to full height masonry. Considered within the context of all construction materials, including 1000 truck trips for fill and 280 truck trips for the slab and foundation, the overall reduction in haul truck trips is 8.5% as compared to a full height masonry building. In addition, building material deliveries would be reduced by 71.5% (50 truck trips for a pre-engineered metal building with a CMU foundation versus 175 truck trips for an all-CMU structure). Therefore, fewer fossil fuels are consumed in transportation, due to the need for less material, under the Project as opposed to a more conventional design. It is further noted that these material trips are well below the standard CalEEMod assumptions for construction emissions for a typical project of similar size." (AR 783-784, SAR 251)*

#### C. Project Operational Energy Use Including Transportation

As stated above, the City determined the Project would consume electricity of approximately 2.44 million kilowatt hours per year. This is based on a 148,000 square foot retail warehouse. (AR 949-950, Impact 3.9.8.). The City also determined that the analysis demonstrated that the Project is within a typical range for a Costco Warehouse. The City also analyzed fuel consumption before and after mitigation measures. (SAR 253; Mitigation Measure 3.2.2a).

#### D. Renewable Energy Sources.

There is substantial evidence in the record to dispute Petitioners contention that the City failed to consider the use of renewable energy sources for the Project.

"In addition to the information contained in this Draft EIR section, the City notes that the energy sources for the electricity provided by the City of Ukiah Utilities Department includes an unusually high percentage of renewable energy sources compared to the state average. Ukiah's 2011 energy supply included 49% eligible renewable sources, compared to a 2010 statewide average of 14%. Large hydroelectric energy, while not considered an "eligible" renewable source for purposes of the California Renewable Portfolio, is nevertheless a clean energy source, and at 25% is a substantial component of Ukiah's energy mix. In addition, on-site renewable energy sources have been considered. The Project would include pre-wiring and an engineered roof to allow for future solar energy panels. It is Costco standard practice to determine the feasibility of installation of rooftop solar at the time of the completion of warehouse construction and beginning of operation (anticipated build out year is 2017). Factors evaluated by Costco include cost of the solar system, tax incentives, how much power the system will produce and the utility cost of electricity. For the Ukiah Costco warehouse, it is estimated that rooftop solar would only contribute to approximately 25% of the building electricity needs. In contrast, as noted above, Ukiah's 2011 energy supply included 49% eligible renewable sources and an additional 25% from large hydroelectric - approximately 75% from renewable sources. Thus, renewable energy sources provide the vast majority of the Project's energy demand." (AR 3192, SAR 257-258).

Petitioners contend that the City utilized the wrong thresholds of significance for the Project's energy use. Appendix F of the Guidelines does not suggest any particular threshold to be used in this analysis. Moreover, case law is clear that the City has the discretion to determine an appropriate standard of significance in an EIR as long as the decision is supported by substantial evidence. (*Save Cuyama Valley, supra*, at 1067-1068. The fact that Petitioners disagree with the City's decision is insufficient to establish an abuse of discretion. (*North Coast Rivers Alliance v. Marin Municipal Water Dist. Board of Directors* (2013) 216 Cal. App. 4th 614).

The City quantified the energy usage and demand and found that the project as constructed, "will result in a building energy performance that is 12% more efficient than the Title 24 performance standards (Title 24 Performance Certificate of Compliance, dated 12/17/13, included as Attachment B). As such, the Project would more than comply with state and federal energy standards, including Title 24 of the California Code of Regulations." (AR 783-784, SAR 251). The City's energy analysis including the mitigation measures to be implemented complies with the requirements of Appendix F and the holding in *California Clean Energy Committee v. City of Woodland, (supra)*.

### **3. Respondents Did Not Commit CEQA Error of Improper Piecemeal Review by Failing to Include the 101/Talmage Improvements/Interchange Project As Part of the Costco Project and Analyzing the Two Projects in One EIR.**

Petitioners contend that the 101/Talmage Improvement Project should have been included as part of the Costco project and analyzed together in one EIR. The court disagrees with Petitioners' position.

It is well settled that CEQA prohibits piecemeal review of the significant environmental impacts of a project. (*Berkeley Keep Jets Over the Bay Com. V. Board of Port Cmrs.*

(2001) 91 Cal. App. 4<sup>th</sup> 1344). "Agencies cannot allow 'environmental considerations [to] become submerged by chopping a large project into many little ones—each with a minimal potential impact of the environment—which cumulatively may have disastrous consequences.'" *Banning Ranch Conservancy v. City of Newport Beach* (2012) 211 Cal. App. 4<sup>th</sup> 1209 (citations omitted). The court in *Laurel Heights* (*supra*) set forth a piecemealing test and held that "[A]n EIR must include an analysis of the environmental effect of future expansion or other action if: (1) it is a reasonably foreseeable consequence of the initial project; and (2) the future expansion or action will be significant in that it will likely change the scope or nature of the initial project or its environmental effects." (*Laurel Heights, supra* at 396). "Under this standard, the facts of each case will determine whether and to what extent an EIR must analyze future expansion or other action." (*Ibid.*) The cases "tend to be fact driven." (*Banning, supra*).

Contained in the record is the City's description of the 101/Talmage improvements.

*"The City of Ukiah Talmage Road Interchange Project being undertaken and designed as a City of Ukiah Project. The purpose of this project is to improve the operation at the intersection of Airport Park Boulevard/Talmage Road and Talmage Road/U.S. 101 Southbound ramps to better serve the Airport Industrial Park and the surrounding area. Airport Industrial Park is a regional serving retail and commercial center that provides goods and services to City residents as well as the greater region."* (AR 2196).

According to City staff, *"The issue of the independent utility of the proposed U.S. 101/Talmage Interchange Improvements, which has been considered by the City Council separate from the proposed Costco project, was addressed by City staff at the Hearing of December 4, 2013 (incorporated here by reference). The City Council has undertaken a design, funding, and environmental review process for the proposed improvements. While the proposed improvements would provide a feasible means to mitigate a potentially significant impact related to project traffic, the improvements are necessary to address future traffic deficiencies, with or without the proposed project. This need has been documented in the analysis done for the improvements, as well as the Costco Final EIR, November 2013, SCH#2011112025, the Final EIR for the proposed (but not approved) Walmart Expansion, SCH#2010032042, 2005 Mendocino Council of Governments Route 101 Corridor Interchange Study, and the Ukiah Valley Area Plan prepared by Mendocino County."* (AR 531)

*"The City of Ukiah is pursuing the Talmage Road Interchange Improvements as a separate City-sponsored project, because those improvements are required for the build-out of the Redwood Business Park, with or without the Project."* (AR 14).

Petitioners contend that the project agreements between the City and Costco require, as a condition of approval, the completion of the interchange improvements. Petitioners argue that based on the condition of approval, the activities are interrelated and constitute the "whole of an action" which cannot be piecemealed. (*See Tuolumne County Citizens for Responsible Growth, Inc. v. City of Sonoma* (2007) 155 Cal. App. 4<sup>th</sup> 1214).

Section 302.1 of the Development Agreement as it relates to the interchange improvements specifically provides that, *"Costco acknowledges that in addition to discretion reserved by City elsewhere in this Agreement, including, without limitation, Sections 104 and 202 hereof, City expressly retains and reserves all discretion to (i) modify the City Work as it determines, in its sole discretion, may be necessary to comply*

with the CEQA, (ii) select other feasible alternatives to the City Work to avoid significant environmental impacts, (iii) balance the benefits of the City Work against any significant environmental impacts prior to taking final action if such significant impacts cannot otherwise be avoided, and/or (iv) determine not to proceed with the City Work." It is clear from this language that the City has retained its discretion to consider the interchange project independently and is not required to even complete the project. The interchange project is a separate and distinct project that stands to benefit the Redwood Business Park and surrounding area.

The court finds that the facts in the instant matter differ from the factual scenario set forth in *Tuolumne, supra*. In *Tuolumne*, the proposed home improvement center was conditioned upon a road improvement that was to serve the center. The proponent of the both projects was the same entity, Lowe's. In the instant matter, the traffic interchange project is not directly adjacent to the Costco project it is approximately a quarter of a mile away from the proposed Costco site. The City is the proponent of the interchange project. The financing mechanism set forth in the City/Costco Development Agreement does not support a finding that the interchange project is dependent on the construction of a Costco store. (SAR 154). Based on the factual scenario in this case, the holding in *Banning*, supports the City's decision to conduct separate environmental reviews. As stated in *Banning*, the key word is consequence. Simply put, the interchange improvement project is not a consequence of the Costco project.

#### 4. Respondents Adequately Analyzed and Mitigated the Potential Traffic Impacts

Petitioners contend that the EIR does not include a traffic study that estimates and evaluates the vehicular trips to and from the proposed Costco that would use the US101/Talmage Road Interchange. Petitioners argue that the trip distribution forms the basis for determining the number of peak-hour trips that will use the interchange and, if the trip number is understated, then the improvements may not be adequate. Petitioners focus on the fact that the City's traffic expert utilized information from the traffic analysis prepared for a different project involving the proposed Wal Mart expansion (a project that was ultimately rejected by the City). According to Petitioners, reliance on that study renders the independent traffic study for the Costco project unacceptable for CEQA purposes.

The EIR contains a detailed analysis prepared by a licensed traffic engineer, W-Trans. (AR 952-989; AR 1904-2063) (DEIR Appendix E- Traffic Impact Analysis)). This engineer had previously prepared the study for the Wal Mart Expansion Project. The engineer considered information utilized to prepare the study for the Wal Mart expansion in preparing the analysis of the impacts from the Costco project. In his expert opinion, the engineer determined that the information contained in the Wal Mart expansion study was relevant to the Costco project. (AR 3304-3309-8; AR 3350-3354). Again as stated above, the issue is not whether the studies are irrefutable or could have been better, the study need only be "sufficiently credible to be considered as part of the total evidence that supports the agency's decision." (*Assn. of Irrigated Residents, supra*.) The agency's traffic analysis conducted by an expert is owed deference. (*National Parks and Conservation Assn. v. County of Riverside (1999) 71 Cal. App. 4th 1341*). A disagreement among experts regarding the methodology utilized does not constitute a basis for overturning the agency's decision. (*Laurel Heights 1, supra*, 47 Cal. 3d at p. 409.)

The record is clear that the City's expert utilized information from the earlier study but that was not the only basis for the conclusions made in the Costco EIR.

*"If you recall, I explained the process a little bit, that -- that testimony by me was not meant to be new information, just to give you perspective of what we go through in determining where traffic comes from and what are the routes that they might take to get to the site and sort of the history of my familiarity with -- with the site. So it was not meant to be new information, just to provide some additional background for you in responding to their comments. As I said, last time the development of the distribution assumptions where traffic goes to and from its not a specific science, it's an art and science, takes a lot of human factors in to play as well as data and it's pretty common practice to utilize data that's available from other sources or data that's available from other nearby traffic studies. So yes we did start with the Wal-Mart Traffic Study Assumptions. We did consider the new market study of the Costco Project. We did consider what -- how existing traffic from the Airport Business Park distributes out, how much goes to the freeway, how much goes to local streets. We did consider that Costco does -- the type -- when people go to a Costco especially from faraway it's not a daily trip you're gonna [sic] make, it's an outing. There's likely to be some of those trips that are gonna [sic] use other -- stop in other places in Ukiah since it is the County Center to do other types of business so we wanna [sic] take that into account." (AR 3350-3353)*

Petitioners contend that a different trip distribution method should have been used. This criticism however, does not establish that the City failed to conduct an adequate traffic study. In fact, the City's own expert reviewed the allegation made by Petitioners' expert and determined that if the City were to assume an increase in trips, as Petitioner suggests, the ultimate outcome would not be different as the mitigation measures would be more than sufficient to reduce the impact to less than significant.

*"So it's our opinion that what is being suggested in the letter is different than we assumed. That's not surprising given the process that we all go through in figuring out those numbers. But what I did wanna [sic] -- what I did do, okay, is this keeps coming up again and again is that we should've assumed more traffic on -- on 101. So we did just to test that their suggestion, we did do an analysis and I'm gonna [sic] put together a memo just summarizing those results and I'm gonna [sic] put that on the record. Basically what we did is we took the worst case condition that's our future with the Costco project during the weekday p.m. peak hour. If you recall, I had testified before there's about 49 percent of the Costco traffic came from the interchange itself with about 34 percent coming from 101 to the North. What we did in this side analysis detest their suggestions was we -- we increased the traffic to and from North on 101 by 50 -- 50 percent, okay so we assume -- we actually assume 50 percent of the Costco traffic would utilize the 101 ramps to and from the North. That's about a 50 percent increase from 34 to 50. So about 65, roughly two thirds of the traffic to Costco would be coming from the interchange itself. And at the -- the mitigate -- the new ramp intersection of the ramps, what is currently being designed by the City and Caltrans at a new traffic signalized location and with that mitigated intersection in the EIR you'll see the numb -- there's two numbers I show, and one -- the first is the Draft EIR quoted a delay in level surface -- 24.84 seconds level service C, that's in the EIR as the mitigated level service. And then with this added traffic to the freeway we're at 27.6C. So two the three seconds increase in delay, level service C. Both are still acceptable. We evaluated queuing conditions and there's an additional sheet that shows the queuing calculations that the queuing is still within the storage that would be provided by the -- the design to new intersection as well. So in -- in summary our analysis does show there's still a slight increase in delay if we had assume more traffic but only two or three more seconds, still well within the*

*acceptable range and that's again what is being designed by the City and Caltrans." (AR 3353-3354)*

The record establishes that the City's expert prepared a comprehensive traffic study (AR 1904-2063). A detailed traffic impact analysis section was included in the EIR along with extensive responses to comments. (AR 952-989; AR 11106-11164; 11165-11169). The City Council also heard testimony from the expert traffic engineer at three separate meetings. (AR 3163-3166; 3304-3308; 3350-3354). There is substantial evidence to support a finding that the traffic analysis was adequate and that the City Council was fully informed at the time they made their findings and decision.

#### 101/Talmage Interchange Design Exceptions

Petitioners contend that the EIR failed to disclose the design exceptions for the proposed 101/Talmage Road Interchange. There are two segments to the Road Interchange improvements. A portion of the improvements are within City control and the other is subject to the approval of CalTrans. Due to the uncertainty of funding for the improvements at the time the EIR was certified, the City determined that the improvements mitigation was fiscally infeasible and that the traffic impacts were significant and unavoidable. The City adopted a Statement of Overriding Considerations. (AR 14; 966; 531; 3241). Petitioners do not challenge the SOC. The record contains evidence that the City and CalTrans had many consultations regarding the design of improvements. (AR 530; 977; 11007). It was understood that design exemptions would ultimately be necessary but those exceptions were not precisely known at the time. At the time the EIR was certified, although no design approval had been received, CalTrans had reviewed the proposed mitigation measures and advised the City that:

*"We have completed analysis of the proposed mitigation measures discussed in the DEIR. We consulted GHD and W-Trans to obtain current preferred design alternative concepts and model output information necessary to perform analysis. Our evaluation focused on the primary mitigation measures pertaining to State owned facilities including:*

- > Talmage Road Interchange Improvements*
- >- Reconfiguration of US 101 southbound (SB) off-ramp loop*
- >- Signal installation at intersection of US 101 SB off-ramp and Talmage Road*
- >- Installation of two westbound left-turn lanes (WBL) at intersection of Talmage Road and Airpmt Park Blvd.*

*We conclude that the mitigation measures proposed in the DEIR adequately mitigate projected traffic impacts on State facilities. Therefore, we request that the proposed mitigation be required as a condition of approval for the project. Details regarding the technical analysis can be provided upon request." (AR 733)*

The City's certification of the EIR without CalTrans approval or design exceptions is not fatal and a finding that the impacts were significant and unavoidable along with a Statement of Overriding Considerations was appropriate. (*Tracy First v. City of Tracy (2009) 177 Cal. App. 4th 912*). The court also finds that there is sufficient information contained in the EIR regarding the 101/Talmage Improvements mitigation.

#### 5. The EIR Contains an Adequate Air Quality Analysis

Petitioners contend that the EIR underestimates the Project's air pollution impacts by assuming a low average of vehicular trip distance to the Costco store. Petitioners question the methodology utilized by the City's expert. Petitioners also argue that there was a difference in pass-by rates used for the traffic analysis and the air quality analysis.

The traffic analysis used a 37% pass-by rate for both Project uses combined (warehouse and gas station) (AR 1934). The air quality analysis used the CalEEMod Default of 15% for the warehouse and 59% for the gas station (AR 1134). According to the City's expert the use of the air quality pass-by rate resulted in a more conservative analysis.

*"[A] 15% pass by rate was used in CalEEMod. This is the normal default setting and was not adjusted upwards in order to provide a more conservative analysis (see discussion below). Commenter's assertion that overestimating the mileage on diverted trips represents a significant new impact. Given the uncertainty in actual trip lengths, the EIR essentially constructs a worst case scenario. The assertion that the trip lengths for some trips, with correspondingly lower vehicular air emissions, represents a new impact is not correct. It is likely that the actual mileage, and vehicular air emissions, will be lower than the EIR estimates. This would represent a reduction of a previously identified significant impact.*

*Commenter questions the use of the CalEEMod model default trip lengths, including the use of the Urban Home-Shopping trip of 7.3 miles for Mendocino County trips. As noted in the FEIR, the longest trip lengths in the model were used for each category of trip in order to ensure a conservative analysis. The commenter (as shown in the last sentence on page 7) seems to confuse maximum trip length with average trip length. The average trip lengths represent the total mileage for all visitors, divided by the number of individual trips. Thus, a 7.3 average trip length may represent a shopper who travels 3 miles, and one who travels 11 miles. The most distance heavily populated residential areas in the City of Ukiah are less approximately 3 miles from the Costco (and several areas are much closer). The market area, as disclosed in the EIR, and discussed by several commenters on the DEIR, is much larger. However, it makes intuitive sense that most of the shoppers for a store, even a regional store, will be in or adjacent to the community in which that store is located. In addition, the closest shoppers are the most likely to make a single-purpose trip to the store, as opposed to linking trips (making more than one stop in the project area, for those who have travelled further). Thus, the longest default average in the model is used. Other commenters have suggested that an average geographic distance, or even the maximum geographic distance, to the edge of the market area should be used. This does not take into account population density and the location of potential shoppers.*

*Finally, and most importantly, approximately 17% of the project trips would be redirected from the existing Santa Rosa and Rohnert Park stores. Given that the Santa Rosa store is approximately 60 miles from Ukiah, a trip originating in Ukiah to the proposed Ukiah store location that would otherwise have gone to Santa Rosa or Rohnert Park would have a net reduction of 60 miles. For example, an existing trip from Willits to the Santa Rosa Costco, compared to the proposed project site would be reduced from 90 miles to 30 miles. Given the enormous technical and financial difficulty in modeling each and every trip origin and destination within the market area, the most realistic and supportable assumption was to use the maximum default trip length in the air quality model. In addition, the lower standard modeling assumption of 15% for the pass-by rate was used, rather than the 37% used Commenter recommends use of a 33, 44 or 66 mile*

*average trip length but does not offer evidence demonstrating that this would be clearly more reasonable than the assumptions used in the model."* (AR 2762-2763)

Again, as stated previously in this opinion, the City is entitled to rely on its expert and the Court must defer to the City. (*CEQA Guidelines 15151; Irrigated Residents, supra*, 107 Cal. App. 4<sup>th</sup> at p. 1397). The EIR contains a detailed analysis of project-related emissions and impacts. (AR 802-819 (*DEIR Air Quality Impact Section*); AR 116-1250 (*Appendix B (Air Quality Data)*.) The City's expert adequately addressed the concerns regarding the use of the air quality pass-by rate. It was a methodology that the expert determined would be best to utilize in the context of the air quality analysis.

It is also clear from the record that the decision makers were advised of the disagreement between the City's expert and the expert retained by Petitioners. (AR 2762). "An EIR must include detail sufficient to enable those who did not participate in its preparation to understand and to consider meaningfully the issues raised by the proposed project." *Association of Irrigated Residents, supra* 107 Cal. App. 4<sup>th</sup> at 1390 citations omitted. Although Petitioners' expert disagrees with the conclusions reached in the EIR, if there is substantial evidence to support the City's position it will be upheld notwithstanding contrary evidence in the record (*North Coast Alliance, supra*, 216 Cal. App. 4<sup>th</sup> at 643 and cases cited therein). "The issue is...whether the agency relied on evidence that a reasonable mind might accept as sufficient to support the conclusion reached in the EIR." (*Id* at 642, citations omitted). The City determined that there would be significant and unavoidable air quality operational impacts as a result of vehicle trips. There is substantial evidence in the record to support the City's conclusions.

#### 6. The EIR Contains an Adequate Analysis of the Project's Noise Impacts.

Petitioners contend that the EIR's conclusions about the impact of the Project's traffic noise is not supported by the information contained in the EIR. Specifically, Petitioners argue that the noise modeling is flawed, the baseline noise measurements are not adequate, there was a failure to identify and evaluate nighttime sleep disturbance related to the Project's added truck traffic, and the EIR erred in finding that the Project will not have a significant impact on the noise environment. The court disagrees with Petitioners.

##### Noise Modeling

Petitioners contend that the noise modeling did not conform to the Caltrans Technical Noise Supplement ("TeNS") Manual and that failure to do so, renders the results inadequate. According to the City's expert the TeNS manual is not an official policy, standard or regulation.

*"The commenter appears to hold the TeNS Manual as the concrete framework for noise analyses and suggests that impacts that do not follow its guidance are flawed. However, the TeNS Manual was cited in the DEIR as reference to general concepts pertaining to noise, such as general attenuation rates, but was not used as the basis for impact significance. TeNS is not a requirement for adequate analysis under CEQA. As stated in the 1998 TeNS Manual on page N-1, specifically the underlined text (emphasis included in the TeNS Manual): "The purpose of this Technical Noise Supplement (TeNS) is to*

*provide technical background information on transportation-related noise in general and highway traffic noise in particular. It is designed to elaborate on technical concepts and procedures referred to in the Caltrans Traffic Noise Analysis Protocol (the Protocol). The contents of this Supplement are for informational purposes only and unless specifically referred to as such in the Protocol they are not official policy, standard or regulation. The procedures recommended in TeNS are in conformance with 'industry standards'. This document can also be used as a 'stand alone' document for training purposes, or as a reference for technical concepts, methodology, and terminology needed to acquire a basic understanding of transportation noise with emphasis on highway traffic noise."*

*As noted above, the TeNS Manual is "not official policy, standard, or regulation". Rather than using TeNS as the basis of analysis for the DEIR, underlying algorithms included in the FHWA Traffic Noise Prediction Model were incorporated into the DEIR traffic impact analysis. As discussed in response to Comment 112-2 in the FEIR, modeled traffic noise was used as the basis of analysis, which incorporates assumptions of the traffic study, which did include traffic count data, as well as future traffic projections. The TeNS manual includes recommendations, not requirements, and does not confer credibility nor accuracy to an analysis by default. Construction truck vibration is discussed in response to Comment 130-23." (AR 11177, 11178).*

The City utilized the FHWA Model as required by the City's General Plan. (*Endangered Habitats League v. County of Orange* (2005) 131 Cal. App. 4th 777; General Plan required application of Highway Capacity Manual methodology to assess traffic impacts).

Petitioners further contend that since the TeNS Manual was not used, the noise model was not properly calibrated. There is evidence in the record however, that the City's expert addressed this issue and adjusted accordingly.

*"Notably, since the LTI measurement was unattended and likely captured more than just roadway noise, it was not used to calibrate the traffic noise model. Rather, the model was based on the traffic study, which incorporated traffic count data and projections of future traffic on the roadway network. The difference in roadway volumes and associated noise for Airport Park Blvd south of Talmage and Airport Park Blvd north of Commerce Dr. is the result of patrons to the commercial uses (such as Walmart). Since the Hampton Inn is directly across from the Walmart entrance, the traffic noise exposure at the hotel would be represented by the Airport Park Blvd south of Talmage segment. In addition, the traffic noise model was revised to reflect correct speed limits on several of the roadways, and to estimate traffic noise on Airport Park Blvd south of Talmage at about 35 feet from the roadway centerline to better characterize noise at the two hotels in close proximity (see revised Table 3.8-6). In summary, the baseline noise either increased or decreased slightly on the revised roadways depending on the corrected speed limit. However, the incremental change in noise after these model revisions would not change along the roadways. The updated Table 3.8-6 and supporting traffic noise model calculation sheets are included in Chapter 4 of the FEIR." (AR 577).*

Petitioners' contention that the quality of the expert work performed on behalf of the City was inadequate, is based on the opinion of Petitioners' own expert. "Disagreements among experts does not make an EIR inadequate. (citing Guidelines, § 15151; *Association of Irrigated Residents v. County of Madera* (2003) 107 Cal.App.4th 1383, 1390, 133 Cal.Rptr.2d 718 [When experts in a subject area dispute the conclusions reached by other experts whose studies were used in drafting the EIR, the EIR need only summarize the main

points of disagreement and explain the agency's reasons for accepting one set of judgments instead of another].) Technical perfection is not required; we look not for an exhaustive analysis but for adequacy, completeness, and a good-faith effort at full disclosure. citing *Rio Vista Farm Bureau Center v. County of Solano* (1992) 5 Cal.App.4th 351, 368, 7 Cal.Rptr.2d 307.)" (*Eureka Citizens for Responsible Gov't v. City of Eureka* (2007) 147 Cal. App. 4th 357).

Again, the City is entitled to rely on its experts; and, there is sufficient evidence in the record to explain the methodology utilized for the noise modeling.

#### Noise Baseline

Petitioners again question the methodology utilized to take the baseline measurements. The record supports a finding that the sound measurements were adequately performed and are reflective of the noise sources in the ambient environment. *"Metrosonics Model db308 sound level meters were used to measure the existing ambient noise levels at various locations around the proposed Project site. The meters were calibrated to ensure the accuracy of the measurements. On November 14th, three shmi-term (ST) measurements were conducted near sensitive receptor locations. Environmental conditions were approximately 65 degrees with winds of 0-5 miles per hour. Long-term (L T) measurements were conducted from November 15th through November 17th. The noise measurement results are presented below in Table 3.8-1. Notable noise sources are listed in the column on the right. Noise meter locations are shown in Figure 3.8-2. Long-term noise plots are shown in Figures 3.8-3 through 3.8-5." (Charts omitted, AR 918-919).*

Petitioners argue that the sound measurements are not adequate and the EIR does not contain adequate sound level data because of the contaminating noise sources in the hotel parking lot. The City's expert addressed this criticism and explained its reasons for accepting one judgment verses another. *"As discussed above, the noise monitoring data gathered and presented in the DEIR shows the ambient noise environment in the proximity to the noise meter, which could include some hotel parking lot noise, as well as the inflow and outflow of vehicles from the Walmart parking lot. However, this monitoring data represents the ambient noise in that area. The Leq, not the L10, was used as the criterion for impact determinations. The commenter does not provide valid conclusions to support an assertion that the data is "fatally flawed". If the meter were placed further from the hotel, it would provide a representation of the ambient noise environment in that alternative area, and depending on its distance from the hotel, would likely not be representative of the ambient noise environment at the hotel. However, as discussed in response to Comment 112-2 in the FEIR, modeled traffic noise was used as the basis of analysis rather than the monitored noise, and incorporates assumptions of the traffic study, which did include traffic count data, as well as future traffic projections. Thus, the project would not have a substantially greater impact than set forth in the DEIR." (AR 11179).*

#### Noise Analysis Relating to Nighttime Sleep Disturbance

Petitioners argue that the impact of substantial temporary or periodic increases in sound levels was not properly evaluated as related to heavy trucks passing by three hotels. Petitioners contend that the impacts of these noise sources are significant because of the effect on sleep.

In evaluating the potential for sleep disturbance the EIR reviewed the likelihood for interior hotel room noise and found that the interior noise levels are not expected to exceed the California Noise Insulation Standard of 45dB.

*"The interior noise level standard of 45 dbA Ldn, per the California Noise Insulation Standards (Title 24, California Code of Regulations), was used to evaluate potential sleep disturbance. Sound Exposure Levels (SEL), which represents acoustical energy during a single noise event compressed into a period of one second, are typically applied to aircraft flyovers or can be incorporated into an analysis to determine Leq or Ldn. The commenter asserts that the night time heavy truck traffic on Airport Boulevard would double, but does not include data to support this conclusion. Additional information and interior noise assessment for the hotels along Airport Boulevard was included in response to Comment 112-2 of the FEIR." (AR 11178)*

*"Exterior levels along Airport Park Boulevard adjacent to the Hotels are not expected to exceed 69 dB Ldn. Traffic noise levels at the Hotel outdoor activity areas are not expected to exceed the 65 Ldn set in the General Plan (Table 3.8-2) due to shielding by the building itself (at the hotel on the south end of Airport Park Boulevard). Standard commercial/residential building construction would be expected to provide exterior to interior noise attenuation of at least 25 dB with windows and doors closed. Therefore, interior levels are not expected to exceed 45 dB Ldn." (AR 931)*

The City's expert further determined that the addition of Costco trucks is not expected to result in sleep disturbing impacts since the existing noise environment includes truck traffic from other business.

*"The Cumulative scenario included development and associated traffic on the roadway network for the future year 2030, and as shown in Table 3.8-6, the Project would result in an even lesser increase in traffic noise. The addition of Costco trucks is not expected to result in significant sleep-disturbing impacts at the hotels since nighttime delivery trucks already occur on Airport Park Blvd for the existing commercial uses (such as Walmart) and are part of the existing noise environment. Restricting delivery trucks to the daytime hours would not be a feasible mitigation based on scheduling of deliveries and lack of a restriction enforcement mechanism. Furthermore, the Hampton Inn and Fairfield Inn are modern hotels that would have been constructed per Title 24 standards and thus designed to maintain appropriate interior noise levels." (AR 577)*

Petitioners cite *Berkeley Keep Jets Over the Bay Committee v. Board of Port Commissioners* (2001) 91 Cal. App. 4<sup>th</sup> 1344, to support their argument that that the impact of substantial temporary or periodic increases in sound levels was not properly evaluated as related to heavy trucks passing by three hotels. In *Berkeley*, the court found that the EIR failed to provide the most fundamental information about the project's noise impacts, specifically, the number of additional nighttime flights, the frequency of the flights and the effect on sleep. Here the EIR included an analysis of the ambient noise environment, and a finding that truck trips amount to 10 trips on an average weekday at limited times. The subject EIR also determined that the hotels are designed to maintain appropriate interior noise levels. The impact of truck traffic as it relates to sleep was adequately analyzed.

There is substantial evidence to support the City's Noise Impact Determination

Petitioners contend that the Project will have a significant traffic noise impact on Airport Park Boulevard south of Talmage Road, as well as on Airport Park Boulevard north and south of Commerce Drive. The evidence in the record does not support Petitioners' argument. The City's expert acknowledged that existing exterior noise levels exceed the General Plan Noise Element Standards. Because of this, the expert utilized a methodology to determine increases for sensitive receptors and the interior noise level maximum.

*"Table 3.8-6 in the DEIR notes that the incremental increase in noise on the roadway segment with these hotels (Airport Park Blvd south of Talmage Rd) would be about 1.8 to 3.1dBA (Airport Park Blvd. north of Commerce Drive, for Existing versus Existing plus Project. While this noise level would exceed the FICON criterion of 1.5dBA in an existing environment greater than 65dBA, and is therefore potentially significant on the face of it, the fact that the building is for transient/temporary lodging (i.e., patrons would not experience a significant change in the noise environment since they are not long-term residents) rather than residential units, and the general plan recognizes that external noise exceedances may be acceptable if the internal level of 45dBA is maintained, the noise level increase was determined to result in a less than significant impact. The exterior noise level already exceeds the general plan standards, under existing conditions (including the balconies referenced by the commenter). The FICON standards were used to identify potentially significant increases for receptors. The interior noise levels were considered, with a standard of 45dBA (a standard reflected in both local policy and state building regulations). Residential uses, in contrast to hotels, are more affected by outdoor noise (which is reflected in the general plan language allowing higher exterior noise levels if the interior noise standard of 45dBA is maintained). As described below, the 45 dB interior noise level is maintained, and the impact was therefore considered less than significant." (AR 576).*

Petitioners take issue with this analysis contending that the General Plan does not allow for higher exterior noise levels if the interior noise standard of 45dBA is maintained, unless available exterior noise level reduction measures have been implemented. While Petitioners are correct in citing the language from the General Plan, the study prepared by the City's expert concluded that the traffic noise levels already exceed the General Plan requirements without the Project and, there would be no significant change in the noise environment because individuals staying in the hotels are not long term residents. The distinction made between hotels and residential uses was not unreasonable. The GP interior noise standard of 45dBA is the same for residences and hotels. The City's expert also determined that the interior noise standard of 45dBA is maintained and could be less than 45dBA based on the age of the hotels and construction information received. (AR 11971). Further, the hotels outdoor activity areas are not expected to exceed the 65 LDN set in the General Plan. (AR 931). This opinion is based on the fact the buildings shield the outdoor areas and is not speculative or unrealistic. As stated repeatedly in this opinion, Petitioners' objection to the methodology utilized to support the conclusions made by the City does not make the analysis inadequate. The City did not unreasonably rely on the conclusions of its experts.

The court finds that the City's determination is supported by substantial evidence.

7. The City was not required to make a Determination that the Project is Consistent with the Airport Industrial Park Specific Plan

Petitioners contend that the City never amended the Airport Industrial Park Specific Plan to make the changes necessary for the Costco Project to conform to the Specific Plan.

According to City staff, the Airport Industrial Park Specific Plan was never properly adopted and, even if it had been, it was superseded by the 1995 Ukiah General Plan.

*"1981 Airport Industrial Park Specific Plan: On January 21, 1981, the City Council adopted a Specific Plan for the Airport Industrial Park by a roll call vote rather than by Resolution or Ordinance. In terms of land use, the stated development concept found in the first paragraph on page 18 of the document was for a planned industrial office/commercial complex where individual uses should be allowed to locate anywhere within the industrial park provided they do not adversely affect adjacent land uses." Soon thereafter, the City adopted Resolution 81-59 which established specific regulations applicable to development within the Airport Industrial Park. The specific regulations in the Resolution were more specific than those contained in the 1981 Specific Plan and included the Circulation Plan and Generalized Land Use Map from the Specific Plan. The planned development Resolution was amended a number of times in the 1980's and early 1990's to modify the land use classifications contained on the planned development Generalized Land Use Map.*

*In 1992 after adopting new City Code (zoning) regulations for the establishment of Planned Developments, the City adopted a precise Planned Development Ordinance regulating development within the Airport Industrial Park. The Ordinance included text and diagrams specifying the distribution, location and extent of land uses, specific development standards, prohibited uses, required public utility easements, street design standards, signage requirements, design guidelines, landscaping and open space requirements, and discretionary permit review requirements. Section four of the Ordinance indicated that the Planned Development "provides a mixture of industrial and commercial uses within a Planned Development (PD), consistent with the City of Ukiah General Plan, as amended, which allows said mixture, and which is accordingly shown on the City of Ukiah General Plan Land Use Map for the subject Assessor's parcels." In 1995, the City adopted a new General Plan and designated the AIP as a "Master Plan" area with the knowledge it had already adopted a precise Planned Development Ordinance regulating growth and development within the AIP. The General Plan contains goals and policies addressing Master Plan Areas and allows for them to include a variety of land uses including "mixed use developments," which commonly include retail commercial, office, residential, etc. General Plan Land Use Element includes Goal LU-6 "Utilize Master Plan Areas to meet precise planning needs" and associated Policy LU-6.1 "Allow the use of Master Plan Areas to provide for mixed use development, and other precise-planning needs for larger ownerships or groups of ownerships." the Airport Industrial Park Planned Development provides for mixed use and other development that meets the precise needs of the City, including retail commercial land uses, and therefore is consistent with both Goal LU-6 and Policy LU-6.1.*

*The Ordinance was amended a number of times through the 1990's and 2000's to modify the text and Generalized Land Use Map, and each amendment was found to be consistent with the General Plan Master Plan land use designation for the Airport Industrial Park. Since the adoption of the precise Planned Development Ordinance in 1992, the City has conducted a series of public hearings and open discussions about the planning, growth, development, and conservation of the Airport Industrial Park area.*

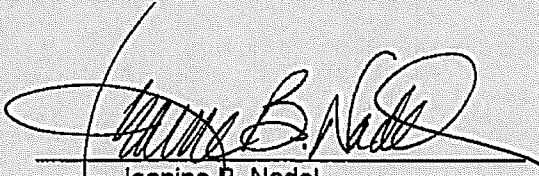

*These public hearings and community discussions have resulted in a number of modifications to the precise Planned Development Ordinance and the conditional approval of nearly 1 million square feet of development. It is questionable whether the 1981 specific plan was properly adopted, since it was not adopted by resolution or ordinance as required by Government Code Section 65451. In addition, virtually all of the information in the plan is outdated. In any event, the specific plan was superseded by the 1995 General Plan, designating the Airport Industrial Park as a Master Plan area and the ordinances adopted thereafter providing land use designations, allowed and permitted uses, and design standards within the Airport Industrial Park." (AR 2746)*

Government Code §65453 requires that a specific plan be adopted, amended or repealed in the same manner as a general plan, except that a specific plan may be adopted by a resolution or ordinance. According to the evidence in the record, in 1981 a Specific Plan for the Airport Industrial Park was adopted by a roll call vote which was inconsistent with the requirements set forth in §65453.

As stated above, the City adopted the General Plan in 1995 and designated the AIP as a master plan area with the knowledge that it had already adopted a precise Planned Development Ordinance which regulated growth and development within the AIP. The Development Ordinance was amended a number of times over the years and each amendment was consistent with the General Plan Master Plan land use designation for the AIP. Based on the evidence in the record, Petitioners have incorrectly assumed there is an AIP Specific Plan. The City is not required to conduct a consistency analysis with the AIP Specific Plan.

Based on the substantial evidence contained in the Administrative Record and applicable law, the City did not commit CEQA error in adopting the addendum or in excluding the 101/Talmage Improvements Project as part of the Costco Project. The City performed an adequate environmental review of the Project and certification of the EIR was appropriate. The Petition is hereby denied.

## Attachment 9

November 21, 2013

Mr. Wayne Wiley  
Associate Planner  
City of Roseville  
311 Vernon St.  
Roseville, CA 95678

Re: Response to Philip King, Ph.D. Memo regarding Proposed Life Time Fitness Center in Roseville, CA

Dear Mr. Wiley:

ALH Urban & Regional Economics (ALH Economics) has reviewed the November 4, 2013 memo from Philip King, Ph.D. to Steve Herum, Attorney at Law, regarding Dr. King's comments on the EIR for the proposed Life Time Fitness facility proposed for Roseville, CA. Dr. King's opinion is that the EIR is inadequate and incomplete because it omitted any analysis of urban decay. Further, Dr. King believes that there is "a significant potential for urban decay stemming from" the proposed Life Time Fitness facility.<sup>1</sup> We have prepared the following response to address Dr. King's comments, paralleling the headings in Dr. King's memo where relevant. In addition, this response includes several data exhibits and source documentation.

The Principal of ALH Economics, Amy L. Herman, has extensive experience as an economic analyst conducting urban decay analyses for prospective development projects. These studies are typically conducted as part of the environmental review process, with the findings incorporated into EIRs for projects and the studies included as an Appendix to the EIR. In the context of CEQA, such analyses have historically been focused on large-scale retail development, mostly of a big box orientation. The professional resume for Amy L. Herman is presented in Appendix A, along with an introduction to ALH Economics. Ms. Herman's professional project experience includes a wide range of urban and regional economic analyses, as summarized in her resume. This includes real estate market research, fiscal and economic impact analysis, economic development and policy analysis, and other urban and regional economic specialties. In addition to the representative projects included in Ms. Herman's resume, her extensive experience preparing urban decay studies is also presented in Appendix A.

---

<sup>1</sup> Memo to Steve Herum, Attorney at Law, from Philip King, Ph.D., regarding Proposed Lifetime Fitness Center in Roseville, November 4, 2013, page 1.

---

## SUMMARY OF FINDINGS

The Life Time Fitness project EIR did not include analysis of urban decay. Such analysis is only necessary if there is the perceived potential for urban decay to result from project development. Upon initiating the EIR, the City of Roseville had no reason to anticipate that urban decay would result from development of the Life Time Fitness club. Therefore, the EIR was not deficient for failing to include such an analysis, despite claims to the contrary made by attorney Steven A. Herum in correspondence submitted to the City during the hearing on the merits of the project on November 6<sup>th</sup>, 2013.

In the context of CEQA, such analyses have historically been focused on large-scale retail development, mostly of a big box orientation. The City of Roseville has no reason to anticipate that urban decay would result from development of the proposed Life Time Fitness facility. There are limited fitness facilities in Roseville that are fully comparable to the proposed facility, such that the proposed facility will expand the offerings in the health and wellness market in Roseville. Moreover, retail vacancy in Roseville is very low and vacant retail spaces are moderately to well-maintained, including among some of the city's oldest retail centers. Even retail vacancies that are of relatively long duration for Roseville, such as one to two years, are typically well-maintained. Finally, no new retail development in Roseville has been tied to erosion of the physical condition of Roseville's retail base. Therefore, there is no reason to anticipate that urban decay would result in Roseville from development of the Life Time Fitness club.

After reviewing Dr. King's analysis, ALH Economics believes that his analysis is based upon faulty and undocumented assumptions. His work is sloppy and often unsubstantiated, resulting in the following flaws:

- Grossly underestimated existing fitness facility demand
- Incomplete inventory of supply of existing fitness facilities
- Unsupported estimate of existing club space use and membership
- Use of obsolete, misleading, and selective data
- Erroneous estimate of prospective Life Time Fitness membership
- Underestimate of VillaSport membership
- Overreliance on macro-level retail market data that obscure more favorable conditions in Roseville
- Misunderstanding and misrepresentation of retail market trends

There are yet other flaws in Dr. King's analysis, which together he uses to fabricate a story that development of Life Time Fitness, with or without the cumulative impacts of VillaSport, will lead to a significant increase in retail and office vacancy rates, resulting in urban decay. He therefore reaches the conclusion that the omission of an urban decay analysis renders the EIR for Life Time Fitness inadequate and incomplete.

In contrast to Dr. King's analysis, similar analysis conducted by ALH Economics with more reasoned and documented assumptions, indicates that urban decay is not an anticipated consequence of development of Life Time Fitness. This analysis is presented in the following section in which ALH Economics responds to Dr. King's memo. A final section to this letter reviews examples of similar memos or reports prepared by Dr. King in which he claimed that the environmental documentation for proposed development projects was inadequate and, similar to Roseville, in which he made his

own dire predictions about what would happen after the proposed facility was developed. A review of some of the memos and reports submitted by Dr. King shows that he is consistently wrong in his predictions, and that information he presents in support of his position that urban decay will occur often is incorrect or not supported by substantial evidence, and therefore is not credible.

#### RESPONSE TO DR. KING'S MEMO

Dr. King's memo included analysis on several topics germane to the proposed Life Time Fitness facility, including supply and demand characteristics, retail market conditions, and competitive impacts. These topics are reviewed below. Each topic starts with a synopsis of Dr. King's analysis, presented in lightly bolded italics, followed by an ALH Economics response. The topics are presented in the same order as in Dr. King's memo. Exhibits prepared and referenced by ALH Economics are presented in Appendix B. Select reference materials relied upon in preparing this response are included in Appendix C. Some reference materials are quite voluminous, such as court opinions, other memos prepared by Dr. King, and economic impact/urban decay studies prepared for other projects. These materials are referenced as appropriate, are maintained in the files of ALH Economics, and can be provided to the City of Roseville upon request.

#### The Market for Fitness Centers

*In this section of his memo, Dr. King provides an estimate of the potential membership for the Life Time Fitness Center based on a 20-minute drive time of the center. He cites a national membership participation rate of 16% of the population based upon information provided by the International Health, Racquet & Sportsclub Association (IHRSA) for 2012. Dr. King assumes a higher participation rate of 20% for Roseville given its younger more professional population base and applies this to a count of 210,665 households within a 20-minute drive time of the proposed center. From this, he derives an estimate of 42,133 potential fitness club members. Dr. King ascribes the household count to CBRE, but does not provide a source citation.*

Dr. King's approach to estimating membership grossly underestimates potential fitness club membership. In his memo he indicates the IHRSA participation rate pertains to population but then he applies his assumed participation rate to an estimated 2012 household count. Confusing households with population in this manner is a very substantial, and fundamental, error. The result is a demand analysis based upon a flawed premise.

ALH Economics conducted more in-depth research on prospective fitness club membership participation rates and information than did Dr. King. In 2012, IHRSA published a report on health club activity use and trends. This report is titled "The IHRSA Health Club Consumer Report: 2012 Health Club Activity, Usage, Trends & Analysis." Numerous trends are analyzed in the report based upon an online survey of 38,172 participants conducted through an industry leader in consumer survey administration. Many different types of information are included in the report, such as membership participation rates by state, participation rates by age, income, and region, and even the frequency of use of different health club features. The general findings as they pertain to the proposed Life Time Fitness Center include that California has the 6<sup>th</sup> highest overall participation rate in the country and that participation rates generally tend to be higher as income goes up. In addition, while the participation rates pertain to the entire population over the age of 6, the age bracket that tends to have the highest participation rate is the age 35-44 bracket.

Pursuant to the IHRSA study, the average California participation rate among the population over the age of 6 is 20.6%.<sup>2</sup> This is higher than the U.S. average of 17.9% also cited in this study.<sup>3</sup> In this manner, Dr. King was accurate in assuming a higher participation rate for Roseville than the national average he cited. ALH Economics obtained an estimate of the population and household count within the 20-minute drive time from the proposed Life Time Fitness center site referenced by Dr. King. The California fitness center participation rate was applied to the appropriate demographic base to estimate prospective fitness center participation. Notably, Dr. King does not provide any support for his selection of a 20-minute drive time area. All he states is that IHRSA indicates that "one of the most important factors in determining fitness membership is the drive time involved to get to the club" (quotes denote King memo, not IHRSA documentation).<sup>4</sup> Such a reference is not included in the above-cited IHRSA document; thus ALH Economics cannot determine Dr. King's source for this fundamental assumption. I suspect Dr. King selected the 20-minute area because he happened to find demographic data for this area in marketing materials for the site, as he sources CBRE and CBRE is the broker of record for the sale of the property. These data, however, comprise a secondary source, as CBRE is not a demographic data vendor and in turn obtains demographic data from third party resources. Dr. King does not identify, and probably does not know, the primary data source for these critical data points underlying his analysis.

As it happens, discussion with a representative of Life Time Fitness' Acquisitions team indicates that the company typically anticipates that a 20-minute drive time encompasses the primary and secondary trade area for a facility, comprising 85% – 90% of members. Thus, Dr. King's selection of a 20-minute drive time area was fortuitous.

ALH Economics obtained demographic estimates from The Nielsen Company, a national vendor of demographic and economic data. The Nielsen Company recently updated its demographic model, thus current estimates are provided for 2014. For data retrieval purposes, the project site pursuant to the application with the City of Roseville was identified as 1435 East Roseville Pkwy. Nielsen's database can be queried in many ways, including based on geography, site radius, and drive time. For drive time, data can be obtained based on driving only major roads or by driving all area roads. The major roads parameter is more restrictive, and results in a lower count. ALH Economics queried the Nielsen database for a 20-minute drive time from the referenced site based on both criteria, i.e., "major roads" and "all roads." The resulting demographic data are presented below in Table 1, including estimates for household counts, population, and population by select age groups. The data sheets provided by Nielsen with the relevant demographic data are presented in Appendix C.

In 2014, the 20-minute drive time area is estimated to have 235,837 to 313,345 households. While reflecting a different time period, this range is larger than the 210,665 household count estimate presented by Dr. King for 2012. Without access to Dr. King's source data, ALH Economics cannot determine why the household counts are not in synch. Nevertheless, ALH Economics obtained the data from a reliable data source, with the relevant data sheets included in Appendix C. Further, ALH

<sup>3</sup> Ibid.

<sup>4</sup> King, page 2.

Economics believes the more accurate basis is the "all roads" figure, as people who drive to a fitness center will choose the most appropriate route at the time, which may or may not include major roads.

The population figures that correspond to the household counts are 629,757 for the "major roads" approach and 820,304 for the "all roads" approach. After backing out the population aged 0-4 and an estimate of the population aged 5, the resulting population estimates for age 6 and above are 580,269 for the "major roads" approach and 756,731 for the "all roads" approach. This is the population base to which the IHRSA participation rates apply. Therefore, application of the California 20.6% average fitness club membership participation rate results in estimated 20-minute drive time health club participation estimates of 119,535 to 155,887 in 2014. While not presented in Table 1, the population within the 20-minute drive time is forecast to increase by 4.2% between 2014 and 2019 (see source materials in Appendix C). Thus prospective fitness club membership is likely to increase over this future time period.

**Table 1. 20-Minute Radius Demographics and Fitness Club Participation, 2014**

Characteristic	Radius Using Major Roads	Radius Using All Roads
Households	235,837	313,345
Total Population	629,757	820,304
Population Aged 0-4	41,095	52,847
Population Aged 5-9	41,965	53,629
Population Aged 6+ (1)	580,269	756,731
Fitness Participation Rate (2)	20.6%	20.6%
Potential Fitness Club Members	119,535	155,887

Sources: Nielson Reports; "The IHRSA Health Club Consumer Report: 2012 Health Club Activity, Usage, Trends & Analysis," Published by The International Health, Racquet & Sportsclub Association, 2012, page 8;" and ALH Urban & Regional Economics.

(1) Assumes population age 6 is equal to 1/5 the population count aged 5-9.

(2) Applied to population aged 6+.

The ALH Economics population-based 2014 demand estimate of 119,535 to 155,887 is dramatically different from Dr. King's 2012 estimate of 42,133. Even at the conservative range predicated upon using only major roads to reach the site (or other sites within the area), the appropriate population-based estimate is more than twice the erroneous household-based estimate used by Dr. King.

As will be noted later, Dr. King predicates much of his opinion about the potential for urban decay to stem from the proposed Life Time Fitness club conclusion on the mismatch between supply and demand, saying the market is currently saturated. Given that potential membership is at minimum more than twice what Dr. King estimates, even without further analysis this suggests his finding regarding market saturation is incorrect and is based upon a simple math error.

In June 2005, Dr. King made a similar type of math error when he wrote a four-page memo claiming that there was a serious and significant possibility that a proposed Lowe's Home Improvement Warehouse in Sonora, CA would "create urban decay in the downtown as well as in other areas in the City of Sonora and lead to a less healthy business climate in the City."<sup>5</sup> Dr. King's memo regarding the proposed Lowe's store was submitted to the City of Sonora by attorney's opposing the proposed store's environmental review and documentation. When these attorneys, on behalf of a local citizen's organization, challenged the approval of the project and the adoption of a mitigated negative declaration, the issue went before the court system. In the process of reviewing Dr. King's memo for an appeal, the Fifth Appellate District Court of Appeal reviewed and analyzed King's analysis supporting his opinion that the "proposed store would displace approximately 176,000 square feet of existing retail space and that the displacement would have a devastating impact on a town as small as Sonora."<sup>6</sup> His estimate of 176,000 square feet of displaced space was based upon square footage sales impacts in three retail categories, including 140,000 square feet of impacts in the building materials category. King based this 140,000-square-foot estimate on an assumption of \$16 million in displaced sales and a sales performance estimate of \$216 per square foot. Noting that King's analysis did not make sense, the Court examined Dr. King's math and noted that the two figures leading to his conclusion of 140,000 square feet actually resulted in a different estimate of displaced sales, i.e., 74,074 square feet. The Court therefore determined that King's conclusion that 140,000 square feet of space devoted to building materials would be displaced by the proposed store "is an opinion that is not supported by the facts in the record or, apparently, the method he used to derive the figure. Instead, the information provided shows he made a math error."<sup>7</sup> The Court therefore further stated in its Opinion, that:

"The ultimate opinion provided by Professor King about urban decay cannot be regarded as substantial evidence because it was based on an erroneous calculation of displaced retail space. In short, the error means that the opinion regarding urban decay was 'unsubstantiated' rather than 'supported by facts' for purposes of Public Resources Code section 21082.2, subdivision (c)."<sup>8</sup>

After revealing Dr. King's math error in the case of the Sonora Lowe's Home Improvement store, the Court determined there was no further need to address other issues raised by Dr. King in his June 2005 four-page memo claiming urban decay would result from the Lowe's store development. A similar argument could be made here as well, regarding Dr. King's claims that there is "a significant potential for urban decay stemming from" the Life Time Fitness project, since much of Dr. King's analysis is predicated upon the assumption that existing fitness facilities will close because his estimate of demand (which has been shown to be erroneous and a gross underestimate) essentially matches

<sup>5</sup> Tuolumne County Citizens for Responsible Growth, Inc. v. City of Sonora et al., Court of Appeal, Fifth Appellate District, State of California, Certified for Partial Publication, filed 10/2/07. This Opinion can be found at: [http://ceres.ca.gov/ceqa/cases/2007/Tuolumne\\_County\\_Citizens\\_v.\\_City\\_of\\_Sonora.pdf](http://ceres.ca.gov/ceqa/cases/2007/Tuolumne_County_Citizens_v._City_of_Sonora.pdf). Although this court decision is only a partial "published" precedent citable by attorneys in court, the decision nevertheless reflects the court's awareness of errors in Dr. King's analysis and lack of facts in support of his opinion. See Appendix C.

<sup>8</sup> Ibid.

his estimate of the supply.<sup>9</sup> Nevertheless, this letter continues to provide review and response to Dr. King's additional areas of analysis in an effort to give his opinion consideration.

### Competitors

*Dr. King provides a list of 32 fitness facilities in Roseville, Rocklin, Granite Bay, and Citrus Heights that he identifies as potential competitors for the proposed Life Time Fitness Center (see King, Table 2). He provides an estimate of membership, citing that the estimated membership is consistent with accepted industry standards. This purported standard, as evidenced by Dr. King's estimates of membership for the facilities with cited square footage, appears to be 10 square feet of space per member. Dr. King provides no citation for this standard. He applies this metric to square feet per fitness facility, assigns 500 members to all facilities for which he does not provide estimated size, and derives an estimate of total membership of 43,000 among the 32 facilities. Dr. King then compares this figure to his earlier estimate of 42,133 potential member households (see King Table 1) and indicates this means the current market for fitness centers is already saturated and that any members attracted by Life Time Fitness will be attracted away from existing area health clubs.*

Dr. King's competitive analysis appears very rudimentary and incomplete. For example, among the 32 facilities cited by Dr. King, follow-up research conducted by ALH Economics indicated that several of these facilities are not in operation or are consolidated with other facilities. For example, Dr. King cites five locations for Curves, three in Roseville and two in Rocklin. Research conducted by ALH Economics in the week following the date of Dr. King's memo indicates that only three of these facilities are in operation, with one facility closed in Roseville (e.g., 699 Washington Boulevard) and one relocated in Rocklin (the Stanford Ranch location moved to Sunset Boulevard). Yet other facilities are listed at the wrong address, such as Fitness MD in Roseville and MAS Movement Strength, the latter of which is a personal trainer who works with private clients and thus is quite unlikely to have the level of membership ascribed by Dr. King, e.g., 500 members. Thus, Dr. King's fact-checking regarding prospective competitive facilities is clearly lacking in accuracy.

This sloppiness is coupled with Dr. King's implied statement that a 10 square feet per member metric is industry standard. No citation for this metric is provided by Dr. King; thus there is no evidence to support his assumption. ALH Economics pursued several approaches to confirm the reasonableness of this assumption or develop an alternate assumption. On one hand, Dr. King's figure seems low when you consider that even one piece of sports equipment could require more than 10 square feet of space as a footprint for the equipment, plus additional space to accommodate circulation and locker room space. For example, internet-based research on a basic treadmill, such as the NordicTrack T5.5 Treadmill sold by Sears, indicates dimensions of 73 1/4" W, 35 3/4" H, and 68 1/8" L, which corresponds to a footprint of 34.65 square feet.<sup>10</sup> Further, the American College of Sports Medicine (ACSM) indicates that industry practice for group fitness studios/exercise classrooms is to allocate 40

<sup>9</sup> Philip King, Ph.D. memo, November 4, 2013, page 1.

<sup>10</sup> See: [http://www.sears.com/nordictrack-t5.5-treadmill/p-00624975000P?prdNo=2&blockNo=2&blockType=G2&sid=ISx20070515x00001a&psid=37x1073046&knshCrid=3192714&k\\_clickID=267d76f7-93b3-0d09-32c9-000030164916](http://www.sears.com/nordictrack-t5.5-treadmill/p-00624975000P?prdNo=2&blockNo=2&blockType=G2&sid=ISx20070515x00001a&psid=37x1073046&knshCrid=3192714&k_clickID=267d76f7-93b3-0d09-32c9-000030164916) (Copy of printout included in Appendix C).

to 60 square feet of space per piece of equipment or per user.<sup>11</sup> The metrics vary, but the ACSM reports that in 2010, per a publication prepared by IHRSA, industry member occupancy levels ranged from 10 to 14 square feet per member.<sup>12</sup> Further, empirical data from health/fitness operators worldwide show a general range of 3 to 27 square feet per member.<sup>13</sup> Ultimately, ACSM says the allocation of space per member depends on the business model chosen by each facility operator. All of these figures suggest an overall average higher than the 10 square feet of space cited by Dr. King.

In addition to the above, ALH Economics turned to the Life Time Fitness, Inc. 2012 Annual Report to determine if space metrics are provided in this report or can be deduced from other report information. There is useful and relevant information included in this report (see Appendix C for relevant pages excerpted from the 2012 Annual Report). However, the nature of Life Time Fitness' facilities is not conducive to deducing a space metric per member. For example, the proposed Roseville Life Time Fitness center includes 120,000 square feet of building space plus additional outdoor area for pool and 14 tennis courts.<sup>14</sup> This facility is generally comparable to the current larger format center being developed by Life Time Fitness, Inc., which average 114,000 square feet.<sup>15</sup> According to the Annual Report, the current model generally targets 7,500 to 11,000 memberships.<sup>16</sup> The Annual Report also indicates that as of December 31, 2012, there was an average of 1.9 members per membership.<sup>17</sup> Using these figures, it appears that the current model Life Time Fitness facility averages 14,250 to 20,900 individual members. Applying these figures to the average current model facility size of 114,000 results in a space metric of 5.45 to 8.0 square feet per member, or a general average of 6.5. However, as noted above, this figure does not take into account the outdoor space typically devoted to pool and tennis courts, and thus is not a reliable estimate of fitness facility space allotted per member. Clearly, Life Time Fitness, Inc. has a space metric well in excess of this calculated figure.

Without more in-depth analysis it is difficult to assess the appropriate metric for fitness facility space per member. The time allotted ALH Economics for preparation of this letter is not conducive to conducting this more in-depth analysis. Moreover, as suggested by the ACSM data, the metric likely varies by type of fitness facility, such that one metric is not appropriate across all facilities. Therefore, ALH Economics approached the issue of average fitness facility membership from a different direction. IHRSA tracks U.S. consumer participation at health clubs and the number of health club facilities. Trend data regarding health club membership and health club counts by year is available on the IHRSA web site. This information indicates that in 2012, there were an estimated 50.2 million people who belonged to a health facility. At the time there were 30,500 health facilities. This averages to 1,657 members per facility.<sup>18</sup> This figure has moved around a bit in recent years, but has averaged

between 1,600 and 1,700 since 2010. Therefore, for working purposes, ALH Economics assumes average fitness facility membership of 1,657 for the fitness facilities identified by Dr. King as potentially competitive with the proposed Life Time Fitness Center. Using this metric, applied to 29 of the 32 facilities cited by Dr. King,<sup>19</sup> results in estimated existing fitness facility membership of 48,053. Notably, this figure is actually higher than Dr. King's estimated 43,000 figure.

The estimated existing fitness facility membership of 48,053 compares to the more accurate year 2014 estimate of 119,535 to 155,887 potential fitness club members presented in the earlier section. Thus, for the same facilities analyzed by Dr. King, this revised analysis using a more supportable membership metric demonstrates that, rather than the current market for fitness centers being already saturated as claimed by Dr. King, the market is characterized by a strong deficit of facilities, indicating room for yet additional facilities to enter the marketplace.

Although not disclosed by Dr. King, ALH Economics recognizes that Dr. King's list of competitive facilities is likely not comprehensive. Dr. King himself is internally inconsistent by citing a Roseville facility later in his report that is not included in his list of potential competitors. This facility is Strong Fitness, referenced in Figure 1 on page 6 of his memo pursuant to his discussion regarding existing vacancies. Using Google maps, ALH Economics calculates that this facility is located approximately 1.1 miles from the proposed Life Time Fitness site. Thus it seems this facility should just as likely be considered a competitive facility by Dr. King as any other facility he cited, again suggesting sloppy research by Dr. King. This suggests there are yet other fitness facilities within the 20-minute drive time of the proposed Life Time Fitness center overlooked by Dr. King. However, also of note is that just because the 20-minute drive time is a reasonable trade area to assume for analysis of Life Time Fitness, that does not mean this is the same trade area for all the cited fitness facilities. This is especially the case for the facilities located somewhat distant from the Life Time Fitness site, such as all of the California Family Fitness facilities, which are located approximately 4.3 to 5.0 miles from the Life Time Fitness site (pursuant to Google maps queries). The trade areas for these facilities likely extend beyond the 20-minute trade area for Life Time Fitness, meaning some portion of their trade area is likely unique from the Life Time Fitness trade area, and in like manner, some portion of the Life Time Fitness trade area is beyond the boundaries of the California Family Fitness facility trade areas. In other words, their trade areas intersect but are not coterminous.

### **Vacancies in Roseville Area**

*Dr. King presents data regarding retail vacancy for the combined Roseville and Rocklin area for retail space by type of center, including community and neighborhood centers, power regional centers, and strip centers (see King Table 3). He indicates that while power and regional shopping centers are doing well, strip centers have an almost 25% vacancy rate. He indicates that by his estimation it would take 60 years to absorb the existing strip center vacancy, and that approximately half the competing fitness facilities he identified are located in strip centers. He states that market conditions are better for community centers but that current negative absorption indicates that vacancy is rising for these centers, despite being several years into the recovery from the Great Recession. Dr. King further indicates the amount of community center vacancy is high, and that a center could be troubled if an anchor store closes. Dr. King also cites office space*

<sup>19</sup> This count deducts the two closed Curve facilities and the MAS Movement Strength studio, which likely does not have the 500 members ascribed by Dr. King since it is primarily a personal training facility.

*vacancy rates, indicating that these are among the highest in the Sacramento region, that four of the competitive fitness facilities he identified are located in office/flex complexes, and that at the current absorption rate it would take 25 years to fill these vacancies.*

ALH Economics examined the vacancy data presented by Dr. King in Table 3 of his memo. He presents the data as year-to-date, but does not specify the time frame. Examination of the source data reveals that Dr. King presented data only for first quarter 2013, despite his memo date of November 4, 2013. It is misleading of Dr. King to present data labeled as year-to-date without identifying the timeframe of the data. Moreover, it is specious of Dr. King to use data from one three-month period to present a characterization of market trends. Further, as noted by Dr. King, the data are combined for the Roseville and Rocklin area. This serves to commingle the characteristics of the retail bases for the two cities, when in fact the retail bases are characterized by very different levels of performance.

ALH Economics went to the source of Dr. King's market data and prepared a more appropriate time series of data. This source is the commercial brokerage firm Colliers International, which prepares quarterly reports on the Sacramento retail market, with the Roseville and Rocklin markets combined for data presentation purposes. These data are presented in Exhibit 1 in Appendix B (source documents are included in Appendix C). The data are presented for year-end 2011 (identified as fourth quarter 2011), year-end 2012 (identified as fourth quarter 2012), and the first and third quarters of 2013. The time series is limited to 2011 onward because ALH Economics could not locate a similar report for year-end 2010 and the year-end 2009 data were not comparable due to changes in the manner in which Colliers International tracks retail centers (i.e., specialty/lifestyle/outlet retail centers were identified as a separate category of retail in 2009, but this distinction is no longer present in the data from 2011 onward).

As noted in Exhibit 1, with almost no exception, retail vacancy rates have consistently dropped or remained stable for all types of retail centers in the combined Roseville/Rocklin area since year-end 2011. This is in direct opposition to the retail market characterization painted by Dr. King. At year-end 2011, community and neighborhood centers were characterized by 15.5% vacancy. By the end of first quarter 2013, this had dropped to 14.0%, which then remained stable through third quarter 2013. During 2011, almost 62,000 net square feet of community and neighborhood space were absorbed, increasing to more than 150,000 net square feet in 2012. The negative net absorption of (15,028) square feet cited by Dr. King in first quarter 2013, which he described as "not a good sign,"<sup>20</sup> had reversed after this time period, with 36,144 net square feet absorbed during third quarter and ending the quarter with year-to-date net absorption of 15,919 square feet. It is unclear by what metric Dr. King believes the market for community and neighborhood shopping centers is worsening, since according to his source, Colliers International, vacant space dropped by almost 100,000 square feet since year-end 2011, i.e., from 818,491 square feet of vacant space at year-end 2011 to 719,247 square feet of vacancy space at the end of September 2013. Even based on the data reported by Dr. King himself for first quarter 2013, the vacant space dropped by approximately 90,000 square feet since year-end 2011.

Power regional centers are the exception to consistently dropping vacancy rates, with the first quarter 2013 vacancy rate of 8.2% increasing nominally to 8.5% by the end of third quarter 2013. This appears to be a minor shift, which reflects the dynamic nature of the retail sector, especially since net

<sup>20</sup> King, page 4.

absorption for the year remains positive at 36,648 square feet through third quarter 2013. Moreover, retail vacancy in the sector as a whole is down substantially since year-end 2011, when it was reported at 11.6%. Thus, as cited by Dr. King, this sector of the retail base is performing well.

The strip center retail sector is the sector of greatest concern to Dr. King, wherein he cites an expectation that the existing less than 300,000 square feet of vacant strip center space will require over 60 years to absorb existing capacity. Dr. King does not explain how he derives this 60-year figure. Dr. King apparently presents this kind of analysis for its shock value, and it does not reflect a number of market factors. First, strip center space in 2012 experienced almost 15,000 square feet of net absorption (see Exhibit 1). In general, retail markets are deemed most healthy when there is some increment of vacancy, at least 5.0%, which allows for market fluidity and growth of existing retailers. Even retail vacancy rates at the 10% level are generally considered a reasonably healthy retail market.

Therefore, assuming no less than a sustained 10% strip retail vacancy rate, the current vacancy in excess of this level totals approximately 154,000 square feet.<sup>21</sup> This is not a very high increment of space relative to the entire retail base of 9.6 million square feet. Moreover, even if one accepts Dr. King's approach to estimating long-term absorption, then this increment of space would be absorbed over 10 years at the 2012 net absorption rate of 15,000 square feet. This 10-year estimate is dramatically different than Dr. King's 60-year estimate. However, despite calculating this estimate, ALH Economics believes this type of analysis is specious because it assumes, as an artificial parameter, the long-term use of the existing retail inventory *as retail space*.

Commercial markets are fluid and dynamic, and depending upon regulatory constraints, properties can readily change use or get redeveloped. Properties are often repositioned, as property owners readjust their expectations. As retail properties age and become increasingly obsolete as part of the real estate cycle, lease rates drop. While these declining lease rates can lower barriers to entry for some retailers, they can also reach a point where it becomes uneconomical for a property owner to continue to maintain the property in its current use, providing opportunities for rehabilitation or reuse. An example of retail property moving out of the retail inventory for use by non-retail businesses or institutions in Roseville includes 1529 Eureka, which was occupied by the retail use Design by Valentine and changed to a church, i.e., Family Church. This example demonstrates that real estate markets are fluid, and that the size of a market's retail inventory is not a fixed, static entity. Moreover, retail buildings have finite lifespans. Hence there is no knowing today what size the combined Roseville/Rocklin strip center retail base will be in 2073, as speculated by Dr. King given his 60-year absorption estimate. Thus, there is no merit to basing an analysis on a forecast of this length.

Rather than overly dwell on Dr. King's specious analysis about the length of time required for the strip retail center to reach a more healthy vacancy rate, ALH Economics believes two other factors are much more relevant to review. First, when one merges all the retail sector data in Exhibit 1 together, the combined retail inventory totals 9.6 million square feet. The overall vacancy rate for this space has declined over time, from 15.3% at the end of 2011 to 13.2% at the end of third quarter 2013. Overall, this indicates the combined retail market in Roseville and Rocklin is exhibiting improvement, with positive net absorption over each time period measured. More important, however, is the very fact that the retail data provided by Colliers International and relied upon by Dr. King are merged for

<sup>21</sup> Calculated as the existing vacancy of 262,940 square feet – 10% of the existing retail base of 1,089,941 square feet, or 108,994 square feet.

the two cities of Roseville and Rocklin. Examination of separate retail market data for each city presents a very different picture of the current retail market dynamics. ALH Economics obtained such separate data from Costar, a commercial real estate information company. These data are presented in Exhibit 2 for Roseville and Exhibit 3 for Rocklin (see Appendix B). The data are combined in Exhibit 4. The data provide a quarterly time series back to first quarter 2006.

Every commercial real estate brokerage or information company tracks a different complement of properties when measuring inventory, vacancy, and absorption. Thus, the combined Costar data for Roseville and Rocklin in Exhibit 4 differ from the combined data reported by Colliers International in Exhibit 1. Notably, as of third quarter 2013, Colliers International reports a combined retail base of 9.6 million square feet, while Costar reports a larger base of 13.6 million square feet (see Exhibit 4). The overall third quarter 2013 retail vacancy rate reported by Colliers International was 13.2%, while the corresponding figure reported by Costar was 9.7%. Interestingly, the amount of third quarter 2013 vacant space is relatively comparable between the two sources, reported as 1.3 million square feet by both sources.

Reconciling the data discrepancies between Colliers International and Costar is an impossible task unless one can identify the individual properties tracked by each industry leader and perform a property by property comparison. Such a task is certainly beyond the scope of what can be accomplished in this review of Dr. King's analysis, and would only be achievable by an industry insider with access to each company's database. However, the Costar data clearly indicate that by separating Roseville from Rocklin strong distinctions between the two retail markets emerge. First, the majority of retail space is located in Roseville versus Rocklin, with 10.4 million and 3.2 million square feet, respectively (see Exhibits 2 and 3). Yet, the amount of vacant retail space is approximately the same in each city, averaging about 660,000 square feet. As a result, the overall retail vacancy rate in Roseville is a modest 6.4%, compared to a much higher 20.2% vacancy rate in Rocklin. Further, the vacancy rates in Roseville since first quarter 2006 have remained generally within healthy parameters throughout the time period, even during the peak of the Great Recession, with vacancy highest in mid-2010 at 10.8%. For most of the noted time period, Roseville's retail vacancy rate was well below the 10.0% level. In contrast, Rocklin's vacancy rate peaked at a similar timeframe at 23.9%, and has generally not been below the 20% level since late 2008.

The retail market performance distinctions are important because Dr. King, in the following section of his memo addressing **Potential Closings**, indicates a belief that fitness centers closest to the proposed Life Time Fitness center site will be most at risk of closure. He then proceeds to identify six specific facilities he anticipates will face the most significant pressure. All six of these facilities are located in Roseville. Therefore, the retail market characteristics in Roseville are far more germane to Dr. King's analysis than the characteristics in Rocklin, and as noted, the retail market in Roseville appears to be very strong and healthy. For example, according to Costar, net retail absorption in Roseville over the past four quarters totaled 166,047 square feet. This is in strong contrast to the 13,200 net square feet in Rocklin over the same time period. Hence, contrary to Dr. King's claims and assumptions, the retail market in Roseville is very healthy, characterized by declining vacancy and strong absorption.

## Potential Closings

*Dr. King estimates membership for the proposed Life Time Fitness Center as well as for VillaSport, another proposed large-scale health club in Roseville, and concludes that for these two centers to be viable up to 38% of the current market, or 16,500 members, could be displaced. He identifies up to six existing facilities in Roseville that he therefore believes are most at risk of closure due to this displacement. Yet Dr. King further suggests that all of the clubs he identified as competitive facilities could be at risk, and that multiple fitness centers would close over the next 2-5 years to bring the market back to equilibrium. He prepares an estimate of future demand based on household growth from 2012 to 2017 and, after netting out projected membership associated with this growth, concludes that over the next five years up to 13,500 memberships will be displaced, representing between a quarter and a third of the current market pursuant to his estimate. He concludes that the "cumulative impacts of such closings will significantly add to the potential for urban decay given the already high vacancy rates in the area."<sup>22</sup>*

ALH Economics believes Dr. King's analysis in this section of his memo is completely predicated on faulty analysis and assumptions. First, Dr. King uses data he cites from Life Time Fitness Annual reports, most specifically relying on an older report from 2007 to estimate membership of 8,300 to 11,500, when much more current information is presented in newer reports, including the 2012 Annual Report that Dr. King also references. He used the 2007 Annual Report to cite a target membership level for Life Time Fitness' larger centers, at 8,500 to 11,500. These figures are higher than membership figures from the 2012 Annual Report of 7,500 to 11,000 memberships for the current model of facility being built, or 5,500 to 11,000 for other large format centers.<sup>23</sup> It almost appears that Dr. King was fishing for the highest prospective membership number possible by relying on a report that is six years old, and essentially obsolete from an operational perspective. The irony here is that Dr. King ultimately underestimated prospective Life Time Fitness membership because he did not review the Annual Report in enough depth to realize that each membership averages 1.9 members. As estimated above in the **Competitors** section, ALH Economics estimates that based on membership data cited in the 2012 Annual Report, the current model Life Time Fitness facility averages 14,250 to 20,900 individual members. This figure is greatly in excess of Dr. King's estimate of 8,300 to 11,500, which was based on obsolete and incomplete data.

Dr. King then supplements his estimate of new club memberships in the area by referencing another planned large-scale health club proposed for Roseville. This is VillaSport Athletic Club and Spa (VillaSport), planned for development next to the Westfield Galleria in Roseville. While not as far along in the development and approvals process as Life Time Fitness, Dr. King assumes this project will also be added to the health and wellness sector in Roseville, and thus qualifies as a reasonably foreseeable project for purposes of cumulative analysis. Dr. King estimates this project, planned by Syufy Enterprises, would need to enroll at least 5,000 members to be viable. As is characteristic of Dr. King, he does not provide a citation for this 5,000 member figure. In contrast, ALH Economics found a January 2013 Sacramento Business Journal article in which a Syufy representative says he expects

<sup>22</sup> King, page 5.

<sup>23</sup> "Life Time Fitness, Inc. 2012 Annual Report," page 5.

4,500 memberships, with an individual membership typically comprising three people.<sup>24</sup> Thus, based on this information, the anticipated membership at VillaSport is more like 13,500, not the 5,000 figure estimated by Dr. King. Together, based on the membership estimates prepared by ALH Economics, the two new planned large-scale fitness facilities could have cumulative membership of 27,750 to 34,400. This figure is greatly in excess of Dr. King's maximum estimate of 16,500.

Of note, the Life Time Fitness membership estimate includes members of all ages, including members under age 6. The IHRSA metric on which fitness club demand is based excludes persons under the age of 6. Accordingly, there is a slight discrepancy in comparing the estimated Life Time Fitness membership to the estimated IHRSA-based demand. However, this mismatch results in a conservative analysis, as it slightly inflates Life Time Fitness membership compared to demand. Based upon information provided by a representative of Life Time Fitness during a telephone interview, as of October 2013, approximately 5% of all individual Life Time Fitness members were under the age of 6.<sup>25</sup> To keep the analysis conservative, the Life Time Fitness membership estimate is not adjusted to account for this age factor. A similar adjustment is not made for VillaSport, which also will likely have a percentage of members under the age of 6.

Dr. King compared his estimate of 16,500 new members to his existing membership figure of 43,000, which also happened to match his demand estimate (hence concluding there is no unmet demand), and thus calculated that up to 38% of the existing membership could be displaced. Using more substantiated assumptions and analysis, ALH Economics estimates that demand in the 20-minute drive time surrounding the Life Time Fitness site in 2014 will total 119,535 to 155,887. In contrast, existing membership among the facilities identified by Dr. King is estimated to total 48,053. The comparative results of these two different supply and demand analyses are presented below in Table 2.

**Table 2. Comparative Fitness Club Membership Supply and Demand Analysis**

Characteristic	King Analysis		ALH Economics Analysis	
	Low	High	Low	High
20-minute drive time demand (1)	42,133	42,133	119,535	155,887
Existing Club Memberships	(43,000)	(43,000)	(48,053)	(48,053)
Life Time Fitness Membership	(8,300)	(11,000)	(14,250)	(20,900)
VillaSport Membership	(5,000)	(5,000)	(13,500)	(13,500)
Remaining Demand	(14,167)	(16,867)	43,732	73,434

<sup>24</sup>Sacramento Business Journal, "Syfy proposes upscale fitness center for Roseville," January 4, 2013 (<http://www.bizjournals.com/sacramento/print-edition/2013/01/04/syfy-upscale-fitness-center-roseville.html?page=all>). See copy of article in Appendix C.

<sup>25</sup>Telephone interview with Abdi Javidan, Sr. Director Acquisitions, Life Time Fitness, Inc.

As the figures in Table 2 indicate, Dr. King's approach to supply and demand results in negative remaining demand upon full operation of the Life Time Fitness and VillaSport facilities. This alleged negative demand is the basis for his conclusion that existing club membership will be displaced by the new large scale facilities. In contrast, the ALH Economics analysis of supply and demand indicates that substantial additional demand will remain even after these two facilities are developed. Dr. King's analysis further considers future growth in demand, estimated at less than 300 memberships between 2012 and 2017. He determined this is not sufficient to offset the displacement impacts of the new facilities. In contrast, the demographic projections for the 20-minute drive time indicate that the area population is projected to grow by 4.2% between 2014 and 2019. Thus, by 2019, ALH Economics estimates that demand for fitness club memberships will grow by approximately 5,000 to 6,600.<sup>26</sup>

As perhaps a telling commentary on Dr. King's analysis, the aforementioned January 2013 Sacramento Business Journal article included two quotes from existing and prospective fitness club operators in the 20-minute trade area defined for Life Time Fitness. One of these quotes is from a representative of Syufy, the operator of the planned VillaSport facility. In this article, the Syufy spokesman indicates, in reference to the existing and prospective competition, including Life Time Fitness, "I think we can all sort of exist side-by-side."<sup>27</sup> In like manner, Spare Time, the owner/operator of Johnson Ranch Racquet Club, the existing facility within the 20-minute drive time area with the most comparable amenities and services to Life Time Fitness and Villa Sport, was cited in the Sacramento Business Journal article as recognizing that fitness club operators have slightly different models, and that Spare Time will be able to compete.<sup>28</sup> The statements of these individuals suggest they are not, at least publicly, concerned about prospective displacement of their facilities resulting from the market introduction of Life Time Fitness.

Convinced that his analysis is correct, Dr. King proceeds in his memo to identify six specific fitness facilities he believes will be most at risk of closure due to member displacement. These facilities, all in Roseville, include the following:

- 24 Hour Fitness on North Sunrise Avenue, Anytime Fitness on Douglas Boulevard, and Golds Gym on Foothills Blvd., all located in community or neighborhood shopping centers;
- Curves on Cirby Way, located in the Oak Ridge Plaza strip center;
- Johnson Ranch Racquet Club, located in a stand-alone facility on Eureka Road;
- Roseville Health & Wellness on Lead Hill Boulevard, located in office/flex space.<sup>29</sup>

In contrast to Dr. King's conclusions, the ALH Economics analysis indicates sufficient membership demand will exist for the preceding facilities and Life Time Fitness. Moreover, each of these facilities provides different services and serves different niches. For example, some facilities focus on the use of fitness equipment, others are oriented around a medical model of service, while yet others are family-oriented and include outdoor swimming and tennis.

It is likely that Life Time Fitness and VillaSport will be most competitive with facilities that provide the greatest level of services, and hence require the greatest cost, and less competitive with facilities that

<sup>26</sup> The 4.2% growth factor is applied to the 119,535 and 155,887 estimated demand figures.

<sup>27</sup> Sacramento Business Journal, Ibid.

<sup>28</sup> Sacramento Business Journal, Ibid.

<sup>29</sup> King, page 5.

provide relatively fewer services. For example, representative facilities in Roseville that lack outdoor swimming, tennis, youth-oriented activities (among other features) cost about \$10 to \$40 per month per member.<sup>30</sup> In contrast, as of year-end 2012, Life Time Fitness membership costs started at \$40 to \$55 per month per individual member and \$100 to \$135 per month per family.<sup>31</sup> At the highest level, reflecting the greatest level of benefits, value, and privileges, individual membership costs are \$120 to \$140 per month and family membership costs are \$250 - \$270 per month.<sup>32</sup> Thus, Life Time Fitness membership costs are relatively high and most assuredly attract a different demographic and type of user than the lower cost \$20 to \$40 per month facilities. The costs are higher at Life Time Fitness because of the range of amenities, services, activities, and events available, which will not appeal to users of other fitness facilities, or will be too expensive for them. While features vary among Life Time Fitness facilities, a select listing available at the typical current model includes zero-depth entry swimming pools, basketball/volleyball courts, racquetball/squash courts, waterslides, rock climbing cavern, child center, massage therapy, metabolic testing, nutrition coaching, aquatics, athletic leagues, sports training camps, summer and vacation camps, social events, and interest-driven clubs.<sup>33</sup>

ALH Economics prepared the preceding approach to a supply and demand analysis because it parallels Dr. King's analysis. This was prepared to show how the results estimated by Dr. King would be different if he used more appropriate assumptions. If conducting an independent analysis, ALH Economics would approach the analysis differently, recognizing more nuances in the analysis. These nuances would most importantly take into consideration that trade areas vary by facility, with smaller facilities likely having a small trade area and larger facilities with a broader array of member features and amenities having a larger trade area. An ALH Economics analysis would also take into consideration the different market niches served by the various fitness facilities as well as sensitivity to household income as an indicator of demand for facilities by price structure. Further, larger facilities such as California Family Fitness and Johnson Ranch Racquet Club are more family-oriented, provide a much broader array of services than the smaller strip or community shopping center clubs such as Curves and Anytime Fitness, and thus attract a different demographic from a wider geographic area. The trade areas for these larger facilities will overlap only in part with the trade area for Life Time Fitness and Villa Sport. A more sensitive analysis would therefore take this partial overlap into consideration, and more carefully shape competitive supply and demand estimates.

### **Potential for Urban Decay**

*Dr. King indicates that given the very high vacancy rates in Roseville's strip malls, community centers, and office space, there is a significant threat of urban decay resulting from eliminating a quarter of current health clubs in the market and that this threat should have been addressed, and mitigated if possible, in the EIR. He then proceeds to present photos of five existing retail vacancies, citing Sunrise Boulevard as having a large number of strip malls with high vacancy rates and newer commercial buildings near Stanford Ranch Road in Roseville/Rocklin also having high vacancy rates.*

<sup>30</sup> Monthly fees for facilities in Roseville including 24 Hour Fitness, Anytime Fitness, Crunch Gym, and Gold's Gym pursuant to website and telephone research.

<sup>31</sup> "Life Time Fitness, Inc. 2012 Annual Report," page 9.

<sup>32</sup> Ibid.

<sup>33</sup> Ibid, page 6.

Before responding to this comment, it warrants repeating that Dr. King's analysis is premised upon erroneous analysis and false assumptions – that in his opinion existing area demand is not sufficient to absorb the Life Time Fitness center and that existing fitness centers will be displaced when demand is redirected away from them to Life Time Fitness and VillaSport. It is on the basis of these conclusions that Dr. King believes vacancy will increase and hence the potential for urban decay to result. The preceding ALH Economics analysis demonstrated the flaws in Dr. King's calculation of demand, and therefore demonstrated that sufficient demand exists for the existing fitness centers as well as the two major potential market additions – Life Time Fitness and VillaSport. Nevertheless, the following addresses Dr. King's concern about the condition of vacancies in Roseville.

It is also important at this juncture to focus on what constitutes the *environmental* impact known as urban decay. The leading court case on the subject, *Bakersfield Citizens for Local Control v. City of Bakersfield* (2004) 124 Cal.App.4th 1184, 1204, described the phenomenon as "a chain reaction of store closures and long-term vacancies, ultimately destroying existing neighborhoods and leaving decaying shells in their wake." The court also discussed prior case law that addressed the potential for large retail projects to cause "physical deterioration of [a] downtown area" or "a general deterioration of [a] downtown area." (Id. at pp. 1206, 1207). When looking at the phenomenon of urban decay, it is also helpful to note economic impacts that do not constitute urban decay. For example, a vacant building is not urban decay, even if the building were to be vacant over a relatively long time. Similarly, even a number of empty storefronts would not constitute urban decay.

In citing the "very high vacancy rates in Roseville's strip malls"<sup>34</sup> Dr. King appears to be confusing the combined Roseville/Rocklin market statistics with Roseville alone. As demonstrated by the Costar data in Exhibits 2 - 4, the bulk of the combined area vacancy is in Rocklin. Therefore, it is not clear that one could characterize Roseville's strip malls as having "very high vacancy" from this information alone. Moreover, among the five vacancies photographed and referenced by Dr. King, only one is an example of a strip center vacancy, i.e., Figure 3 at 9050 Fairway Drive. Hence, Dr. King's own analysis does not support his contention that Roseville has high strip center vacancy.

This section of Dr. King's Memo is about providing evidence of existing retail vacancies. It is difficult to see how he makes the leap from identifying vacancies to saying the threat of urban decay is significant. Moreover, there appears to be minimal logic to the vacancy examples cited, with the exception of two vacancies in centers that include a fitness center as a tenant (i.e., Figures 1 and 3). Here Dr. King is presumably implying that the prospective vacancy of a displaced fitness center (in his perception) will compound existing vacancy. ALH Economics viewed the vacancies highlighted by Dr. King, including the vacancies presented as Figure 1 (354 North Sunrise Avenue) and Figure 3 (9050 Fairway Drive). These vacancies are both well-maintained and located in existing retail nodes. Of particular note, the strip center reflected in Figure 3 is otherwise fully occupied, appears to attract especially strong lunch time traffic, and is in very good condition. According to existing tenants at this strip center, this vacancy was most recently occupied by a sushi restaurant, which closed less than a year ago.

The property reflected in Figure 1 is located within an older retail node that has an overall confusing layout and corresponding confusing pattern of circulation, and has other retail vacancies. Yet, this

<sup>34</sup> King, page 5.

property is moderately well-maintained, with none of the existing vacancies exhibiting signs of urban decay (see next section **Urban Decay and Physical Deterioration**). Of perhaps most relevance, however, is that while the space in Figure 1 appears vacant and has a space available sign posted at the roofline, it is technically leased to neighboring Strong Fitness. According to the leasing agent, contacted at the number posted on the building, the space was leased by Strong Fitness for expansion space. However, after realizing the costs involved, Strong Fitness decided to forego the expansion plan and is now seeking to sublease the space. The space has been available for sublease for about four to five months, with some interest exhibited. The leasing agent reports there is one undisclosed prospective tenant currently very interested in the space and negotiations are underway to see if mutually agreeable terms can be established.

In all likelihood, by the time Life Time Fitness is built and operational, Dr. King's Figures 1 and 3 vacancies in centers with existing fitness facilities will be absorbed. It is not reasonable to assume these spaces will remain vacant for the duration of time necessary for Life Time Fitness to achieve project approvals, construction, and stabilization. Roseville has a strong retail market, with almost consistent quarterly net retail absorption for the past three years as demonstrated in Exhibit 2. This positive net absorption suggests there is no reason to anticipate that the existing vacancies identified by Dr. King will continue to be vacant when Life Time Fitness is operational, therefore compounding center vacancy if the existing fitness center tenants are displaced as purported by Dr. King. Furthermore, given the dynamic nature of retail, these fitness centers themselves might choose to relocate for other reasons, and thus they may be at other locations at the future point in time when Life Time Fitness achieves operations and stabilization. For example, Strong Fitness might ultimately choose to again explore expansion opportunities and relocate to satisfy this need.

There are yet three other vacancies cited by Dr. King. These vacancies prove what is indisputable, that there are retail vacancies in Roseville and Rocklin. There is nothing unusual or surprising about this. Moreover, this cannot be said enough, some degree of retail vacancy is good for a market, encouraging movement and market fluidity. Among the three other vacancies cited by Dr. King, two are in Roseville (Figure 2, 394 N. Sunrise Avenue and Figure 4, 5781 Five Star Boulevard). What is perhaps fortuitous from an urban decay perspective, Dr. King highlighted one vacancy in particular that has been vacant for several years. This is the former California Backyard location corresponding with Figure 4. This vacancy is located in Fairway Commons, as part of a node of thriving power center tenants, including Costco, Home Depot, and other strong regional tenants, such as Guitar Center, Staples, JoAnn, and Sprouts. Despite being vacant for more than two years, this 20,000-square-foot retail space, as proven by Dr. King's photograph, is in good physical condition and displays no signs of deterioration. A phone interview with the owner/manager of this property indicates that the space can be divided into two smaller tenant spaces of approximately 10,000 square feet. In a November 19, 2013 interview, the property ownership indicated that several parties are currently "very interested" in the space, either for the entire area or the smaller divided spaces.<sup>35</sup> Therefore, it sounds as if this retail vacancy may be fully or partially backfilled in the near future. Further, this retail node does not have any fitness center tenants; there should therefore be no risk of any deleterious impact on this center even if any fitness centers close in the future.

---

<sup>35</sup> Telephone interview with Merlone Geier Partners representative, November 19, 2013.

The good physical condition of the former California Backyard space at 5781 Five Star Boulevard property proves that properties with relatively prolonged vacancies in Roseville are well maintained and do not slip into a downward spiral of decay and deterioration. Instead, the property owner is maintaining the property in good physical condition with no deleterious impact on the environment. The same is the case with the vacancy depicted in Figure 2 at 394 N. Sunrise Avenue. This is the former location for Thomasville Furniture, which relocated to Creekside Town Center on Galleria Boulevard in July 2012. While vacant for almost 1.5 years, this space, which has leasing challenges due to its access and circulation, is in good physical condition and again displays no signs of urban decay or deterioration.

Not only are the above-mentioned Roseville retail vacancies in good condition, but a visual survey of many of Roseville's retail nodes by ALH Economics revealed near uniform good maintenance of retail properties in Roseville, both occupied and vacant. This includes retail located along Douglas Boulevard, Foothills Boulevard, Galleria Boulevard, Eureka Road, North Sunrise Road, Fairway Drive, and Cirby Way. ALH Economics visited many retail centers located along these roads, including older centers with and without relatively high vacancy as well as newer centers with and without vacancy. As stated, all are in good physical condition. As an example, Elk Hill Plaza at 3992 Foothills Boulevard is an older center with a number of existing vacancies, four of which are located in a building with a total of seven tenant spaces. Despite this high vacancy, this building is in good physical condition, demonstrating high standards for property maintenance in Roseville. Yet other retail vacancies are maintained in good condition. For example, the small center Eureka Ridge Plaza at 1480 Eureka Road has approximately 11 tenant spaces, of which three are currently vacant, although improvements are underway for one of these spaces. The vacancies at this newer center, built in 2005, are so well maintained that on first examination they do not appear to be vacant.

In summary, ALH Economics' visual examination indicates that Roseville's retail properties are in good condition. As stated earlier, the retail market in Roseville is of most relevance to Dr. King's concerns about the threat of urban decay since all the fitness centers he specifically identified as possibly at risk of displacement from Life Time Fitness and VillaSport are located in Roseville. This additionally includes even the large majority of all the fitness facilities he identified as competitive and thus at general risk of displacement. Even if there were any merit to Dr. King's claim that a quarter of the existing fitness clubs could close, ALH Economics does not foresee the potential for the physical decline of commercial retail space in Roseville. As a case in point, for Roseville's vacancy rate to increase by 1.0% to a still reasonably healthy 7.4%, an additional 99,356 square feet of space would need to be vacated.<sup>36</sup> This is more than twice the amount of estimated square feet of fitness facility space identified by Dr. King, of which only 28,500 square feet are located in Roseville (excluding Rocklin and Citrus Heights facilities listed on Exhibit 2). This amount of space comprises less than 0.3% of the City's retail base. Even if all these existing fitness centers closed, the impact on Roseville's retail vacancy rate would be nominal. According to data presented in Exhibit 2, the Roseville market absorbed almost twice this amount of retail space during third quarter 2013 alone. Therefore, based on the condition of existing vacancies, the nominal amount of space, and the demonstrated strength of the market, the worst case increase in inventory predicated upon Dr. King's analysis is not suggestive of conditions leading to urban decay.

<sup>36</sup> Calculated as follows: 10,397,841 existing inventory \* (.064+.01) – 670,084 (See Exhibit 2 for existing inventory of 10,397,841 square feet, existing vacancy rate of 6.4%, and existing vacancy totaling 670,084 square feet).

In his discussion about fitness centers at risk of displacement, Dr. King also references that some area fitness centers are located in office/flex space and says there is a threat of urban decay in the office market if some of these facilities close. This includes four competitive centers included on his Exhibit 2. These are California Family Fitness in Rocklin with an estimated 25,000 square feet, Roseville Health & Wellness in Roseville with an estimated 15,000 square feet, and two "small" facilities with an estimated 500 members each. These latter facilities are Fitness MD in Roseville and Rocklin Crossfit in Rocklin. Based on Dr. King's figures and assumptions, ALH Economics assumes that Dr. King would estimate these four facilities total 50,000 square feet. This assumption includes an allocation of 5,000 square feet each to the smaller facilities, which was derived by multiplying Dr. King's estimated 500 members by the earlier referenced 10 square feet per member he seems to assume in his analysis.

According to Colliers International, at the end of first quarter 2013 the Roseville/Rocklin office market had 11.9 million square feet of office space, operating at 21.1% vacancy.<sup>37</sup> The combined square footage of the fitness facilities located in office/flex space comprises a scant 0.42% of the combined city office market. Regardless of the prevailing vacancy rate at the time, this is the amount the vacancy rate would increase if these two facilities closed due to displacement. This is an insignificant figure and would not have a noticeable impact on market conditions. Further, Roseville Health & Wellness comprises the larger increment of this space. This facility follows a medical model for fitness, including offering the area's only saltwater pool,<sup>38</sup> and is located in an office node that includes many other medical offices, including Kaiser Permanente. This more medical orientation alone should provide this facility with insulation from any competitive pressures resulting from Life Time Fitness and Villa Sport. Further, all of the properties in this node are very well maintained. Therefore, not only is the closure of this facility unlikely, but even if that occurred, the strong existing area property maintenance suggests the property would be well maintained in keeping with the other properties in this node.

To close, despite strong retail market conditions in Roseville, one vacancy example cited by Dr. King is exhibiting signs of poor maintenance. This is his final example, comprising Figure 5 at 6671 Stanford Ranch Road in Rocklin. This space, located in Willow Rock Plaza across Stanford Ranch Road from Roseville, totals approximately 20,000 square feet and was a former Food Source grocery store, which is Raley's more warehouse-oriented grocery operation. The property has plywood over the doors and windows and areas of paint on some of the boards, appearing to be an effort to cover up graffiti. According to media sources, the store was closed in mid-2006. Despite its closure, Raley's continues to hold and make payment on the lease, which does not expire until September 2015.<sup>39</sup> Therefore, similar to the above-referenced vacancy next to Strong Fitness, this property is technically leased. However, according to the property owner/manager, interest in the space has been exhibited, but because Raley's holds deed restrictions there are constraints regarding prospective new tenants. Occupancy at this center, the balance of which is under separate ownership from the former Food Source space, does not appear effected by this lack of an anchor tenant. There is only one other small shop vacancy at this center, with other tenants including personal services, medical services, a veterinary hospital, restaurants, smoke shop, and postal center, among others. Notably, this center

<sup>37</sup> "Office Report, Sacramento Office Insights," Volume 1, 1<sup>st</sup> Quarter 2013, Colliers International. Data are combined for Roseville and Rocklin. See Appendix C.

<sup>38</sup> <http://www.rosevillehwc.com/aquaticCenter.php>

<sup>39</sup> Telephone interview with Merlone Geier Partners representative, November 19, 2013.

does not include a fitness center tenant. Hence while this Rocklin center exhibits signs of deterioration, any future decline could not be attributable to displacement impacts due to Life Time Fitness or VillaSport because there is no fitness center present that could be displaced.

### **Urban Decay and Physical Deterioration**

*Dr. King presents his definition of urban decay and physical deterioration and shares his perspective on resulting policy implications, indicating that visible symptoms of physical deterioration and abandoned buildings signal lack of public policy concern and invite vandalism, graffiti, arson for profit, among other negative characteristics. His definition of evidence of urban decay includes such markers as plywood boarded doors and windows, extensive gang graffiti and offensive words painted on buildings, overturned dumpsters, homeless encampments on the property or doorways, among others. He further presents his opinion that as urban decay becomes more apparent property owners defer or cease making costly maintenance and repairs, which in turn leads to vacancies and lower lease rates, exacerbating urban decay. He further notes that while shopping centers may be well maintained now, this should not be expected if vacancies are prolonged, leading to a downward spiral. In addition, he suggests that health clubs may have specific infrastructure or configurations, such as pools, that may make it harder to backfill if they become vacant.*

Dr. King's concerns about lack of public policy focused on the condition of physical property in Roseville is unwarranted. As stated previously by ALH Economics and supported by facts and analysis, urban decay is unlikely to result from the operations of Life Time Fitness, alone or in combination with VillaSport. However, in the event some existing fitness facilities in Roseville (where the majority identified by Dr. King are located, including the ones he specifically singled out), owners of commercial retail properties are generally financially motivated to maintain property in a manner appropriate to retain existing tenants and attract new retail tenants. This appears to be the case in the City of Roseville, as evidenced by the overall positive prevailing physical condition of the City's retail vacancies. If property owners lag, however, and property maintenance begins to show signs of deferred maintenance or other disrepair, the City has regulatory controls that can be implemented to avoid the onset of deterioration or decay.

The City of Roseville's ordinances, such as the City of Roseville Municipal Code of Ordinances Chapter 10.54 on Nuisance Abatement; Chapter 16.34 on Administrative Penalty on Owners of Long-Term Boarded and Vacant Buildings Which are Not Under Repair or Actively offered for Sale, Lease, or Rent; Chapter 16.35 on Abatement of Substandard Buildings; Chapter 9.20 on Abatement of Weeds, Dirt, Rubbish, and Rank Growths; and Chapter 10.53 on Spray Paint and Graffiti, require property owners to maintain their properties so as not to create a nuisance by creating a condition that reduces property values and promotes blight and neighborhood deterioration.<sup>40</sup> Enforcement of these ordinances can help prevent physical deterioration due to any long-term closures of retail spaces, such as fitness facilities. The City of Roseville's Code Enforcement Department is part of the Development Services Department. The Department currently has one Code Enforcement Supervisor, one Code Enforcement Inspector, one Code Enforcement/Building Inspector, one Code Enforcement/Housing Inspector, and one temporary weekend Sign Abatement Inspector.

---

<sup>40</sup> City of Roseville, "Municipal Code," <http://qcode.us/codes/roseville/> (accessed November 2013).

Code enforcement is done on both a pro-active and complaint basis. Public complaints can be made through the City's website, by email, and by calling the 24-hour enforcement hotline. The Code Enforcement Department works with residents, neighborhood associations, public service agencies, and other City departments to help resolve any violations on a voluntary basis. According to the City of Roseville, in order to attempt resolution of the violation before actual enforcement action is taken most violations will receive a warning, either verbal or written. If voluntary compliance is not obtained the City has several ways for enforcing code requirements, including:

- **Administrative Citation - Remedy** designed to address minor (one-time) violations. The fines increase with each offense. Administrative citations are standard forms, like traffic citations, that include blanks for entering the date, address, code section violated, and the penalty amount. Fines range from \$100 to \$500.
- **Administrative Compliance Order - Remedy** designed to address ongoing and/or continuing violations that are relatively permanent in nature. Administrative compliance orders are in the form of a letter detailing specific violations and have a fine set by the Board of Hearing Examiners. If the resident or business fails to comply with the compliance order, follow-up legal action may include further correspondence, litigation, or referral to a hearing panel. This process also allows the City to assess administrative penalties and costs incurred by the Code Enforcement staff. Fines range from \$25.00 to \$500.00 per day, with a maximum of \$50,000.<sup>41</sup>

In addition, according to Municipal Code Chapter 2.52.130, if a violation has not been corrected by the allotted time in the Administrative Order, the City or a contracting agent will abate the problem. The actual cost to remedy the violation, administrative costs, and any other associated costs will be at the expense of the property owner.<sup>42</sup>

According to the City of Roseville Code Enforcement Department, they received 2,041 complaints in fiscal year 2011-12 and 1,953 in 2012-13. Of the complaints received in 2011-12, 839 violation cases were opened and 839 were closed, equaling a closure rate of 100%. In 2012-13, 914 violation cases were opened and 906 were closed, equaling a closure rate of 99%.<sup>43</sup> Historically, roughly one-third of complaints pertain to commercial properties, and those that do pertain to issues not typically associated with urban decay.<sup>44</sup> Not all complaints pertain to commercial properties. The few categories in which commercial properties are estimated to comprise approximately 30% or more of the complaints include Sign Violations, Work Without Permits, Vacant Structures, and Expired Permits. The nature of these complaints suggest very little correlation with conditions conducive to urban decay. For the remaining complaint categories, commercial properties comprise approximately 0% – 5% of the cases. These categories include Property Nuisances, Substandard Conditions, Encroachments, Weeds, Zoning Violations, Noise, Waster Water, and other less common complaints.

<sup>42</sup> City of Roseville, "Municipal Code," <http://qcode.us/codes/roseville/> (accessed November 2013).

<sup>43</sup> Code Enforcement Department, Code Enforcement Inspector, City of Roseville; telephone interview conducted November 14, 2013.

<sup>44</sup> Complaint information provided by Code Enforcement Department, November 21, 2013.

As one would expect from this high complaint closure rate, and low percentage pertaining to commercial properties, during fieldwork in November 2013 there were no visible signs of litter, graffiti, weeds, or rubbish associated with existing commercial nodes and corridors in Roseville. There were a few instances of small amounts of trash near some commercial properties, but mostly fast food-related, such as empty cups and straws. All vacant properties were well-maintained with no signs of decay or deterioration. Thus, ALH Economics concludes that existing measures to maintain private commercial property in good condition in Roseville are effective and would serve to preclude the potential for urban decay and deterioration in the event any existing fitness centers close following the operations of Life Time Fitness, alone or in combination with VillaSport.

### **Mitigation**

*Dr. King indicates that given the substantial amount of vacant real estate that it is disturbing that no mitigation plan was proposed. He suggested it might be possible to find a suitably large vacant space in the area or that a mitigation fee might also be appropriate.*

The preceding review of Dr. King's November 4, 2013 Memo indicates that Dr. King's analysis and conclusions are flawed, and that urban decay will not result from development of the Life Time Fitness Project. Existing retail vacancy is low in Roseville, vacancies are well maintained and do not exhibit existing signs of decay, and sufficient demand exists to absorb prospective membership at the Life Time Fitness project and existing area fitness facilities. Consequently no impacts will occur warranting mitigation.

### **Conclusion**

*Dr. King concludes his memo by repeating his major points, that development of Life Time Fitness and VillaSport will result in increased vacancies in the Roseville area, that at least 25% to 33% of existing fitness centers will close. Dr. King indicates his conclusions regarding urban decay impacts are the same with or without the cumulative impacts of VillaSport. He further reinforces his opinion that Life Time Fitness will exacerbate the close to 25% vacancy rate in Roseville/Rocklin strip centers and that it will take decades for this vacancy rate to fall to reasonable levels, but in the meantime, rents will fall and maintenance will suffer, leading to urban decay.*

To summarize ALH Economics' preceding comments on Dr. King's analysis and opinions, ALH Economics believes that Dr. King's analysis is based upon faulty and undocumented assumptions. His work is sloppy and often unsubstantiated, resulting in the following flaws:

- Grossly underestimated existing fitness facility demand
- Incomplete inventory of supply of existing fitness facilities
- Unsupported estimate of existing club space use and membership
- Use of obsolete, misleading, and selective data
- Erroneous estimate of prospective Life Time Fitness membership
- Underestimate of VillaSport membership
- Overreliance on macro-level retail market data that obscure more favorable conditions in Roseville
- Misunderstanding and misrepresentation of retail market trends

There are yet other flaws in Dr. King's analysis, which together he uses to fabricate a story that development of Life Time Fitness, with or without the cumulative impacts of VillaSport, will lead to a significant increase in retail and office vacancy rates, resulting in urban decay. He therefore reaches the conclusion that the omission of an urban decay analysis renders the EIR for Life Time Fitness inadequate and incomplete.

As stated earlier, an urban decay analysis is only necessary if there is the perceived potential for urban decay to result from project development. Upon initiating the Life Time Fitness EIR, the City of Roseville had no reason to anticipate that urban decay would result from development of the project. Therefore, the EIR was not deficient for failing to include such an analysis. In the context of CEQA, such analyses have historically been focused on large-scale retail development, mostly of a big box orientation. There are limited fitness facilities in Roseville that are fully comparable to the proposed facility, such that the proposed facility will expand the offerings in the health and wellness market in Roseville. Moreover, retail vacancy in Roseville is very low and vacant retail spaces are moderately to well-maintained, including among some of the City's oldest retail centers. Even retail vacancies that are of relatively long duration for Roseville, such as one to two years, are well-maintained. Finally, no new retail development in Roseville has been tied to erosion of the physical condition of Roseville's retail base. Therefore, there is no reason to anticipate that urban decay would result in Roseville from development of Life Time Fitness, and correspondingly no reason to include an urban decay analysis in the EIR. Further, the analysis included herein, conducted by ALH Economics with more reasoned and documented assumptions, indicates that urban decay is not an anticipated consequence of development of Life Time Fitness.

#### **ERRONEOUS KING PREDICTIONS REGARDING URBAN DECAY**

The preceding analysis puts into question Dr. King's accuracy and credibility as an "expert" witness. Dr. King's submission at the very end of a project's administrative process of materials insisting that a CEQA document is inadequate and must be redone is not a one-time event, but rather is part of an established pattern of inaccurate doom and gloom urban decay predictions made repeatedly by him throughout California and beyond. Similar to what occurred on November 4, 2013 in Roseville, it is common practice for Dr. King to submit an 11<sup>th</sup> hour claim that a project seeking EIR certification has an inadequate EIR due to an insufficient urban decay analysis. These claims are accompanied by memos similar to the one Dr. King submitted regarding Life Time Fitness via the law firm Herum Crabtree, or sometimes his claims are presented in the form of reports or declarations to the court. Oftentimes there are math or other errors in Dr. King's reports (such as referenced earlier by the Court of Appeal, Fifth Appellate District, State of California), but even more critically, his predictions regarding business closure and resulting urban decay are repeatedly proven to be inflammatory and wrong.

Dr. King's urban decay memos or reports are always presented in opposition to proposed development projects, indicating a clear bias by Dr. King. These materials were historically prepared by Dr. King as the primary author under the umbrella name California Economic Research Associates (CERA) in association with others but more recently have been solely prepared by Dr. King. Most frequently these reports pertain to planned Walmart stores, such as in the California cities of American Canyon, Anderson, Antioch, Chico, Clovis, Crescent City, Fairfield, Galt, Gilroy, Hanford, Lodi, Marysville, Merced, Milpitas, Oroville, Red Bluff, Redding, Rocklin, Stockton, Suisun City, Tracey, Ukiah, Yuba City, and Yucca Valley, plus Tumwater, WA. Dr. King has also prepared documents

claiming inadequate urban decay analyses for projects centered around other retailers, such as Home Depot in Eureka, Home Depot in Thousand Oaks, Bel-Air in Nevada County, an Albertson's expansion in Carpinteria, and Lowe's in Sonora. Dr. King's assertions regarding urban decay are not focused on retail development alone, as he has also submitted materials claiming the risk of urban decay for a regional detention center in Riverside County. There are likely yet other memos and reports authored by Dr. King for projects not cited above.

In all these documents, Dr. King consistently and routinely faulted the environmental documentation for being inadequate and, similar to Roseville, made his own dire statements and predictions about what would happen after the proposed facility was developed. A review of some of the memos and reports submitted by Dr. King shows that he is consistently wrong in his analysis and conclusions.

ALH Economics performed such a review of some of Dr. King's past predictions. Three case studies are presented, all related to development of Walmart stores. The case studies, representing Walmart development over a span of time and throughout California, include Fairfield, Yuba City, and Gilroy. In all three of these cases, Walmart expanded and relocated existing stores. These cases were selected because they are instances where stores Dr. King claimed would cause urban decay have been built and where ALH Economics has some familiarity or conducted previous relevant research following up on Dr. King's predictions. In the case of the prior research, this was conducted when the Principal of ALH Economics, Amy Herman, was previously in the employ of CBRE Consulting (see Amy Herman and Firm Introduction in Appendix A). The case study information, including Dr. King's urban decay and other economic impact predictions, follows.

### **Fairfield**

In December 2006 Dr. King wrote a 13-page memo to the Fairfield City Council regarding the EIR for a proposed 202,630-square-foot Walmart Supercenter to be located at the Mission Village Shopping Center on North Texas Road. This was a planned retail project involving the demolition of an aging retail center that was almost entirely vacant and had been underutilized since 2000 when its former Albertson's anchor store closed. Walmart's development plan involved closing its smaller, existing Walmart store on Chadbourne Road, also in Fairfield. In his memo, Dr. King indicated that based on his review, it appeared that the EIR's treatment and mitigation of economic issues and urban decay was insufficient and that the EIR should not be certified.<sup>45</sup> Dr. King identified many perceived flaws in the EIR and said his analysis indicated that development of the Fairfield Supercenter would close at least two existing grocery stores. He further indicated that since these stores anchored shopping centers, the total impact in terms of urban decay would be substantially greater than just the closure of these stores. Dr. King further stated the following regarding the existing Walmart store that would be vacated by Walmart:

"It will be very difficult to retenant the existing Discount Store space and retenanting this space will displace other currently vacant commercial space in the area. The existing Discount Store is an older property with few windows and not designed for anything besides a big box store. We seriously doubt that a suitable tenant will be

<sup>45</sup> All references to Dr. King's Fairfield analysis pertain to a memo prepared by him on December 6, 2006, addressed to the Honorable Members of the Fairfield City Council, Re: EIR for Proposed Mission Village Supercenter. See Appendix C.

found." ..... "Adding to the already plentiful available commercial real estate space on Chadbourne Road will detract from the area and the closed Discount Store can be expected to create significant urban decay."

Another major topic of Dr. King's memo was the disposition of a Kmart store located on North Texas Street next to the future Walmart site. Of this store, Dr. King said:

"The proposed site is directly adjacent to the Kmart shopping center and it is very apparent that this center is experiencing difficulties. The overall appearance of the center is poor and routine maintenance has been deferred.....Kmart competes directly with Wal-Mart and it is clear that a Supercenter would put the Kmart discount store, and eventually the entire shopping center, out of business. Thus, opening the Supercenter in the Mission village shopping center would lead to the subsequent closing of the Kmart center."

Notably, the economic analysis prepared for the project's EIR by the real estate economics firm Economic & Planning Systems indicated that the Kmart center, which also included Big Lots, Radio Shack, Valero Gas Station, Burger King, Dollar Tree, a bingo center, and a thrift store, was likely to be particularly vulnerable to the competitive threat from Walmart.<sup>46</sup> This Kmart store was noted to have weak annual sales even in the absence of Walmart, and its long-term viability was cited as further jeopardized by the company's corporate performance at the national level.<sup>47</sup> However, as noted by EPS, the Walmart project was anticipated to eliminate the most significant potential source of existing urban decay conditions along North Texas Street given its redevelopment of the 18-acre Mission Village Center. The EPS analysis further stated "From an urban decay perspective, any new vacancies that might occur at the Kmart Center across the street because of the additional competition will be at least offset by improved conditions at the Mission Village Center." <sup>48</sup>

The Walmart Supercenter opened on North Texas Street in November 2010. In February 2011, the former Walmart store at Chadbourne Road was sold to Specialty Properties Partners, LLC.<sup>49</sup> Shortly thereafter in June 2011, Specialty Sales Classic opened,<sup>50</sup> an industry leader in classic, antique, and exotic cars whose California showrooms contain the largest indoor inventory of highly collectable vehicles in the western United States. With four Bay Area showrooms, the Fairfield showroom is their largest. Recently, in addition to their showroom space, Specialty Sales augmented the use of the property by opening a banquet hall in a portion of the space. Thus, a property for which Dr. King doubted a suitable tenant could be found and that was designed only for a big box store was sold to a new user three months after Walmart vacated the property and opened with a new use a scant four months later, and later modified to include a second new use. Clearly Dr. King's opinion regarding the reuse potential and appeal of the former Walmart space in Fairfield was wrong. And clearly the

<sup>46</sup> "Wal-Mart Supercenter Economic Impact Analysis," Final Draft Report, Prepared for City of Fairfield, Prepared by Economic & Planning Systems, Inc., October 2005, page 53. See Appendix C.

<sup>48</sup> Ibid, page 67.

<sup>49</sup> See Realquest printout with Recording/Sale Date in Appendix C.

<sup>50</sup> See <http://www.specialtysales.com/showroom.php?location=Fairfield>. Copy included in Appendix C.

reuse of this property did not detract from the area and create significant urban decay as stated by Dr. King.

Dr. King was wrong yet again about future events in Fairfield when he said at least two grocery stores would close. For context, he specifically said at least two of the following stores would close:

- Raley's on North Texas Street in Fairfield
- Raley's on Sunset Avenue in Suisun City
- Food Maxx on West Texas Street in Fairfield
- Albertson's on North Texas Street in Fairfield

Even prior to the Walmart opening, the Albertson's on North Texas Street closed as part of the chain's bankruptcy. However, by July 2010 (possibly earlier), and several months before the Walmart opening, a new grocery tenant, Mexico Meat Market, took over the entire space. This store remains in operation three years after opening of the Walmart Supercenter. In addition, the other three grocery stores referenced by Dr. King are also open and fully operational. This even includes the Food Maxx on North Texas Street, which ALH Economics believes may be the store Dr. King meant to mention since the North Texas Street Food Maxx, another discount retailer, is located closer to the Walmart Supercenter site than the chain's store on West Texas Street. Regardless, both Fairfield Food Maxx stores remain open three years after Walmart relocated and expanded to North Texas Street. The continued operations of these stores, and even the opening of a new store with the knowledge of the pending opening of a nearby Walmart Supercenter indicates that Dr. King was wrong about these stores closing and by extension wrong about the shopping centers where they are located experiencing urban decay.

Finally, Dr. King said that the nearby Kmart store would close and that the entire shopping center where Kmart is located would close. This is a subject that was also discussed in the EIR, with the potential for closure of this store also referenced in the EIR. This Kmart store did indeed close, but only in September 2013, almost three years after the opening of the Walmart Supercenter. This closure coincided with the end of the store's lease, and Kmart opted not to renew the lease. As noted by Dr. King and in the EIR, this store had marginal operations even before Walmart moved next door. According an Economic Development official with the City of Fairfield, Kmart sales dropped somewhere between 10-20% after the Walmart store opened.<sup>51</sup> However, as noted, the store remained in business until its lease expired.

ALH Economics visited the Kmart site in November 2013. The property is well maintained despite losing its anchor tenant. Approximately two years prior to Kmart's closure, or roughly one year after the Walmart Supercenter opened, the adjoining Big Lots store closed, in pursuit of a larger space in the market. While the overall property is referred to as the Kmart center, the Kmart and the Big Lots spaces are under separate ownership from the other site uses. This separate ownership includes the bingo center space, which closed a couple years ago. Aside from these uses, all other site uses referenced by EPS in their report are still there, including Dollar Tree, Radio Shack, and Burger King. While Dr. King might argue that these uses will close and leave now that the Kmart is vacant, actions by the Kmart store owner suggest otherwise. In early November 2013, just a scant two months after

<sup>51</sup> Telephone interview with Karl Dumas, Senior Economic Development Project Manager, City of Fairfield, November 15, 2013.

Kmart's closing, the property owner submitted a Development Review package to the City of Fairfield to initiate rehabilitation activities on the site. These plans include subdividing the combined Kmart and Big Lots space into at least four spaces, including an approximately 50,000-square-foot junior anchor space. According to the City of Fairfield, several uses are interested in the space, including a fitness center and general retailer.

In addition to the property ownership planning to subdivide the building area, other site plans include a new façade, upgrading the parking lot, adding pads for restaurants, and upgrading signage and landscaping. These development plans reflect activities completely contrary to Dr. King's forecast of urban decay following closure of the Kmart store. Instead, the property owner is reinvesting in the property, taking the opportunity to modernize the space and make it more attractive. This hardly suggests that the property will fall into disrepair and ultimately contribute to urban decay, as Dr. King otherwise suggests. Hence even the anticipated closure of an existing store, which may or may not have been caused by competitive pressure from the Walmart Supercenter, is not a portent of urban decay, and instead provides an opportunity to improve the existing retail base. This, and the preceding findings regarding the swift sale and backfilling of Walmart's former store space and the continued operations of grocery stores Dr. King said would close, demonstrates how fundamentally wrong Dr. King's findings and opinions were regarding the potential for Walmart-related urban decay in Fairfield and strongly cast into question his credibility and expertise.

### Yuba City

In April 2006, a Walmart Supercenter opened in Yuba City. Similar to Fairfield, this store comprised an expansion and relocation of an existing Walmart store. The EIR for this project was prepared in approximately 2004. During the public review process for the EIR, Dr. King (along with Sharmila King) submitted a March 15, 2004 memo to attorney William Kopper titled "Reply Draft Environmental Impact Report (DEIR) prepared in conjunction with the proposed Yuba City Super Wal-Mart." In this memo, Dr. King declared that "We believe that the creation of a Super Center will result in an oversupply of retail space in Yuba City, forcing many anchor stores, particularly grocery stores, out of business, blighting two malls."<sup>52</sup> Further, in a statement foreshadowing his predictions in Fairfield, he said "... we believe that at least two of the following stores are likely to close if the Super Center is built: Raley's, Albertson's, Grocery Outlet. The result will lead to increased blight in Yuba City." With regard to the existing Walmart store that would be vacated by Walmart upon completion of the Supercenter, Dr. King said "Given the size of the existing space and its unattractiveness for most retailers, we believe the space will be empty." He also said the Walmart would reduce traffic in the downtown area and would compete directly with over half of retail shops downtown and that dozens of businesses could close, including in downtown. Dr. King's memo specifically included pictures of numerous downtown storefronts, as examples of stores that he said would compete with Walmart. To summarize, based on analysis Dr. King conducted on the retail market and grocery market in Yuba City, Dr. King said the Walmart Supercenter would cause two out of three specific grocery stores to close, that the existing Walmart store would remain empty, and that numerous businesses in downtown Yuba City would close.

<sup>52</sup> All references to Dr. King's Yuba City analysis pertain to a memo prepared by him on March 15, 2004, addressed to William Kopper, Attorney at Law, Re: Reply Draft Environmental Impact Report (DEIR) prepared in conjunction with the proposed Yuba City Super Wal-Mart. This memo was coauthored by Sharmila King with Philip King listed first as the primary author. See Appendix C.

In June 2007, Amy Herman, the Principal of ALH Economics, had reason to follow up on economic impacts in Yuba City pursuant to the April 2006 opening of the Walmart Supercenter.<sup>53</sup> At that time, information gathered from the Yuba-Sutter Economic Development Corporation (EDC) indicated that no negative impacts had been noted associated with the Walmart opening. The Yuba City-Marysville area had experienced tremendous population growth coupled with increasing household incomes and the area was thriving.

As of June 2007, the EDC indicated no major retailers had closed in Yuba City, although one small hardware store was on the verge of closing, and ultimately did close due to family retirement. The lack of existing store closures in Yuba City was noted even in light of the opening of another Walmart Supercenter in nearby Marysville, just a few miles from the Yuba City Supercenter. In addition, the EDC further indicated that the existing Grocery Outlet was upgrading and relocating within the market. Thus, more than a year after the Yuba City Walmart Supercenter opened, no existing grocery stores had closed, and one of the existing grocery stores Dr. King said might close was relocating and expanding. These actions demonstrate that at the time, there were no known negative impacts on the existing grocery market in Yuba City attributable to the Wal-Mart Supercenter.

Fast forward to the present, and Yuba City has since experienced the Great Recession and unemployment per City sources is 5% greater than the national average and historically among the top five unemployment rates in the nation.<sup>54</sup> Despite this, the City's major shopping centers are at least 85% leased, and the City depicts the retail base as strong. Within a year of the new Walmart store opening in 2006, the former Walmart store was sold to Lowe's Home Improvement Warehouse, which proceeded to demolish the former Walmart store and build a new Lowe's store. The City's Economic Development officer indicates the Lowe's store opened around 2007, comprising swift reuse of the former Walmart site. Already by 2007 the Grocery Outlet store was expanding and relocating. Similar to Fairfield, the Albertson's store closed for corporate reasons, but was taken over by Save Mart. This Save Mart store remains in operation today, as does the Raley's store that Dr. King said could close. Thus, all three of the grocery stores, among which Dr. King said two would close, continue to operate side by side with the Walmart Supercenter. Further, the City's Economic Development officer is not aware of any major grocery stores that closed due to competitive pressures from Walmart.

Dr. King's Yuba City memo included photographs of downtown stores he said would compete with Walmart, implying that at least half these stores would close because of Walmart, either due to competitive pressures or reduced downtown traffic. These stores, with some street names listed but no addresses, were as follows:

- Friends and Heart
- Evan's General Store (Plumas Street)
- *Pelton's Party Rental and Sales*
- Outlet Discount Store

<sup>53</sup> At that time Ms. Herman was a Senior Managing Director at CBRE Consulting, which was the successor firm to Sedway Group. See Appendix A for Ms. Herman's professional history.

<sup>54</sup> Telephone interview with Darin Gale, City of Yuba City Economic Development Manager, November 15, 2013.

- The Potting Barn Annex (Plumas Street)
- *Gaiser Pets (Plumas Street)*
- *Butler Cleaners*
- *Larry's Business Center (Plumas Street)*

The stores listed in bold italics are confirmed by ALH Economics to still be in operation today. Among the four stores not confirmed, The Potting Barn Annex closed due to a partnership breakup. In a telephone interview with ALH Economics, the former owner of this store confirmed the closure was not related to competitive pressures exerted by Walmart.<sup>55</sup> Because Dr. King did not reference addresses for these businesses in his memo, ALH Economics has not been able to determine the current disposition of the remaining three businesses not denoted in bold italics. These three businesses comprise 38% of the downtown businesses cited by Dr. King as at risk of closure due to Walmart. This percentage is lower than the 50% cited by Dr. King that would close, and could be even lower if some of these businesses relocated or changed business model and/or name, as businesses are wont to do. But most importantly, in the 2007/2008 timeframe, the City of Yuba City launched a \$15 million Streetscape Improvement Project funded through redevelopment on Plumas Street between Highway 20 and Bridge Street.<sup>56</sup> This redevelopment effort included infrastructure reconstruction, sidewalk widening, landscape improvements, installation of street furniture and art, street reconstruction, and other improvements. Vehicular access to the road was not available for almost a year. The City's Economic Development Manager indicates many businesses likely had a difficult time managing during this period, although the City provided signage and other features designed to support existing businesses.<sup>57</sup> Nevertheless, this important public works improvement project could be equally if not more likely a cause for closure of some of the businesses singled out by Dr. King, or there could be yet even other reasons that could instead be part of the normal cycle of business growth and decline. Without access to the former business owners or managers, the reason for business closure cannot be determined. But most importantly, it is very possible that the spaces previously occupied by these likely closed businesses were backfilled by yet other businesses. Because Dr. King's work did not list addresses for these businesses, ALH Economics is not able to follow up and determine the current occupancy status of the spaces. However, the City's Economic Development Manager reports that Plumas Street currently has very few vacancies. Nevertheless, it is important to remember that the ultimate issue and concern regarding urban decay is not business closures but rather impacts on the *physical environment*. Therefore, competitive impacts that may have been exerted by Walmart are immaterial if these properties were vacated and then backfilled by other users.

In addition to the listed stores, Dr. King's memo included a picture of the Sutter Theater and indicated once Downtown Yuba City begins to deteriorate, the theater will close and cause additional blight. In December 2004, the nonprofit Sutter Performing Arts Association was formed as a public effort to save the historical Sutter Theater.<sup>58</sup> Given this effort, it seems likely the theater was already closed when Dr. King included its picture in his March 2004 memo. The timing of the theater's closure aside, Sutter Performing Arts Association has been raising money to restore the facility, with a \$4.0 million

<sup>55</sup> Telephone interview with Joyese Sneed, November 19, 2013.

<sup>56</sup> For a slide show about the improvement project, see:

<http://www.calredevelop.org/External/WCPages/WCWebContent/WebContentPage.aspx?ContentID=1869f>

<sup>57</sup> Telephone interview with Darin Gale, City of Yuba City Economic Development Manager, November 20, 2013.

<sup>58</sup> See <http://www.suttertheater.org/>

goal. According to the City's Economic Development Manager, substantial progress has been made on the restoration, including repair of the exterior as well as roof and electrical work, completed approximately two years ago. Thus the deterioration Dr. King said would occur clearly did not, with rehabilitation work occurring instead.

As in the case of Fairfield, the preceding review of Dr. King's predictions regarding the dire impacts of Walmart on Yuba City's retailers and commercial market conditions do not hold up. None of the grocery stores Dr. King said would close actually closed, the former Walmart site was swiftly and readily reused, including via the development of newer construction, hence upgrading the overall condition of the real estate base. In addition, many downtown stores Dr. King said would be vulnerable to Walmart continue to be in business 7.5 years after the opening of the Walmart Supercenter and the Sutter Theater Dr. King said would deteriorate instead has undergone rehabilitation. Dr. King could hardly have been more wrong in his assessment of Walmart's impact on Yuba City, despite his purported analysis of the retail market and grocery market in Yuba City.

### **Gilroy**

In approximately 2005, Walmart opened a Supercenter in Gilroy. As in Fairfield and Yuba City, this store comprised an expansion and relocation of an existing Walmart store. In the February 17, 2004 report, "Economic Analysis of a Proposed Wal-Mart Super Center in Gilroy, California," prepared by CERA, Dr. King et al. asserted that the opening of the Walmart Supercenter would have a significant negative effect on the downtown and other Gilroy retailers, particularly grocery stores. Dr. King et al. prepared this report for attorney John Gabrielli. In this report, Dr. King et al. declared that the PW Market, Arteaga's, and the Gilroy Village mall would be forced to close within a year of the Supercenter's opening.<sup>59</sup> The report additionally included a list of 74 retailers that would feel serious impacts. Dr. King et al. claimed these impacts would lead to higher vacancy and blight in the City of Gilroy. Dr. King et al. referenced yet other dire consequences for Gilroy, such as a potential rise in unemployment and the opportunity cost to shoppers of more traffic in the area.

In June 2007, Amy Herman, the Principal of ALH Economics, had reason to follow up on economic impacts in Gilroy pursuant to the approximate 2005 opening of the Walmart Supercenter. Through conversations with the Gilroy Economic Development Corporation at that time, approximately 1.5 years after the Supercenter opened its doors, it was clear that the retail market, as well as the overall health of the community, continued to prosper. The Gilroy Economic Development Corporation estimated that retail occupancy citywide was 99 percent. The predictions made by Dr. King et al. did not come to fruition: the downtown was experiencing significant redevelopment including the development of housing, the City's population was growing, unemployment was down, retail center occupancies were high, and the Arteaga's market and Gilroy Village mall (properly identified as the Gilroy Village Shopping Center) were still in operation, with the latter anchored by Rite Aid as it was at the time Dr. King et al. their report. About a year before the Walmart Supercenter opened, in November 2004, the PW Market closed its doors in the Gilroy Village Shopping Center. This followed more than a year of sales declines. A 99 Cent Store and Smart & Final took over the vacant PW Market space, with no residual impact on vacancy due to the PW Market closure. Notably, Smart &

<sup>59</sup> All references to Dr. King's Gilroy analysis pertain to a report prepared by him and two other associates on February 17, 2004, addressed to John Gabrielli, Attorney at Law. The report is titled "Economic Analysis of a Proposed Wal-Mart Super Center in Gilroy, California." See Appendix C.

Final also is a vendor of food items. See's Candy had also moved into the neighborhood center and it was 96% occupied in June 2007. The Town Center Shopping Center, anchored by Grocery Outlet, was also 96% occupied.

The preceding market data refute Dr. King et al.'s claims that within a year of the Walmart store opening existing grocery stores and the Gilroy Village Shopping Center would close. Moreover, Appendix 1 of Dr. King et al.'s report, titled "Businesses we believe will be significantly impacted by [the] proposed Super Center" listed 74 businesses. Of those, Ms. Herman found in June 2007 that more than half were located in the fully occupied Outlet Center in Gilroy and a number of the businesses were, in fact, food manufacturing operations and/or office headquarters. Such uses are highly unlikely to compete in any fashion with Walmart. The list also included a convenience oriented shopping locales, such as a Shell Gas Station Food Mart, three 7 Eleven locations, as well as a classic car shop, none of which face competition from the Supercenter. Thus, this list compiled by Dr. King et al. for the purpose of their analysis was a gross overstatement of the number and type of businesses likely to be impacted by the Supercenter.

In another fast forward to the present, ALH Economics reached out yet again to the Gilroy Economic Development Corporation. Now under new leadership, the Gilroy Economic Development Corporation continues to believe the Gilroy retail market did not experience any negative impacts attributable to the Walmart.<sup>60</sup> Not only are Arteaga's and other grocery stores still in operation that existed when the Walmart store opened but additional major grocery operators have entered the market, such as Mi Pueblo, a leading Hispanic grocery store chain. This indicates that Walmart does not constrain grocery operations in Gilroy. In fact, Mi Pueblo moved into space vacated by Grocery Outlet, which had relocated to a different Gilroy location. This is an example of successful retail backfilling in the market, similar to the earlier backfilling of PW Market by 99 Cent Store and Smart & Final. Another example of successful backfilling is the reuse of the former Walmart space, vacated when Walmart built the new Supercenter. Unlike Fairfield and Yuba City, this Walmart reuse took several years, in some part due to the poor visibility of the site relative to the core retail base in Gilroy, which serves a large regional area. However, Walmart had sold the property almost immediately, and thus the property was under different ownership during its years of vacancy. Approximately two years ago, See Grins RV took over the space, using both the former Walmart building and parking lot for RV displays. See Grins promotes itself as the largest indoor showroom of RV equipment west of the Mississippi. This was an expansion opportunity for See Grins RV, which maintained its smaller facility in nearby San Martin, and recently expanded into Morgan Hill. This reuse therefore comprised a net gain in retail occupancy for the region.

Overall, the combined Morgan Hill/Gilroy retail base is operating at 9.9% vacancy, down from a recent high of 11.0% in 2010.<sup>61</sup> Specifically in Gilroy, the Gilroy EDC indicates that the main retail shopping centers are almost fully leased. Therefore, Walmart does not appear to be having a stifling effect on the local retail base. An exception to the strong occupancy includes a shopping center built in the 2007/2008 timeframe, which never achieved a 40,000-square-foot anchor tenant. However, since this center was built after Walmart's expansion and relocation, the unsuccessful leasing effort can certainly not be attributed to Walmart. In addition, the Gilroy EDC indicates that prior to the Great

<sup>60</sup> Telephone interview with Tammi Brownlow, President, Gilroy Economic Development Corporation, November 15, 2013.

<sup>61</sup> "Santa Clara County Retail Report: Third Quarter 2013," Terranomics Retail Services. See Appendix C.

Recession there was a lot of momentum for Downtown Gilroy. Newer residential development was fully leased or sold. The main constraint experienced by Downtown properties now are regulations regarding unreinforced masonry, which especially contributes to ground floor vacancies in the 1,000 to 3,000 square foot range and deteriorated appearances. Despite these issues, which again have no relevancy to Walmart, the core area of downtown Gilroy between 3<sup>rd</sup> and 6<sup>th</sup> streets is reported to be doing well, with new restaurant, wine bar café, boutique, and coffee shop uses.

In summary, the major grocery store closures predicted by Dr. King et al. after Walmart's opening did not occur, and many of the stores they expected to be significantly impacted by Walmart are not competitive with Walmart and are not even retail operations. Further, the predominant issues impacting optimal development of Downtown Gilroy are regulatory rather than market-based, and again have no bearing on Walmart. In conclusion therefore, Dr. King et al. once again missed the mark in their predictions regarding Walmart's effects in Gilroy.

### Summary

In summary, the preceding review of Dr. King's statements about Walmart impacts in Fairfield, Yuba City, and Gilroy indicate that Dr. King does not have a strong grasp on retail market dynamics and consistently reaches conclusions from his own analysis that are not borne out. In all three of these examples, the urban decay Dr. King stated would occur did not occur, and certainly not within the timeframes stated by Dr. King. Stores he emphatically said would close continue to operate today and properties he said would not be reused currently have strong viable users. These fundamentally wrong and baseless predictions further support ALH Economics' earlier findings that Dr. King's analysis and findings regarding the proposed Life Time Fitness in Roseville are flawed, and do not support his conclusion that urban decay will result from development of Life Time Fitness, with or without the cumulative impacts of VillaSport.

### CLOSING

ALH Economics appreciated the opportunity to prepare this analysis for the City of Roseville. Please let me know if you have any questions regarding the analysis and findings.

Sincerely,

ALH Urban & Regional Economics

Amy L. Herman, AICP  
Principal

## Attachment 10

RESOLUTION NO. 13-471

CERTIFYING A FINAL ENVIRONMENTAL IMPACT REPORT RELATING  
TO THE LIFE TIME FITNESS PROJECT LOCATED WITHIN THE STONERIDGE  
SPECIFIC PLAN, ADOPTING FINDINGS OF FACT, AND ADOPTING  
THE MITIGATION MONITORING AND REPORTING PROGRAM

WHEREAS, Life Time Fitness proposes to construct a two-story, 120,000 square foot fitness facility in the Stoneridge Specific Plan known as Life Time Fitness (Project); and

WHEREAS, the City of Roseville (City) determined that an environmental impact report (EIR) should be prepared for the Project pursuant to the California Environmental Quality Act (CEQA), Public Resources Code sections 21000 *et seq.*; and

WHEREAS, the Notice of Preparation for the Project was circulated for comment by responsible and trustee agencies and the public from March 25, 2013 through April 25, 2013; and

WHEREAS, the Draft EIR for the Project was distributed to the public and various public agencies for review and comment beginning on July 24, 2013 through September 9, 2013; and

WHEREAS, during the public review and comment period, the Draft EIR was reviewed by the City Planning Commission at a public hearing on August 22, 2013; and

WHEREAS, written and oral comments on the Draft EIR were received, and responses to those comments have been prepared and included in the Final EIR; and

WHEREAS, the City Council held a public hearing on the merits of the Project on November 6, 2013; and

WHEREAS, on the day of the public hearing, the City Council received correspondence from the Downey Brand law firm on behalf of VillaSport LLC, in which attorney Christian Marsh offered numerous contentions to the effect that the EIR was legally deficient; and

WHEREAS, during the public hearing on November 6, 2013, the City Council received additional correspondence from the Herum Crabtree law firm on behalf of an unincorporated association calling itself Committee for a Better Roseville, in which attorney Steven Herum contended that the EIR was legally deficient; and

WHEREAS, Committee for a Better Roseville had not previously filed comments on the Notice of Preparation or Draft EIR, but instead only expressed its concerns at the very end of a lengthy administrative process open to the public; and

WHEREAS, an attachment to the correspondence from Herum Crabtree law firm was a November 4, 2013, report from Philip King, Ph.D, to Mr. Herum, in which the author contended that there is "a significant potential for urban decay stemming from this project"; and

WHEREAS, upon the advice of outside CEQA counsel and recommendation of the Assistant City Attorney, the City Council, having received late correspondence from two law firms, opted to close the public hearing and continue the Council's deliberations on the Project until December 4, 2013; and

WHEREAS, the City Council instructed City staff to consider the contentions raised in the new correspondence and to prepare written responses to the contentions made by the Downey Brand and Herum Crabtree law firms; and

WHEREAS, the City subsequently retained the services of ALH Urban & Regional Economics to review the contentions made by Philip King on the subject of urban decay; and

WHEREAS, Amy L. Herman, the Principal of ALH Urban & Regional Economics, has very considerable experience dealing with urban decay analyses in EIRs and has impressive academic and professional credentials, making her a credible expert on the subject in the eyes of the City Council; and

WHEREAS, detailed responses to the contentions made by Downey Brand, Herum Crabtree, and Philip King were prepared by the environmental consulting firm Dudek (which prepared the EIR), City staff, the City's CEQA counsel Remy Moose Manley, LLP, and ALH Urban & Regional Economics; and

WHEREAS, these detailed responses have satisfied the City Council that the contentions made by Downey Brand, Herum Crabtree, and Philip King are without merit; and

WHEREAS, the report prepared by ALH Urban & Regional Economics included a very thorough analysis of the various assumptions underlying Philip King's contentions, finding them to be erroneous in many instances; and

WHEREAS, ALH Urban & Regional Economics summarized its conclusions on this subject as follows:

"To summarize ALH Economics' preceding comments on Dr. King's analysis and opinions, ALH Economics believes that Dr. King's analysis is based upon faulty and undocumented assumptions. His work is sloppy and often unsubstantiated, resulting in the following flaws:

- Grossly underestimated existing fitness facility demand
- Incomplete inventory of supply of existing fitness facilities
- Unsupported estimate of existing club space use and membership
- Use of obsolete, misleading, and selective data
- Erroneous estimate of prospective Life Time Fitness membership

- Underestimate of VillaSport membership
- Overreliance on macro-level retail market data that obscure more favorable conditions in Roseville
- Misunderstanding and misrepresentation of retail market trends"; and

WHEREAS, the report prepared by ALH Urban & Regional Economics also included detailed analyses of past instances in which Philip King, on behalf of other clients, similarly predicted that proposed projects (typically "big box" retailers) would also cause urban decay; and

WHEREAS, with respect to Philip King's track record with respect to his past predictions that various projects, if approved, would cause urban decay, ALH Urban & Regional Economics concluded that its "analysis puts into question Dr. King's accuracy and credibility as an 'expert' witness," and that his "submission at the very end of a project's administrative process of materials insisting that a CEQA document is inadequate and must be redone is not a one-time event, but rather is part of an established pattern of inaccurate doom and gloom urban decay predictions made repeatedly by him throughout California and beyond"; and

WHEREAS, the analysis of Philip King's track record by ALH Urban & Regional Economics included three cases studies based on his comments on projects proposed in the Cities of Fairfield, Gilroy, and Yuba City; and

WHEREAS, in summarizing its conclusions with respect to these case studies, ALH Urban & Regional Economics had the following to say:

"[T]he preceding review of Dr. King's statements about Walmart impacts in Fairfield, Yuba City, and Gilroy indicate that Dr. King does not have a strong grasp on retail market dynamics and consistently reaches conclusions from his own analysis that are not borne out. In all three of these examples, the urban decay Dr. King stated would occur did not occur, and certainly not within the timeframes stated by Dr. King. Stores he emphatically said would close continue to operate today and properties he said would not be reused currently have strong viable users"; and

WHEREAS, CEQA case law has long recognized the authority and ability of agency decisionmaking bodies to discount the testimony of witnesses those bodies find not to be credible (see, e.g., *Quail Botanical Gardens Foundation, Inc. v. City of Encinitas* (1994) 29 Cal.App.4th 1597, 1603; *Bowman v. City of Berkeley* (2004) 122 Cal.App.4th 572, 583; *San Joaquin Raptor/Wildlife Rescue Center v. County of Stanislaus* (1996) 42 Cal.App.4th 608, 617; *Stanislaus Audubon Society, Inc. v. County of Stanislaus* (1995) 33 Cal.App.4th 144, 151; *Sierra Club v. County of Sonoma* (1992) 6 Cal.App.4th 1307, 1317; and *Benton v. Board of Supervisors* (1991) 226 Cal.App.3d 1467, 1483); and

WHEREAS, based on the report prepared by ALH Urban & Regional Economics and its own familiarity with the real estate market in Roseville, the City Council finds Philip King *not* to be a credible witness, and therefore discounts his testimony; and

WHEREAS, the City Council is persuaded by the expert report prepared by ALH Urban & Regional Economics, which constitutes substantial evidence, that the Project will not cause urban decay and certainly will not cause any significant environmental effects related to urban decay; and

WHEREAS, the Final EIR has been presented to the City Council, which has reviewed and considered the information in the Final EIR; and

WHEREAS, the City Council has determined that the document reflects the City's independent judgment; and

WHEREAS, the Final EIR identified certain significant effects on the environment that, absent the adoption of mitigation measures, would be caused by the construction and operation of the Project; and

WHEREAS, the City Council is required, pursuant to Public Resources Code section 21081, subdivision (a), to adopt all feasible mitigation measures or feasible project alternatives that can substantially lessen or avoid any significant project-related environmental effects; and

WHEREAS, as demonstrated by the Findings of Fact attached as Exhibit A to this Resolution, the Project's significant environmental effects can be reduced to a less than significant level through the adoption of feasible mitigation measures; and

WHEREAS, because the adoption of all feasible mitigation measures has mitigated all significant effects on the environment associated with the Project to a less than significant level, the City Council need not, as a legal matter, consider the feasibility of alternatives, as set forth in the Final EIR, that will have less severe environmental impacts than those of the Project; and

WHEREAS, the City Council nevertheless has determined, for reasons set forth in Exhibit A attached hereto, that the alternatives, as described in the Final EIR, are infeasible in any event; and

WHEREAS, because the Project will not cause any significant unavoidable impacts, the City Council is not required to adopt a Statement of Overriding Considerations pursuant to Public Resources Code section 21081, subdivision (b), and CEQA Guidelines section 15093; and

WHEREAS, the City Council is required by Public Resources Code section 21081.6, subdivision (a), to adopt a Mitigation Monitoring and Reporting Program to ensure that the mitigation measures adopted by the City Council are actually carried out; and

WHEREAS, the City has prepared for the Project a Mitigation Monitoring and Reporting Program, which is included as Chapter 5 to the Final EIR; and

WHEREAS, none of the comments made during the public review period, none of the oral or written testimony presented during the public hearing on the Project, and no other information presented to the City on the Project and the EIR have included significant new information requiring recirculation of some or all of the Draft EIR pursuant to CEQA Guidelines section 15088.5; and

WHEREAS, the Development Services Director is the custodian of the documents which constitute the record of proceedings for this Project and the record of proceedings is located at the Roseville Civic Center, Development Services Department, at 311 Vernon Street, Roseville, CA 95678; and

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Roseville, having independently considered the environmental effects of the Project as shown in the Final EIR, as follows:

1. The above recitals are true and correct and are hereby incorporated as substantive findings of this Resolution.
2. It is hereby certified that the City Council has reviewed the Final EIR prepared for the Project, as well as all staff reports pertaining to the Project, and all other pertinent documents relating to the preparation of the Final EIR, including the Draft EIR and all comments received thereon.
3. It is hereby certified that the Final EIR is adequate and complete and has been prepared in compliance with CEQA. The contention of Philip King that there is a "significant potential for urban decay stemming from this project" is not credible, as Philip King is not a credible witness or believable expert.
4. It is hereby certified that the Final EIR reflects the independent judgment of the City as lead agency.
5. The City Council, in anticipation of approving the Project, hereby adopts the CEQA Findings of Fact, attached hereto as Exhibit A, pursuant to Public Resources Code Section 21081, subdivision (a).
6. The City Council, in anticipation of approving the Project, hereby adopts and incorporates into the Project all of the mitigation measures for the Project that are within the responsibility and jurisdiction of the City that are identified in the Findings.
7. The City Council, in anticipation of approving the Project, hereby adopts the Mitigation Monitoring Program for the Life Time Fitness project, as set forth in Chapter 5 of the Final EIR.
8. Direction to staff: The City Clerk is directed to file a Notice of Determination, together with this resolution and its exhibits, if any, in the Office of the County Clerk of Placer County and, in accordance with Public Resources Code Section 21152, shall cause such Notice

to be posted in the County Clerk's Office within five working days following adoption of this resolution.

PASSED AND ADOPTED by the Council of the City of Roseville this 4th day of  
December, 2013, by the following vote on roll call:

AYES COUNCILMEMBERS: Herman, Garcia, Gore, Rohan

NOES COUNCILMEMBERS: None

ABSENT COUNCILMEMBERS: Roccucci

COMMITTEE FOR A BETTER  
ROSEVILLE,

Petitioner,

vs.

CITY OF ROSEVILLE, et al.,  
Respondents.

LIFE TIME FITNESS, INC., et al.,  
Real Parties in Interest.

Case No.: SCV 34096

Factual and Procedural Background

The Life Time Fitness Project

The dispute in this action centers around the Life Time Fitness Project (Project), which proposes the construction of a two-story, 120,000 square foot, members-only fitness facility located on Parcel 14 in the Stoneridge Specific Plan, which consists of 17.41 acres between East Roseville Parkway and Secret Ravine Parkway in Roseville, California. (AR pp. 000201, 001944.) Lifetime Fitness, Inc. (Lifetime) is the owner and operator of a chain of large fitness centers and proposes construction of the Project. (Id

1 at p. 012754.) Tsakopoulos Investment, LLC (Tsakopoulos) is the owner of  
2 Parcel 14, the proposed site for the Project. (Id at p. 000001.) The Project  
3 site is bordered by the Stoneridge West – Village 1, the Silver Ridge Senior  
4 Apartments, and the Saint Anna Greek Orthodox Church and preschool. (Id.  
5 at p. 000195.) Current land uses in the immediate vicinity of the Project  
6 also include open space and Miners Ravine Trail, an assisted care facility that  
7 is under construction, a fire station, and a small commercial development as  
8 seen below: (Id. at pp. 000195-000198.)

000198

1       The Project includes both indoor and outdoor facilities. (AR p.  
2 000201.) The outdoor facilities consist of a 110,000 square foot tennis area  
3 consisting of 14 tennis courts; 58,600 square foot pool deck and bistro with  
4 outdoor leisure and lap pool, two water slides, whirlpool, and outdoor  
5 seating/lounge area; and a 7,100 square foot child activity area which  
6 encompasses a 4,500 square foot day camp along with a 2,600 square foot  
7 child center area. (Ibid.) The indoor facilities will cover approximately  
8 118,500 square feet covering two floors. (Id. at pp. 000201-000202.) The  
9 first floor contemplates 75,000 square foot with amenities that include locker  
10 rooms; life spa/salon; life café; reception area and lounge; gymnasium with  
11 two basketball courts; member activity room and gym; child activity area;  
12 indoor lap pool and leisure pool; two whirlpool spas; sauna; sales offices and  
13 supporting administrative office space; laundry facilities; pro shop and retail  
14 office; and supporting pool pump/mechanical/electrical rooms. (Ibid.) The  
15 second floor will span approximately 43,500 square feet and include a  
16 cardio, resistance, and free weight area; an advance training area; two  
17 group fitness rooms; one cycle studio; two yoga and pilates studios; a  
18 training room; eight offices; a life lab area; and team locker room. (Id. at p.  
19 000202.)

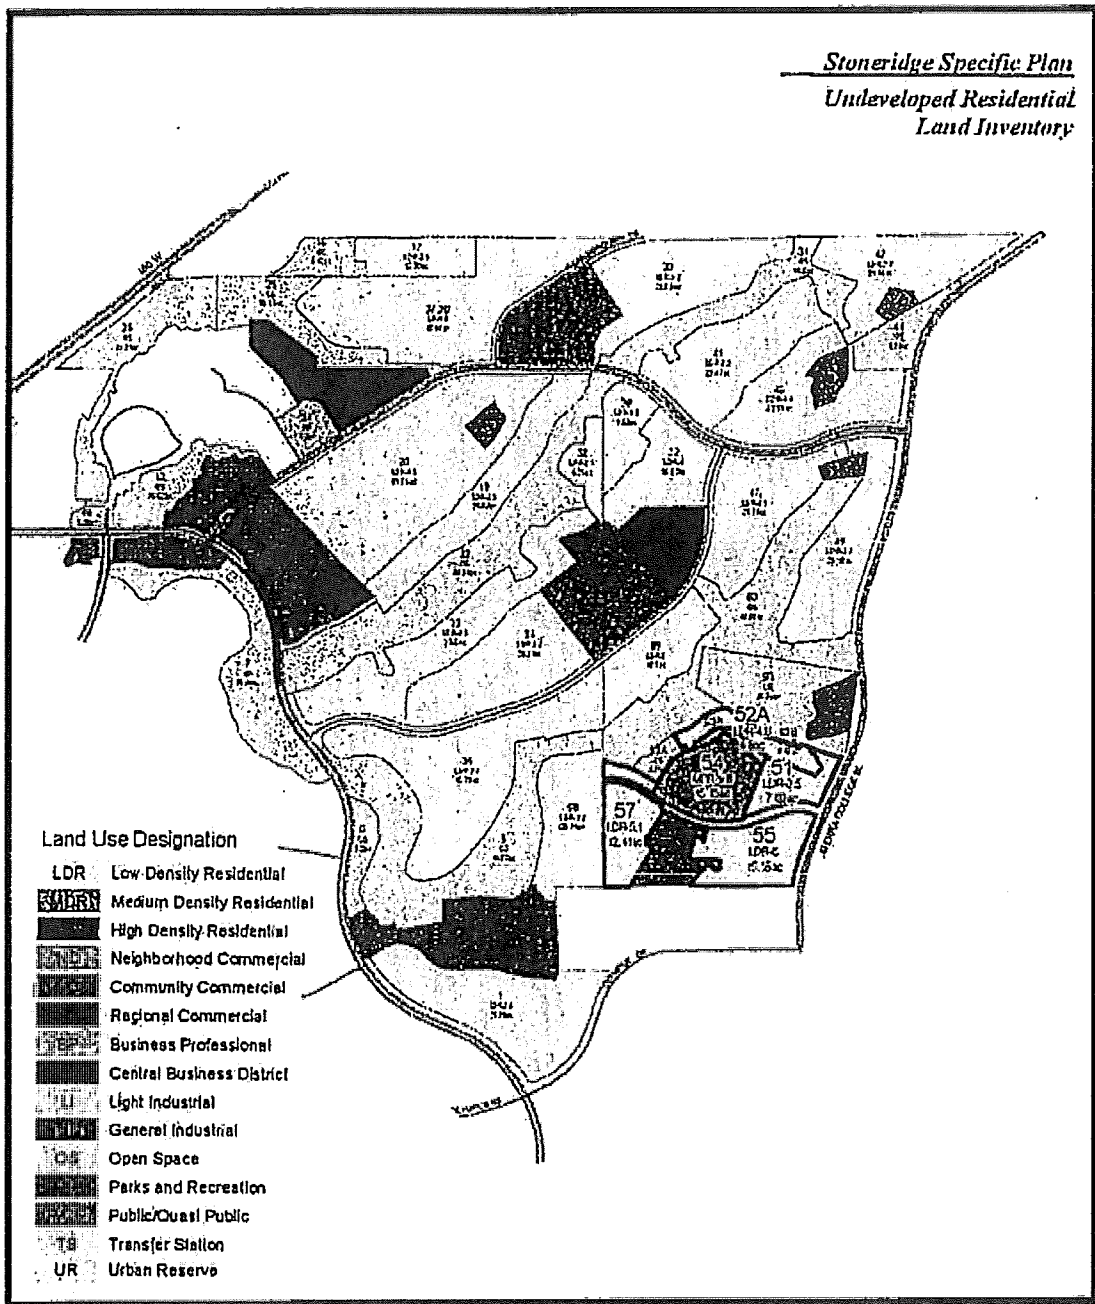

20       Once the Project is completed, the contemplated hours of operation for  
21 the overall fitness center will be from Sunday through Saturday from 5 a.m.  
22 until 11 p.m. for both the indoor and outdoor facilities. (Ibid.) There will,  
23 however, be specific hours of operation for portions of facility such as the  
24 swimming areas, tennis courts, and child activity areas. (Ibid.) The Project  
25 will have three entrances: the main entrance off of East Roseville Parkway  
26 and two entrances off of Secret Ravine Parkway. (Id. at p. 000212.) There  
27 are 643 proposed surface street parking spaces and 21 double bike racks to  
28 allow for 42 bicycles. (Ibid.)

1        The Proposed Project Site, the City of Roseville's General Plan, and the  
2        Stoneridge Specific Plan

3        The City of Roseville's (City) current General Plan, last updated on  
4 February 20, 2013, was adopted on May 5, 2010 by the City Council in  
5 Resolution No. 10-161. (AR pp. 012000-012300.) "The Plan provides  
6 direction to coordinate all major components of the community's physical  
7 development." (Id. at p. 011743.) The purpose of the General Plan is to  
8 "serve as a framework for detailed public and private development  
9 proposals. It establishes requirements for additional planning studies, which  
10 must be completed prior to any future specific plan to modify the General  
11 Plan land use allocations." (Ibid.) The General Plan includes a "planning  
12 area" that is the focus of its land use policy. (Id. at p. 011752.) This  
13 includes an "incorporated area" that is made up of 15 subareas, 13 of which  
14 are specific plan areas. (Ibid.) This includes the Stoneridge Specific Plan.  
15 (Id. at p. 011759.) According to the General Plan, "[t]he Stoneridge Specific  
16 Plan was adopted in March 1998 and includes 1,117 acres, a majority of  
17 which (699 acres) was previously designated as urban reserve in the  
18 Northeast Roseville Specific Plan, with the remainder (390 acres) annexed  
19 into the City from unincorporated Placer County. The Specific Plan includes  
20 2,861 single and multi-family units, including approximately 35 acres of  
21 Commercial, 5 acres of Business Professional, 78 acres of Park, 270 acres of  
22 Open Space, a 15-acre school site and a fire station. At build out, the Plan  
23 area is expected to accommodate approximately 7,467 residents and  
24 provide 1,563 jobs." (Ibid.) The General Plan designates, defines, and  
25 establishes standards for the various land use areas. (Id. at pp. 011771-  
26 011777.) The Plan identifies various land use designations that exist in the  
27 Stoneridge Specific Plan as seen below: (Id. at p. 012188.)

Among the designations within the Stoneridge Specific Plan are areas identified as "Community Commercial" (CC). (Ibid.) "The community commercial land use category is distinguished from the neighborhood commercial designation by providing a broader range of goods and services to an expanded service area." (Id. at p. 011774.) The General Plan

1 describes the standard for CC designated parcels as larger in acreages due  
2 to the larger service area. (Ibid.) "The acreages range from 5 to 25 acres,  
3 the square footage ranges from 50,000 to 250,000 square feet, and the floor  
4 area ratio ranges from 20% to 40%. Appropriate areas for community  
5 commercial land use are the corners of, and adjacent to, arterials." (Ibid.)  
6 The primary uses for parcels designated as CC include retail stores and  
7 businesses that sell a full range of goods and services. (Ibid.) This includes  
8 auto sales, auto repair, and commercial childcare facilities. (Ibid.) CC  
9 designations also have secondary usage for professional offices, which  
10 include medical offices and clinics. (Ibid.)

11 As referenced in the General Plan, the Stoneridge Specific Plan was  
12 originally adopted on March 18, 1998 by the City Council in Resolution No.  
13 98-53 and was last amended on March 28, 2007. (AR pp. 011759, 004789-  
14 004918.) The Roseville Zoning Ordinance and Stoneridge Design Guidelines  
15 also affect the land use policies of the Stoneridge Specific Plan. (Id. at p.  
16 004797.) The land uses are implemented through application of the  
17 permitted, conditionally permitted, and administratively permitted uses that  
18 are designated by the zoning applicable to each parcel. (Id. at p. 004801.)  
19 The Specific Plan is designed to achieve various goals and objectives, one of  
20 which is to provide "community commercial uses in locations which readily  
21 serve the population of the Plan Area". (Ibid.) Its land use plan designates  
22 34.89 acres as CC, which includes the 17.41 acres on Parcel 14. The CCs  
23 "are envisioned to provide a sufficiently large concentration and mix of  
24 services to sustain the needs of local residents and employees of the Plan  
25 Area." (Id. at p. 004808.) As stated in the Stoneridge Specific Plan, "Parcel  
26 14 is intended to serve as the primary neighborhood center with uses  
27 including a grocery/drug store and other neighborhood oriented uses".  
28 (Ibid.) The Specific Plan also listed several special parcel conditions

1 affecting Parcel 14, which included specific requirements for landscape  
2 buffers, masonry walls, non-vehicular access, and joint use park and ride  
3 spaces. (Id. at p. 004908.)

4 The Environmental Review Process for the Project

5 Lifetime's Application for the Project, the Project Evaluation

6 Meeting, and Public Response

7 Lifetime contemplated construction of the Project on Parcel 14 in 2012  
8 and filed a Universal Application for development of the Project with the  
9 City's Planning Department on December 3, 2012. (AR pp. 012754-012761,  
10 012785-012790.) Lifetime's application also requested four permits: (1) a  
11 conditional use permit (CUP); (2) a design review permit (DRP); (3) a zoning  
12 text amendment; and (4) a Specific Plan Amendment (SPA). (Id. at p.  
13 012785.) The City acknowledged receipt of the Project application and sent  
14 a notice to the East Roseville Parkway Neighborhood Association to review  
15 the request, submit comments/questions, and notify the association of  
16 information to schedule a project presentation by Lifetime. (Id. at pp.  
17 012791-012792.) The City's Planning Department gave notice of a project  
18 evaluation meeting (PEM) that would be held on January 9, 2013. (Id. at  
19 pp. 012793-012794.) The Planning Department also issued a PEM letter to  
20 Lifetime on January 9, 2013, that itemized 12 points of further clarification  
21 needed to assess the Project.<sup>1</sup> (Id. at pp. 012795-012797.) These points  
22 included a request for further evaluations regarding parking, pad grades,  
23 visual impacts, lighting, trash, and noise impacts. (Ibid.) As it pertained to  
24 noise, the Planning Department noted: "Based upon the proximity of  
25 Lifetime Fitness' outdoor activity areas to the adjacent residents located to  
26 the north and east, staff has concerns that noise exposure to the homes'

---

27  
28 <sup>1</sup> The January 9, 2013 Planning Department correspondence also refers to an Attachment 1 - Conditions of Approval. However, there appears to be no such attachment readily ascertainable in the administrative record.

1 exterior and interior spaces will exceed the General Plan Noise threshold of  
2 60dB and 45dB, respectively. Please provide a noise study evaluating the  
3 potential noise impacts on the surrounding properties." (Id. at p. 012795.)  
4 It went on to state: "Based on the proximity of the proposed project to the  
5 adjacent apartment complex, and the anticipated visual and noise impacts,  
6 please consider screening views and attenuating noise by placing a six foot  
7 tall masonry wall, fence, or other type of screen along the eastern property  
8 line." (Id. at p. 012796.) Lifetime responded to the PEM letter on February  
9 8, 2013. It specifically noted that noise study by J.C. Brennan & Associates,  
10 Inc. was pending. (Id. at p. 012829.) Lifetime stated, after consultation  
11 with a noise consultant, the Project would incorporate a 6-foot tall solid  
12 barrier between the drive aisle and the carports for the Silver Ridge Senior  
13 Apartments to mitigate pool noise. (Id. at p. 012830.) Lifetime also stated  
14 that no further noise barrier was required to the existing masonry wall.<sup>2</sup>  
15 (Ibid.)

16 During the course of the next few months, various Project  
17 presentations were made within the community that generated numerous  
18 email correspondences from the public inquiring about the Project,  
19 requesting further information, and voicing their approval or disapproval of  
20 the Project. (AR pp. 012805-012920.) An anonymous publication, which  
21 allegedly contained inaccurate information regarding the Project, was also  
22 distributed and garnered additional responses from the public. (Id. at pp.  
23 012841, 012843-012850, 012852, 012854, 012855, 012867, 012870-  
24 012878, 012880-012882, 012888-012890, 012898, 012912.)

25 Project Notice of Preparation, Initial Study, and Comment Period  
26  
27

28 <sup>2</sup> It is noted that page 3 of Lifetime's response to the PEM letter appears to have been  
omitted and is not readily ascertainable in the administrative record.

1       The City issued a notice of preparation (NOP) of an environmental  
2 impact report (EIR) on March 25, 2013 for the Project. (AR pp. 000133-  
3 000178, 012921-012924.) The NOP established a 30 day written comment  
4 period that closed on April 25, 2013. (Id. at pp. 000133-000134.) The City  
5 was designated the lead agency and contact for the Project. (Id. at p.  
6 000133.) The NOP provided for the scope of the EIR, specifically identifying  
7 that the EIR would "provide the basis for CEQA compliance for subsequent  
8 approvals for the project, such as use permits, design review permits, and  
9 other discretionary permits issued by the City". (Id. at p. 000146.) This  
10 included (1) an amendment to the Stoneridge Specific Plan to eliminate two  
11 parcel specific conditions, namely, to delete the language "[n]on-vehicular  
12 access shall be provided between Parcel 14 and the adjacent HDR site of  
13 Parcel 21, provided accessible grades can be maintained. Minimum width of  
14 this access corridor should be 15 feet" and "[a] total of 25 joint use park and  
15 ride spaces shall be reserved on Parcel 14. Signage and space stenciling  
16 shall be provided to designate the parking spaces as available for park and  
17 ride use"; (2) a zoning text amendment to add "outdoor recreation" as a  
18 conditionally permitted use in the CC zone; (3) a conditional use permit  
19 (CUP) to allow "outdoor recreation" uses; and (4) a design review permit.  
20 (Id. at p. 000146.) The NOP identified the scope of the EIR to include  
21 analysis of the Project's impacts to air quality, aesthetics, greenhouse  
22 gases/climate change, noise, and transportation and circulation. (Ibid.) The  
23 initial study (IS) and environmental checklist were attached to the NOP and  
24 the IS concluded the Project could have a significant impact on the  
25 environment, requiring an EIR. (Id. at p. 000149-000178.) However, the  
26 IS determined many of the potential environmental impacts would be "less  
27 than significant or can be clearly mitigated to a less-than-significant level" so  
28 the EIR would focus upon the identified potentially significant impacts to air

1 quality, aesthetics, greenhouse gases/climate change, noise, and  
2 transportation and circulation. (Ibid.)

3 Various comments, including email correspondences, were submitted  
4 during the 30-day period. (AR pp. 000224-000225, 000582-000923,  
5 012929-012935, 012947.) A response and comment was also submitted by  
6 Rutan & Tucker LLP, which discussed in detail 8 separate areas of deficiency  
7 in the IS and the proposed scope of the EIR. (Id. at pp. 000225, 012936-  
8 012946.) The City continued to receive email correspondences regarding  
9 the Project after the comment period for the NOP had expired. (Id. at pp.  
10 012954-012971.)

11 Notice of Availability of Draft EIR, Draft EIR, and Planning  
12 Commission Meeting

13 The City published the notice of availability of the draft EIR for the  
14 Project on July 26, 2013.<sup>3</sup> (AR p. 012973.) The notice stated that the  
15 Planning Commission meeting for presentation of the draft EIR was set for  
16 August 22, 2013. (Ibid.) The draft EIR would be available for public review  
17 for 45 days, from July 24, 2013 through September 9, 2013, and written  
18 comments on the draft EIR would be accepted prior to September 9, 2013.  
19 (Ibid.) The draft EIR was prepared for the City by Dudek and addressed 12  
20 impact areas. (AR pp. 000179, 000189.) The first 5 areas (aesthetics, air  
21 quality, climate change, noise, and transportation/circulation) were identified  
22 in the IS. (Ibid.) An additional 7 areas were also identified in the draft EIR:  
23 (1) biological resources; (2) cultural resources; (3) hazards and hazardous  
24 materials; (4) hydrology and water quality; (5) land use/planning; (6) public  
25 services; and (7) public utilities. (Ibid.) The draft EIR also analyzed 4  
26 alternatives: (1) no project/no build; (2) no project/existing zoning  
27

28 <sup>3</sup> There appears to be typographical errors in the notice of availability. The notice is dated  
"July 23, 2010" and states it was published on "July 26, 2010".

1 alternative; (3) reduced footprint alternative; and (4) reduced  
2 footprint/reduced intensity alternative. (Id. at p. 000190.)

3 The Planning Commission held a meeting August 22, 2013 to accept  
4 the five recommendations in the August 22, 2013 staff report, which  
5 included recommending the City Council certify the draft EIR. (AR pp.  
6 002108-002142, 002829-002893.) The Planning Commission adopted these  
7 recommendations. (Id. at pp. 002829-002893.)

#### 8 Final EIR and City Council Meetings

9 The final EIR was prepared and addressed written comments received  
10 from the public during the public review period. (AR pp. 001939-002107.)  
11 Among the written comments received was a letter from Rutan & Tucker,  
12 LLP, identifying alleged deficiencies in the EIR analysis and the final EIR  
13 addressed the comments raised in the letter. (Id. at pp. 002028-002051.)  
14 The City Council scheduled a public hearing on November 6, 2013 to adopt  
15 the findings and certify the final EIR and other related amendments and  
16 findings for the Project. (Id. at pp. 002143-002478.) On the day of the  
17 hearing, a legal representative for Villasport LLC appeared with numerous  
18 contentions that the EIR was legally deficient. (Id. at pp. 002894-002974.)  
19 A legal representative for the Committee also appeared and submitted  
20 additional correspondence alleging the EIR was legally deficient. (Ibid.) The  
21 City Council closed the meeting and continued the matter to December 4,  
22 2013 in order for its staff to provide a response to these correspondences  
23 and comments made at the hearing. (Ibid.) When the City Council met on  
24 December 4, 2013, a lengthy staff report was presented by the City  
25 addressing the issues raised by Villasport and the Committee. (Id. at pp.  
26 002481-002699.) The City Council found that their contentions were  
27 without merit and proceeded to adopt the findings and certify the EIR.  
28 (Ibid.)

1        The Committee's Litigation

2                Petition for Writ of Mandate

3        The Committee filed its petition on January 2, 2014 alleging three  
4 causes of action: (1) failure of the City to comply with CEQA; (2) violations  
5 of California Planning and Zoning Law, the Roseville Municipal Code, and  
6 Subdivision Map Act; and (3) violations of federal and state due process. As  
7 it pertains to the CEQA cause of action, the Committee contends the City  
8 prejudicially abused its discretion in six specific ways: (1) the CEQA  
9 documents omitted discussion/analysis of urban decay; (2) the EIR adopted  
10 a flawed and legally erroneous baseline; (3) the EIR omitted project  
11 features; (4) the EIR failed to adequately evaluate alternatives to the  
12 Project; (5) the EIR failed to adequately evaluate noise produced by the  
13 Project; and (6) the EIR is inadequate and cannot be cured by the  
14 supplemental staff report. It alleges in the second cause of action the land  
15 use approvals for the Project are inconsistent with or in conflict with the  
16 General Plan, the Stoneridge Specific Plan, and/or the Roseville Municipal  
17 Code. The third and final cause of action asserts the Committee's due  
18 process rights were violated by restricting its time to address the City  
19 Council to five minutes in addition to the City presenting new information in  
20 a supplemental staff report the Committee had no opportunity to review or  
21 address when brought before the City Council.

22                The Administrative Record

23        In conjunction with its petition, the Committee filed a "Notice of  
24 Election to Prepare the Record of Proceedings" to notify the parties it elected  
25 to prepare the administrative record pursuant to Public Resources Code  
26 section 21167.6(b)(2). The Committee filed three proofs of service on  
27 January 13, 2014, declaring all parties to the action had been served with its  
28 election to prepare the record. Despite this notice, the City certified and

1 lodged with the court nine banker boxes, consisting of 45 volumes, as the  
2 administrative record on February 7, 2014. A status conference was set for  
3 April 3, 2014 after the court addressed the conflict in preparation of the  
4 record in relation to the Committee's request for a stay. The parties  
5 indicated at the status conference they would be working together to  
6 compile a complete administrative record. On April 14, 2014, the parties  
7 submitted a stipulation addressing the administrative record where they  
8 agreed, among other things, that the Committee would not challenge the  
9 City's prior lodging of the record and the parties would attempt to resolve  
10 any disputes over the lodged record by stipulation. The City subsequently  
11 certified and lodged a supplemental administrative record on April 29, 2014,  
12 which consisted of 7 volumes in a single banker box. It filed a Notice of  
13 Errata to the Administrative Record on April 29, 2014 to address a printing  
14 error to pages 001414 through 001482 of the record lodged on February 7,  
15 2014. The Committee did not file any further objections or challenges to the  
16 record. The complete administrative record presented to the court by the  
17 parties encompasses ten banker boxes, in 52 binder volumes, and the 68  
18 pages attached to the Errata to the Administrative Record.

19 The Committee's Application for Stay and/or Temporary Restraining  
20 Order/Preliminary Injunction

21 On February 13, 2014, the Committee filed an ex parte application  
22 seeking a stay of the City's approval of the Project pursuant to Code of Civil  
23 Procedure section 1094.5(g), or in the alternative, the issuance of temporary  
24 restraining order and preliminary injunction pursuant to Code of Civil  
25 Procedure section 525 et seq. The court set the matter for further hearing  
26 to better consider the record and sought further briefing regarding the  
27 potential bond amount. The Committee's request was heard on March 6,  
28 2014 and a ruling issued on March 21, 2014. The court addressed the

1 lodging of the administrative record, noting in light of the conflicts the ruling  
2 focused upon the court file rather than the administrative record since the  
3 sufficiency of the record was in dispute. The court granted the Committee's  
4 request for a stay pursuant to Code of Civil Procedure section 1094.5(g)  
5 subject to a \$385,102.00 bond. In light of the ruling on the Committee's  
6 request for a stay, the court denied the alternative relief for a preliminary  
7 injunction.

8 The Committee filed a motion for reconsideration of the court's ruling  
9 on its application for stay on March 26, 2014, asserting the court should  
10 reconsider the ordered bond amount. Prior to the hearing on the motion for  
11 reconsideration, the Committee filed an appeal to the court's ruling on its  
12 request for stay. On April 23, 2014, the court denied the motion for  
13 reconsideration in light of the pending appeal. The Committee also filed a  
14 petition for writ of supersedeas that was denied by the Third District Court of  
15 Appeal on April 24, 2014. The appeal of the court's ruling on the stay  
16 application is still pending before the appellate court.

17 Responsive Pleadings, Limited Consolidation, and Statement of Issues

18 The City and real parties in interest filed their Notice of Intent to File  
19 Responsive Pleadings on January 30, 2014. They followed with a verified  
20 answer on March 7, 2014 that included 14 affirmative defenses.

21 On February 18, 2014, the Committee filed a Notice of Related Case,  
22 informing the court a substantially similar CEQA petition was filed in  
23 Villasport Roseville, LLC v. City of Roseville, et al, Placer Court case number  
24 SCV-34098. The court set the matters for hearing on April 3, 2014 to  
25 consider consolidation of the two cases. At the hearing, the parties  
26 stipulated to consolidation of the cases for the limited purposes of case  
27 management, submission of the administrative record, and coordination of  
28 briefing and hearing dates. The court also set the matter for hearing on

1 June 26, 2014. The matter was subsequently continued, on the court's own  
2 motion, to July 1, 2014.

3 The parties submitted a stipulation on April 14, 2014 where they  
4 agreed the parties' respective petitions and answers would act as their  
5 Statement of Issues pursuant to Public Resources Code section 21167.8(f).

6 At the consolidated hearing on July 1, 2014, attorney Steven Herum  
7 appeared on behalf of petitioner Committee for a Better Roseville; attorneys  
8 Christian Marsh and Becky Smith appeared for petitioner Villasport Roseville,  
9 LLC;; attorney Robert Schmitt appeared on behalf of respondent City of  
10 Roseville; attorney Tina Thomas appeared for real parties in interest Lifetime  
11 Fitness, Inc. and LTF Real Estate; and attorney Larry Larson appeared on  
12 behalf of real party in interest Tskaopoulos Investments, LLC.

13 The court took the matter under submission at that time.

#### 14 Preliminary Issues

##### 15 The Committee's Pending Appeal

16 Although not addressed by any of the parties in their respective briefs,  
17 a discussion of the Committee's pending appeal is warranted to determine  
18 whether this court has jurisdiction to proceed with the merits of the  
19 Committee's petition for writ of mandate. It is well established the filing of a  
20 timely and proper notice of appeal will generally divest the trial court of  
21 jurisdiction over matters embraced in or affected by the appeal. (*Code of*  
22 *Civil Procedure section 916(a); California Rules of Court, Rule 8.100(a)(2);*  
23 *Varian Medical Systems, Inc. v. Delfino (2005) 35 Cal.4th 180, 196-198.*)  
24 An appeal from an interim remedy to maintain the status quo, however,  
25 does not deprive the trial court of jurisdiction to proceed to try the case on  
26 the merits. (*Gray v. Bybee (1943) 60 Cal.App.2d 564, 571.*) This is  
27 because interim remedies, like an injunction, amount to "a mere preliminary  
28 or interlocutory order to keep the subject of litigation in status quo pending

1 the determination of the action on its merits". (*Ibid*; *Varian Medical*  
2 *Systems, Inc. v. Delfino* (2005) 35 Cal.4th 180, 191.) Returning to the  
3 Committee's pending appeal, the Committee challenges the court's ruling  
4 and order on its application for stay and/or injunctive relief entered on March  
5 21, 2014. Since both the application for stay and alternative injunctive relief  
6 sought to maintain the status quo of the pending litigation, the court retains  
7 jurisdiction to address the merits of the Committee's petition.

#### 8 Discussion

9 While the Committee alleges three causes of action in its petition with  
10 several specific contentions under the various causes of action, its opening  
11 brief frames the issues as four separate contentions.

#### 12 Contention One – Deprivation of Due Process and Fair Hearing

##### 13 The Committee's Contentions

14 The Committee asserts due process and Code of Civil Procedure  
15 section 1094.5(b) entitled it to a fair hearing before its members were  
16 deprived of a property interest. According to the Committee, the City did  
17 not provide its members with an effective opportunity to refute, test,  
18 explain, and controvert conflicting evidence. It further alleges the City's  
19 five-minute time limitations were not viewpoint neutral, the culmination of  
20 both violated the Committee's due process rights to a fair hearing. The  
21 Committee's writ petition alleges its members include those with property  
22 rights but does not allege any deprivation of such property rights.  
23 (Committee's Petition, pp. 2:27-3:4, 17:10-27.)

##### 24 Respondents' Contentions

25 Respondents challenge the Committee's due process allegations,  
26 claiming the assertions are insufficient in several respects. First, the  
27 allegations are so ambiguous the legal theories cannot be discerned.  
28 Second, the allegations made by the Committee do not raise any substantial

1 or significant deprivation of property rights. Third, there has been no  
2 articulable violation of Code of Civil Procedure section 1094.5(b) since the  
3 Committee cannot establish the City deviated from the mandated procedures  
4 in a material manner. Fourth, the City afforded ample time for public  
5 comment. Finally, the Committee did not have a right to respond to the  
6 December 4, 2013 supplemental staff report since there is no such  
7 requirement under CEQA.

8 Discussion

9 The Committee has not sufficiently established a due process violation.  
10 First, there has been an insufficient showing respondents deprived members  
11 of the Committee of their property interests. There must be allegations of  
12 substantial or significant deprivation of property rights, and general  
13 assertions are insufficient. (*Horn v. County of Ventura* (1979) 24 Cal.3d  
14 605, 616; *Taxpayers for Accountable School Bond Spending v. San Diego*  
15 *Unified School District* (2013) 215 Cal.App.4th 1013, 1058-1060.) The writ  
16 petition does not provide sufficient factual or legal allegations regarding  
17 property interests. Further, the Committee's opening brief does not identify  
18 the property interests of any of the members of the Committee. Instead, it  
19 refers to select public comments made by adjoining neighbors who are not  
20 identified as members of the Committee. (AR pp. 002926-002929; 002936-  
21 002938.) It is unclear what property rights are affected, the identity of the  
22 members whose property rights are implicated, or how these unidentified  
23 interests have been deprived. Since the property rights have not been  
24 sufficiently identified, it follows the Committee has not sufficiently shown  
25 how these unidentified members with unidentified property interests were  
26 not afforded reasonable notice or an opportunity to a fair hearing.

27 Second, the Committee has not sufficiently established the absence of  
28 a fair hearing in violation of Code of Civil Procedure section 1094.5(b). In

1 support of its position, the Committee relies heavily upon *Clark v. City of*  
2 *Hermosa Beach* (1996) 48 Cal.App.4th 1152. The *Clark* case, however, is  
3 distinguishable in key respects. The petitioners in the *Clark* case were the  
4 actual property owners bringing an application seeking a permit to destroy  
5 an existing duplex on their property and replacing it with a 35-foot-high  
6 condominium. While the planning commission approved the application, the  
7 city council subsequently denied it. One of the members of the city council  
8 who voted on the application had actually challenged approval of the  
9 petitioners' permit application, which created a conflict of interest. The  
10 Committee had no such application before the City. Instead, the Committee  
11 is a not-for-profit unincorporated association challenging portions of the  
12 environmental review process for the Project under CEQA. (See  
13 Committee's Petition.) The requirements discussed in *Clark* that a party be  
14 "apprised of the evidence against [it] so that [it] may have an opportunity to  
15 refute, test, and explain it." In contrast here, the City took no action to deny  
16 or affirm any application or action brought by the Committee so there was  
17 no evidence against it that necessitated refuting, testing, or explanation in a  
18 separate hearing specifically for the Committee.

19 The Committee's additional citations to *English v. City of Long Beach*  
20 (1950) 35 Cal.2d 155 and *Today's Fresh Start, Inc. v. Los Angeles County*  
21 *Office of Education* (2011) 197 Cal.App.4th 436, also fail to bolster its  
22 position. Much like *Clark*, the *English* case is distinguishable since it involved  
23 a petitioner who challenged his dismissal, without a hearing, as a patrolman  
24 for the police department based upon a rule requiring petitioner to take and  
25 pass a physical examination. As for the *Today's Fresh Start* case, the  
26 Committee cites to the appellate court opinion that was ultimately  
27 superseded by the California Supreme Court's opinion in *Today's Fresh Start,*  
28 *Inc. v. Los Angeles County Office of Education* (2013) 57 Cal.4th 197, and

1 the court disregards the arguments associated with this case.

2       The proper framework and analysis of the Committee's due process  
3 and fair hearing claims are brought with CEQA as the backdrop. In this  
4 context, it is essential to note that while the CEQA Guidelines encourage  
5 public hearings, they are not a required element under CEQA. (*CEQA*  
6 *Guidelines section 15087(i).*) Even so, the record here supports that the  
7 Committee was provided ample opportunity to respond and object to the  
8 EIR. Presentations regarding the Project began in early 2013. (AR pp.  
9 012805-012920.) The City complied with the NOP, initial study, and  
10 comment period requirements. (Id. at pp. 000133-000178, 012921-  
11 012924.) It also complied with the notice requirements for the notice of  
12 availability, draft EIR, and comments period. (Id. at pp. 012973, 000179,  
13 000189.) The Planning Commission held a public hearing on August 22,  
14 2013. (Id. at pp. 002108-002142, 002829-002893.) The final EIR complied  
15 with the public comment and review period. (Id. at pp. 001939-002107.)  
16 The City Council then held two meetings. The first was on November 6,  
17 2013 where the Committee appeared, spoke, and was allowed to submit  
18 documentation. (Id. at pp. 002143-002478.) The City Council then closed  
19 the public hearing. (Id. at pp. 002894-002974.) The Committee had ample  
20 time to respond and object to the EIR throughout this process.

21       The Committee's true area of contention is the closing of the public  
22 hearing and continuance of the matter to December 6, 2013 to allow the  
23 City's staff to respond to the comments and documents made at the  
24 November 6, 2013 hearing. To reiterate, there is no requirement under  
25 CEQA for an agency to hold public hearings. (*CEQA Guidelines section*  
26 *15087(i).*) The City, however, did have a hearing that was held and closed  
27 on November 6, 2013. (AR pp. 002894-002974.) There is no mandate  
28 under CEQA by which the City was required to reopen hearings. As to the

1 Committee's assertions it was unable to respond to the staff report  
2 addressed at the December 4, 2014 hearing, the record does not support  
3 this position. The staff report was made available to the public prior to the  
4 December 4, 2014 hearing. (Id. at p. 2981:9-13.) Nothing prevented the  
5 Committee from submitting a written response to the report and the City  
6 did, in fact, receive a written response from another organization, Villasport.  
7 (Id. at pp. 002795-2799.)

8 Nor has there been a sufficient showing by the Committee that it was  
9 denied a fair hearing based upon the five-minute public comment time  
10 limitation. As previously stated, this assertion must be viewed in the  
11 context of the CEQA process. Again, there is no hearing requirement under  
12 CEQA. (*CEQA Guidelines section 15087(i).*) Respondent Life Time Fitness  
13 was the applicant seeking approval of the Project whereas the Committee  
14 was a member of the public objecting to portions of the CEQA process. The  
15 allocation of time for public testimony at public hearings would generally fall  
16 under the Ralph M. Brown Act, codified at Government Code section 54950,  
17 *et seq.* Specifically, a local agency is allowed to limit the time for public  
18 testimony for issues and speakers. (*Governmental Code section*  
19 *54954.3(b)*; see also *Chaffee v. San Francisco Public Library Com. (2005)*  
20 *134 Cal.App.4th 109, 116.*) The City's noticed policy was to limit public  
21 comments to five minutes per person with the ability to afford extra time if  
22 requested. (AR pp. 003012, 003031, 003054, 002978-002979.) There was  
23 no differentiation in the time afforded to the Committee as compared to  
24 other members of the public prior to the close of the hearing. (Id. at pp.  
25 002926-2939.) All members of the public, which included the Committee,  
26 were given the same opportunity to provide public comments. The  
27 Committee has not shown that it was *prevented* from providing comments  
28 regarding the Project, either in verbal or written form.

1 Nor does the record support the Committee's assertions the public  
2 time limits were not "viewpoint neutral". The Committee focuses on the  
3 amount of time respondent Life Time Fitness spoke at the hearing. Even  
4 assuming the Committee, as a member of the public, was entitled to the  
5 same amount of time to comment as the applicant, the record does not  
6 show the Committee ever requested more time, and was subsequently  
7 denied additional time, to address the City Council prior to the close of the  
8 November 6, 2013 hearing. Instead, it draws attention to the fact the  
9 Committee was not allowed to comment at the December 6, 2013 hearing.  
10 What the Committee overlooks is that no one was afforded the ability to  
11 speak after the close of the hearing with the exception of City staff member  
12 who responded to a question posed by a member of the City Council. (AR at  
13 pp. 002975-003004.) In light of all of this, the Committee has not  
14 sufficiently established any due process violation or violation of the right to a  
15 fair hearing.

## 16 Contention Two – CEQA Violations

### 17 Standard of Review

18 The Committee focuses upon three separate CEQA violations in its  
19 opening brief, essentially challenging the adequacy of the EIR. An EIR is  
20 presumed to be adequate under CEQA. (*Public Resources Code section*  
21 *21167.3.*) Based upon this presumption, the petitioner has the burden of  
22 proving the EIR is inadequate. (*Concerned Citizens of South Central L.A. v.*  
23 *Los Angeles Unified School Dist. (1994) 24 Cal.App.4th 826, 836; California*  
24 *Native Plant Society v. City of Rancho Cordova (2009) 172 Cal.App.4th 603,*  
25 *613-614.*) The court's inquiry when reviewing an agency's compliance with  
26 CEQA is to determine whether there was a prejudicial abuse of discretion.  
27 (*Public Resources Code section 21168.5.*) In conducting this review, the  
28 court looks to whether the agency has not proceeded in a manner as

1 required by law or if there is a determination that is not supported by  
2 substantial evidence. (*Public Resources Code sections 21168, 21168.5;*  
3 *Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho*  
4 *Cordova (2007) 40 Cal.4th 412, 426-427.*) The review of these two types of  
5 errors differs. Where the error is one of improper procedure, a showing the  
6 agency's failure to follow the law is prejudicial or presumptively prejudicial  
7 requires the determination must be set aside. (*Vineyard Area Citizens for*  
8 *Responsible Growth, Inc. v. City of Rancho Cordova (2007) 40 Cal.4th 412,*  
9 *435.*) "Courts must 'scrupulously enforce all legislatively mandated CEQA  
10 requirements.' " (*California Native Plant Society v. City of Santa Cruz*  
11 *(2009) 177 Cal.App.4th 957, 984.*) An EIR, however, will only be found  
12 legally inadequate and subject to independent review for procedural error  
13 where it omits information required by CEQA and necessary for an informed  
14 discussion. (*Id. at p. 986.*) "To sum up, the omission of required  
15 information constitutes a failure to proceed in the manner required by law  
16 where it precludes informed decision-making by the agency or informed  
17 participation by the public. [Citation.]" (*Id. at p. 987.*) Where the error is a  
18 dispute over facts, the agency's substantive factual conclusions are given  
19 greater deference and the conclusions are reviewed for substantial evidence.  
20 (*Ibid.*) With these principles in mind, the court turns to the three  
21 contentions argued in its opening brief.

## 22 Urban Decay

### 23 The Committee's Contentions

24 The Committee asserts the City's EIR and other CEQA documents lack  
25 discussion or analysis concerning the Project's potential for urban decay,  
26 which amounts a prejudicial abuse of discretion. The Committee argues this  
27 underlying omission in the EIR amounts to a prejudicial defect that cannot  
28 be cured by the City's findings in the December 4, 2013 supplemental staff

1 report. The Committee contends the omission of an urban decay analysis is  
2 a fatal error and there is no presentable evidence that urban decay is not a  
3 significant impact. The Committee further alleges the proper standard of  
4 review is a weighing of competing evidence under the fair argument  
5 standard and the City's actions are not entitled to review under the  
6 deferential substantial evidence standard.

#### 7 Respondents' Contentions

8 Respondents' contend an urban decay analysis in the EIR was not  
9 necessary since the City had no reason to anticipate urban decay as a result  
10 of the Project. They also assert the final EIR expressly considered the  
11 potential for urban decay and found no evidence that any impact would  
12 result from the Project. (Id. at p. 2047.) Respondents argue substantial  
13 evidence supports the City's determination and the Committee's submission  
14 of Dr. King's report was submitted late and lacked credibility. They also  
15 claim the supplemental staff report was in response to the Committee's late  
16 submitted assertions raised for the first time after the public portion of the  
17 hearing was concluded.

#### 18 Discussion

19 The Committee asserts the City prejudicially abused its discretion since  
20 the City omitted any analysis of urban decay in the CEQA documents. It is  
21 important to note, however, that economic and social effects of a proposed  
22 project generally fall outside the scope of CEQA. (*CEQA Guidelines section*  
23 *15131(a)*.) The possible economic or social effects must be disclosed and  
24 analyzed where the project will directly or indirectly lead to adverse physical  
25 changes in the environment. (*Friends of Davis v. City of Davis (2000) 83*  
26 *Cal.App.4th 1004, 1019-1020*.) In order to trigger the necessity of such an  
27 analysis, there must be evidence suggesting the economic and social effects  
28 caused by the proposed project could result in physical impacts such as

1 urban decay or deterioration. (*Bakersfield Citizens for Local Control v. City*  
2 *of Bakersfield* (2004) 124 Cal.App.4th 1184, 1207.) In this case, the  
3 Committee has failed to meet its burden to establish the City prejudicially  
4 abused its discretion.

5 The Committee relies heavily upon the *Bakersfield* case to support its  
6 proposition that the EIR improperly omitted an analysis of urban decay. The  
7 *Bakersfield* case, however, does not particularly support the Committee's  
8 position as it is highly distinguishable. In the *Bakersfield* case, the  
9 challenged projects were two retail shopping centers, 3.6 miles apart and  
10 both containing Wal-Mart Superstores, other large anchor stores, smaller  
11 retailers, and gas stations. (*Bakersfield Citizens for Local Control v. City of*  
12 *Bakersfield* (2004) 124 Cal.App.4th 1184, 1193-1195.) The *Bakersfield*  
13 court noted elements relevant for the need of an urban decay analysis  
14 included such factors as the size of the project and the type of retailers,  
15 their market areas, and the proximity of other retail opportunities. (*Id.* at p.  
16 1207.) The appellate court further noted the administrative record  
17 contained a sufficient indication that the additional retail space of the two  
18 projects could start a chain reaction ultimately resulting in urban decay  
19 necessitating a study of the issue. (*Id.* at p. 1208.) The same does not  
20 exist here. This Project involves the construction of a members-only fitness  
21 facility. (AR pp. 000201, 001944.) There are no other facilities like the  
22 Project within the immediate vicinity. (*Id.* at pp. 000195-000198.) The  
23 population impact of the Project was determined not to be large enough for  
24 substantial growth since it would only offer new employment for  
25 approximately 305 positions necessary for staffing of the facility. (*Id.* at pp.  
26 000223.) In turn, the Project would not provide the need to construct new  
27 homes or new services. (*Ibid.*) Nor would there be a need for extended  
28 roads or infrastructure. (*Ibid.*) The parcel site for the Project is zoned CC,

1 which is intended for development of a primary neighborhood center with  
2 neighborhood oriented uses. (Id. at p. 004808.) These factors fall short of  
3 supporting evidence triggering the need for an analysis on urban decay and  
4 there has been an insufficient showing on the part of the Committee that  
5 such an analysis was required under CEQA.

6 Nor does the Committee's reliance upon *Protect the Historic Amador*  
7 *Waterways v. Amador Water Agency* (2004) 116 Cal.App.4th 1099 or  
8 *California Clean Energy Committee v. City of Woodland* (2014) 225  
9 *Cal.App.4th* 173 bolster its contentions. *Protect the Historic Amador*  
10 *Waterways* involved an EIR that failed to analyze specific significant  
11 environmental effects upon the project. As previously discussed, urban  
12 decay is an economic/social effect that generally does not require an  
13 analysis under CEQA. (CEQA Guidelines section 15131(a).) There is no  
14 requirement that economic and social effects with no impact the  
15 environment be analyzed such as the water and biological resources  
16 addressed in *Protect the Historic Amador Waterways*. The *California Clean*  
17 *Energy Committee*, case involved a large shopping center project where  
18 urban decay was determined to have an impact upon the environment, was  
19 studied in the draft EIR, and involved discussion of mitigation measures.

20 The Committee's characterization that the CEQA documents omitted  
21 any discussion of urban decay is inaccurate. The issue of urban decay was  
22 not raised by any persons or member of the public until the draft EIR was  
23 released for public comment. (AR at pp. 2108, 2829, 2857-2869, 2486,  
24 2500, 2033, 2047, 2575-2579.) The sole commenter on the issue of urban  
25 decay was Rutan & Tucker, LLP, who submitted written comments raising  
26 the issue. (Id. at pp. 002028-002035.) The final EIR responded to the  
27 claims surrounding urban decay and determined there was no evidence to  
28 support physical effects of urban decay or deterioration since a fitness

1 facility was not the type of project that would result in store closures or  
2 empty storefronts. (Id. at p. 002047.) It also determined the  
3 environmental implications of growth were too speculative to predict or  
4 evaluate. (Ibid.) The final EIR also determined attorney comments alone  
5 were not evidence to support urban decay. (Ibid.)

6 The City reiterated its determination in the final EIR that there was  
7 insufficient evidence to support the need for an urban decay analysis after  
8 the Committee appeared at the November 6, 2013 City Council meeting.  
9 The Committee raised the issue at the November 6, 2013 meeting and  
10 brought documentation to support its contentions. (AR pp. 002143-2149,  
11 002451-002478, 002481, 002575-002602, 002930-002934, 002143-  
12 002149.) The meeting was closed and the matter continued to December 4,  
13 2013 in order to allow the City to respond to the Committee's comments.  
14 (Id. at pp. 002487, 002610-002739.) The City submitted a supplemental  
15 staff report for the December 4, 2013 hearing, which included the report of a  
16 retained economist to review urban decay. (Id. at pp. 002487-002489,  
17 002610, 002611, 002633, 002649-2658.) The report only reaffirmed the  
18 City's prior determinations that urban decay was not an anticipated  
19 consequence of the Project and that Committee's submitted documentation  
20 on urban decay lacked credibility. (Id. at pp. 002487-2489, 002611,  
21 002633.) Based upon all of this, the record does not support the  
22 Committee's argument that an urban decay analysis was required in the EIR.

### 23 Noise

#### 24 The Committee's Contentions

25 The Committee also claims the EIR substantially underreported the  
26 potential significant noise impacts of the Project by rounding down the  
27 Project's noise impact of 49.5 dBA to fall under its 50 dBA threshold for  
28 significant noise level. The Committee asserts this allowed the City to

1 dispense with the need for a detailed impact study. It also contends the  
2 noise analysis failed to consider the potential noise at second floor  
3 residences and the comparison of the Project to the Tempe Arizona health  
4 club facility was improper, resulting in a prejudicial abuse of discretion and  
5 no substantial evidence to support the conclusion in the EIR regarding the  
6 noise impacts of the Project.

#### 7 Respondents' Contentions

8 Respondents contend the City's analysis for measuring noise impacts  
9 in the EIR complied with the City's General Plan and Noise Ordinance. They  
10 argue exterior noise level standards are applied at the property line of noise-  
11 sensitive uses and not at individual outdoor areas. The EIR provided a  
12 detailed noise study using a comparable facility and applied a standard  
13 methodology concluding the Project's noise impacts would be less than  
14 significant. The City properly relied upon the standards in its General Plan  
15 and Noise Ordinance along with the conclusions of its noise expert and EIR  
16 consultant even though other experts may reach different conclusions.

#### 17 Discussion

18 In reviewing the EIR, the agency's factual conclusions are given  
19 deference and reviewed for substantial evidence. (*California Native Plant*  
20 *Society v. City of Santa Cruz* (2009) 177 Cal.App.4th 957, 987.)  
21 " "Technical perfection is not required; the courts have looked not for an  
22 exhaustive analysis but for adequacy, completeness and a good-faith effort  
23 at full disclosure." ' [Citations.]" (*Id. at p. 979.*) The draft EIR analyzed  
24 noise from the Silver Ridge Senior Apartment since these were the closest  
25 sensitive receptors. (AR p. 000409.) The noise analysis was composed of  
26 non-transportation sources for residential receptors. (*Id. at pp. 000414-*  
27 *000415, 002606-002608, 012063.*) According to the guidelines in the  
28 General Plan and Roseville Noise Ordinance, the exterior noise level

1 standards for such residential receptors are applied at the property line.  
2 (Ibid.) Furthermore, the EIR discusses and analyzes the decision to  
3 compare the Project with the Tempe Arizona facility since the two were  
4 similar. (Id. at p. 000427-428, 002608.) There is substantial evidence  
5 within the record to support the EIR analysis and determination as to the  
6 Project's noise impacts and the Committee has not met its burden.

#### 7 Baseline for Cumulative Impacts

#### 8 The Committee's Contentions

9 The Committee also claims the EIR adopted an erroneous future  
10 condition baseline in relation to the Project without supplying substantial  
11 evidence to support departing from the general rule that the physical  
12 description of the environmental conditions reflect those existing at the time  
13 the notice of preparation is published or when the environmental analysis is  
14 commenced. It argues a future conditions baseline may only be applied  
15 where the departure is justified by unusual aspects of the project or  
16 surrounding conditions. While the EIR properly applied an existing physical  
17 condition baseline when studying direct project impacts, the EIR improperly  
18 applied a future conditions baseline for cumulative impacts. It contends  
19 such a baseline analysis is a prejudicial abuse of discretion since the analysis  
20 results in a scenario where a single development project will never exceed  
21 the threshold of full build out under the 2025 General Plan.

#### 22 Respondent's Contentions

23 Respondents argue the two-baseline approach is proper where it  
24 results in a more accurate or conservative environmental analysis.  
25 Respondents assert this approach is consistent with CEQA and applicable  
26 case law, noting there is nothing in CEQA prevented an agency from  
27 considering both types of baselines in its primary analysis.

#### 28 Discussion

1        "The fundamental goal of an EIR is to inform decision makers and the  
2 public of any significant adverse effects a project is likely to have on the  
3 physical environment. [Citations.] To make such an assessment, an EIR  
4 must delineate environmental conditions prevailing absent the project,  
5 defining a 'baseline' against which predicted effects can be described and  
6 quantified. [Citations.]" (*Neighbors for Smart Rail v. Exposition Metro Line*  
7 *Construction Authority (Smart Rail) (2013) 57 Cal.4th 439, 447.*) In  
8 general, an EIR compares the impacts of a project to environmental  
9 conditions that exist at the time of the CEQA review. (*Ibid.*) The EIR,  
10 however, may rely solely upon a future conditions baseline upon a showing  
11 that the existing conditions baseline would be misleading or without  
12 informational value. (*Id. at p. 457.*) The analysis in *Smart Rail* requires this  
13 justification be made when the EIR relies *solely* upon the future baseline.  
14 (*Ibid.*) The California Supreme Court put no such requirement on EIRs  
15 including both an existing conditions baseline and a future conditions  
16 baseline, which exist in this instance. Contrary to the Committee's  
17 assertions, the EIR contains sufficient discussion and analysis on the two-  
18 baseline approach adopted to determine the noise and traffic impacts of the  
19 project. (AR pp. 000245-000245, 000411, 000433, 000439, 000490-  
20 000503, 000522-000530, 000533-000537.) A prejudicial abuse of  
21 discretion has not been shown.

22        Contention Three – Project Inconsistency with Planning Rules and  
23        Policies

24        The Committee's Contentions

25        The Committee alleges the City issued land use approvals for the  
26 Project that were inconsistent or conflicted with the Roseville General Plan,  
27 Stoneridge Specific Plan, and/or the Roseville Municipal Code. Specifically, it  
28 contends the Project site is inconsistent with the Stoneridge Specific Plan,

1 which anticipated the development of community commercial to serve the  
2 principal shopping needs of the community with shopping centers and other  
3 retail/service uses. The City's substitution of the Project for its designated  
4 community commercial use in the Specific Plan goes against the principle of  
5 consistency in the planning and development of land in California. The  
6 Committee argues the EIR conceded the Project was inconsistent with the  
7 Specific Plan and necessitated the change of at least two conditions to move  
8 forward with the Project. (AR pp. 366-450.) The EIR omitted any  
9 environmental impact considerations and policy issues related to eliminating  
10 the planned use for the parcel in the Specific Plan in favor of the Project.

#### 11 Respondents' Contentions

12 Respondents claim the EIR does not identify major inconsistencies with  
13 the Specific Plan or concede of such inconsistencies. They allege the draft  
14 EIR and final EIR, in fact, provide an overview of the consistency between  
15 the Project and the applicable planning documents, which include the  
16 Stoneridge Specific Plan. (AR pp. 366-367, 372-376, 2574, 2041, 2043.)  
17 Respondents also argue the draft EIR did evaluate and compare impacts  
18 associated with the development of a grocery store or other neighborhood  
19 amenity. (AR pp. 561, 2855.) Their final assertion is that the City's  
20 determination of consistency with its own Specific Plan must be afforded  
21 great deference.

#### 22 Discussion

23 The Committee fails to sufficiently establish inconsistencies or conflicts  
24 with the General Plan, Specific Plan, or the Municipal Code in the City's  
25 issuances of land use approvals for the Project. Pursuant to Government  
26 Code section 65300, every county and city is required to adopt a  
27 "comprehensive, long-term general plan for the physical development of the  
28 county or city....". " "An action, program, or project is consistent with the

1 general plan if, considering all its aspects, it will further the objectives and  
2 policies of the general plan and not obstruct their attainment." [Citation.]'  
3 [Citation.] State law does not require perfect conformity between a  
4 proposed project and the applicable general plan.... [Citations.]" [Citation.]  
5 In other words, 'it is nearly, if not absolutely, impossible for a project to be  
6 in perfect conformity with each and every policy set forth in the applicable  
7 plan.... It is enough that the proposed project will be compatible with the  
8 objectives, policies, general land uses and programs specified in the  
9 applicable plan. [Citations.]' [Citations.]" (*Pfeiffer v. City of Sunnyvale City*  
10 *Council (2011) 200 Cal.App.4th 1552, 1563.*) The agency's decision on  
11 whether a plan is consistent with its own general plan is given great  
12 deference. (*Ibid.*) "A reviewing court's role 'is simply to decide whether the  
13 city officials considered the applicable policies and the extent to which the  
14 proposed project conforms with those policies.' [Citation.]" (*Ibid.*) A party  
15 challenging a city's determination that a project is consistent with its general  
16 plan "has the burden to show why, based upon the evidence in the record,  
17 the determination was unreasonable. [Citation.]" (*Ibid.*)

18 The record does not support the Committee's contentions. The site of  
19 the Project, Parcel 14, has a "CC" designation. (AR p. 012188.) This  
20 category provides for a broader range of goods and services to the service  
21 area. (Id. at p. 011774.) The primary uses on a CC designated parcel vary  
22 and are not limited to a single function. (*Ibid.*) They include a multitude of  
23 retail stores and businesses offering a full range of goods and services.  
24 (*Ibid.*) For example, these uses can include auto sales, auto repair,  
25 commercial child care, medical offices, and clinics. (*Ibid.*) The Stoneridge  
26 Specific Plan stated Parcel 14 could be used for a grocery/drug store and  
27 "any other neighborhood oriented uses". (Id. at p. 004808.) Nothing in the  
28 record substantially shows Parcel 14 was primarily meant to provide for a

1 grocery/drug store. Nor is there substantial evidence establishing the  
2 amendments to the Zoning Code or Stoneridge Specific Plan were  
3 inconsistent with the General Plan. Specifically, obtaining a conditional use  
4 permit was contemplated for CC zones seeking outdoor sports and  
5 recreation. (AR pp. 000379, 002040-002041, 002111-002113, 002761,  
6 002835, 002900, 002924-002926.) Further, the deletions of the non-  
7 vehicular access and deletion of the 25 park and ride spaces were  
8 determined not to be useful for a members-only fitness facility. (Id. at p.  
9 002111.) For these reasons, the Committee has not established the Project  
10 was inconsistent with, or conflicted with, the General Plan, Specific Plan, or  
11 any applicable laws.

#### 12 Contention Four - Irrelevant Analysis of the Supplemental Staff Report

##### 13 The Committee's Contentions

14 The Committee's final contention is that the supplemental staff report  
15 prepared for the December 4, 2013 hearing addressed the "wrong question"  
16 and reflects a prejudicial abuse of discretion on the part of the City.  
17 According to the Committee, the fatal flaw is that the supplemental staff  
18 report erroneously treated the EIR as being certified. The new information  
19 in the supplemental staff report should have been appended to the EIR and  
20 subjected to recirculation under CEQA since the City essentially invoked the  
21 standards under Public Resources Code section 21166.

##### 22 Respondents' Contentions

23 Respondents simply assert the Committee's allegations that a  
24 supplemental or subsequent EIR were invoked by the supplemental staff  
25 report under Section 21166 are incorrect and lack any evidentiary support.

##### 26 Discussion

27 The Committee's contention takes the staff report out of context.  
28 Public Resources Code section 21166 refers to subsequent or supplemental

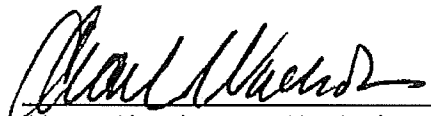

1 EIRs, which are not required unless (1) substantial changes are proposed in  
2 the project, requiring major revisions to the EIR; (2) substantial changes  
3 occur with the circumstances under which the project is undertaken that  
4 require major revisions to the EIR; or (3) new information that was  
5 unavailable at the time the EIR was certified as complete becomes available.  
6 The staff report presented at the December 4, 2013 hearing was prepared in  
7 response to comments and documents submitted by the Committee, among  
8 others, who appeared at the November 6, 2013 City Council meeting. (AR  
9 pp. 002894-002974, 002481-002820.) Following the close of the hearing  
10 and in response to these comments made after the comment period on the  
11 draft EIR had expired, the staff report determined the issues and  
12 documentation submitted were either previously analyzed or concerned  
13 areas not requiring analysis in the EIR. (Id. at p. 002483.) The record does  
14 not show there was discussion or analysis regarding the need for a  
15 supplemental or subsequent EIR. For these reasons, the Committee has not  
16 met its burden as to this allegation.

17 Disposition

18 The Committee's petition for writ of mandate is denied.

## The Big 'If' in UCSF's 'Support' for Golden State Warriors Arena

An architect's rendering of the Golden State Warriors' proposed new arena on San Francisco's Mission Bay waterfront. (MANICA Architecture)

By **Dan Brekke** (<http://ww2.kqed.org/news/author/danbrekke>) [ⓧ \(http://twitter.com/danbrekke\)](http://twitter.com/danbrekke)

JULY 28, 2015

Officials at UC San Francisco, the institution that may be the biggest obstacle to the Golden State Warriors' plan to build a grand new hoops palace in Mission Bay, say they'll go along with the arena proposal — if the city can resolve their concerns about the flood of traffic the new facility is expected to unleash.

In behind-the-scenes negotiations going back to last summer, UCSF has insisted the Warriors and the city provide guarantees that arena traffic won't interfere with patients and emergency vehicles trying to get to university hospitals. In return, UCSF would support the plan, which would plant an 18,500-seat arena and office complex (<http://www.nba.com/warriors/sf>) at the corner of Third and 16th streets.

Monday, with the public comment period on the city's environmental impact report (<http://www.sf-planning.org/index.aspx?page=1828>) for the arena about to close, the university said that it's on the verge — within millimeters, if not microns! — of bestowing its blessing. It's feeling so good about the new basketball/concert/show venue that it's even launched a website, WinWinSF.com (<http://www.winwinsf.com>), which features a very cheerful-looking pediatric care nurse opining rather daringly, "If we can bring the Warriors to San Francisco but also provide a safe environment for patients, I think it would be a win-win for both of us."

The site then lays out its vision of what the "win-win" looks like: "a binding agreement" that would lock the city, the San

San Francisco Giants (whose AT&T Park would be just up the street from the new basketball pleasure dome) and the Warriors into a long-term plan to manage scheduling at the venues and figure out a sane way to deal with traffic when games or concerts or monster truck events are slated at both sites simultaneously. The EIR for the project contemplates a total of 225 events each year ([http://www.gsweventcenter.com/Draft\\_SEIR\\_and\\_Appendices/Vol\\_1\\_GSW\\_MB\\_DSEIR.pdf](http://www.gsweventcenter.com/Draft_SEIR_and_Appendices/Vol_1_GSW_MB_DSEIR.pdf)) at the arena; that total includes 41 regular-season home games and about 60 other “full capacity” events.

UCSF’s “win-win” sounds rather conditional — what a wonderful world it would be if we could all watch basketball *and* avoid traffic jams! — and UCSF officials who spoke Monday didn’t really sound like they are all in for the arena. Case in point: Barbara French, the school’s vice chancellor for strategic communications and university relations.

“While UCSF welcomes the 2015 NBA Champions to San Francisco,” French declared strategically, “our support is contingent on achieving a binding agreement to ensure meaningful and lasting solutions to traffic impacts.”

French told KQED’s Alex Emslie that the university could envision a workable relationship with its prospective new NBA neighbors.

“We’re fine with the Warriors being across the street,” she said. “We think we can live together. There’s instances around the country where sports arenas live near a hospital. I’m not sure there’s instances where they’re directly across the street. But we think with good planning, with good traffic mitigations, there’s several major infrastructure projects that are to come online about the time the Warriors are to be here or shortly thereafter. We think that as a city, we need to be on the traffic, and as a hospital, we need to be sure our patients can get here.”

UCSF Chancellor Sam Hawgood, who’s been working on getting the city and the Warriors to commit to a traffic plan for the better part of a year, is quoted in the San Francisco Chronicle as saying, “I am confident that meaningful and lasting solutions can and will be worked out. The city and the Warriors understand that patient safety must be secured.”

Hawgood said the kind of binding “win-win” agreement UCSF is looking for is still a month or two away.

It would be interesting to know what San Francisco Mayor Ed Lee, Warriors management and the Giants — who have to be really happy to be dragged into this — might be offering as traffic solutions. The mayor, for one, has expressed interest (<http://www.sfgate.com/bayarea/article/I-280-near-Mission-Bay-would-be-raised-in-Caltrain-6254662.php>) in tearing down the northern end of Interstate 280. That would seem to complicate automobile access to the neighborhood. Public transit will be offered as a solution, but BART, Caltrain and Muni all face serious capacity issues. Has anybody proposed an armada of self-driving electric taxis?

While UCSF talks semi-optimistically about transportation solutions that have yet to emerge, one mostly anonymous group of wealthy San Franciscans is saying through its hired gun, PR maven Sam Singer, that there is no way to mitigate traffic to and from the new arena.

UCSF is “focusing on the Warriors games, which are in the evening,” Singer said Monday on behalf of the Mission Bay Alliance (<http://missionbayalliance.org/>). “There’s 185 more events. That’s an event every other day 1,000 feet from a major American emergency room and hospital. Muni runs 20 percent on time. BART is at 99 percent capacity. The city is making promises that it can’t possibly keep. ... We hope as time goes on, the city, the Warriors and the community will ultimately realize that this is a fatally flawed project.”

The alliance, which describes itself as “UCSF stakeholders, donors, faculty, physicians and the working men and women of San Francisco” (and has been described elsewhere (<http://big-bucks-donors-to-UCSF>) as anonymous “big-bucks donors to UCSF”), has said it will sue to block the arena.

On Monday, Singer promised something more colorful, veering from basketball to Dante-esque ice hockey metaphors to describe the group’s battle plan.

“As we explain the actual demerits of this project to the public we are going to win this battle,” Singer said. “Right now this game is in the first minutes of the first quarter. By the time the Mission Bay Alliance reaches the championship, we’re going to beat the owners of the Warriors. We’re going to wipe the court with them. ... We are going to fight the Warriors proposal until hell freezes over, and then we’re going to fight them on the ice.”

Of course, there’s one place the Warriors wouldn’t have to go through all this: that place in Oakland where they’ve had 123 regular-season sellouts in a row. Folks over there might actually welcome the idea of a new arena.

**MEMORANDUM**

**TO:** Agency Commissioners

**FROM:** Fred Blackwell, Executive Director

**SUBJECT:** Conditionally approving a Major Phase application for the new Salesforce.com corporate headquarters in Mission Bay (Blocks 26 – 34) pursuant to the Owner Participation Agreement with FOCIL-MB, granting a variance to the view corridor standards contained in the Mission Bay South Design for Development to accommodate one pedestrian bridge for Blocks 29-32, and adopting environmental findings pursuant to the California Environmental Quality Act; Mission Bay South Redevelopment Area.

**SUMMARY**

In November 2010, Salesforce.com, a San Francisco-based technology company (“Salesforce”), purchased 14 acres of land in the Mission Bay South Redevelopment Area to build a new, approximately two million square-foot corporate headquarters. The Salesforce campus will include office space, retail uses, on-site childcare, parking and other ancillary uses. The purchased property consists of eight vacant parcels: the undeveloped portions of Blocks 26 and 27 and all of Blocks 29 through 34. These blocks are bounded generally by Mission Bay Boulevard South, Third Street, Terry Francois Boulevard and Mariposa Street. The land was purchased from Alexandria Real Estate Equities, who had previously purchased the parcels from FOCIL-MB, the Mission Bay master developer.

On July 19, 2011, the Commission conducted an informational workshop on the proposed design of the Salesforce campus project. Now, in accordance with the Owner Participation Agreement (“OPA”) for Mission Bay South, Salesforce has submitted a Major Phase application for Block 26 (Parcel 1), Block 27 (Parcel 1) and Blocks 29 – 34. The Major Phase submittal is intended to serve as a detailed master plan for the new Salesforce campus. The Master Plan/Major Phase will guide future schematic design submittals for individual buildings on the campus. The Major Phase submittal includes a pedestrian bridge that requires a variance from the view corridor standards in the Mission Bay South Design for Development.

Salesforce has been working over the last six months with its design team, led by the internationally-renowned architecture firm Legorreta + Legorreta, on the Master Plan/Major Phase (“Major Phase”) for the new headquarters. The campus will consist of eight new buildings with a large open space in the center. The goal of the design, as presented in the Major Phase, is to create a distinctive identity for the Salesforce campus while also creating a vibrant, urban environment that will be well-integrated with the growing Mission Bay neighborhood. Unlike typical suburban corporate campuses, the Salesforce headquarters will be an open campus, with publically-accessible and inviting uses on the ground floor such as

retail, restaurants, childcare and open space. The architecture will be bold and colorful, using a rich palette of natural materials including stone, terracotta and traditional brick.

Salesforce anticipates bringing schematic designs for the first four campus buildings to the Commission for consideration at the end of this year and breaking ground on its first buildings later next year.

As part of its actions on September 17, 1998, establishing the Mission Bay Redevelopment Project Areas, the Agency Commission certified the Final Subsequent Environmental Impact Report (“FSEIR”) for the Mission Bay Redevelopment Projects (Resolution No. 182-98) and adopted findings under the California Environmental Quality Act (“CEQA”) (Resolution No. 183-98). This FSEIR includes by reference a number of addenda. Agency staff has reviewed the Salesforce Major Phase submittal and finds it to be within the scope of the project analyzed in the FSEIR and addenda and no additional environmental review is needed.

*Staff recommends that the Commission adopt environmental findings pursuant to the California Environmental Quality Act, approve a variance to the view corridor standards in the Mission Bay South Design for Development to accommodate one pedestrian bridge, and approve a Major Phase application for Blocks 26 (Parcel 1), Block 27 (Parcel 1) and Blocks 29 – 34 for the new Salesforce corporate headquarters in Mission Bay.*

## **BACKGROUND**

### **Salesforce Overview**

Founded in 1999 in San Francisco, Salesforce is a business software and information management company and a leader in what is known as “cloud computing.” Salesforce has 5,000 employees worldwide, including nearly 2,500 in San Francisco. It currently occupies approximately 550,000 square feet of leased space in several different buildings in San Francisco. This space will be consolidated in its new Mission Bay headquarters. Salesforce is one of the largest technology companies in San Francisco and is growing quickly.

### **Major Phase Submission Requirements**

The Mission Bay South Owner Participation Agreement between the Agency and FOCIL-MB and the Interagency Cooperation Agreement (“ICA”) between the Agency and City departments establish the protocols for development approvals in Mission Bay South. Under these agreements, FOCIL-MB, or a third party developer such as Salesforce, is required to submit its overall plans for development in “Major Phases” of one or more land use blocks.

As specified in the OPA, Major Phase submissions provide information on proposed land uses and intensities of development, height, bulk, and massing of future buildings, location and general design of open space, and the subdivision of blocks into building parcels. Each Major Phase application must also specify the required infrastructure improvements to be built in association with the blocks, including street and utility construction and streetscape improvements. Because of the scale, nature and timing of the Salesforce development, the

current Major Phase application contains additional information and is intended to serve as a more detailed master plan for the new Salesforce campus. The “enhanced” Salesforce Major Phase also addresses and codifies architectural style guidelines, a palette of building materials and colors, retail standards, conceptual landscape designs, sustainability parameters, public art strategies and general urban design principles.

The Major Phase submission must be consistent with the Mission Bay South Redevelopment Plan, the Mission Bay South Design for Development (“Design for Development”), the Mission Bay South Infrastructure Plan, and other Redevelopment Plan documents.

Major Phases do not present schematic designs for individual buildings. Schematic design applications for individual development projects within a Major Phase are submitted to the Commission for review following Major Phase approval and must be consistent with the requirements established for each Major Phase.

### **Previous Major Phase Approvals**

The Salesforce campus will include all or portions of eight blocks in Mission Bay South: Blocks 26, 27, 29 – 32 and 33 – 34.

The Commission previously approved a Major Phase application for Blocks 26 - 28 (Resolution No. 41-2000) in Mission Bay South. Three buildings have already been built on Blocks 26 to 28, pursuant to the previously approved Major Phase, including the Old Navy Headquarters and a biotechnology lab building and a parking garage. Salesforce has purchased the last two undeveloped parcels included in the previous Major Phase: Block 26, Parcel 1 and Block 27, Parcel 1. Therefore, this new Major Phase will only apply to the two undeveloped parcels now owned by Salesforce on Blocks 26 - 28.

The Commission also previously approved a Major Phase application for Blocks 29 – 32 in Mission Bay South, submitted by the prior owner, Alexandria Real Estate Equities (Resolution No. 84-2006). No development has occurred on these blocks and Salesforce purchased all four blocks covered by the previous Major Phase. Therefore, the current Major Phase submittal from Salesforce will serve as a completely revised Major Phase submittal for Blocks 29 – 32 and supplant the old one.

The Commission has not previously approved a Major Phase application for Blocks 33 and 34. Thus, the new Major Phase submittal from Salesforce will cover Block 26 (Parcel 1), Block 27 (Parcel 1), Blocks 29 – 32 and Blocks 33 – 34. It will supplant any previously approved Major Phase applications for these blocks.

## **DISCUSSION**

### **Salesforce Major Phase/Master Plan Overview**

In accordance with the Owner Participation Agreement for Mission Bay South, Salesforce has now submitted a Major Phase application for Block 26 (Parcel 1), Block 27 (Parcel 1) and

Blocks 29 – 34. The Major Phase application calls for an approximately two million square-foot corporate headquarters for the company on 14 acres in Mission Bay South. The Major Phase will serve as a detailed Master Plan for the Salesforce campus, which will include eight new main buildings with a large new open space in the center. In addition to office space for Salesforce, the project will include retail, childcare facilities, automobile and bicycle parking, service and loading areas and a series of smaller open spaces. It is estimated that the new headquarters will house between 8,000 and 10,000 employees.

The campus will be located on portions of Blocks 26 and 27 and on Blocks 29 through 34, bounded by Mission Bay Boulevard South, Third Street, Terry Francois Boulevard and Mariposa Street (see Attachment 1). The project site is across Third Street from the University of California, San Francisco (“UCSF”) research campus and the future UCSF Medical Center. Across Terry Francois Boulevard from the headquarters lie the San Francisco Bay and a future public park. The site is served by two MUNI light rail stops and planned MUNI bus lines.

The design team is led by Legorreta + Legorreta, a renowned architecture firm based in Mexico City. The design team also includes the San Francisco-based Flad Architects and local landscape architecture firms Andrea Cochran Landscape Architecture and Tom Leader Studio.

An aerial view of the campus design is shown in Attachment 2 and a site plan is included as Attachment 3. The complete Major Phase application is included as Attachment 4.

### ***Key Design Goals***

The fundamental design goal for the Salesforce campus, as described in the Major Phase, is to create a distinctive and cohesive identity for the Salesforce campus while also creating a vibrant, urban environment that will be well-integrated with the growing Mission Bay neighborhood. Another key design goal is to ensure that the future campus contributes to the vitality of Mission Bay’s street life and helps activate the pedestrian realm. Unlike typical suburban corporate campuses that often have a single, gated point of entry, the Salesforce headquarters will be an open campus, with publically-accessible and active uses on the ground floor such as retail, restaurants, childcare, fitness areas and open spaces. Each building will have its own entrance and the campus will be very permeable, with access points off all major streets. A central campus open space, referred to as the “Town Square” and discussed in more detail below, will be open to the public and will include cafes, open air markets, art work and other inviting uses.

### ***Land Use Program***

The Major Phase provides for the development of nearly 1.9 million square feet of office space, 65,000 square feet of new retail space, 21,000 square feet of on-site childcare, a series of publically accessible open spaces, as well as 2,211 parking spaces and ancillary service and circulation areas.

The following table summarizes the land use program contained in the Major Phase application.

Block	Site Area (acres)	Land Uses	Approx. Square Feet of Leasable Area Office Building	Approx. Square Feet of Retail
26 (Parcel 1)	.69	Office and Retail	174,281	1,200
27 (Parcel 1)	.99	Office and Retail	140,898	9,500
29	2.6	Office and Retail	342,749	12,500
30	1.85	Office, Retail, Parking	183,080	8,500
31	2.6	Office and Retail	499,253	20,000
32	1.85	Office, Retail, Childcare	216,392	3,500
33	1.71	Office, Retail, Parking	110,820	9,800
34	1.71	Office	223,527	0
<b>Total</b>	<b>14.00</b>		<b>1,891,000</b>	<b>65,000</b>

### ***Building Massing and Height***

The massing proposed in the Major Phase is intended to reinforce Mission Bay's urban setting while also being sensitive to the surrounding context. The proposed building heights on the campus will generally be built at the permitted base height of 90 feet. The Major Phase also permits up to three "towers" that may be up 160 feet tall, consistent with the Design for Development. However, the Major Phase establishes significant variations in building heights throughout the campus to help break down the massing, ensure contextual development and provide a sense of place and orientation.

Along Third Street, the buildings hold the urban streetwall, with the exception of a significant setback at the corner of South Street and Third Street, which is intended to serve as the main entrance to the campus. Building heights along Third Street will range generally from 90 feet to 155 feet, with a 155-foot "tower" element located on Block 26 to mark the beginning the Salesforce campus. Two additional 155-foot tower elements are located on the core of the campus on Blocks 29 and 31. Building heights step down significantly as the campus moves closer to the waterfront. Along Terry Francois Boulevard, building heights begin as low as 15 feet and work their way upward to 90 feet through a series of stepbacks and setbacks. These reductions in height are intended to create a sense of openness and expansiveness along the waterfront. The two southern-most blocks of the campus, Blocks 33 and 34 bounded by Third Street and Illinois Street, will range in height from 60 to 90 feet. However, Block 34 will include a series of terraced stepbacks along the narrow Illinois Street that begin as low as 15 feet in height.

That Major Phase application takes advantage of a Design for Development provision that allows unoccupied space above the allowable 90-foot and 160-foot height limits to create architecturally symbolic or ornamental features. Salesforce is proposing these elements in several key areas to add variety to the building massing and create a sense of place within the campus. A very slender portion of the 160-foot tower on Block 29 will have a terracotta screen that reaches 185 feet. This screen element will be the highest point in the development and will help define the central portion of the campus. Blocks 31, 34 and 34 will each have narrow, unoccupied ornamental building elements that extend beyond the 90-foot datum to 120 feet.

These elements will be marked by a change of material or fenestration pattern, and will help add variety and interest to the skyline of the campus.

### ***Approach to Architecture, Color and Materials***

As mentioned above, the design of the Salesforce campus is being led by Legorretta + Legorretta, a world renowned architecture firm. Legorretta + Legorretta's architecture is known for its simple yet bold geometric shapes, thick wall planes, an emphasis on natural light and the use of vibrant color, particularly reds, purples and yellows. Thus there will be a visual consistency to all eight buildings of the Salesforce campus, based on Legorretta + Legorretta's distinct and recognizable style.

While the Major Phase is not intended to include schematic design proposals for individual buildings, it does propose an architectural approach and palette of materials and colors for the future buildings, as laid out in Chapter 3 of the attached Major Phase. The Major Phase identifies a rich palette of natural, high-quality materials including limestone, terracotta and traditional. Under the Major Phase, every building on the campus will be constructed of one of these natural materials. Each building will also include a bright stucco accent color, such as purple, orange, blue, yellow, tangerine and pink, to provide visual interest and a building identity. For example, at the northern entrance to the campus, the Major Phase calls for a light-colored, limestone building with distinct pink accents. The central core campus on Blocks 29 – 32 will be defined by warmer terracotta buildings, each with a unique accent color.

### ***Retail Program and Childcare***

The Major Phase calls for 65,000 square feet of retail on the campus and 21,000 square feet of on-site childcare. The retail program will include a mix of sit-down restaurants, casual cafes, shops and services, located in key areas on the ground-floor of the project to help integrate the campus with the larger community and activate the pedestrian realm. The program calls for 38,000 square feet of retail along Third Street, 15,000 square feet in the campus's main open space described below, and 12,000 square feet along the waterfront. The complete retail program is described in Chapter 3 of the attached Major Phase application.

The retail is intended to serve Mission Bay's residents and daytime worker population, as well as Salesforce employees. Unlike other corporate campuses, Salesforce will not have private cafeterias or other eateries for its employees. Rather, Salesforce employees will use the public retail spaces, adding to the vitality of the area's street life.

Under the Major Phase, Salesforce will provide up to 21,400 square feet of on-site childcare space, consistent with the Mission Bay Redevelopment Plan childcare requirements (Section 304.9) and Section 414 of the San Francisco Planning Code. The proposed on-site childcare will accommodate approximately 200 children. While priority will be given to children of Salesforce employees for the on-site childcare spots, to the extent space is available, Salesforce and the childcare provider may make spaces available to the public.

### ***Campus Open Space – The Town Square***

The Salesforce campus will include a large, publically-accessible open space on Blocks 29 – 32 – referred to as the Town Square – as well as a series of smaller, interstitial open spaces and plazas. The Town Square will be at the center of the campus and is intended to be a gathering

place for the public as well as Salesforce employees. It will contain seating, farmer's markets, outdoor café space, art work and other programming.

Several key elements will help define the Town Square. There will be three habitable "pavilions" that will serve as sculptural elements in the space. The pavilions will include retail, meeting spaces and other uses to help activate the open space. Two of the pavilions will be designed by local or international artists to create architectural variety and interest. The third pavilion, located adjacent to the building on Block 31, will be designed by Legorreta + Legorreta in the same architectural vocabulary as the campus and will support an outdoor electronic screen. The screen will provide public programming, such as baseball games or movies, to help activate the central open space. The Agency will establish operational controls and requirements on the electronic screen during later design phases.

The Town Square will also include a series of water features, including a large one in the center of the space that will help modulate the scale of the open space; the size of the water feature will be designed to expand and contract, depending on the use in the Town Center. Finally, the central open space will be defined by two slim, vertical "pylons" rising to 165 feet. These pylons will help define the entries to the Town Square, and will relate to an existing visual language in Mission Bay of vertical elements in public spaces, including the Richard Serra sculptures on the UCSF campus and the tall campanile form on the UCSF Community Center building. The pylons, to be built of natural red sandstone, are intended to be an iconic and easily identifiable part of the Salesforce campus.

#### ***Circulation, Transit and Automobile and Bicycle Parking***

Vehicular access to the campus is proposed from South Street, Terry Francois Boulevard, 16<sup>th</sup> Street and Illinois Street. Vehicular curb cuts are not allowed on Third Street, the main transit spine in Mission Bay.

Blocks 29 – 32 on the Salesforce campus will be divided by north-south and east-west "varas" or privately-maintained, public right-of-ways that help breakdown the scale of the development and improve pedestrian circulation. The north-south vara will connect to an existing vara on Blocks 26 – 28, referred to as Bridgeview Way. It will provide pedestrian and emergency access through the site. The east-west vara is also proposed as a public pedestrian walkway, allowing pedestrians to walk from Third Street, through the campus, to Terry Francois Boulevard and beyond to the future Bayfront Park and the waterfront.

The Salesforce campus will be well-served by local transit. The site sits on the Third Street Light Rail line. In addition, the 22 Fillmore bus line will be rerouted to extend along 16<sup>th</sup> Street and will travel north along Third Street in front of the site. The Caltrain station is located less than a half-mile north from the site. The site is also well served by bicycle infrastructure, with dedicated bike lanes planned for 16<sup>th</sup> Street and Terry Francois Boulevard.

The Design for Development requires one parking space for each 1,000 square feet of gross floor area of office space. It also permits additional parking for retail space depending on the size and specific use. The Major Phase application therefore allows a maximum of 2,211 vehicular parking spaces. Salesforce will build two new parking structures on the campus (on Blocks 30 and 33) to accommodate 1,836 parking spaces. The remaining spaces will be

provided in the existing parking garage on Block 27 (Parcels 2 and 3), previously developed by Alexandria Real Estate Equities.

Lastly, the Design for Development requires one secured bicycle parking space for every 20 vehicular spaces for a total of 111 bicycle spaces. Salesforce is providing 450 bicycle parking spaces, well more than the number required. Salesforce will also provide showers and storage areas to support bicycle riders.

### ***Sustainable Design Strategies***

The Major Phase calls for incorporating cutting edge sustainable design and “green-building” strategies throughout the project. Salesforce intends to achieve LEED Platinum certification for the headquarters project, as defined by the US Green Building Council. This standard significantly exceeds the sustainability requirements of San Francisco’s Green Building Code. The project will include strategies to reduce water use, conserve and reduce energy, leverage alternative energy sources, including wind turbines, maximize natural light and use sustainable materials. An overview of the project’s approach to sustainability is included in Chapter 3 of the attached Major Phase.

### ***Infrastructure Improvements***

To serve the Salesforce campus, as well as the larger transportation needs of the Mission Bay South Project Area, public streets around the project will be improved. Improvements to South Street, 16<sup>th</sup> Street, Terry Francois Blvd., Illinois Street and Third Street will be completed, consistent with the Infrastructure Plan. New sidewalks will be built, and other pedestrian elements such as new trees, pedestrian scaled lighting, trash cans, and bike racks will be installed as part of the approved Mission Bay South Master Streetscape Plan.

New joint utility trench, wet utilities and recycled water lines will be installed as part of the street improvement work on Terry Francois Blvd, 16<sup>th</sup> Street and Illinois Street. New sewer lines will be installed along Illinois Street.

### **Proposed Variance to the Design for Development View Corridor Standards**

In Mission Bay South, pursuant to the Mission Bay South Design for Development, all street alignments, including both pedestrian and vehicular right-of-ways and privately-maintained public right-of-ways, or varas, are considered view corridors. According to the view corridor standards contained in the Design for Development, no building or portions of buildings may block a view corridor in Mission Bay South. This standard is intended maintain visual links to the Bay and the Mission Creek channel (which runs from south of the AT&T Ballpark to the I-280 freeway), as well as vistas to the hills, the Bay Bridge and the downtown skyline, and to generally create visual linkages that provide a sense of place and orientation within Mission Bay.

As part of this Major Phase submittal, Salesforce is requesting a variance to the Design for Development view corridor standards to allow a pedestrian bridge linking the buildings on Blocks 31 and 32, near the intersection of 16<sup>th</sup> Street and Illinois Street. This bridge would cross over a future extension of Bridgeview Way, one of the pedestrian varas and right-of-ways identified by the Design for Development as a view corridor. According to Salesforce, the bridge will allow critical operational efficiencies between the two buildings.

The Design for Development allows the Agency, at its discretion, to grant variances to the design standards contained in the Design for Development when: (1) “the enforcement would otherwise constitute an unreasonable limitation beyond the intent and purpose of the Design for Development and the Redevelopment Plan” and (2) if “the variance is consistent with the public health, safety and welfare.”

Staff finds that the granting the variance would not constitute an unreasonable limitation beyond the intent and purpose of the Design for Development and finds that granting the variance is consistent with the public health, safety and welfare. The proposed pedestrian bridge is located just north of the southern terminus of a view corridor that terminates at 16<sup>th</sup> Street, at an existing building. Views to the north from the campus, towards Mission Creek channel, AT&T Ballpark, the downtown skyline and beyond, would remain open and unobstructed. The bridge would not block any existing significant vistas and therefore would not be inconsistent with the intent and purpose of the Design for Development. Furthermore, allowing a pedestrian bridge at this location supports key economic development goals contained in the Mission Bay South Redevelopment Plan, such as creating and growing a new economic cluster of innovative companies in the high-technology, biotechnology and life-science industries. These industries require large and flexible floorplates. By connecting two buildings, the pedestrian bridge creates the larger building floorplates Salesforce needs to conduct its work and maximize operational efficiencies. Lastly, allowing a pedestrian bridge at this location will not injure or be detrimental to the health or safety of members of the public. Therefore, staff recommends granting the variance.

### **Citizens Advisory Committee (CAC) Review**

The Mission Bay Citizens Advisory Committee reviewed and discussed the design concepts contained in the Major Phase at its June 9<sup>th</sup> and August 11<sup>th</sup> meetings.

The CAC repeatedly expressed enthusiastic support for the Salesforce headquarters project. Members of the CAC appreciated the warmth and uniqueness of the proposed architecture and complimented the bold use of color. The CAC strongly commended Salesforce’s plans to keep the buildings public and permeable at the ground floor and were particularly pleased by Salesforce’s commitment to provide on-site childcare facilities. CAC members stated that the development would be a strong and desirable addition to Mission Bay.

The CAC asked Salesforce to be thoughtful about where the brightest accent colors are placed, as they will be visible to the occupants of surrounding buildings, including the future UCSF Medical Center. They also asked Salesforce to be sensitive about rooftop uses, visible from Potrero Hill and to provide more bicycle parking facilities, more spread out through the campus. Finally, they requested that Salesforce study further the size and design of the Town Center to ensure the space is well used.

In response to CAC input, Salesforce completed additional solar and wind studies to ensure that the campus open spaces are comfortable and usable. Salesforce will return to the CAC with more detailed information about the programming of the central open space during the schematic design phase. Salesforce has also substantially increased the amount of bicycle parking on the campus and will provide bicycle facilities such as storage and showers.

Salesforce prepared and shared views of the campus from Potrero Hill and the I-280 freeway, which demonstrated that most of the campus will be largely blocked from view by the future UCSF hospital.

All schematic designs for individual buildings will be brought to the CAC for additional review and input.

### **Mission Bay Program in Diversity**

Pursuant to the OPA, Salesforce must comply with the Mission Bay Program in Diversity ("Program"). Salesforce is in the process of assembling its professional services team and is currently exceeding the Agency's Minority/Women-Owned Business Enterprise ("M/WBE") professional services subcontracting goals of 38 percent (20 percent for MBEs and 18 percent for WBEs). Currently, M/WBE participation in Salesforce's professional services team is 53 percent. During construction, Salesforce will be bound by the Program's goals and requirements for M/WBE subcontracting and for local resident participation in the construction workforce.

### **Next Steps**

Once a Major Phase application is approved by the Agency Commission, Salesforce is required to submit schematic design applications for individual buildings, consistent with the approved Major Phase. The schematic designs also require Agency Commission review and approval.

Pursuant to the provisions of Section 304.11 of the Mission Bay South Redevelopment Plan, the Planning Commission also has schematic design review purview for the individual Salesforce buildings because they are office development projects. The Planning Commission will be asked to confirm a Planning Code Section 321 "Prop M" design approval providing authorization for the Salesforce office space prior to Agency Commission action on all schematic building designs.

Salesforce intends to submit schematic designs for individual campus buildings for consideration to both Commissions by the end of 2011. Salesforce anticipates breaking ground on its first building late next year and for the headquarters to be fully constructed over the next five to seven years.

### **CEQA Environmental Review**

As part of its actions in establishing the Mission Bay Redevelopment Project Areas on September 17, 1998, the Redevelopment and Planning Commissions certified the Mission Bay FSEIR, adopted CEQA findings, approved a series of mitigation measures, and established a comprehensive system for mitigation monitoring. The Board of Supervisors and various City departments adopted similar findings and mitigation monitoring plans. This FSEIR includes by reference eight (8) addenda.

Copies of the full four-volume FSEIR were distributed to the Commission prior to the 1998 certification and adoption of the environmental findings, and have subsequently been made available to members of the Commission. The addenda have also been made available to the

members of the Commission. Additional copies of the FSEIR and addenda will be delivered to the members of the Commission upon request, and are also available for review at the Agency's offices.

Agency staff has reviewed the Major Phase submitted for Blocks 26-34, as well as the requested variance to the view corridor standards contained the Mission Bay South Design for Development to accommodate one pedestrian bridge for Blocks 29-32, and has considered and reviewed the FSEIR and addenda. Staff finds the Major Phase and variance to be within the scope of the project analyzed in the FSEIR and subsequent addenda and no additional environmental review is required pursuant to State CEQA Guidelines Sections 15180, 15162, and 15163.

### **STAFF RECOMMENDATION AND CONDITIONS OF APPROVAL**

Staff recommends that the Commission adopt the environmental findings pursuant to the California Environmental Quality Act, grant a variance to the view corridor standards contained the Mission Bay South Design for Development to accommodate one pedestrian bridge and approve the Major Phase application for Block 26 (Parcel 1), Block 27 (Parcel 1) and Blocks 29 – 34, dated September 13, 2011, with the following conditions:

1. Consistent with the variance findings described above, the Salesforce campus shall be permitted one pedestrian bridge connecting Blocks 31 and 32. No other below or above ground connections between blocks or buildings (such as tunnels or bridges) shall be allowed anywhere on the campus. The schematic design of the bridge requires review and approval by the Agency. The schematic design for the bridge shall be submitted as part of the schematic design for the building on either Block 31 or 32. The bridge shall be a minimum of 40 feet above grade and be of an appropriate width and transparency as to create a sense of spaciousness and orientation on the campus and along 16<sup>th</sup> Street.
2. A schematic design application for the Town Center must be submitted to the Agency for review and approval concurrent with the first schematic design application for a building on Blocks 29 – 32.
3. The schematic designs for the three “pavilions” located in the Town Center require approval by the Agency. The schematic designs shall be submitted to the Agency for review and approval prior to Design Development approval of the last building on Blocks 29 – 32. Two of pavilions shall be designed by architects or artists other than the campus architect, Legorreta + Legorreta.
4. A plan detailing the final design, size and operational limitations of the outdoor electronic screen shall be submitted to the Agency for approval prior to Design Development approval of the building on Block 31. The operational standards for the outdoor electronic screen shall also be reviewed by the Citizens Advisory Committee.
5. A signage master plan for all Salesforce signage must be submitted concurrent with the Design Development application for the first building on Blocks 29 – 32.

No corporate, wayfinding, retail or other signage implied in the Major Phase application is approved as part of this Major Phase. All signage shall be consistent with the Mission Bay South Signage Master Plan.

6. All improvements to the public right-of-way surrounding the Salesforce campus shall be consistent with the Mission Bay South Streetscape Master Plan, unless otherwise noted in this Major Phase application.
7. All future schematic design submittals shall identify specific mitigations to address wind discomfort.
8. The design of the walking/jogging path on 16<sup>th</sup> Street along Blocks 31 and 32 shall be generally consistent with the path already installed on 16<sup>th</sup> Street along the UCSF campus to create a strong pedestrian connection to the waterfront.

(Originated by Kelley Kahn, Project Manager)

## **RESOLUTION NO. 97-2011**

### **CONDITIONALLY APPROVING A MAJOR PHASE APPLICATION FOR THE NEW SALESFORCE.COM CORPORATE HEADQUARTERS IN MISSION BAY (BLOCKS 26-34) PURSUANT TO THE OWNER PARTICIPATION AGREEMENT WITH FOCIL-MB, GRANTING A VARIANCE TO THE VIEW CORRIDOR STANDARDS CONTAINED IN THE MISSION BAY SOUTH DESIGN FOR DEVELOPMENT TO ACCOMMODATE ONE PEDESTRIAN BRIDGE FOR BLOCKS 29 – 32, AND ADOPTING ENVIRONMENTAL FINDINGS PURSUANT TO THE CALIFORNIA ENVIRONMENTAL QUALITY ACT; MISSION BAY SOUTH REDEVELOPMENT PROJECT AREA**

#### **BASIS FOR RESOLUTION**

1. On September 17, 1998, by Resolution No. 190-98, the Commission of the Redevelopment Agency of the City and County of San Francisco (“Agency Commission”) approved the Redevelopment Plan for the Mission Bay South Redevelopment Project Area (“Plan”). On the same date, the Agency Commission adopted related documents, including Resolution No. 193-98 authorizing execution of an Owner Participation Agreement (“South OPA”) and related documents between Catellus Development Corporation, a Delaware corporation (“Catellus”), and the Agency. On November 2, 1998, the San Francisco Board of Supervisors (“Board of Supervisors”), by Ordinance No. 335-98, adopted the Plan. The Plan and its implementing documents, as defined in the Plan, constitute the “Plan Documents.”
2. On September 17, 1998, the Agency Commission adopted Resolution No. 182-98 which certified the Final Subsequent Environmental Impact Report (“FSEIR”) as a program EIR for Mission Bay North and South pursuant to the California Environmental Quality Act (“CEQA”) and State CEQA Guidelines Sections 15168 (Program EIR) and 15180 (Redevelopment Plan EIR). On the same date, the Agency Commission also adopted Resolution No. 183-98, which adopted environmental findings (and a statement of overriding considerations), in connection with the approval of the Plan and other Mission Bay project approvals (the “Mission Bay Project”). The San Francisco Planning Commission (“Planning Commission”) certified the FSEIR by Resolution No. 14696 on the same date. On October 19, 1998, the Board of Supervisors adopted Motion No. 98-132 affirming certification of the FSEIR by the Planning Commission and the Agency, and Resolution No. 854-98 adopting environmental findings and a statement of overriding considerations for the Mission Bay Project.
3. Subsequent to certification of the FSEIR, the Agency has issued several addenda to the FSEIR, as described in Recital 4 below. The addenda do not identify any

substantial new information or new significant impacts or a substantial increase in the severity of previously identified significant effects that alter the conclusions reached in the FSEIR. Hereinafter, the Final Subsequent Environmental Impact Report, including any addenda thereto, shall be collectively referred to as the “FSEIR.”

4. The first addendum, dated March 21, 2000, analyzed temporary parking lots to serve the AT&T Ballpark. The second addendum, dated June 20, 2001, analyzed revisions to 7th Street bike lanes and relocation of a storm drain outfall provided for in the Mission Bay South Infrastructure Plan, a component of the South OPA. The third addendum, dated February 10, 2004, analyzed revisions to the Mission Bay South Design for Development with respect to the maximum allowable number of towers, tower separation and requires step-backs. The fourth addendum, dated March 9, 2004, analyzed the Mission Bay South Design for Development with respect to the permitted maximum number of parking spaces for bio-technical and similar research facilities and the North OPA with respect to changes to reflect a reduction in permitted commercial development and associated parking. The fifth addendum, dated October 4, 2005, analyzed the UCSF proposal to establish a Phase I 400-bed hospital in Mission Bay South on Blocks 36-39 and X-3. The sixth addendum, dated September 10, 2008, addressed revisions of the UCSF Medical Center at Mission Bay. The seventh addendum, dated January 7, 2010, addressed the construction of a Public Safety Building on Block 8 in Mission Bay South.
5. Catellus, the original master developer of the Mission Bay North and South Redevelopment Project Areas, has sold most of its remaining undeveloped land in Mission Bay to FOCIL-MB, LLC, (“FOCIL-MB”), a subsidiary of Farallon Capital Management, LLC, a large investment management firm. The sale encompassed approximately 71 acres of land in Mission Bay, and the remaining undeveloped residential parcels in Mission Bay South. FOCIL-MB assumed all of Catellus’s obligations under the South OPA and the Agency’s Owner Participation Agreement for Mission Bay North (collectively, the “OPAs”), as well as all responsibilities under the related public improvement agreements and land transfer agreements with the City and County of San Francisco. FOCIL-MB is bound by all terms of the OPAs and related agreements, including the requirements of the affordable housing program, equal opportunity program, and design review process.
6. The Plan and the Plan Documents, including the Design Review and Document Approval Procedure, designated as Attachment G to the South OPA (“DRDAP”), provide that development proposals in Mission Bay South will be reviewed and processed in “Major Phases,” as defined in and consistent with the Plan and the Plan Documents. Submission of design plans and documents for any specific building (“Project”) must be consistent with the requirements established for each Major Phase. The DRDAP sets forth the review and approval process for Major Phases and Projects.

7. As permitted under the South OPA, Alexandria Real Estate Equities (“ARE”) purchased Blocks 26 - 34 from FOCIL-MB.
8. As permitted under the South OPA, Salesforce.com (“Developer”) purchased Block 26 (parcel 1), Block 27 (parcel 2) and Blocks 29 – 34 from ARE. Salesforce.com will be bound by all relevant terms of the South OPA and related agreements, including the requirements of the equal opportunity program and design review process.
9. Pursuant to the Plan and Plan Documents, including the DRDAP, Developer submitted a major phase application for Blocks 26 (parcel 1), Block 27 (parcel 1) and Blocks 29 - 34 dated September 13, 2011 (“Blocks 26 - 34 Major Phase”).
10. The Blocks 26 - 34 Major Phase includes a proposal for a pedestrian bridge linking future buildings on Blocks 31 and 32, crossing a privately-maintained public right-of-way between South Street and 16th Street.
11. The Plan, through the Mission Bay South Design for Development (“Design for Development”), identifies all street alignments, including the privately maintained public right-of-way between Blocks 31 and 32 as view corridors.
12. The Design for Development includes a design standard that prohibits new buildings or portions of buildings from blocking view corridors.
13. The Plan allows the Agency, at its discretion, to grant a variance to the design standards contained in the Design for Development when (1) “the enforcement would otherwise constitute an unreasonable limitation beyond the intent and purpose of the Design for Development and the Redevelopment Plan” and (2) if “the variance is consistent with the public health, safety and welfare.”
14. Agency staff believes a variance should be granted. The proposed pedestrian bridge is located just north of the southern terminus of a view corridor that terminates at 16<sup>th</sup> Street, at an existing building. Views to the north through the corridor would remain open and unobstructed. The bridge would not block any existing significant vistas and therefore would not be inconsistent with the intent and purpose of the Design for Development. Furthermore, allowing a pedestrian bridge at this location supports key economic goals contained in the Plan, such as creating a new economic development cluster in Mission Bay centered on high-technology and biotechnology industries. These industries require large and flexible floorplates. By connecting two buildings, the proposed pedestrian bridge creates the floorplate size Salesforce needs to conduct its work and maximize operational efficiencies. Lastly, allowing a pedestrian bridge at this location will not injure or be detrimental to the health or safety of members of the public.
15. Agency staff has reviewed the Blocks 26 - 34 Major Phase submitted by Developer, for purposes of compliance with CEQA and the State CEQA Guidelines.

16. The FSEIR is a program EIR under CEQA Guidelines Section 15168 and a redevelopment plan EIR under CEQA Guidelines Section 15180. Approval of the Blocks 26-34 Major Phase including the proposed pedestrian bridge is an undertaking pursuant to and in furtherance of the Plan in conformance with CEQA Section 15180 (“Implementing Action”).
17. Agency staff, in making the necessary findings for the Implementing Action contemplated herein, considered and reviewed the FSEIR and has made documents related to the Implementing Action and the FSEIR files available for review by the Agency Commission and the public, and these files are part of the record before the Agency Commission.
18. The FSEIR findings and statement of overriding considerations adopted in accordance with CEQA by the Agency Commission by Resolution No. 183-98 dated September 17, 1998, were and remain adequate, accurate and objective and are incorporated herein by reference as applicable to the Implementing Action.
19. Agency staff has reviewed the Blocks 26 – 34 Major Phase submitted by the Developer, finds it acceptable and recommends approval thereof, subject to the resolution of certain conditions.

## **FINDINGS**

The Agency finds and determines that the Blocks 26-34 Major Phase submission, including the proposed pedestrian bridge, is an Implementing Action within the scope of the Project analyzed in the FSEIR and requires no additional environmental review pursuant to State CEQA Guidelines Sections 15180, 15162 and 15163 for the following reasons:

1. The Implementing Action does not incorporate substantial changes into the Project analyzed in the FSEIR and will not require major revisions to the FSEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.
2. No substantial changes have occurred with respect to the circumstances under which the Project analyzed in the FSEIR was undertaken that would require major revisions to the FSEIR due to the involvement of new significant environmental effects, or a substantial increase in the severity of effects identified in the FSEIR.
3. No new information of substantial importance to the Project analyzed in the FSEIR has become available which would indicate that (a) the Implementing Action will have significant effects not discussed in the FSEIR; (b) significant environmental effects will be substantially more severe; (c) mitigation measures or alternatives found not feasible which would reduce one or more significant

effects have become feasible; or (d) mitigation measures or alternatives which are considerably different from those in the FSEIR will substantially reduce one or more significant effects on the environment.

## **RESOLUTION**

**ACCORDINGLY, IT IS RESOLVED** by the Redevelopment Agency of the City and County of San Francisco (1) that it has reviewed and considered the FSEIR findings and statement of overriding considerations and hereby adopts the CEQA Findings set forth in Resolution No. 183-98 incorporated herein and those set forth above; (2) a variance is granted to the view corridor standards contained in the Mission Bay South Design for Development to accommodate one pedestrian bridge for Blocks 29-32; and (3) that the Blocks 26 - 34 Major Phase is hereby approved pursuant to the Mission Bay South Owner Participation Agreement with FOCIL-MB, subject to the following program, operational and design requirements being addressed in design phases proposals for individual buildings on Blocks 26 – 34:

1. Consistent with the variance findings described above, the Salesforce campus shall be permitted one pedestrian bridge connecting Blocks 31 and 32. No other below or above ground connections between blocks or buildings (such as tunnels or bridges) shall be allowed anywhere on the campus, with the exception of underground garages, loading docks, service areas and corridors, as proposed in the Major Phase. The schematic design of the bridge requires review and approval by the Agency. The schematic design for the bridge shall be submitted as part of the schematic design for the building on either Block 31 or 32. The bridge shall be a minimum of 40 feet above grade and be of an appropriate width and transparency as to create a sense of spaciousness and orientation on the campus and along 16th Street.
2. A schematic design application for the Town Center must be submitted to the Agency for review and approval concurrent with the first schematic design application for a building on Blocks 29 – 32.
3. The schematic designs for the three “pavilions” located in the Town Center require approval by the Agency. The schematic designs shall be submitted to the Agency for review and approval prior to Design Development approval of the last building on Blocks 29 – 32. Two of pavilions shall be designed by architects or artists other than the campus architect, Legorreta + Legorreta.
4. A plan detailing the final design, size and operational limitations of the outdoor electronic screen shall be submitted to the Agency for approval prior to Design Development approval of the building on Block 31. The operational standards for the outdoor electronic screen shall also be reviewed by the Citizens Advisory Committee.
5. A signage master plan for all Salesforce signage must be submitted concurrent with the Design Development application for the first building on Blocks 29 –

32. No corporate, wayfinding, retail or other signage implied in the Major Phase application is approved as part of this Major Phase. All signage shall be consistent with the Mission Bay South Signage Master Plan.

6. All improvements to the public right-of-way surrounding the Salesforce campus shall be consistent with the Mission Bay South Streetscape Master Plan, unless otherwise noted in this Major Phase application.
7. All future schematic design submittals shall identify specific mitigations to address wind discomfort.
8. The design of the walking/jogging path on 16th Street along Blocks 31 and 32 shall be generally consistent with the path already installed on 16th Street along the UCSF campus to create a strong pedestrian connection to the waterfront.

**APPROVED AS TO FORM:**

---

James B. Morales  
Agency General Counsel

## **RESOLUTION NO. 97-2011**

*Adopted September 20, 2011*

**CONDITIONALLY APPROVING A MAJOR PHASE APPLICATION FOR THE NEW SALESFORCE.COM CORPORATE HEADQUARTERS IN MISSION BAY (BLOCKS 26-34) PURSUANT TO THE OWNER PARTICIPATION AGREEMENT WITH FOCIL-MB, GRANTING A VARIANCE TO THE VIEW CORRIDOR STANDARDS CONTAINED IN THE MISSION BAY SOUTH DESIGN FOR DEVELOPMENT TO ACCOMMODATE ONE PEDESTRIAN BRIDGE FOR BLOCKS 29 – 32, AND ADOPTING ENVIRONMENTAL FINDINGS PURSUANT TO THE CALIFORNIA ENVIRONMENTAL QUALITY ACT; MISSION BAY SOUTH REDEVELOPMENT PROJECT AREA**

### **BASIS FOR RESOLUTION**

1. On September 17, 1998, by Resolution No. 190-98, the Commission of the Redevelopment Agency of the City and County of San Francisco ("Agency Commission") approved the Redevelopment Plan for the Mission Bay South Redevelopment Project Area ("Plan"). On the same date, the Agency Commission adopted related documents, including Resolution No. 193-98 authorizing execution of an Owner Participation Agreement ("South OPA") and related documents between Catellus Development Corporation, a Delaware corporation ("Catellus"), and the Agency. On November 2, 1998, the San Francisco Board of Supervisors ("Board of Supervisors"), by Ordinance No. 335-98, adopted the Plan. The Plan and its implementing documents, as defined in the Plan, constitute the "Plan Documents."
2. On September 17, 1998, the Agency Commission adopted Resolution No. 182-98 which certified the Final Subsequent Environmental Impact Report ("FSEIR") as a program EIR for Mission Bay North and South pursuant to the California Environmental Quality Act ("CEQA") and State CEQA Guidelines Sections 15168 (Program EIR) and 15180 (Redevelopment Plan EIR). On the same date, the Agency Commission also adopted Resolution No. 183-98, which adopted environmental findings (and a statement of overriding considerations), in connection with the approval of the Plan and other Mission Bay project approvals (the "Mission Bay Project"). The San Francisco Planning Commission ("Planning Commission") certified the FSEIR by Resolution No. 14696 on the same date. On October 19, 1998, the Board of Supervisors adopted Motion No. 98-132 affirming certification of the FSEIR by the Planning Commission and the Agency, and Resolution No. 854-98 adopting environmental findings and a statement of overriding considerations for the Mission Bay Project.
3. Subsequent to certification of the FSEIR, the Agency has issued several addenda to the FSEIR, as described in Recital 4 below. The addenda do not identify any

substantial new information or new significant impacts or a substantial increase in the severity of previously identified significant effects that alter the conclusions reached in the FSEIR. Hereinafter, the Final Subsequent Environmental Impact Report, including any addenda thereto, shall be collectively referred to as the "FSEIR."

4. The first addendum, dated March 21, 2000, analyzed temporary parking lots to serve the AT&T Ballpark. The second addendum, dated June 20, 2001, analyzed revisions to 7th Street bike lanes and relocation of a storm drain outfall provided for in the Mission Bay South Infrastructure Plan, a component of the South OPA. The third addendum, dated February 10, 2004, analyzed revisions to the Mission Bay South Design for Development with respect to the maximum allowable number of towers, tower separation and requires step-backs. The fourth addendum, dated March 9, 2004, analyzed the Mission Bay South Design for Development with respect to the permitted maximum number of parking spaces for bio-technical and similar research facilities and the North OPA with respect to changes to reflect a reduction in permitted commercial development and associated parking. The fifth addendum, dated October 4, 2005, analyzed the UCSF proposal to establish a Phase I 400-bed hospital in Mission Bay South on Blocks 36-39 and X-3. The sixth addendum, dated September 10, 2008, addressed revisions of the UCSF Medical Center at Mission Bay. The seventh addendum, dated January 7, 2010, addressed the construction of a Public Safety Building on Block 8 in Mission Bay South.
5. Catellus, the original master developer of the Mission Bay North and South Redevelopment Project Areas, has sold most of its remaining undeveloped land in Mission Bay to FOCIL-MB, LLC, ("FOCIL-MB"), a subsidiary of Farallon Capital Management, LLC, a large investment management firm. The sale encompassed approximately 71 acres of land in Mission Bay, and the remaining undeveloped residential parcels in Mission Bay South. FOCIL-MB assumed all of Catellus's obligations under the South OPA and the Agency's Owner Participation Agreement for Mission Bay North (collectively, the "OPAs"), as well as all responsibilities under the related public improvement agreements and land transfer agreements with the City and County of San Francisco. FOCIL-MB is bound by all terms of the OPAs and related agreements, including the requirements of the affordable housing program, equal opportunity program, and design review process.
6. The Plan and the Plan Documents, including the Design Review and Document Approval Procedure, designated as Attachment G to the South OPA ("DRDAP"), provide that development proposals in Mission Bay South will be reviewed and processed in "Major Phases," as defined in and consistent with the Plan and the Plan Documents. Submission of design plans and documents for any specific building ("Project") must be consistent with the requirements established for each Major Phase. The DRDAP sets forth the review and approval process for Major Phases and Projects.

7. As permitted under the South OPA, Alexandria Real Estate Equities ("ARE") purchased Blocks 26 - 34 from FOCIL-MB.
8. As permitted under the South OPA, Salesforce.com ("Developer") purchased Block 26 (parcel 1), Block 27 (parcel 2) and Blocks 29 - 34 from ARE. Salesforce.com will be bound by all relevant terms of the South OPA and related agreements, including the requirements of the equal opportunity program and design review process.
9. Pursuant to the Plan and Plan Documents, including the DRDAP, Developer submitted a major phase application for Blocks 26 (parcel 1), Block 27 (parcel 1) and Blocks 29 - 34 dated September 13, 2011 ("Blocks 26 - 34 Major Phase").
10. The Blocks 26 - 34 Major Phase includes a proposal for a pedestrian bridge linking future buildings on Blocks 31 and 32, crossing a privately-maintained public right-of-way between South Street and 16th Street.
11. The Plan, through the Mission Bay South Design for Development ("Design for Development"), identifies all street alignments, including the privately maintained public right-of-way between Blocks 31 and 32 as view corridors.
12. The Design for Development includes a design standard that prohibits new buildings or portions of buildings from blocking view corridors.
13. The Plan allows the Agency, at its discretion, to grant a variance to the design standards contained in the Design for Development when (1) "the enforcement would otherwise constitute an unreasonable limitation beyond the intent and purpose of the Design for Development and the Redevelopment Plan" and (2) if "the variance is consistent with the public health, safety and welfare."
14. Agency staff believes a variance should be granted. The proposed pedestrian bridge is located just north of the southern terminus of a view corridor that terminates at 16<sup>th</sup> Street, at an existing building. Views to the north through the corridor would remain open and unobstructed. The bridge would not block any existing significant vistas and therefore would not be inconsistent with the intent and purpose of the Design for Development. Furthermore, allowing a pedestrian bridge at this location supports key economic goals contained in the Plan, such as creating a new economic development cluster in Mission Bay centered on high-technology and biotechnology industries. These industries require large and flexible floorplates. By connecting two buildings, the proposed pedestrian bridge creates the floorplate size Salesforce needs to conduct its work and maximize operational efficiencies. Lastly, allowing a pedestrian bridge at this location will not injure or be detrimental to the health or safety of members of the public.
15. Agency staff has reviewed the Blocks 26 - 34 Major Phase submitted by Developer, for purposes of compliance with CEQA and the State CEQA Guidelines.

16. The FSEIR is a program EIR under CEQA Guidelines Section 15168 and a redevelopment plan EIR under CEQA Guidelines Section 15180. Approval of the Blocks 26-34 Major Phase including the proposed pedestrian bridge is an undertaking pursuant to and in furtherance of the Plan in conformance with CEQA Section 15180 ("Implementing Action").
17. Agency staff, in making the necessary findings for the Implementing Action contemplated herein, considered and reviewed the FSEIR and has made documents related to the Implementing Action and the FSEIR files available for review by the Agency Commission and the public, and these files are part of the record before the Agency Commission.
18. The FSEIR findings and statement of overriding considerations adopted in accordance with CEQA by the Agency Commission by Resolution No. 183-98 dated September 17, 1998, were and remain adequate, accurate and objective and are incorporated herein by reference as applicable to the Implementing Action.
19. Agency staff has reviewed the Blocks 26 – 34 Major Phase submitted by the Developer, finds it acceptable and recommends approval thereof, subject to the resolution of certain conditions.

## FINDINGS

The Agency finds and determines that the Blocks 26-34 Major Phase submission, including the proposed pedestrian bridge, is an Implementing Action within the scope of the Project analyzed in the FSEIR and requires no additional environmental review pursuant to State CEQA Guidelines Sections 15180, 15162 and 15163 for the following reasons:

1. The Implementing Action does not incorporate substantial changes into the Project analyzed in the FSEIR and will not require major revisions to the FSEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.
2. No substantial changes have occurred with respect to the circumstances under which the Project analyzed in the FSEIR was undertaken that would require major revisions to the FSEIR due to the involvement of new significant environmental effects, or a substantial increase in the severity of effects identified in the FSEIR.
3. No new information of substantial importance to the Project analyzed in the FSEIR has become available which would indicate that (a) the Implementing Action will have significant effects not discussed in the FSEIR; (b) significant environmental effects will be substantially more severe; (c) mitigation measures or alternatives found not feasible which would reduce one or more significant

effects have become feasible; or (d) mitigation measures or alternatives which are considerably different from those in the FSEIR will substantially reduce one or more significant effects on the environment.

## RESOLUTION

**ACCORDINGLY, IT IS RESOLVED** by the Redevelopment Agency of the City and County of San Francisco (1) that it has reviewed and considered the FSEIR findings and statement of overriding considerations and hereby adopts the CEQA Findings set forth in Resolution No. 183-98 incorporated herein and those set forth above; (2) a variance is granted to the view corridor standards contained in the Mission Bay South Design for Development to accommodate one pedestrian bridge for Blocks 29-32; and (3) that the Blocks 26 - 34 Major Phase is hereby approved pursuant to the Mission Bay South Owner Participation Agreement with FOCIL-MB, subject to the following program, operational and design requirements being addressed in design phases proposals for individual buildings on Blocks 26 – 34:

1. Consistent with the variance findings described above, the Salesforce campus shall be permitted one pedestrian bridge connecting Blocks 31 and 32. No other below or above ground connections between blocks or buildings (such as tunnels or bridges) shall be allowed anywhere on the campus, with the exception of underground garages, loading docks, service areas and corridors, as proposed in the Major Phase. The schematic design of the bridge requires review and approval by the Agency. The schematic design for the bridge shall be submitted as part of the schematic design for the building on either Block 31 or 32. The bridge shall be a minimum of 40 feet above grade and be of an appropriate width and transparency as to create a sense of spaciousness and orientation on the campus and along 16th Street.
2. A schematic design application for the Town Center must be submitted to the Agency for review and approval concurrent with the first schematic design application for a building on Blocks 29 – 32.
3. The schematic designs for the three “pavilions” located in the Town Center require approval by the Agency. The schematic designs shall be submitted to the Agency for review and approval prior to Design Development approval of the last building on Blocks 29 – 32. Two of pavilions shall be designed by architects or artists other than the campus architect, Legorreta + Legorreta.
4. A plan detailing the final design, size and operational limitations of the outdoor electronic screen shall be submitted to the Agency for approval prior to Design Development approval of the building on Block 31. The operational standards for the outdoor electronic screen shall also be reviewed by the Citizens Advisory Committee.
5. A signage master plan for all Salesforce signage must be submitted concurrent with the Design Development application for the first building on Blocks 29 –

32. No corporate, wayfinding, retail or other signage implied in the Major Phase application is approved as part of this Major Phase. All signage shall be consistent with the Mission Bay South Signage Master Plan.

6. All improvements to the public right-of-way surrounding the Salesforce campus shall be consistent with the Mission Bay South Streetscape Master Plan, unless otherwise noted in this Major Phase application.
7. All future schematic design submittals shall identify specific mitigations to address wind discomfort.
8. The design of the walking/jogging path on 16th Street along Blocks 31 and 32 shall be generally consistent with the path already installed on 16th Street along the UCSF campus to create a strong pedestrian connection to the waterfront.

**APPROVED AS TO FORM:**

  
James B. Morales  
Agency General Counsel

**MEMORANDUM**

**TO:** Agency Commissioners

**FROM:** Tiffany Bohee, Executive Director

**SUBJECT:** Conditionally approving the Combined Basic Concept and Schematic Design for **Block 29** of the new Salesforce.com campus in Mission Bay (Blocks 29 – 32) in the Mission Bay South Redevelopment Project Area, pursuant to the Owner Participation Agreement with FOCIL-MB, LLC, and adopting environmental findings pursuant to the California Environmental Quality Act; Mission Bay South Redevelopment Project Area.

Conditionally approving the Combined Basic Concept and Schematic Design for **Block 30** of the new Salesforce.com campus in Mission Bay (Blocks 29 – 32) in the Mission Bay South Redevelopment Project Area, pursuant to the Owner Participation Agreement with FOCIL-MB, LLC, and adopting environmental findings pursuant to the California Environmental Quality Act; Mission Bay South Redevelopment Project Area.

Conditionally approving the Combined Basic Concept and Schematic Design for **Block 31** of the new Salesforce.com campus in Mission Bay (Blocks 29 – 32) in the Mission Bay South Redevelopment Project Area, pursuant to the Owner Participation Agreement with FOCIL-MB, LLC, and adopting environmental findings pursuant to the California Environmental Quality Act; Mission Bay South Redevelopment Project Area.

Conditionally approving the Combined Basic Concept and Schematic Design for **Block 32** of the new Salesforce.com campus in Mission Bay (Blocks 29 – 32) in the Mission Bay South Redevelopment Project Area, pursuant to the Owner Participation Agreement with FOCIL-MB, LLC, and adopting environmental findings pursuant to the California Environmental Quality Act; Mission Bay South Redevelopment Project Area.

Conditionally approving the Combined Basic Concept and Schematic Design for the **Town Square and Site Landscape** of the new Salesforce.com campus in Mission Bay (Blocks 29 – 32) in the Mission Bay South Redevelopment Project Area, pursuant to the Owner Participation Agreement with FOCIL-MB, LLC, and adopting environmental findings pursuant to the California Environmental Quality Act; Mission Bay South Redevelopment Project Area.

## SUMMARY

In November 2010, salesforce.com, inc. a San Francisco-based technology company (“Salesforce”), purchased 14 acres of land in the Mission Bay South Redevelopment Area to build a new, approximately two million square-foot corporate campus. The Salesforce campus will include office space, retail uses, on-site childcare, parking and other ancillary uses. The purchased property consists of eight vacant parcels: the undeveloped portions of Blocks 26 and 27 and all of Blocks 29 through 34. The land was purchased from Alexandria Real Estate Equities, who had previously purchased the parcels from FOCIL-MB, the Mission Bay master developer.

On July 19, 2011, the Commission received an informational hearing on the Salesforce campus and provided input on design concepts for the project. On September 20, 2011, the Commission approved a Major Phase application for all eight blocks of the Salesforce campus: Block 26 (Parcel 1), Block 27 (Parcel 1) and Blocks 29 – 34 (“Major Phase”). The Major Phase serves as a master plan for the new Salesforce campus and is intended to guide future schematic design submittals for individual buildings on the campus.

Now, in accordance with the Owner Participation Agreement (“OPA”) for Mission Bay South, Salesforce has submitted Combined Basic Concept and Schematic Design applications for buildings on the first four blocks of its campus, Blocks 29, 30, 31 and 32, and for associated open space and site landscaping (“Schematic Designs”). Taken together, these four buildings will contain approximately 1.2 million gross square feet of office development, 50,000 square feet of retail, 22,000 square feet of childcare and 900 parking spaces. The four buildings will be surrounded by approximately four acres of publicly accessible open space, including the “Town Square,” a large central plaza that will include water features, outdoor cafés, art work and other public programming.

The proposed Schematic Designs achieve the key design goal articulated in the Major Phase. The design of the four buildings and the Town Square help define a distinctive identity for the Salesforce campus while also creating a vibrant urban environment that will be well-integrated with the growing Mission Bay neighborhood. The design team is led by Legorreta + Legorreta, an internationally renowned architecture firm based in Mexico City.

The Mission Bay Citizen’s Advisory Committee (“CAC”) has reviewed the Schematic Designs several times over the last six months, most recently at its meeting on January 12, 2012. The CAC has consistently expressed support for the Salesforce project, particularly its colorful and unique architectural style and its active and inviting ground floor.

Pursuant to the provisions of Section 304.11 of the Mission Bay South Redevelopment Plan, the Planning Commission also has schematic design review purview for the individual Salesforce buildings because they are office development projects. On February 16, 2012, the Planning Commission will be asked to confirm a Planning Code Section 321 “Prop M” design approval providing authorization for the Salesforce office space on Blocks 29 - 32. The Agency Commission’s approval of the Schematic Designs for Blocks 29 - 32 is contingent on Planning Commission’s design review approval.

As part of its actions on September 17, 1998, establishing the Mission Bay Redevelopment Project Areas, the Agency Commission certified the Final Subsequent Environmental Impact Report (“FSEIR”) for the Mission Bay Redevelopment Projects (Resolution No. 182-98) and adopted findings under the California Environmental Quality Act (“CEQA”) (Resolution No. 183-98). This FSEIR includes by reference a number of addenda. Agency staff has reviewed the Schematic Design submittals and finds them to be within the scope of the project analyzed in the FSEIR and addenda and no additional environmental review is needed.

### **AB 26 and Mission Bay**

As required by AB 26, the Agency has been in a “suspended” state since June 29, 2011. Under AB 26, however, the Agency has been able to fulfill enforceable obligations which were in place prior to that date, including the Mission Bay South OPA, which was approved in 1998. The OPA sets forth the process for development approvals within the Project Area, and requires the Agency to consider design submissions, including Major Phase and vertical development proposals, on a timely schedule. Therefore, the Agency is able to approve the four Salesforce schematic designs at the current time.

Pursuant to AB 26, on February 1, 2012, the Agency will be dissolved. The City of San Francisco as the successor agency will automatically assume all of the Agency’s enforceable obligations. In Mission Bay, these include the North and South OPA’s, Interagency Cooperation Agreements, Tax Increment Allocation Pledge Agreements, and many related documents. On January 24, 2012, the Board of Supervisors adopted a resolution related to the Agency’s dissolution which affirmed the City’s commitment to Mission Bay and other major approved development projects going forward.

*Staff recommends that the Commission adopt environmental findings pursuant to the California Environmental Quality Act and approve the Combined Basic Concept and Schematic Designs for Blocks 29 – 32 and the Town Square and Site Landscape for the Salesforce.com campus in the Mission Bay.*

## **DISCUSSION**

### **Salesforce Overview**

Founded in 1999 in San Francisco, Salesforce is a business software and information management company and a leader in what is known as “cloud computing.” Salesforce has 7,000 employees worldwide, including nearly 3,000 in San Francisco. It currently occupies approximately 640,000 square feet of leased space in several different buildings in San Francisco. Salesforce is one of the largest technology companies in San Francisco and is growing quickly. It is estimated that the new Mission Bay campus will house between 8,000 and 9,000 employees.

### **Salesforce Approved Major Phase**

On September 20, 2011, the Commission approved a Major Phase application for the entire Salesforce campus, covering eight blocks in Mission Bay South: Block 26 (Parcel 1), Block 27 (Parcel 1) and Blocks 29 – 34. The campus site is bounded by Mission Bay Boulevard South, Third Street, Terry Francois Boulevard and Mariposa Street (see Attachment 1). The site is across Third Street from the University of California, San Francisco (“UCSF”) research campus and the future UCSF Medical Center.

The approved Major Phase allows an approximately two million square-foot corporate campus for the company in eight buildings on 14 acres in Mission Bay. In addition to office space for Salesforce, the approved Major Phase calls for retail, childcare facilities, automobile and bicycle parking, service and loading areas and significant open space. The Major Phase also includes architectural and urban design guidelines, a palette of building materials and colors, retail standards, conceptual landscape designs and sustainability parameters.

As part of its approval of the Major Phase application, the Commission also approved a variance to the Design for Development view corridor standards to allow a single pedestrian bridge linking the buildings on Blocks 31 and 32, near the intersection of 16<sup>th</sup> Street and Illinois Street. The bridge will cross over a future extension of Bridgeview Way, a privately-owned pedestrian corridor or “vara.” By connecting two buildings, the pedestrian bridge creates the larger building floorplates that Salesforce needs to conduct its work and maximize operational efficiencies.

Pursuant to the Mission Bay South OPA, schematic designs for individual buildings can be submitted following the Major Phase approval.

### **Blocks 29 – 32 Schematic Designs**

In accordance with the OPA, Salesforce has now submitted Schematic Design applications for the first four buildings on its campus and for the Town Square and related landscaping. This first phase of the project will be on Blocks 29, 30, 31 and 32 in Mission Bay South, bounded by South Street, Terry Francois Boulevard, 16<sup>th</sup> Street and Third Street. See Attachment 1 for the location of these blocks.

The design team is led by Legorreta + Legorreta, a renowned architecture firm based in Mexico City. The design team also includes the San Francisco-based Flad Architects and local landscape architecture firms Andrea Cochran Landscape Architecture and Tom Leader Studio.

### ***Campus Wide Design Goals & Approach***

The design of the buildings on Blocks 29 – 32 is consistent with the overall design goals for the Salesforce campus established in the Major Phase. A key design goal, as described in the approved Major Phase, is to create a distinctive identity for the Salesforce campus while also creating a vibrant, urban environment that will be well-integrated with the growing Mission Bay neighborhood. Another key design goal is to ensure that the future campus contributes to the vitality of Mission Bay’s street life and helps activate the pedestrian realm. Unlike typical suburban corporate campuses that often have a single, gated point of entry, the Salesforce headquarters will be an open campus, with publically-accessible and active uses on the ground

floor such as retail, restaurants, childcare, fitness areas, meeting rooms and open spaces. Each building will have its own entrance and the campus will be very permeable, with access off all major streets.

Consistent with Legorreta +Legorreta's distinct style, the campus buildings, including Blocks 29 – 32, will feature simple yet bold geometric shapes, thick wall planes, an emphasis on natural light and the use of vibrant color, particularly reds, purples and yellows, creating a visual consistency to the campus. All buildings will be made of high-quality materials including stone and terracotta. An aerial view of the complete Salesforce campus is shown in Attachment 2.

### ***Overview of Schematic Design for Blocks 29 – 32***

The four buildings on Blocks 29 - 32 will contain approximately 1.2 million gross square feet of office development, approximately 50,000 square feet of retail and approximately 22,000 square feet of childcare. The building on Block 30 will include a parking garage containing 900 parking spaces. A subterranean service tunnel will provide access to loading docks that will serve all four buildings. The four buildings will be surrounded by approximately four acres of publicly accessible open space, including the Town Square.

The architectural approach for all four building is a consistent and playful variation on a theme: boldly-scaled, punctuated planes fold over the main masses of each building. Glass curtain walls on the upper floors make these folding planes appear to be floating. The use of setbacks, step backs, terraces, projections and variations in height provide individuality to each building. The primary building materials for Blocks 29 – 32 will be terracotta, in varying reddish hues, and light colored stone. Each building will include a bright accent color, such as pink or purple, to provide visual interest and a building identity. A materials palette is included as Attachment 18.

The design of each building and the Town Square and related landscaping are described in more detail below.

### ***Block 29, Olive Building***

Block 29 is 2.6 acres and is located at the corner of Third Street and South Street. The building on Block 29 is approximately 327,000 gross square feet, including approximately 15,000 square feet of retail. The retail fronts the Town Square and the north-south pedestrian vara to help activate these spaces. A site plan of the building is included in Attachment 3.

Block 29 serves as the primary entry to the Salesforce campus. The building is setback from the corner of Third and South Streets to accommodate a large entry plaza. The building contains a ten-story tower element setback on the site that steps down to a six-story mass closer to Third Street and the Town Square. The tower element is covered with a “folding plane” that travels from the roof to the ground floor along the north-south vara. The façade of this plane is punctuated by an irregular pattern of openings and made of a light colored stone. The six story element is red terracotta and is covered by a large plane that overhangs the entry plaza, supported by multi-colored columns that help announce the building entry. An olive accent color is used throughout the building, providing a sense of identity.

A key element of the design for Block 29 is a 182-foot high, very slender “campanile” that is attached to the tower element. The campanile will be the highest point in the development and will help define the central portion of the campus. The campanile is also made of the Morisca stone, with olive-colored metal and stucco accents throughout. The designs for the building on Block 29 are shown in Attachments 4 – 6.

***Block 30, Purple Building***

Block 30 is 1.85 acres and is located at the corner of South Street and Terry Francois Boulevard. The building is approximately 184,900 gross square feet and includes approximately 11,000 square feet of retail and restaurant space fronting Terry Francois Boulevard and a proposed fitness center. In addition, the building includes a nine-story parking garage (with two additional levels underground) fronting South Street, which contains 900 parking spaces. A site plan is included as Attachment 7.

The building steps down toward the water, with a 60-foot office element fronting Terry Francois Boulevard. This portion of the building is made of orange terracotta, with metal panels around the retail entrances. Moving away from the water, the building rises to 90 feet using a glass curtainwall on the upper floors. This mass is wrapped by a folding plane, similar in form to Building 29, that drops down to the ground floor along the north-south side. The folding plane is made of stone, accented with purple metal and stucco. Adjacent to the office element is the fitness center, designed to be highly-transparent with many windows surrounded by a very distinctive purple metal panel system.

The parking garage fronts South Street and uses a system of orange terracotta baguettes to screen the cars. The base of the parking garage is made of yellow terracotta to add interest and warmth at the pedestrian level. Ingress and egress to the garage is off of South Street. The designs for Block 30 are shown in Attachments 8, 9 and 16.

***Block 31, Pink Building***

Block 31 is 2.6 acres and is located at the corner of Third Street and 16<sup>th</sup> Street, two major arterials in Mission Bay. The building is approximately 443,600 square feet and contains approximately 19,000 square feet of ground-floor retail along Third Street and the Town Square. A site plan for Building 31 is included as Attachment 10.

Along Third Street, the building holds the streetwall and rises to 60 feet. This portion of the building contains ground-floor retail with office spaces above. It is constructed of a yellow terracotta with a regular horizontal window pattern. The ground-floor retail is very transparent, with nearly floor-ceiling glass windows. After 60 feet, the building is setback slightly and continues to rise to 90 feet using a glass curtain wall system.

At the corner of 16<sup>th</sup> Street and Third Street, the building rises to 152 feet, the second of two tower elements on Blocks 29 – 32. The tower is setback from the corner, creating a public plaza at the ground floor to serve and support the abutting retail uses. The top two stories of the tower are clear curtain wall, wrapped in a folding plane made of Morisca stone. As the building moves down 16<sup>th</sup> Street, another six story element of office space fronts the street. At 60 feet, the building steps back slightly and rises two more stories using a glass curtain wall. This mass is also wrapped in a folding plane made of Morisca stone, which lands at the ground

floor along the north-south vara (Bridgeview Way). The main entrance to the building is on 16<sup>th</sup> Street, constructed entirely of glass.

Terraces and projecting meeting rooms add interest to all the facades and a detail of pink stucco and metal is used throughout, including in the deep punched recesses of the folding planes. The building designs are shown in Attachments 6 and 11 – 13.

### ***Block 32 – Yellow Building***

Block 32 is 1.85 acres and is located at the corner of 16<sup>th</sup> Street and Terry Francois Boulevard, fronting the San Francisco Bay. This is the smallest of the four buildings at approximately 223,000 gross square feet. It includes 3,600 square feet of retail and nearly 22,000 square feet of indoor childcare space. A site plan for this building is included as Attachment 14.

The building steps down towards the waterfront through a series of usable terraces, creating a sense of openness and expansiveness along the Bay. The building is approximately 16-foot tall and soon thereafter 32-foot tall along Terry Francois Boulevard, stepping up gradually to 60 feet. This portion of the building is made of red terracotta. After another step back at 60 feet, the building changes from terracotta to a two-story glass curtain wall, wrapped in a folding plane of light-colored stone that ends along the vara on the west side of the building. A series of protruding elements add interest to the facades. The main entrance to the building is off 16<sup>th</sup> Street, created of sheer glass to create a distinct contrast with the terracotta. This building uses yellow metal and stucco accents to give it its identity. The design of Block 32 is seen in Attachments 15 - 17.

The west façade of the building connects to the building on Block 31 via a pedestrian bridge at the 4<sup>th</sup> floor. The bridge concept was approved as part of the Major Phase approval, but the more detailed design is part of the Schematic Design submittal for this building. As seen in Attachment 16, the bridge is very transparent, comprised of clear glass and vertical metal framing. The metal framing is spaced more closely at the ends and thins out toward the middle, creating the impression of an accordion. From inside the bridge, the metal panels look pink while walking in one direction and yellow while walking the other direction (corresponding to the two buildings that the bridge connects).

### ***Campus Open Space***

Blocks 29 – 32 will include a large, publically-accessible plaza referred to as the Town Square as well as a series of smaller, interconnecting open spaces and plazas.

The entrances to the campus open space and will be defined by two very large vertical “pylons” that will be up to 165 feet tall, 20 feet wide and 7 feet in depth: one along Third Street and one along Terry Francois Boulevard. These pylons relate to an existing visual language in Mission Bay of vertical elements in public spaces, including the Richard Serra sculptures on the UCSF campus and the tall campanile form on the UCSF Community Center building. The pylons, to be built of red stone, are intended to be an iconic and easily identifiable part of the Salesforce campus.

The Town Square will serve as the center of the campus and is intended to be a gathering place for the public as well as Salesforce employees. It will contain seating, food trucks, farmer’s markets, outdoor café space, art work and other programming. Several key elements will help

define the Town Square. It will include a water feature in the center of the square that will help modulate the scale of the open space; the size of the water feature will be designed to expand and contract, depending on the use in the Town Center. In addition, an organically-shaped, concrete pergola will define an area for outdoor café seating within the Town Square.

There will also be three “pavilions” in the space. Two of the pavilions will be structural elements in the space designed by local or international artists to create architectural variety and interest. One of these will be in an outdoor area dedicated to the childcare center as part of the childcare play space. The third pavilion, located adjacent to the building on Block 31, will be designed by Legorreta + Legorreta in the same architectural vocabulary as the campus and will support an outdoor electronic screen. The screen will provide public programming, such as baseball games, art installations or movies as well as some Salesforce-related programming, to help activate the central open space. The Operational controls and requirements of the electronic screen will be established during later design phases. The designs of these pavilions are not part of this submittal and will be completed once artists have been selected.

In addition to the Town Square at the center of the four blocks, the landscaping plan includes several plazas and clear pedestrian pathways, taking advantage of the north-south and east-west “varas” or privately-maintained, public right-of-ways that are required on the site. A key goal of the landscaping plan is to lead and invite the public from the Third Street MUNI stop at the corner of Third Street and South Street, through the campus, towards the San Francisco Bay. A large entry plaza at the corner of Third Street and South Street marks the main entrance to the campus, made obvious by multi-colored columns and a distinct paving pattern. A “bio-acequia” system (a system of water features in the ground plane) guides the public from the entry plaza into the site to the main Town Square and through the vara to a waterfront plaza abutting the Bay at Terry Francois Boulevard. Along the way, intimate places for sitting and gathering are created, including an olive tree grove with lounge seating and a walkway lined with palm trees. Low walls for seating and planted gardens to help sustainably manage stormwater will further define the campus open space.

The planting palette for the site consists of drought-tolerant species that also have strong architectural forms to help define the space such as Canary Island palms, olive trees and lemon-scented gum trees. An attractive and colorful selection of furnishings will be in the open space, including multi-colored, moveable chairs and tables for the café seating, wooden bench seating and more organically-shaped lounge seating.

The designs of the Town Square and other campus open spaces are shown in Attachments 19 – 23.

### ***Transit and Automobile and Bicycle Parking***

The Design for Development establishes a parking requirement of one parking space for each 1,000 square feet of gross floor area of office space. It also permits additional parking for retail space depending on the size and specific use. Consistent with these requirements, the buildings on Blocks 29 - 32 will be served by 1,394 parking spaces, including 900 spaces in the parking garage now being proposed on Block 30. The additional spaces will be in an existing parking garage on Block 27 and in a future parking garage on Block 33 in Mission Bay. The parking garage on Blocks 33 will be the subject of a future Schematic Design application by Salesforce.

The Design for Development also requires one secured bicycle parking space for every 20 vehicular spaces. Salesforce is providing roughly 310 bicycle parking spaces on these four blocks, well more than the 70 required. Salesforce will also provide showers and storage areas to support bicycle riders.

Finally, the Salesforce campus will be well-served by local transit. The site sits on the Third Street Light Rail line. In addition, SFMTA intends to reroute the 22 Fillmore bus to extend along 16<sup>th</sup> Street and will travel north along Third Street in front of the site. The Caltrain station is located less than a half-mile north from the site. The site is also well served by bicycle infrastructure, with dedicated bike lanes planned for 16<sup>th</sup> Street and Terry Francois Boulevard.

### ***Sustainable Design Strategies***

The design of Blocks 29 - 32 incorporates cutting edge sustainable design and “green-building” strategies throughout the project. Salesforce is targeting LEED Platinum for the project, as defined by the US Green Building Council. This standard exceeds the sustainability requirements of San Francisco’s Green Building Code. The design includes strategies to reduce water use, conserve and reduce energy, leverage alternative energy sources, maximize natural light, treat on-site stormwater with green strategies and use sustainable materials.

### **Citizens Advisory Committee (CAC) Review**

The Mission Bay Citizens Advisory Committee reviewed and discussed the design of the Salesforce campus four times over the last six months, most recently at its meeting on January 12, 2012.

The CAC has repeatedly expressed enthusiastic support for the Salesforce project. Members of the CAC appreciated the warmth and uniqueness of the proposed architecture and complimented the bold use of color. The CAC strongly commended Salesforce’s plans to keep the buildings public and permeable at the ground floor and were particularly pleased by Salesforce’s commitment to provide on-site childcare facilities. CAC members stated that the development would be a strong and desirable addition to Mission Bay.

The CAC asked Salesforce to be thoughtful about where the brightest accent colors are placed, as they will be visible to the occupants of surrounding buildings, including the future UCSF Medical Center. They also asked Salesforce to be sensitive about rooftop uses, visible from Potrero Hill and to provide more bicycle parking facilities, more spread out through the campus.

In response to CAC input, Salesforce completed additional solar and wind studies to ensure that the campus open spaces are comfortable and usable. Salesforce also substantially increased the amount of bicycle parking on the campus and will provide bicycle facilities such as storage and showers. Salesforce prepared and shared views of the campus from Potrero Hill and the I-280 freeway, which demonstrated that most of the campus will be largely blocked from view by the future UCSF hospital.

### **Planning Commission Review**

Pursuant to the provisions of Section 304.11 of the Mission Bay South Redevelopment Plan, the Planning Commission also has schematic design review purview for the individual Salesforce buildings because they are office development projects. On February 16, 2012, the Planning Commission will be asked to confirm a Planning Code Section 321 "Prop M" design approval providing authorization for the Salesforce office space on Blocks 29 - 32. The Agency Commission's approval of the Schematic Designs for Blocks 29 - 32 is contingent on Planning Commission's design review approval.

The Planning Commission received an informational presentation on the proposed campus design on January 12, 2012 and responded very favorably to the project.

### **Mission Bay Program in Diversity and Trainee Hiring Goals**

Pursuant to the OPA, Salesforce must comply with the Mission Bay Program in Diversity ("Program"). To date, Salesforce has exceeded the Agency's Minority/Women-Owned Business ("M/WBE") professional services subcontracting goal of 38 percent (20 percent for MBEs and 18 percent for WBEs). The M/WBE participation in Salesforce's professional services team continues to hold steady at 53 percent M/WBE businesses. The professional services team is expected to provide trainee opportunities that are based on the consultants' fees. The current goal is to create approximately 75 professional service trainee opportunities over the course of the Salesforce project.

Since the Commission meeting on September 20, 2011, the Agency's Contract Compliance staff has established a bridge between the professional consultants, City College of San Francisco ("CCSF"), and San Francisco State University ("SFSU") to create a pipeline of qualified referrals for the professional trainee program. Overall, there is a large percentage of students from diverse backgrounds in CCSF's Architectural Department and SFSU's Engineering Department who are both economically disadvantaged and meet the eligibility criteria to participate in a trainee program.

After several meetings between staff, CCSF and SFSU, the proposed plan is to generate interest through a job fair that would allow CCSF and SFSU students an opportunity to meet and greet various architecture and engineering firms working on Agency projects, including the Salesforce project, review the firms' trainee job descriptions/opportunities, and to submit their resumes in hopes of employment. Classes resumed in mid-January and staff plans to work with CCSF and SFSU to hold a job fair in late February 2012 or facilitate introductions between the schools and Salesforce consultants to work together directly depending on the next steps related to the Agency's dissolution.

Staff is also in the early stages of exploring how to utilize the existing Trainee module in the Elation System to facilitate an electronic referral system, similar to the construction worker request process in Elation, to interface between the professional consultants and the students that meet the qualifications of the trainee positions.

Lastly, during construction, Salesforce will be bound by the Program's goals and requirements for M/WBE subcontracting and for local resident participation in the construction workforce.

### **Next Steps**

Salesforce is targeting breaking ground on its first building at the end of this year and for the campus to be fully constructed over the next five to seven years.

### **CEQA Environmental Review**

As part of its actions in establishing the Mission Bay Redevelopment Project Areas on September 17, 1998, the Redevelopment and Planning Commissions certified the Mission Bay FSEIR, adopted CEQA findings, approved a series of mitigation measures, and established a comprehensive system for mitigation monitoring. The Board of Supervisors and various City departments adopted similar findings and mitigation monitoring plans. This FSEIR includes by reference eight (8) addenda.

Copies of the full four-volume FSEIR were distributed to the Commission prior to the 1998 certification and adoption of the environmental findings, and have subsequently been made available to members of the Commission. The addenda have also been made available to the members of the Commission. Additional copies of the FSEIR and addenda will be delivered to the members of the Commission upon request, and are also available for review at the Agency's offices.

Agency staff has reviewed the Combined Basic Concept and Schematic Designs submitted for Blocks 29-32 and has considered and reviewed the FSEIR and addenda. Staff finds the Combined Basic Concept and Schematic Designs to be within the scope of the project analyzed in the FSEIR and subsequent addenda and no additional environmental review is required pursuant to State CEQA Guidelines Sections 15180, 15162, and 15163.

### **STAFF RECOMMENDATION AND CONDITIONS OF APPROVAL**

Staff recommends that the Commission adopt the environmental findings pursuant to the California Environmental Quality Act and approve the Combined Basic Concept and Schematic Designs for Blocks 29 – 32 and the Town Square and Site Landscape for the Salesforce.com campus, with the following conditions:

1. The building materials, colors, finishes, architectural detailing, and landscape design may be refined, in consultation with Agency staff, during Design Development phase. A material and color mock-up of sufficient size to be built on the construction site during an early phase of construction shall be prepared for Agency staff review to ensure consistency with approved plans.
2. The designs for the three “pavilions” located in the Town Square shall be submitted to the Agency for review and approval as part of the Design Development phase for the Town Square and/or the Design Development phase for the building on Block 32. Two of pavilions shall be designed by architects or artists other than the campus architect, Legorreta + Legorreta.

3. A plan detailing the final design, size and operational standards of the outdoor electronic screen shall be submitted for review and approval as part of the Design Development phase of the building on Block 31. The operational standards for the outdoor electronic screen shall also be reviewed by the Citizens Advisory Committee.
4. The design of the exterior play area serving the childcare center on Block 32 shall be submitted for review and approval as part of the Design Development phase for the building on Block 32. Of particular interest to the Agency will be how the exterior play area meets the publicly-accessible open space along the vara and the need to ensure a pedestrian-friendly treatment to any necessary enclosures for the play area.
5. The design of the water feature in the Town Square and the base of the pylons (including the details of the relationship between these water features and the pylons) shall be refined during the Design Development phase for the Town Square.
6. The design of all wind screens, sunshades, louvers, canopies and other architectural details require approval as part of the Design Development phase for all blocks.
7. Cooking exhaust shafts extending to the roof shall be included in retail spaces designated for restaurants as part of the Design Development submittals.
8. Proposals for public art (in addition to the pavilions described in condition #2 above) shall be submitted to the Agency for review.
9. The configuration of the photovoltaic panels, rooftop mechanical equipment and penthouses shall be further refined during the Design Development phase.
10. A signage master plan for all Salesforce signage must be submitted concurrent with the Design Development application for the first building on Blocks 29 – 32. No corporate, wayfinding, retail or other signage implied in the Basic Concept and Schematic Design applications is approved as part of this action. All signage shall be consistent with the Mission Bay South Signage Master Plan.
11. All improvements to the public right-of-way surrounding the Salesforce campus shall be consistent with the Mission Bay South Streetscape Master Plan, with the exception of the Arbutus Marina tree planting pattern and the paving material on Block 29, as shown in the Town Square and Site Landscape submittal.
12. The amount and/or width of curb cuts serving the parking garage and loading zones shall be refined during the Design Development phase and shall be consistent with any relevant City and County of San Francisco standards. Of particular interest to the Agency is avoiding excessive interruption to the pedestrian path of travel and to the public realm.

13. The Commission's approval of the Schematic Designs for the buildings on Blocks 29 - 32 is contingent on the Planning Commission's design review approval of the buildings consistent with Planning Code Section 321.

## **RESOLUTION NO. 10-2012**

### **CONDITIONALLY APPROVING THE COMBINED BASIC CONCEPT AND SCHEMATIC DESIGN FOR BLOCK 29 OF THE NEW SALESFORCE.COM CAMPUS IN MISSION BAY (BLOCK 29 – 32) IN THE MISSION BAY SOUTH REDEVELOPMENT PROJECT AREA, PURSUANT TO THE OWNER PARTICIPATION AGREEMENT WITH FOCIL-MB, LLC, AND ADOPTING ENVIRONMENTAL FINDINGS PURSUANT TO THE CALIFORNIA ENVIRONMENTAL QUALITY ACT; MISSION BAY SOUTH REDEVELOPMENT PROJECT AREA**

#### **BASIS FOR RESOLUTION**

1. On September 17, 1998, by Resolution No. 190-98, the Commission of the Redevelopment Agency of the City and County of San Francisco (“Agency Commission”) approved the Redevelopment Plan for the Mission Bay South Redevelopment Project Area (“Plan”). On the same date, the Agency Commission adopted related documents, including Resolution No. 193-98 authorizing execution of an Owner Participation Agreement (“South OPA”) and related documents between Catellus Development Corporation, a Delaware corporation, and the Agency. On November 2, 1998, the San Francisco Board of Supervisors (“Board of Supervisors”), by Ordinance No. 335-98, adopted the Plan. The Plan and its implementing documents, as defined in the Plan, constitute the “Plan Documents.”
2. On September 17, 1998, the Agency Commission adopted Resolution No. 182-98 which certified the Final Subsequent Environmental Impact Report (“FSEIR”) as a program EIR for Mission Bay North and South pursuant to the California Environmental Quality Act (“CEQA”) and State CEQA Guidelines Sections 15168 (Program EIR) and 15180 (Redevelopment Plan EIR). On the same date, the Agency Commission also adopted Resolution No. 183-98, which adopted environmental findings (and a statement of overriding considerations), in connection with the approval of the Plan and other Mission Bay project approvals (the “Mission Bay Project”). The San Francisco Planning Commission (“Planning Commission”) certified the FSEIR by Resolution No. 14696 on the same date. On October 19, 1998, the Board of Supervisors adopted Motion No. 98-132 affirming certification of the FSEIR by the Planning Commission and the Agency, and Resolution No. 854-98 adopting environmental findings and a statement of overriding considerations for the Mission Bay Project.
3. Subsequent to certification of the FSEIR, the Agency has issued several addenda to the FSEIR, as described in Recital 4 below. The addenda do not identify any substantial new information or new significant impacts or a substantial increase in the severity of previously identified significant effects that alter the conclusions reached in the FSEIR. Hereinafter, the Final Subsequent Environmental Impact Report, including any addenda thereto, shall be collectively referred to as the “FSEIR.”

4. The first addendum, dated March 21, 2000, analyzed temporary parking lots to serve the ballpark. The second addendum, dated June 20, 2001, analyzed revisions to 7th Street bike lanes and relocation of a storm drain outfall provided for in the Mission Bay South Infrastructure Plan, a component of the South OPA. The third addendum, dated February 10, 2004, analyzed revisions to the Mission Bay South Design for Development with respect to the maximum allowable number of towers, tower separation and require step-backs. The fourth addendum, dated March 9, 2004, analyzed the Mission Bay South Design for Development with respect to the permitted maximum number of parking spaces for bio-technical and similar research facilities and the North OPA with respect to changes to reflect a reduction in permitted commercial development and associated parking. The fifth addendum, dated October 4, 2005, analyzed the UCSF proposal to establish a Phase I 400-bed hospital in Mission Bay South on Blocks 36-39 and X-3. The sixth addendum, dated September 10, 2008, addressed revisions of the UCSF Medical Center at Mission Bay. The seventh addendum, dated January 7, 2010, addressed the construction of a Public Safety Building on Block 8 in Mission Bay South.
5. On or about June 28, 2011, a bill providing for the dissolution on February 1, 2012 of all redevelopment agencies was adopted by the California legislature and signed by the Governor (the “dissolution legislation” or “AB 26”). By its terms, the dissolution legislation became effective immediately. The dissolution legislation requires agencies and “successor agencies” to honor “enforceable obligations,” as defined in Section 34167 of the legislation. The definition of “enforceable obligation” includes “[a]ny legally binding and enforceable agreement or contract that is not otherwise void as violating the debt limit or public policy.” The South OPA and its attachments is such a contract.
6. Pursuant to AB 26, on February 1, 2012, the Agency will be dissolved. The City of San Francisco as the successor agency will automatically assume all of the Agency’s enforceable obligations. In Mission Bay, these include the Plan and the Plan Documents. On January 24, 2012, the Board of Supervisors adopted a resolution related to the Agency’s dissolution which affirmed the City’s commitment to Mission Bay and other major approved development projects going forward.
7. The Plan and the Plan Documents, including the Design Review and Document Approval Procedure, designated as Attachment G to the South OPA (“DRDAP”), provide that development proposals in Mission Bay South will be reviewed and processed by the Agency in “Major Phases,” as defined in and consistent with the Plan and the Plan Documents. Submission of design plans and documents for any specific building must be consistent with the requirements established for each Major Phase. The DRDAP sets forth the review and approval process for Major Phases and Projects. The obligation of the Agency to review and approve Major Phases and Projects, including Schematic Designs, if they are consistent with the requirements for each Major Phase is an “enforceable obligation” within the meaning of the dissolution legislation.
8. As permitted under the South OPA, Alexandria Real Estate Equities (“ARE”) purchased Blocks 26 - 34 from FOCIL-MB.

9. As permitted under the South OPA, salesforce.com, inc. (“Developer” or “Salesforce”) purchased Block 29, in Mission Bay South, from ARE. Developer will be bound by all relevant terms of the South OPA and related agreements, including the requirements of the equal opportunity program and design review process.
10. On September 20, 2011, by Resolution No. 97-2011, the Agency Commission approved the Developer’s Major Phase Application for Blocks 26-34 in the Mission Bay South Redevelopment Project Area (“Mission Bay South”).
11. Pursuant to the Plan and Plan Documents, including the DRDAP, the Developer has submitted a Combined Basic Concept and Schematic Design for a commercial building on Block 29, dated January 24, 2012 (“Schematic Design”). The commercial building consists of 327,000 gross square feet, including approximately 15,000 square feet of retail.
12. Agency staff has reviewed the Schematic Design for purposes of compliance with CEQA and the State CEQA Guidelines.
13. The FSEIR is a program EIR under CEQA Guidelines Section 15168 and a redevelopment plan EIR under CEQA Guidelines Section 15180. Approval of the Schematic Design is an undertaking pursuant to and in furtherance of the Plan in conformance with CEQA Section 15180 (“Implementing Action”).
14. Agency staff, in making the necessary findings for the Implementing Action contemplated herein, considered and reviewed the FSEIR, and has made documents related to the Implementing Action and the FSEIR files available for review by the Agency Commission and the public, and these files are part of the record before the Agency Commission.
15. The FSEIR findings and statement of overriding considerations adopted in accordance with CEQA by the Agency Commission by Resolution No. 183-98, dated September 17, 1998, reflected the independent judgment and analysis of the Agency, were and remain adequate, accurate and objective and were prepared and adopted following the procedures required by CEQA, and the findings in said resolutions are incorporated herein by reference as applicable to the Implementing Action.
16. Agency staff has reviewed the Schematic Design submitted by Salesforce, finds it acceptable and recommends approval thereof, subject to the resolution of certain conditions.

## **FINDINGS**

The Agency finds and determines that the Schematic Design submission is an Implementing Action within the scope of the Project analyzed in the FSEIR and requires no additional environmental review pursuant to State CEQA Guidelines Sections 15180, 15162 and 15163 for the following reasons:

1. The Implementing Action is within the scope of the Project analyzed in the FSEIR and no major revisions are required due to the involvement of new significant

environmental effects or a substantial increase in the severity of significant effects previously identified in the FSEIR.

2. No substantial changes have occurred with respect to the circumstances under which the Project analyzed in the FSEIR was undertaken that would require major revisions to the FSEIR due to the involvement of new significant environmental effects, or a substantial increase in the severity of effects identified in the FSEIR.
3. No new information of substantial importance to the Project analyzed in the FSEIR has become available which would indicate that (a) the Implementing Action will have significant effects not discussed in the FSEIR; (b) significant environmental effects will be substantially more severe; (c) mitigation measures or alternatives found not feasible which would reduce one or more significant effects have become feasible; or (d) mitigation measures or alternatives which are considerably different from those in the FSEIR will substantially reduce one or more significant effects on the environment.

## **RESOLUTION**

**ACCORDINGLY, IT IS RESOLVED** by the Redevelopment Agency of the City and County of San Francisco that (1) it has reviewed and considered the FSEIR findings and statement of overriding considerations and hereby adopts the CEQA findings set forth in Resolution No. 183-98 incorporated herein and those set forth above; and (2) that the Combined Basic Concept and Schematic Design for the commercial building on Block 29 is hereby approved pursuant to the Mission Bay South Owner Participation Agreement with FOCIL-MB, subject to the following conditions:

1. The building materials, colors, finishes, architectural detailing, and landscape design may be refined, in consultation with Agency staff, during Design Development phase. A material and color mock-up of sufficient size to be built on the construction site during an early phase of construction shall be prepared for Agency staff review to ensure consistency with approved plans.
2. The designs for the three “pavilions” located in the Town Square shall be submitted to the Agency for review and approval as part of the Design Development phase for the Town Square and/or the Design Development phase for the building on Block 32. Two of the pavilions shall be designed by architects or artists other than the campus architect, Legorreta + Legorreta.
3. A plan detailing the final design, size and operational standards of the outdoor electronic screen shall be submitted for review and approval as part of the Design Development phase of the building on Block 31. The operational standards for the outdoor electronic screen shall also be reviewed by the Citizens Advisory Committee.
4. The design of the exterior play area serving the childcare center on Block 32 shall be submitted for review and approval as part of the Design Development phase for the building on Block 32. Of particular interest to the Agency will be how the exterior play area meets the publicly-accessible open space along the vara and the need to ensure a pedestrian-friendly treatment to any necessary enclosures for the play area.

5. The design of the water feature in the Town Square and the base of the pylons (including the details of the relationship between these water features and the pylons) shall be refined during the Design Development phase for the Town Square.
6. The design of all wind screens, sunshades, louvers, canopies and other architectural details require approval as part of the Design Development phase for all blocks.
7. Cooking exhaust shafts extending to the roof shall be included in retail spaces designated for restaurants as part of the Design Development submittals.
8. Proposals for public art (in addition to the pavilions described in condition #2 above) shall be submitted to the Agency for review.
9. The configuration of the photovoltaic panels, rooftop mechanical equipment and penthouses shall be further refined during the Design Development phase.
10. A signage master plan for all Salesforce signage must be submitted concurrent with the Design Development application for the first building on Blocks 29 – 32. No corporate, wayfinding, retail or other signage implied in the Basic Concept and Schematic Design applications is approved as part of this action. All signage shall be consistent with the Mission Bay South Signage Master Plan.
11. All improvements to the public right-of-way surrounding the Salesforce campus shall be consistent with the Mission Bay South Streetscape Master Plan, with the exception of the Arbutus Marina tree planting pattern and the paving material on Block 29, as shown in the Town Square and Site Landscape submittal.
12. The amount and/or width of curb cuts serving the parking garage and loading zones shall be refined during the Design Development phase and shall be consistent with any relevant City and County of San Francisco standards. Of particular interest to the Agency is avoiding excessive interruption to the pedestrian path of travel and to the public realm.
13. The Commission's approval of the Schematic Designs for the buildings on Blocks 29 - 32 is contingent on the Planning Commission's design review approval of the buildings consistent with Planning Code Section 321.

## **RESOLUTION NO. 11-2012**

### **CONDITIONALLY APPROVING THE COMBINED BASIC CONCEPT AND SCHEMATIC DESIGN FOR BLOCK 30 OF THE NEW SALESFORCE.COM CAMPUS IN MISSION BAY (BLOCK 29 – 32) IN THE MISSION BAY SOUTH REDEVELOPMENT PROJECT AREA, PURSUANT TO THE OWNER PARTICIPATION AGREEMENT WITH FOCIL-MB, LLC, AND ADOPTING ENVIRONMENTAL FINDINGS PURSUANT TO THE CALIFORNIA ENVIRONMENTAL QUALITY ACT; MISSION BAY SOUTH REDEVELOPMENT PROJECT AREA**

#### **BASIS FOR RESOLUTION**

1. On September 17, 1998, by Resolution No. 190-98, the Commission of the Redevelopment Agency of the City and County of San Francisco (“Agency Commission”) approved the Redevelopment Plan for the Mission Bay South Redevelopment Project Area (“Plan”). On the same date, the Agency Commission adopted related documents, including Resolution No. 193-98 authorizing execution of an Owner Participation Agreement (“South OPA”) and related documents between Catellus Development Corporation, a Delaware corporation, and the Agency. On November 2, 1998, the San Francisco Board of Supervisors (“Board of Supervisors”), by Ordinance No. 335-98, adopted the Plan. The Plan and its implementing documents, as defined in the Plan, constitute the “Plan Documents.”
2. On September 17, 1998, the Agency Commission adopted Resolution No. 182-98 which certified the Final Subsequent Environmental Impact Report (“FSEIR”) as a program EIR for Mission Bay North and South pursuant to the California Environmental Quality Act (“CEQA”) and State CEQA Guidelines Sections 15168 (Program EIR) and 15180 (Redevelopment Plan EIR). On the same date, the Agency Commission also adopted Resolution No. 183-98, which adopted environmental findings (and a statement of overriding considerations), in connection with the approval of the Plan and other Mission Bay project approvals (the “Mission Bay Project”). The San Francisco Planning Commission (“Planning Commission”) certified the FSEIR by Resolution No. 14696 on the same date. On October 19, 1998, the Board of Supervisors adopted Motion No. 98-132 affirming certification of the FSEIR by the Planning Commission and the Agency, and Resolution No. 854-98 adopting environmental findings and a statement of overriding considerations for the Mission Bay Project.
3. Subsequent to certification of the FSEIR, the Agency has issued several addenda to the FSEIR, as described in Recital 4 below. The addenda do not identify any substantial new information or new significant impacts or a substantial increase in the severity of previously identified significant effects that alter the conclusions reached in the FSEIR. Hereinafter, the Final Subsequent Environmental Impact Report, including any addenda thereto, shall be collectively referred to as the “FSEIR.”

4. The first addendum, dated March 21, 2000, analyzed temporary parking lots to serve the ballpark. The second addendum, dated June 20, 2001, analyzed revisions to 7th Street bike lanes and relocation of a storm drain outfall provided for in the Mission Bay South Infrastructure Plan, a component of the South OPA. The third addendum, dated February 10, 2004, analyzed revisions to the Mission Bay South Design for Development with respect to the maximum allowable number of towers, tower separation and require step-backs. The fourth addendum, dated March 9, 2004, analyzed the Mission Bay South Design for Development with respect to the permitted maximum number of parking spaces for bio-technical and similar research facilities and the North OPA with respect to changes to reflect a reduction in permitted commercial development and associated parking. The fifth addendum, dated October 4, 2005, analyzed the UCSF proposal to establish a Phase I 400-bed hospital in Mission Bay South on Blocks 36-39 and X-3. The sixth addendum, dated September 10, 2008, addressed revisions of the UCSF Medical Center at Mission Bay. The seventh addendum, dated January 7, 2010, addressed the construction of a Public Safety Building on Block 8 in Mission Bay South.
5. On or about June 28, 2011, a bill providing for the dissolution on February 1, 2012 of all redevelopment agencies was adopted by the California legislature and signed by the Governor (the “dissolution legislation” or “AB 26”). By its terms, the dissolution legislation became effective immediately. The dissolution legislation requires agencies and “successor agencies” to honor “enforceable obligations,” as defined in Section 34167 of the legislation. The definition of “enforceable obligation” includes “[a]ny legally binding and enforceable agreement or contract that is not otherwise void as violating the debt limit or public policy.” The South OPA and its attachments is such a contract.
6. Pursuant to AB 26, on February 1, 2012, the Agency will be dissolved. The City of San Francisco as the successor agency will automatically assume all of the Agency’s enforceable obligations. In Mission Bay, these include the Plan and the Plan Documents. On January 24, 2012, the Board of Supervisors adopted a resolution related to the Agency’s dissolution which affirmed the City’s commitment to Mission Bay and other major approved development projects going forward.
7. The Plan and the Plan Documents, including the Design Review and Document Approval Procedure, designated as Attachment G to the South OPA (“DRDAP”), provide that development proposals in Mission Bay South will be reviewed and processed by the Agency in “Major Phases,” as defined in and consistent with the Plan and the Plan Documents. Submission of design plans and documents for any specific building must be consistent with the requirements established for each Major Phase. The DRDAP sets forth the review and approval process for Major Phases and Projects. The obligation of the Agency to review and approve Major Phases and Projects, including Schematic Designs, if they are consistent with the requirements for each Major Phase is an “enforceable obligation” within the meaning of the dissolution legislation.
8. As permitted under the South OPA, Alexandria Real Estate Equities (“ARE”) purchased Blocks 26 - 34 from FOCIL-MB.

9. As permitted under the South OPA, salesforce.com, inc. (“Developer” or “Salesforce”) purchased Block 30, in Mission Bay South, from ARE. Developer will be bound by all relevant terms of the South OPA and related agreements, including the requirements of the equal opportunity program and design review process.
10. On September 20, 2011, by Resolution No. 97-2011, the Agency Commission approved the Developer’s Major Phase Application for Blocks 26-34 in the Mission Bay South Redevelopment Project Area (“Mission Bay South”).
11. Pursuant to the Plan and Plan Documents, including the DRDAP, the Developer has submitted a Combined Basic Concept and Schematic Design for a commercial building on Block 30, dated January 24, 2012 (“Schematic Design”). The commercial building consists of approximately 184,900 gross square feet and includes approximately 11,000 square feet of retail and restaurant space and a proposed fitness center.
12. Agency staff has reviewed the Schematic Design for purposes of compliance with CEQA and the State CEQA Guidelines.
13. The FSEIR is a program EIR under CEQA Guidelines Section 15168 and a redevelopment plan EIR under CEQA Guidelines Section 15180. Approval of the Schematic Design is an undertaking pursuant to and in furtherance of the Plan in conformance with CEQA Section 15180 (“Implementing Action”).
14. Agency staff, in making the necessary findings for the Implementing Action contemplated herein, considered and reviewed the FSEIR, and has made documents related to the Implementing Action and the FSEIR files available for review by the Agency Commission and the public, and these files are part of the record before the Agency Commission.
15. The FSEIR findings and statement of overriding considerations adopted in accordance with CEQA by the Agency Commission by Resolution No. 183-98, dated September 17, 1998, reflected the independent judgment and analysis of the Agency, were and remain adequate, accurate and objective and were prepared and adopted following the procedures required by CEQA, and the findings in said resolutions are incorporated herein by reference as applicable to the Implementing Action.
16. Agency staff has reviewed the Schematic Design submitted by Salesforce, finds it acceptable and recommends approval thereof, subject to the resolution of certain conditions.

## **FINDINGS**

The Agency finds and determines that the Schematic Design submission is an Implementing Action within the scope of the Project analyzed in the FSEIR and requires no additional environmental review pursuant to State CEQA Guidelines Sections 15180, 15162 and 15163 for the following reasons:

1. The Implementing Action is within the scope of the Project analyzed in the FSEIR and no major revisions are required due to the involvement of new significant

environmental effects or a substantial increase in the severity of significant effects previously identified in the FSEIR.

2. No substantial changes have occurred with respect to the circumstances under which the Project analyzed in the FSEIR was undertaken that would require major revisions to the FSEIR due to the involvement of new significant environmental effects, or a substantial increase in the severity of effects identified in the FSEIR.
3. No new information of substantial importance to the Project analyzed in the FSEIR has become available which would indicate that (a) the Implementing Action will have significant effects not discussed in the FSEIR; (b) significant environmental effects will be substantially more severe; (c) mitigation measures or alternatives found not feasible which would reduce one or more significant effects have become feasible; or (d) mitigation measures or alternatives which are considerably different from those in the FSEIR will substantially reduce one or more significant effects on the environment.

## **RESOLUTION**

**ACCORDINGLY, IT IS RESOLVED** by the Redevelopment Agency of the City and County of San Francisco that (1) it has reviewed and considered the FSEIR findings and statement of overriding considerations and hereby adopts the CEQA findings set forth in Resolution No. 183-98 incorporated herein and those set forth above; and (2) that the Combined Basic Concept and Schematic Design for the commercial building on Block 30 is hereby approved pursuant to the Mission Bay South Owner Participation Agreement with FOCIL-MB, subject to the following conditions:

1. The building materials, colors, finishes, architectural detailing, and landscape design may be refined, in consultation with Agency staff, during Design Development phase. A material and color mock-up of sufficient size to be built on the construction site during an early phase of construction shall be prepared for Agency staff review to ensure consistency with approved plans.
2. The designs for the three “pavilions” located in the Town Square shall be submitted to the Agency for review and approval as part of the Design Development phase for the Town Square and/or the Design Development phase for the building on Block 32. Two of the pavilions shall be designed by architects or artists other than the campus architect, Legorreta + Legorreta.
3. A plan detailing the final design, size and operational standards of the outdoor electronic screen shall be submitted for review and approval as part of the Design Development phase of the building on Block 31. The operational standards for the outdoor electronic screen shall also be reviewed by the Citizens Advisory Committee.
4. The design of the exterior play area serving the childcare center on Block 32 shall be submitted for review and approval as part of the Design Development phase for the building on Block 32. Of particular interest to the Agency will be how the exterior play area meets the publicly-accessible open space along the vara and the need to ensure a pedestrian-friendly treatment to any necessary enclosures for the play area.

5. The design of the water feature in the Town Square and the base of the pylons (including the details of the relationship between these water features and the pylons) shall be refined during the Design Development phase for the Town Square.
6. The design of all wind screens, sunshades, louvers, canopies and other architectural details require approval as part of the Design Development phase for all blocks.
7. Cooking exhaust shafts extending to the roof shall be included in retail spaces designated for restaurants as part of the Design Development submittals.
8. Proposals for public art (in addition to the pavilions described in condition #2 above) shall be submitted to the Agency for review.
9. The configuration of the photovoltaic panels, rooftop mechanical equipment and penthouses shall be further refined during the Design Development phase.
10. A signage master plan for all Salesforce signage must be submitted concurrent with the Design Development application for the first building on Blocks 29 – 32. No corporate, wayfinding, retail or other signage implied in the Basic Concept and Schematic Design applications is approved as part of this action. All signage shall be consistent with the Mission Bay South Signage Master Plan.
11. All improvements to the public right-of-way surrounding the Salesforce campus shall be consistent with the Mission Bay South Streetscape Master Plan, with the exception of the Arbutus Marina tree planting pattern and the paving material on Block 29, as shown in the Town Square and Site Landscape submittal.
12. The amount and/or width of curb cuts serving the parking garage and loading zones shall be refined during the Design Development phase and shall be consistent with any relevant City and County of San Francisco standards. Of particular interest to the Agency is avoiding excessive interruption to the pedestrian path of travel and to the public realm.
13. The Commission's approval of the Schematic Designs for the buildings on Blocks 29 - 32 is contingent on the Planning Commission's design review approval of the buildings consistent with Planning Code Section 321.

## **RESOLUTION NO. 12-2012**

### **CONDITIONALLY APPROVING THE COMBINED BASIC CONCEPT AND SCHEMATIC DESIGN FOR BLOCK 31 OF THE NEW SALESFORCE.COM CAMPUS IN MISSION BAY (BLOCK 29 – 32) IN THE MISSION BAY SOUTH REDEVELOPMENT PROJECT AREA, PURSUANT TO THE OWNER PARTICIPATION AGREEMENT WITH FOCIL-MB, LLC, AND ADOPTING ENVIRONMENTAL FINDINGS PURSUANT TO THE CALIFORNIA ENVIRONMENTAL QUALITY ACT; MISSION BAY SOUTH REDEVELOPMENT PROJECT AREA**

#### **BASIS FOR RESOLUTION**

1. On September 17, 1998, by Resolution No. 190-98, the Commission of the Redevelopment Agency of the City and County of San Francisco (“Agency Commission”) approved the Redevelopment Plan for the Mission Bay South Redevelopment Project Area (“Plan”). On the same date, the Agency Commission adopted related documents, including Resolution No. 193-98 authorizing execution of an Owner Participation Agreement (“South OPA”) and related documents between Catellus Development Corporation, a Delaware corporation, and the Agency. On November 2, 1998, the San Francisco Board of Supervisors (“Board of Supervisors”), by Ordinance No. 335-98, adopted the Plan. The Plan and its implementing documents, as defined in the Plan, constitute the “Plan Documents.”
2. On September 17, 1998, the Agency Commission adopted Resolution No. 182-98 which certified the Final Subsequent Environmental Impact Report (“FSEIR”) as a program EIR for Mission Bay North and South pursuant to the California Environmental Quality Act (“CEQA”) and State CEQA Guidelines Sections 15168 (Program EIR) and 15180 (Redevelopment Plan EIR). On the same date, the Agency Commission also adopted Resolution No. 183-98, which adopted environmental findings (and a statement of overriding considerations), in connection with the approval of the Plan and other Mission Bay project approvals (the “Mission Bay Project”). The San Francisco Planning Commission (“Planning Commission”) certified the FSEIR by Resolution No. 14696 on the same date. On October 19, 1998, the Board of Supervisors adopted Motion No. 98-132 affirming certification of the FSEIR by the Planning Commission and the Agency, and Resolution No. 854-98 adopting environmental findings and a statement of overriding considerations for the Mission Bay Project.
3. Subsequent to certification of the FSEIR, the Agency has issued several addenda to the FSEIR, as described in Recital 4 below. The addenda do not identify any substantial new information or new significant impacts or a substantial increase in the severity of previously identified significant effects that alter the conclusions reached in the FSEIR. Hereinafter, the Final Subsequent Environmental Impact Report, including any addenda thereto, shall be collectively referred to as the “FSEIR.”

4. The first addendum, dated March 21, 2000, analyzed temporary parking lots to serve the ballpark. The second addendum, dated June 20, 2001, analyzed revisions to 7th Street bike lanes and relocation of a storm drain outfall provided for in the Mission Bay South Infrastructure Plan, a component of the South OPA. The third addendum, dated February 10, 2004, analyzed revisions to the Mission Bay South Design for Development with respect to the maximum allowable number of towers, tower separation and require step-backs. The fourth addendum, dated March 9, 2004, analyzed the Mission Bay South Design for Development with respect to the permitted maximum number of parking spaces for bio-technical and similar research facilities and the North OPA with respect to changes to reflect a reduction in permitted commercial development and associated parking. The fifth addendum, dated October 4, 2005, analyzed the UCSF proposal to establish a Phase I 400-bed hospital in Mission Bay South on Blocks 36-39 and X-3. The sixth addendum, dated September 10, 2008, addressed revisions of the UCSF Medical Center at Mission Bay. The seventh addendum, dated January 7, 2010, addressed the construction of a Public Safety Building on Block 8 in Mission Bay South.
5. On or about June 28, 2011, a bill providing for the dissolution on February 1, 2012 of all redevelopment agencies was adopted by the California legislature and signed by the Governor (the “dissolution legislation” or “AB 26”). By its terms, the dissolution legislation became effective immediately. The dissolution legislation requires agencies and “successor agencies” to honor “enforceable obligations,” as defined in Section 34167 of the legislation. The definition of “enforceable obligation” includes “[a]ny legally binding and enforceable agreement or contract that is not otherwise void as violating the debt limit or public policy.” The South OPA and its attachments is such a contract.
6. Pursuant to AB 26, on February 1, 2012, the Agency will be dissolved. The City of San Francisco as the successor agency will automatically assume all of the Agency’s enforceable obligations. In Mission Bay, these include the Plan and the Plan Documents. On January 24, 2012, the Board of Supervisors adopted a resolution related to the Agency’s dissolution which affirmed the City’s commitment to Mission Bay and other major approved development projects going forward.
7. The Plan and the Plan Documents, including the Design Review and Document Approval Procedure, designated as Attachment G to the South OPA (“DRDAP”), provide that development proposals in Mission Bay South will be reviewed and processed by the Agency in “Major Phases,” as defined in and consistent with the Plan and the Plan Documents. Submission of design plans and documents for any specific building must be consistent with the requirements established for each Major Phase. The DRDAP sets forth the review and approval process for Major Phases and Projects. The obligation of the Agency to review and approve Major Phases and Projects, including Schematic Designs, if they are consistent with the requirements for each Major Phase is an “enforceable obligation” within the meaning of the dissolution legislation.
8. As permitted under the South OPA, Alexandria Real Estate Equities (“ARE”) purchased Blocks 26 - 34 from FOCIL-MB.

9. As permitted under the South OPA, salesforce.com, inc. (“Developer” or “Salesforce”) purchased Block 31, in Mission Bay South, from ARE. Developer will be bound by all relevant terms of the South OPA and related agreements, including the requirements of the equal opportunity program and design review process.
10. On September 20, 2011, by Resolution No. 97-2011, the Agency Commission approved the Developer’s Major Phase Application for Blocks 26-34 in the Mission Bay South Redevelopment Project Area (“Mission Bay South”).
11. Pursuant to the Plan and Plan Documents, including the DRDAP, the Developer has submitted a Combined Basic Concept and Schematic Design for a commercial building on Block 31, dated January 24, 2012 (“Schematic Design”). The commercial building consists of approximately 443,600 square feet and contains approximately 19,000 square feet of ground-floor retail.
12. Agency staff has reviewed the Schematic Design for purposes of compliance with CEQA and the State CEQA Guidelines.
13. The FSEIR is a program EIR under CEQA Guidelines Section 15168 and a redevelopment plan EIR under CEQA Guidelines Section 15180. Approval of the Schematic Design is an undertaking pursuant to and in furtherance of the Plan in conformance with CEQA Section 15180 (“Implementing Action”).
14. Agency staff, in making the necessary findings for the Implementing Action contemplated herein, considered and reviewed the FSEIR, and has made documents related to the Implementing Action and the FSEIR files available for review by the Agency Commission and the public, and these files are part of the record before the Agency Commission.
15. The FSEIR findings and statement of overriding considerations adopted in accordance with CEQA by the Agency Commission by Resolution No. 183-98, dated September 17, 1998, reflected the independent judgment and analysis of the Agency, were and remain adequate, accurate and objective and were prepared and adopted following the procedures required by CEQA, and the findings in said resolutions are incorporated herein by reference as applicable to the Implementing Action.
16. Agency staff has reviewed the Schematic Design submitted by Salesforce, finds it acceptable and recommends approval thereof, subject to the resolution of certain conditions.

## **FINDINGS**

The Agency finds and determines that the Schematic Design submission is an Implementing Action within the scope of the Project analyzed in the FSEIR and requires no additional environmental review pursuant to State CEQA Guidelines Sections 15180, 15162 and 15163 for the following reasons:

1. The Implementing Action is within the scope of the Project analyzed in the FSEIR and no major revisions are required due to the involvement of new significant

environmental effects or a substantial increase in the severity of significant effects previously identified in the FSEIR.

2. No substantial changes have occurred with respect to the circumstances under which the Project analyzed in the FSEIR was undertaken that would require major revisions to the FSEIR due to the involvement of new significant environmental effects, or a substantial increase in the severity of effects identified in the FSEIR.
3. No new information of substantial importance to the Project analyzed in the FSEIR has become available which would indicate that (a) the Implementing Action will have significant effects not discussed in the FSEIR; (b) significant environmental effects will be substantially more severe; (c) mitigation measures or alternatives found not feasible which would reduce one or more significant effects have become feasible; or (d) mitigation measures or alternatives which are considerably different from those in the FSEIR will substantially reduce one or more significant effects on the environment.

## **RESOLUTION**

**ACCORDINGLY, IT IS RESOLVED** by the Redevelopment Agency of the City and County of San Francisco that (1) it has reviewed and considered the FSEIR findings and statement of overriding considerations and hereby adopts the CEQA findings set forth in Resolution No. 183-98 incorporated herein and those set forth above; and (2) that the Combined Basic Concept and Schematic Design for the commercial building on Block 31 is hereby approved pursuant to the Mission Bay South Owner Participation Agreement with FOCIL-MB, subject to the following conditions:

1. The building materials, colors, finishes, architectural detailing, and landscape design may be refined, in consultation with Agency staff, during Design Development phase. A material and color mock-up of sufficient size to be built on the construction site during an early phase of construction shall be prepared for Agency staff review to ensure consistency with approved plans.
2. The designs for the three “pavilions” located in the Town Square shall be submitted to the Agency for review and approval as part of the Design Development phase for the Town Square and/or the Design Development phase for the building on Block 32. Two of the pavilions shall be designed by architects or artists other than the campus architect, Legorreta + Legorreta.
3. A plan detailing the final design, size and operational standards of the outdoor electronic screen shall be submitted for review and approval as part of the Design Development phase of the building on Block 31. The operational standards for the outdoor electronic screen shall also be reviewed by the Citizens Advisory Committee.
4. The design of the exterior play area serving the childcare center on Block 32 shall be submitted for review and approval as part of the Design Development phase for the building on Block 32. Of particular interest to the Agency will be how the exterior play area meets the publicly-accessible open space along the vara and the need to ensure a pedestrian-friendly treatment to any necessary enclosures for the play area.

5. The design of the water feature in the Town Square and the base of the pylons (including the details of the relationship between these water features and the pylons) shall be refined during the Design Development phase for the Town Square.
6. The design of all wind screens, sunshades, louvers, canopies and other architectural details require approval as part of the Design Development phase for all blocks.
7. Cooking exhaust shafts extending to the roof shall be included in retail spaces designated for restaurants as part of the Design Development submittals.
8. Proposals for public art (in addition to the pavilions described in condition #2 above) shall be submitted to the Agency for review.
9. The configuration of the photovoltaic panels, rooftop mechanical equipment and penthouses shall be further refined during the Design Development phase.
10. A signage master plan for all Salesforce signage must be submitted concurrent with the Design Development application for the first building on Blocks 29 – 32. No corporate, wayfinding, retail or other signage implied in the Basic Concept and Schematic Design applications is approved as part of this action. All signage shall be consistent with the Mission Bay South Signage Master Plan.
11. All improvements to the public right-of-way surrounding the Salesforce campus shall be consistent with the Mission Bay South Streetscape Master Plan, with the exception of the Arbutus Marina tree planting pattern and the paving material on Block 29, as shown in the Town Square and Site Landscape submittal.
12. The amount and/or width of curb cuts serving the parking garage and loading zones shall be refined during the Design Development phase and shall be consistent with any relevant City and County of San Francisco standards. Of particular interest to the Agency is avoiding excessive interruption to the pedestrian path of travel and to the public realm.
13. The Commission's approval of the Schematic Designs for the buildings on Blocks 29 - 32 is contingent on the Planning Commission's design review approval of the buildings consistent with Planning Code Section 321.

**APPROVED AS TO FORM:**

## **RESOLUTION NO. 13-2012**

### **CONDITIONALLY APPROVING THE COMBINED BASIC CONCEPT AND SCHEMATIC DESIGN FOR BLOCK 32 OF THE NEW SALESFORCE.COM CAMPUS IN MISSION BAY (BLOCK 29 – 32) IN THE MISSION BAY SOUTH REDEVELOPMENT PROJECT AREA, PURSUANT TO THE OWNER PARTICIPATION AGREEMENT WITH FOCIL-MB, LLC, AND ADOPTING ENVIRONMENTAL FINDINGS PURSUANT TO THE CALIFORNIA ENVIRONMENTAL QUALITY ACT; MISSION BAY SOUTH REDEVELOPMENT PROJECT AREA**

#### **BASIS FOR RESOLUTION**

1. On September 17, 1998, by Resolution No. 190-98, the Commission of the Redevelopment Agency of the City and County of San Francisco (“Agency Commission”) approved the Redevelopment Plan for the Mission Bay South Redevelopment Project Area (“Plan”). On the same date, the Agency Commission adopted related documents, including Resolution No. 193-98 authorizing execution of an Owner Participation Agreement (“South OPA”) and related documents between Catellus Development Corporation, a Delaware corporation, and the Agency. On November 2, 1998, the San Francisco Board of Supervisors (“Board of Supervisors”), by Ordinance No. 335-98, adopted the Plan. The Plan and its implementing documents, as defined in the Plan, constitute the “Plan Documents.”
2. On September 17, 1998, the Agency Commission adopted Resolution No. 182-98 which certified the Final Subsequent Environmental Impact Report (“FSEIR”) as a program EIR for Mission Bay North and South pursuant to the California Environmental Quality Act (“CEQA”) and State CEQA Guidelines Sections 15168 (Program EIR) and 15180 (Redevelopment Plan EIR). On the same date, the Agency Commission also adopted Resolution No. 183-98, which adopted environmental findings (and a statement of overriding considerations), in connection with the approval of the Plan and other Mission Bay project approvals (the “Mission Bay Project”). The San Francisco Planning Commission (“Planning Commission”) certified the FSEIR by Resolution No. 14696 on the same date. On October 19, 1998, the Board of Supervisors adopted Motion No. 98-132 affirming certification of the FSEIR by the Planning Commission and the Agency, and Resolution No. 854-98 adopting environmental findings and a statement of overriding considerations for the Mission Bay Project.
3. Subsequent to certification of the FSEIR, the Agency has issued several addenda to the FSEIR, as described in Recital 4 below. The addenda do not identify any substantial new information or new significant impacts or a substantial increase in the severity of previously identified significant effects that alter the conclusions reached in the FSEIR. Hereinafter, the Final Subsequent Environmental Impact Report, including any addenda thereto, shall be collectively referred to as the “FSEIR.”

4. The first addendum, dated March 21, 2000, analyzed temporary parking lots to serve the ballpark. The second addendum, dated June 20, 2001, analyzed revisions to 7th Street bike lanes and relocation of a storm drain outfall provided for in the Mission Bay South Infrastructure Plan, a component of the South OPA. The third addendum, dated February 10, 2004, analyzed revisions to the Mission Bay South Design for Development with respect to the maximum allowable number of towers, tower separation and require step-backs. The fourth addendum, dated March 9, 2004, analyzed the Mission Bay South Design for Development with respect to the permitted maximum number of parking spaces for bio-technical and similar research facilities and the North OPA with respect to changes to reflect a reduction in permitted commercial development and associated parking. The fifth addendum, dated October 4, 2005, analyzed the UCSF proposal to establish a Phase I 400-bed hospital in Mission Bay South on Blocks 36-39 and X-3. The sixth addendum, dated September 10, 2008, addressed revisions of the UCSF Medical Center at Mission Bay. The seventh addendum, dated January 7, 2010, addressed the construction of a Public Safety Building on Block 8 in Mission Bay South.
5. On or about June 28, 2011, a bill providing for the dissolution on February 1, 2012 of all redevelopment agencies was adopted by the California legislature and signed by the Governor (the “dissolution legislation” or “AB 26”). By its terms, the dissolution legislation became effective immediately. The dissolution legislation requires agencies and “successor agencies” to honor “enforceable obligations,” as defined in Section 34167 of the legislation. The definition of “enforceable obligation” includes “[a]ny legally binding and enforceable agreement or contract that is not otherwise void as violating the debt limit or public policy.” The South OPA and its attachments is such a contract.
6. Pursuant to AB 26, on February 1, 2012, the Agency will be dissolved. The City of San Francisco as the successor agency will automatically assume all of the Agency’s enforceable obligations. In Mission Bay, these include the Plan and the Plan Documents. On January 24, 2012, the Board of Supervisors adopted a resolution related to the Agency’s dissolution which affirmed the City’s commitment to Mission Bay and other major approved development projects going forward.
7. The Plan and the Plan Documents, including the Design Review and Document Approval Procedure, designated as Attachment G to the South OPA (“DRDAP”), provide that development proposals in Mission Bay South will be reviewed and processed by the Agency in “Major Phases,” as defined in and consistent with the Plan and the Plan Documents. Submission of design plans and documents for any specific building must be consistent with the requirements established for each Major Phase. The DRDAP sets forth the review and approval process for Major Phases and Projects. The obligation of the Agency to review and approve Major Phases and Projects, including Schematic Designs, if they are consistent with the requirements for each Major Phase is an “enforceable obligation” within the meaning of the dissolution legislation.
8. As permitted under the South OPA, Alexandria Real Estate Equities (“ARE”) purchased Blocks 26 - 34 from FOCIL-MB.

9. As permitted under the South OPA, salesforce.com, inc. (“Developer” or “Salesforce”) purchased Block 32, in Mission Bay South, from ARE. Developer will be bound by all relevant terms of the South OPA and related agreements, including the requirements of the equal opportunity program and design review process.
10. On September 20, 2011, by Resolution No. 97-2011, the Agency Commission approved the Developer’s Major Phase Application for Blocks 26-34 in the Mission Bay South Redevelopment Project Area (“Mission Bay South”).
11. Pursuant to the Plan and Plan Documents, including the DRDAP, the Developer has submitted a Combined Basic Concept and Schematic Design for a commercial building on Block 32, dated January 24, 2012 (“Schematic Design”). The commercial building consists of approximately 223,000 gross square feet, and includes 3,600 square feet of retail and nearly 22,000 square feet of indoor childcare space.
12. Agency staff has reviewed the Schematic Design for purposes of compliance with CEQA and the State CEQA Guidelines.
13. The FSEIR is a program EIR under CEQA Guidelines Section 15168 and a redevelopment plan EIR under CEQA Guidelines Section 15180. Approval of the Schematic Design is an undertaking pursuant to and in furtherance of the Plan in conformance with CEQA Section 15180 (“Implementing Action”).
14. Agency staff, in making the necessary findings for the Implementing Action contemplated herein, considered and reviewed the FSEIR, and has made documents related to the Implementing Action and the FSEIR files available for review by the Agency Commission and the public, and these files are part of the record before the Agency Commission.
15. The FSEIR findings and statement of overriding considerations adopted in accordance with CEQA by the Agency Commission by Resolution No. 183-98, dated September 17, 1998, reflected the independent judgment and analysis of the Agency, were and remain adequate, accurate and objective and were prepared and adopted following the procedures required by CEQA, and the findings in said resolutions are incorporated herein by reference as applicable to the Implementing Action.
16. Agency staff has reviewed the Schematic Design submitted by Salesforce, finds it acceptable and recommends approval thereof, subject to the resolution of certain conditions.

## **FINDINGS**

The Agency finds and determines that the Schematic Design submission is an Implementing Action within the scope of the Project analyzed in the FSEIR and requires no additional environmental review pursuant to State CEQA Guidelines Sections 15180, 15162 and 15163 for the following reasons:

1. The Implementing Action is within the scope of the Project analyzed in the FSEIR and no major revisions are required due to the involvement of new significant

environmental effects or a substantial increase in the severity of significant effects previously identified in the FSEIR.

2. No substantial changes have occurred with respect to the circumstances under which the Project analyzed in the FSEIR was undertaken that would require major revisions to the FSEIR due to the involvement of new significant environmental effects, or a substantial increase in the severity of effects identified in the FSEIR.
3. No new information of substantial importance to the Project analyzed in the FSEIR has become available which would indicate that (a) the Implementing Action will have significant effects not discussed in the FSEIR; (b) significant environmental effects will be substantially more severe; (c) mitigation measures or alternatives found not feasible which would reduce one or more significant effects have become feasible; or (d) mitigation measures or alternatives which are considerably different from those in the FSEIR will substantially reduce one or more significant effects on the environment.

## **RESOLUTION**

**ACCORDINGLY, IT IS RESOLVED** by the Redevelopment Agency of the City and County of San Francisco that (1) it has reviewed and considered the FSEIR findings and statement of overriding considerations and hereby adopts the CEQA findings set forth in Resolution No. 183-98 incorporated herein and those set forth above; and (2) that the Combined Basic Concept and Schematic Design for the commercial building on Block 32 is hereby approved pursuant to the Mission Bay South Owner Participation Agreement with FOCIL-MB, subject to the following conditions:

1. The building materials, colors, finishes, architectural detailing, and landscape design may be refined, in consultation with Agency staff, during Design Development phase. A material and color mock-up of sufficient size to be built on the construction site during an early phase of construction shall be prepared for Agency staff review to ensure consistency with approved plans.
2. The designs for the three “pavilions” located in the Town Square shall be submitted to the Agency for review and approval as part of the Design Development phase for the Town Square and/or the Design Development phase for the building on Block 32. Two of the pavilions shall be designed by architects or artists other than the campus architect, Legorreta + Legorreta.
3. A plan detailing the final design, size and operational standards of the outdoor electronic screen shall be submitted for review and approval as part of the Design Development phase of the building on Block 31. The operational standards for the outdoor electronic screen shall also be reviewed by the Citizens Advisory Committee.
4. The design of the exterior play area serving the childcare center on Block 32 shall be submitted for review and approval as part of the Design Development phase for the building on Block 32. Of particular interest to the Agency will be how the exterior play area meets the publicly-accessible open space along the vara and the need to ensure a pedestrian-friendly treatment to any necessary enclosures for the play area.

5. The design of the water feature in the Town Square and the base of the pylons (including the details of the relationship between these water features and the pylons) shall be refined during the Design Development phase for the Town Square.
6. The design of all wind screens, sunshades, louvers, canopies and other architectural details require approval as part of the Design Development phase for all blocks.
7. Cooking exhaust shafts extending to the roof shall be included in retail spaces designated for restaurants as part of the Design Development submittals.
8. Proposals for public art (in addition to the pavilions described in condition #2 above) shall be submitted to the Agency for review.
9. The configuration of the photovoltaic panels, rooftop mechanical equipment and penthouses shall be further refined during the Design Development phase.
10. A signage master plan for all Salesforce signage must be submitted concurrent with the Design Development application for the first building on Blocks 29 – 32. No corporate, wayfinding, retail or other signage implied in the Basic Concept and Schematic Design applications is approved as part of this action. All signage shall be consistent with the Mission Bay South Signage Master Plan.
11. All improvements to the public right-of-way surrounding the Salesforce campus shall be consistent with the Mission Bay South Streetscape Master Plan, with the exception of the Arbutus Marina tree planting pattern and the paving material on Block 29, as shown in the Town Square and Site Landscape submittal.
12. The amount and/or width of curb cuts serving the parking garage and loading zones shall be refined during the Design Development phase and shall be consistent with any relevant City and County of San Francisco standards. Of particular interest to the Agency is avoiding excessive interruption to the pedestrian path of travel and to the public realm.
13. The Commission's approval of the Schematic Designs for the buildings on Blocks 29 - 32 is contingent on the Planning Commission's design review approval of the buildings consistent with Planning Code Section 321.

## **RESOLUTION NO. 14-2012**

### **CONDITIONALLY APPROVING THE COMBINED BASIC CONCEPT AND SCHEMATIC DESIGN FOR THE TOWN SQUARE AND SITE LANDSCAPE OF THE NEW SALESFORCE.COM CAMPUS IN MISSION BAY (BLOCK 29 – 32) IN THE MISSION BAY SOUTH REDEVELOPMENT PROJECT AREA, PURSUANT TO THE OWNER PARTICIPATION AGREEMENT WITH FOCIL-MB, LLC, AND ADOPTING ENVIRONMENTAL FINDINGS PURSUANT TO THE CALIFORNIA ENVIRONMENTAL QUALITY ACT; MISSION BAY SOUTH REDEVELOPMENT PROJECT AREA**

#### **BASIS FOR RESOLUTION**

1. On September 17, 1998, by Resolution No. 190-98, the Commission of the Redevelopment Agency of the City and County of San Francisco (“Agency Commission”) approved the Redevelopment Plan for the Mission Bay South Redevelopment Project Area (“Plan”). On the same date, the Agency Commission adopted related documents, including Resolution No. 193-98 authorizing execution of an Owner Participation Agreement (“South OPA”) and related documents between Catellus Development Corporation, a Delaware corporation, and the Agency. On November 2, 1998, the San Francisco Board of Supervisors (“Board of Supervisors”), by Ordinance No. 335-98, adopted the Plan. The Plan and its implementing documents, as defined in the Plan, constitute the “Plan Documents.”
2. On September 17, 1998, the Agency Commission adopted Resolution No. 182-98 which certified the Final Subsequent Environmental Impact Report (“FSEIR”) as a program EIR for Mission Bay North and South pursuant to the California Environmental Quality Act (“CEQA”) and State CEQA Guidelines Sections 15168 (Program EIR) and 15180 (Redevelopment Plan EIR). On the same date, the Agency Commission also adopted Resolution No. 183-98, which adopted environmental findings (and a statement of overriding considerations), in connection with the approval of the Plan and other Mission Bay project approvals (the “Mission Bay Project”). The San Francisco Planning Commission (“Planning Commission”) certified the FSEIR by Resolution No. 14696 on the same date. On October 19, 1998, the Board of Supervisors adopted Motion No. 98-132 affirming certification of the FSEIR by the Planning Commission and the Agency, and Resolution No. 854-98 adopting environmental findings and a statement of overriding considerations for the Mission Bay Project.
3. Subsequent to certification of the FSEIR, the Agency has issued several addenda to the FSEIR, as described in Recital 4 below. The addenda do not identify any substantial new information or new significant impacts or a substantial increase in the severity of previously identified significant effects that alter the conclusions reached in the FSEIR. Hereinafter, the Final Subsequent Environmental Impact Report, including any addenda thereto, shall be collectively referred to as the “FSEIR.”

4. The first addendum, dated March 21, 2000, analyzed temporary parking lots to serve the ballpark. The second addendum, dated June 20, 2001, analyzed revisions to 7th Street bike lanes and relocation of a storm drain outfall provided for in the Mission Bay South Infrastructure Plan, a component of the South OPA. The third addendum, dated February 10, 2004, analyzed revisions to the Mission Bay South Design for Development with respect to the maximum allowable number of towers, tower separation and require step-backs. The fourth addendum, dated March 9, 2004, analyzed the Mission Bay South Design for Development with respect to the permitted maximum number of parking spaces for bio-technical and similar research facilities and the North OPA with respect to changes to reflect a reduction in permitted commercial development and associated parking. The fifth addendum, dated October 4, 2005, analyzed the UCSF proposal to establish a Phase I 400-bed hospital in Mission Bay South on Blocks 36-39 and X-3. The sixth addendum, dated September 10, 2008, addressed revisions of the UCSF Medical Center at Mission Bay. The seventh addendum, dated January 7, 2010, addressed the construction of a Public Safety Building on Block 8 in Mission Bay South.
5. On or about June 28, 2011, a bill providing for the dissolution on February 1, 2012 of all redevelopment agencies was adopted by the California legislature and signed by the Governor (the “dissolution legislation” or “AB 26”). By its terms, the dissolution legislation became effective immediately. The dissolution legislation requires agencies and “successor agencies” to honor “enforceable obligations,” as defined in Section 34167 of the legislation. The definition of “enforceable obligation” includes “[a]ny legally binding and enforceable agreement or contract that is not otherwise void as violating the debt limit or public policy.” The South OPA and its attachments is such a contract.
6. Pursuant to AB 26, on February 1, 2012, the Agency will be dissolved. The City of San Francisco as the successor agency will automatically assume all of the Agency’s enforceable obligations. In Mission Bay, these include the Plan and the Plan Documents. On January 24, 2012, the Board of Supervisors adopted a resolution related to the Agency’s dissolution which affirmed the City’s commitment to Mission Bay and other major approved development projects going forward.
7. The Plan and the Plan Documents, including the Design Review and Document Approval Procedure, designated as Attachment G to the South OPA (“DRDAP”), provide that development proposals in Mission Bay South will be reviewed and processed by the Agency in “Major Phases,” as defined in and consistent with the Plan and the Plan Documents. Submission of design plans and documents for any specific project must be consistent with the requirements established for each Major Phase. The DRDAP sets forth the review and approval process for Major Phases and Projects. The obligation of the Agency to review and approve Major Phases and Projects, including Schematic Designs, if they are consistent with the requirements for each Major Phase is an “enforceable obligation” within the meaning of the dissolution legislation.
8. As permitted under the South OPA, Alexandria Real Estate Equities (“ARE”) purchased Blocks 26 - 34 from FOCIL-MB.

9. As permitted under the South OPA, salesforce.com, inc. (“Developer” or “Salesforce”) purchased Blocks 29 -32, in Mission Bay South, from ARE. Developer will be bound by all relevant terms of the South OPA and related agreements, including the requirements of the equal opportunity program and design review process.
10. On September 20, 2011, by Resolution No. 97-2011, the Agency Commission approved the Developer’s Major Phase Application for Blocks 26-34 in the Mission Bay South Redevelopment Project Area (“Mission Bay South”).
11. Pursuant to the Plan and Plan Documents, including the DRDAP, the Developer has submitted a Combined Basic Concept and Schematic Design for a town square and site landscaping plan for Blocks 29 -32, dated January 24, 2012 (“Schematic Design”). The town square and site landscaping plan consists of a large, publically-accessible plaza referred to as the Town Square, as well as a series of smaller, interconnecting open spaces and plazas.
12. Agency staff has reviewed the Schematic Design for purposes of compliance with CEQA and the State CEQA Guidelines.
13. The FSEIR is a program EIR under CEQA Guidelines Section 15168 and a redevelopment plan EIR under CEQA Guidelines Section 15180. Approval of the Schematic Design is an undertaking pursuant to and in furtherance of the Plan in conformance with CEQA Section 15180 (“Implementing Action”).
14. Agency staff, in making the necessary findings for the Implementing Action contemplated herein, considered and reviewed the FSEIR, and has made documents related to the Implementing Action and the FSEIR files available for review by the Agency Commission and the public, and these files are part of the record before the Agency Commission.
15. The FSEIR findings and statement of overriding considerations adopted in accordance with CEQA by the Agency Commission by Resolution No. 183-98, dated September 17, 1998, reflected the independent judgment and analysis of the Agency, were and remain adequate, accurate and objective and were prepared and adopted following the procedures required by CEQA, and the findings in said resolutions are incorporated herein by reference as applicable to the Implementing Action.
16. Agency staff has reviewed the Schematic Design submitted by Salesforce, finds it acceptable and recommends approval thereof, subject to the resolution of certain conditions.

## **FINDINGS**

The Agency finds and determines that the Schematic Design submission is an Implementing Action within the scope of the Project analyzed in the FSEIR and requires no additional environmental review pursuant to State CEQA Guidelines Sections 15180, 15162 and 15163 for the following reasons:

1. The Implementing Action is within the scope of the Project analyzed in the FSEIR and no major revisions are required due to the involvement of new significant environmental effects or a substantial increase in the severity of significant effects previously identified in the FSEIR.
2. No substantial changes have occurred with respect to the circumstances under which the Project analyzed in the FSEIR was undertaken that would require major revisions to the FSEIR due to the involvement of new significant environmental effects, or a substantial increase in the severity of effects identified in the FSEIR.
3. No new information of substantial importance to the Project analyzed in the FSEIR has become available which would indicate that (a) the Implementing Action will have significant effects not discussed in the FSEIR; (b) significant environmental effects will be substantially more severe; (c) mitigation measures or alternatives found not feasible which would reduce one or more significant effects have become feasible; or (d) mitigation measures or alternatives which are considerably different from those in the FSEIR will substantially reduce one or more significant effects on the environment.

## **RESOLUTION**

**ACCORDINGLY, IT IS RESOLVED** by the Redevelopment Agency of the City and County of San Francisco that (1) it has reviewed and considered the FSEIR findings and statement of overriding considerations and hereby adopts the CEQA findings set forth in Resolution No. 183-98 incorporated herein and those set forth above; and (2) that the Combined Basic Concept and Schematic Design for the town square and site landscaping on Blocks 29 - 32 is hereby approved pursuant to the Mission Bay South Owner Participation Agreement with FOCIL-MB, subject to the following conditions:

1. The building materials, colors, finishes, architectural detailing, and landscape design may be refined, in consultation with Agency staff, during Design Development phase. A material and color mock-up of sufficient size to be built on the construction site during an early phase of construction shall be prepared for Agency staff review to ensure consistency with approved plans.
2. The designs for the three “pavilions” located in the Town Square shall be submitted to the Agency for review and approval as part of the Design Development phase for the Town Square and/or the Design Development phase for the building on Block 32. Two of the pavilions shall be designed by architects or artists other than the campus architect, Legorreta + Legorreta.
3. A plan detailing the final design, size and operational standards of the outdoor electronic screen shall be submitted for review and approval as part of the Design Development phase of the building on Block 31. The operational standards for the outdoor electronic screen shall also be reviewed by the Citizens Advisory Committee.
4. The design of the exterior play area serving the childcare center on Block 32 shall be submitted for review and approval as part of the Design Development phase for the building on Block 32. Of particular interest to the Agency will be how the exterior

- play area meets the publicly-accessible open space along the vara and the need to ensure a pedestrian-friendly treatment to any necessary enclosures for the play area.
5. The design of the water feature in the Town Square and the base of the pylons (including the details of the relationship between these water features and the pylons) shall be refined during the Design Development phase for the Town Square.
  6. The design of all wind screens, sunshades, louvers, canopies and other architectural details require approval by the Agency and shall be reviewed during the Design Development phase for all blocks.
  7. Cooking exhaust shafts extending to the roof shall be included in retail spaces designated for restaurants as part of the Design Development submittals.
  8. Proposals for public art (in addition to the pavilions described in condition #2 above) shall be submitted to the Agency for review.
  9. The configuration of the photovoltaic panels, rooftop mechanical equipment and penthouses shall be further refined during the Design Development phase.
  10. A signage master plan for all Salesforce signage must be submitted concurrent with the Design Development application for the first building on Blocks 29 – 32. No corporate, wayfinding, retail or other signage implied in the Basic Concept and Schematic Design applications is approved as part of this action. All signage shall be consistent with the Mission Bay South Signage Master Plan.
  11. All improvements to the public right-of-way surrounding the Salesforce campus shall be consistent with the Mission Bay South Streetscape Master Plan, with the exception of the Arbutus Marina tree planting pattern and the paving material on Block 29, as shown in the Town Square and Site Landscape submittal.
  12. The amount and/or width of curb cuts serving the parking garage and loading zones shall be refined during the Design Development phase and shall be consistent with any relevant City and County of San Francisco standards. Of particular interest to the Agency is avoiding excessive interruption to the pedestrian path of travel and to the public realm.
  13. The Commission's approval of the Schematic Designs for the buildings on Blocks 29 - 32 is contingent on the Planning Commission's design review approval of the buildings consistent with Planning Code Section 321.

**APPROVED AS TO FORM:**

---

James B. Morales

### PROJECT DESCRIPTION

The proposal is to develop four new buildings as the corporate headquarters for Salesforce.com on this site with a total of approximately 1,488,996 square feet. Building 29 is a 381,086 square foot, ten-story building, approximately 152-feet in height, located along Third Street at the corner of South Street and Third Street. Building 30 is a six-story, approximately 89-foot tall building containing 334,994 square feet, situated along South Street at the corner of Terry Francois Boulevard. Building 31 is a six-to ten-story, approximately 152-foot tall building containing approximately 507,304 square feet and is located on the corner of Third and 16<sup>th</sup> Streets. Building 32 is a six-story, approximately 89-foot tall building containing approximately 265,612 square feet and is located on the corner of 16<sup>th</sup> Street and Terry Francois Boulevard. A common service tunnel accessed from a single driveway in Building 30 provides loading and service to all four buildings. In addition to office space, a large publicly accessible open space plaza, approximately 4 acres, is located in the center of the campus.

Authorization is requested for up to 1,254,551 square feet of office space, with approximately 41,363 square feet of ground floor retail, and 6,000 square feet of childcare. Specifically, office allocation is requested for 350,803 square feet of office space in Building 29; 189,920 square feet of office space in Building 30; 471,975 square feet of office space in Building 31; and 241,853 square feet of office space in Building 32. A total of 1,394 off-street parking spaces will be located on-site in an underground parking garage. 260 bicycle parking spaces will be provided throughout all four buildings at the ground floor. The project sponsor is seeking allocation of an additional 154,551 square feet of office space for this first phase.

## **SITE DESCRIPTION AND PRESENT USE**

The site is located in the Mission Bay South Project Area, in a Commercial-Industrial Zoning District, and an HZ-5 Height District. Lot 001 in Assessor's Block 8722, also known as MBS Blocks 29,30, 31, and 32, comprise approximately 10.93 acres, and is bounded to the north by South Street, to the west by Third Street, to the south by 16th Street and to the east by Terry Francois Boulevard. The site is now vacant.

## **SURROUNDING PROPERTIES AND NEIGHBORHOOD**

The project site is bounded on the east by Terry Francois Boulevard, and a future public park and the San Francisco Bay beyond. The UCSF research campus and the future UCSF Medical Center lies to the west across Third Street. Commercial and institutional buildings of similar height and scale are to the south and north. The site is served by two MUNI light rail stops at Third Street.

## **ENVIRONMENTAL REVIEW**

The Project is an implementation action pursuant to and within the scope of the Mission Bay South Final Supplemental Environmental Impact Report (Case 96.771E), certified as adequate and complete, by the adoption of Planning Commission Motion No. 14696, on September 17, 1998.

## **HEARING NOTIFICATION**

TYPE	REQUIRED PERIOD	REQUIRED NOTICE DATE	ACTUAL NOTICE DATE	ACTUAL PERIOD
Classified News Ad	20 days	February 10, 2012	February 10, 2011	20 days
Posted Notice	20 days	February 10, 2012	February 9, 2011	21 days
Mailed Notice	10 days	February 16, 2012	February 13, 2011	17 days

## **PUBLIC COMMENT**

- The Mission Bay Citizens Advisory Committee (CAC) reviewed the Salesforce preliminary design concepts on June 9, 2011. In August the CAC reviewed Salesforce's design refinements on the Major Phase application prior to approval by the SF Redevelopment Commission. On January 31, 2012 the CAC reviewed the schematic designs for individual buildings.
- The CAC was supportive of Salesforce's plans for active and permeable ground floor uses, and inclusion of childcare facilities. The CAC asked Salesforce to be thoughtful about where the brightest accent colors are placed, as they will be visible to the occupants of surrounding buildings, including the future UCSF Medical Center. They also asked Salesforce to be sensitive about rooftop uses, visible from Potrero Hill.
- The Planning Department has received no public comment.

## ISSUES AND OTHER CONSIDERATIONS

- The Major Phase is the result of an extensive multi-month charrette process to front load the design work to arrive at shared vision.
- Redevelopment Agency staff and Planning Department staff participated in a series of two-day design charrettes about the design of the headquarters to ensure that key public design goals are met.
- The Master Plan consists of an “enhanced” Major Phase application and meets all requirements of a Major Phase application, which Salesforce was required to submit per the Owner Participation Agreement (OPA) for Mission Bay South. This enhanced Major Phase addresses and codifies the land use program for the campus, overall massing requirements, a palette of materials and colors, architectural style guidelines, retail standards, conceptual landscape designs and general urban design guidelines.
- Following the Redevelopment Agency Commission approval of the Major Phase in September, Redevelopment Agency and Planning Department staff continued to collaborate with Salesforce to refine the design of buildings 29- 32.

## REQUIRED COMMISSION ACTION

Approval is requested for the new project under the current application, for design review and office allocation of up to 1,254,551 square feet pursuant to Planning Code section 321 *et seq.*

## BASIS FOR RECOMMENDATION

- The Project Authorization requested would promote the health, safety, and welfare of the City, and provide jobs in an appropriate Mission Bay site.
- The proposed design of the buildings is in conformity with Motion 14702 and the Mission Bay Redevelopment Plan and the Design for development for Mission Bay South.

<b>RECOMMENDATION:</b> <b>Approval with Conditions</b>

ADOPTING FINDINGS PURSUANT TO PLANNING COMMISSION RESOLUTION \_\_\_\_\_ RELATING TO DESIGN APPROVAL FOR FOUR NEW BUILDINGS, WITH A TOTAL OF APPROXIMATELY 1,488,996 GROSS SQUARE FEET, ALSO CONTAINING APPROXIMATELY 41,363 SQUARE FEET OF GROUND FLOOR RETAIL SPACE AND 1,394 OFF-STREET PARKING SPACES, AND TO PROJECT AUTHORIZATION UNDER THE 2011-2012 ANNUAL OFFICE LIMITATION PROGRAM PURSUANT TO RESOLUTION 14702 AND TO SECTIONS 321 AND 322 OF THE PLANNING CODE, FOR A DEVELOPMENT CONTAINING UP TO 1,254,551 SQUARE FEET (GROSS FLOOR AREA) OFFICE SPACE, LOCATED AT THIRD STREET ON ASSESSOR'S BLOCK 8722, LOT 001, A.K.A. MISSION BAY SOUTH BLOCKS 29, 30, 31 and 32 IN THE MISSION BAY SOUTH REDEVELOPMENT AREA, A COMMERCIAL-INDUSTRIAL-RETAIL ZONING DISTRICT, AND AN HZ-5 HEIGHT DISTRICT.

### PREAMBLE

On December 20, 2011, Ford Fish, of Bay Jacaranda No 2932, LLC, (hereinafter "Project Sponsor") filed Application No. 2011.1423B with the City and County of San Francisco Planning Department ("Department") for design approval and project authorization pursuant to Resolution 14702 and Planning Code Section 321, for construction of 1,254,551 square feet of office space at Mission Bay South Blocks 29, 30, 31, and 32, as further described below ("Project").

In November 2010, Salesforce purchased 14 acres of land in the Mission Bay South Redevelopment Area to build a new corporate headquarters. The purchased property consists of eight vacant parcels: the undeveloped portions of Blocks 26 and 27 and all of Blocks 29 through 34. The land was purchased from Alexandria Real Estate Equities, (ARE) who had previously purchased the parcels from FOCIL-MB, the Mission Bay master developer.

On November 1 2010, ARE transferred the Mission Bay South Development Blocks 33 and 34 to the sponsor. No office space authorization was transferred with these properties. On November 1 2010, ARE transferred 677,020 square feet of office space authorization, along with the Mission Bay South Development Blocks 29, 30, 31, and 32, to the sponsor.

On November 1 2010, ARE transferred lot 1, Block 26 and lot 1, Block 27 of the Mission Bay South Development to the sponsor. 422,980 square feet of office space authorization was transferred with these properties.

Blocks 29 - 32 will cumulatively occupy 1,254,551 square feet of office space and will require an additional 154,551 square feet of office space authorization and allocation.

In accordance with the Owner Participation Agreement ("OPA") for Mission Bay South, Salesforce submitted a Major Phase application for Block 26 (Parcel 1), Block 27 (Parcel 1) and Blocks 29 – 34. A Major Phase Application for Blocks 27, (lot 001), 28 (lot 001), 29, 30, 31, 32, 33, and 34 was approved by the Redevelopment Agency Commission in September 20, 2011. The final Schematic Design for Blocks 29-32 was approved by the Redevelopment Commission on January 31, 2012.

On September 17, 1998, by Resolution No. 14702, the Planning Commission (hereinafter "Commission") determined that the Mission Bay South Redevelopment Plan ("MBS Plan") provides for a type, intensity, and location of development that is consistent with the overall goals, objectives, and policies of the General Plan, as well as the Eight Priority Policies of Section 101.1(b) of the Planning Code ("Code").

Under that Resolution, the Commission also determined that the office development contemplated in the MBS Plan in particular promotes the public welfare, convenience and necessity, and therefore, that the determination required pursuant to Section 321 *et seq.* of the Code for office development shall be deemed to have been made for all specific office development projects undertaken pursuant to the MBS plan.

Further, the Commission considered under Resolution 14702 the guidelines set forth in Section 321(b)(3)(A)-(G) and determined that the apportionment of office space over the anticipated 30-year build-out of the South Plan Area will remain within the limits set by Section 321, and will maintain a balance among economic growth, housing, transportation, and public services, pursuant to terms of the MBS Plan and Plan Documents, which provide for the appropriate construction and provision of housing, roadways, transit, and all other necessary public services in accordance with the Infrastructure Plan (as defined in the MBS Plan Documents).

In its consideration of Resolution 14702, the Commission reviewed the design guidelines of the MBS Plan Area, as set forth in the MBS Design for Development Document ("D for D") and determined that the standards and guidelines in the D for D will ensure the design quality of any proposed office development. The Commission resolved to review and approve the designs of specific office developments in the Plan Area using the D for D guidelines and standards, when such proposals would be subject to the provisions of Section 321 *et seq.*, to confirm that said development is consistent with the findings set forth in Resolution 14702.

The Commission further resolved that, upon confirming that a specific development is consistent with the findings set forth in Resolution 14702, the Commission would issue a project authorization for that

development.

The development of office space is an element of the MBS Plan, which, among other things, provides for: "Strengthening the economic base of the Plan Area and the community by strengthening retail and other commercial functions in the Plan Area through the addition of approximately 335,000 leasable square feet of retail space ... and about 5,953,600 leasable square feet of mixed office, research and development and light manufacturing uses".

The Agency and the Planning Department, together acting as co-lead agencies for conducting environmental review for the Plan, and other permits, approvals and related and collateral actions (the "Project"), prepared and certified a Final Subsequent Environmental Impact Report (the "FSEIR"). The Agency certified the FSEIR for the Project on September 17, 1998 by Resolution No. 182-98. Also on September 17, 1998 by Resolution No.183-98, the Agency adopted environmental findings (and a statement of overriding considerations, that the unavoidable negative impacts of the Project are acceptable because the economic, social, legal, technological and other benefits of the Project outweigh the negative impacts on the environment) pursuant to the California Environmental Quality Act ("CEQA") and State Guidelines in connection with the approval of the MBS Plan and other Project approvals. The Planning Commission certified the FSEIR by Resolution No. 14696 on the same date. On October 19, 1998, the Board of Supervisors adopted Motion No. 98-132 affirming certification of the FSEIR by the Planning Commission and the Agency, and by Resolution No. 854-98 adopting environmental findings (and a statement of overriding considerations).

Pursuant to the California Public Resources Code (PRC) Section 21090 and Section 15180 of the State CEQA Guidelines, all public and private activities or undertakings pursuant to, or in furtherance of a redevelopment plan constitute a single project, and the FSEIR on the Redevelopment Plan shall be treated as a program EIR with no subsequent EIRs required for individual components of the Redevelopment Plan because events specified in PRC Section 21166 and State CEQA Guidelines Sections 15162 or 15163 have not occurred. Specifically, no substantial changes in the Project, no substantial changes in the circumstances under which the Project is being undertaken, and no new information has become available that would cause new significant environmental impacts. Also, no mitigation measures or alternatives previously found to be infeasible have been found to be feasible, and no different mitigation measures or alternatives that would substantially reduce one or more significant effects of the Project have been identified. The project Authorization for Case 2001.1423B, MBS Blocks 29, 30, 31, and 32 ("Implementing Action"), is an undertaking pursuant to and in furtherance of the Plan pursuant to CEQA Guidelines Section 15180.

As part of its actions in establishing the Mission Bay Redevelopment Project Areas on September 17, 1998, the Redevelopment and Planning Commissions certified the Mission Bay FSEIR, adopted CEQA findings, approved a series of mitigation measures, and established a comprehensive system for mitigation monitoring. The Board of Supervisors and various City departments adopted similar findings and mitigation monitoring plans. This FSEIR includes by reference eight (8) addenda.

Copies of the full four-volume FSEIR were distributed to the Commission prior to the 1998 certification and adoption of the environmental findings, and have subsequently been made available to members of the Commission. The addenda have also been made available to the members of the Commission. Additional copies of the FSEIR and addenda will be delivered to the members of the Commission upon request, and are also available for review at the Agency's offices.

Agency staff has reviewed the Combined Basic Concept and Schematic Designs submitted for Blocks 29-32 and has considered and reviewed the FSEIR and addenda. Staff finds the Combined Basic Concept and Schematic Designs to be within the scope of the project analyzed in the FSEIR and subsequent

addenda and no additional environmental review is required pursuant to State CEQA Guidelines Sections 15180, 15162, and 15163.

On March 1, 2012, the Planning Commission ("Commission") conducted a duly noticed public hearing at a regularly scheduled meeting on Office Allocation Application No. 2011.1423B.

The Commission has heard and considered the testimony presented to it at the public hearing and has further considered written materials and oral testimony presented on behalf of the applicant, Department staff, and other interested parties.

**MOVED,** That the Commission hereby approves the project design and authorizes the office space allocation pursuant to Section 321 *et seq.* as requested by Case 2011.1423B, subject to these findings and the conditions contained in Exhibit A, attached hereto and incorporated herein by reference, based on the following findings:

## FINDINGS

Having reviewed the materials identified in the preamble above, and having heard all testimony and arguments, this Commission finds, concludes, and determines as follows:

1. The above recitals are accurate and constitute findings of this Commission.
2. The Redevelopment Agency of the City and County of San Francisco (the "Agency") is implementing the MBS Plan pursuant to and in accordance with Community Redevelopment Law of the State of California.
3. **Site Description and Present Use.** The site is located in the Mission Bay South Project Area, in a Commercial-Industrial Zoning District, and an HZ-5 Height District. Lot 001 in Assessor's Block 8722, also known as MBS Blocks 29, 30, 31, and 32, comprise approximately 10.93 acres, and is bounded to the north by South Street, to the west by Third Street, to the south by 16th Street and to the east by Terry Francois Boulevard.
4. **Surrounding Properties and Neighborhood.** The project site is bounded on the east by Terry Francois Boulevard, and a future public park and the San Francisco Bay beyond. The UCSF research campus and the future UCSF Medical Center lies to the west across Third Street. Commercial and institutional buildings of similar height and scale are to the south and north. The site is served by two MUNI light rail stops at Third Street.
5. **Project Description.** The proposal is to develop four new buildings on this site as the corporate headquarters for Salesforce.com with a total of approximately 1,488,996 square feet. Building 29 is a 381,086 square foot, ten-story building, approximately 152-feet in height, located along Third Street at the corner of South Street and Third Street. Building 30 is a six-story, approximately 89-foot tall building containing 334,994 square feet, situated along South Street at the corner of Terry Francois Boulevard. Building 31 is a six-to ten-story, approximately 152-foot tall building containing approximately 507,304 square feet and is located on the corner of Third and 16<sup>th</sup> Streets. Building 32 is a six-story, approximately 89-foot tall building containing approximately 265,612 square feet and is located on the corner of 16<sup>th</sup> Street and Terry Francois Boulevard. A common service tunnel accessed from a single driveway in Building 30 provides loading and

service to all four buildings. In addition to office space, a large publicly accessible open space plaza, approximately 4 acres, is located in the center of the campus.

Authorization is requested for up to 1,254,551 square feet of office, with approximately 41,363 square feet of ground floor retail, and 6,000 square feet of childcare. Specifically, office allocation is requested for 350,803 square feet of office space in Building 29; 189,920 square feet of office space in Building 30; 471,975 square feet of office space in Building 31; and 241,853 square feet of office space in Building 32. A total of 1,394 off-street parking spaces will be located on-site in an underground parking garage. 260 bicycle parking spaces will be provided throughout all four buildings at the ground floor. The project sponsor is seeking allocation of an additional 154,551 square feet of office space for this first phase.

The project is proposed to meet the office workforce needs of Salesforce.com

6. **Public Comment.** The Mission Bay Citizens Advisory Committee (CAC) reviewed the Salesforce preliminary design concepts on June 9, 2011. In August the CAC reviewed Salesforce's design refinements on the Major Phase application prior to approval by the SF Redevelopment Commission. All future schematic designs for individual buildings will be brought to the CAC for review and input.

The CAC was supportive of Salesforce's plans for active and permeable ground floor uses, and inclusion of childcare facilities. The CAC asked Salesforce to be thoughtful about where the brightest accent colors are placed, as they will be visible to the occupants of surrounding buildings, including the future UCSF Medical Center. They also asked Salesforce to be sensitive about rooftop uses, visible from Potrero Hill.

The Planning Department has received no public comment.

7. **Planning Code Compliance.** The Commission finds and determines that the Project is consistent with the relevant provisions of the Code in the following manner:

1. Section 321- Available Allocation: Consistent with Section 304.11 of the MBS Redevelopment Plan and Planning Code Sections 320 through 325, approval of the office development of MBS Blocks 29-32 would not exceed the annual limitation contained in Planning Code Section 321.

At present, the unassigned large office allocation (for projects equal to or greater than 50,000 square feet in area) is 3,831,349 square feet. Upon authorization of the subject project for 154,551 square feet, 3,676,798 square feet would be available for allocation to pending and future office projects this year.

2. Section 321- Approval Criteria: Pursuant to Resolution 14702, the Commission is charged with determining whether the Project conforms to applicable standards in the D for D Document, which supersedes the criteria set forth in Section 321 and other provisions of the Code except as provided in the MBS Plan. The proposed Project meets the MBS Redevelopment Plan and the D for D Document standards and guidelines as described below in findings 6 and 7, respectively:
3. Mission Bay South Design for Development Standards

The Mission Bay South (MBS) Design for Development Document is a companion document to the Mission Bay South Redevelopment Plan. It contains Design Standards and Design Guidelines, which apply to all development within the MBS Plan Area. With the adoption of the MBS Redevelopment

Plan and the Design for Development Document (D for D), those documents supersede the San Francisco Planning Code in its entirety, except as otherwise provided in the MBS Redevelopment Plan.

The proposed Project meets the MBS Redevelopment Plan and D for D Document standards and guidelines as described below.

In MBS plans for the development of buildings are preceded by the approval of a Major Phase, which generally covers one or several MBS blocks and in which such items as the general appearance, site planning (program of uses, estimated: range of development density, parking, loading, square footage of each use and schedule for development, utilities, transit, vehicular, pedestrian and bicycle circulation, open space, private and public) and streetscape are considered. Any major phase should also meet the MBS Redevelopment Plan and D for D standards and guidelines.

## **Standards**

### **A. Land Use**

Blocks 29-32, as shown in Attachment x of the MBS Redevelopment Plan, "Redevelopment Land Use Map", are within a designated Commercial Industrial Retail District.

*Plans for development of Blocks 29- 32 indicate that the intended use would be office and retail with associated parking, which are permitted uses in that District (Section 302.4 of the MBS Redevelopment Plan).*

### **B. Height**

According to Map 4 of the MBS D for D, Blocks 29, 30, 31, and 32 are within Height Zone-5 (HZ-5), which has the following development controls:

- Base Height: 90'
- Base Height Coverage: 93% of HZ-5
- Tower Height: 160'
- Tower Height Coverage: 7% of HZ-5
- Location of Towers: No tower permitted in Blocks 26a, 28, 30, 32, 34 & X4.
- Corners: No intersection to allow more than 2 towers within 50' of the corner.
- Tower Separation: 100'
- Orientation: Towers along 3<sup>rd</sup> Street not to exceed 160'
- Mechanical Equipment: Exempt from the Height limitation.  
The exemption is limited to the top 36' (20' for a mechanical penthouse, 16 for top of a ventilator stack) of such features where the height limit is more than 65'.

*The proposed development of Blocks 29-32 consists of four buildings; the maximum height of each building would be: Buildings 29 and 31= 152'; Buildings 30 and 32= 90'. The proposed coverage is consistent with the percentages for Base Height and Tower Height coverage determined in the Major Phase Application. The proposal complies with the number, location, orientation and separation of towers as required in the D for D. Mechanical equipment would be located on the roof and screened from view, the maximum height of the proposed screens would be 12' for all Buildings.*

C. Bulk

Bulk controls apply above 90' and include the following standards:

- Maximum Plan Length: 200'
- Maximum Floor Plane: 20,000 square feet

*Buildings 29 and 31 are subject to Bulk requirements; their maximum plan length, as shown on plans would be 184' feet, and the maximum floor planes would be 18,042 square feet, and 16,880 square feet respectively.*

D. Setbacks

- Required Setbacks: 5' setback on east side of Third Street; 20' setback at 16<sup>th</sup> Street.

*The development of Blocks 29-32 proposes a 5' setback along Third Street and a 20' landscaped setback that includes a jogging path along 16<sup>th</sup> Street.*

E. Coverage and Streetwall

In Commercial Industrial Retail Districts the D for D Document sets forth the following requirements:

Coverage: Non Applicable.

Streetwall:

- Minimum Length: Minimum 70% of block frontage length along primary streets required (Third Street and 16<sup>th</sup> Street are considered primary streets, (70% refers to the total measurement from street to street with exceptions for pedestrian walkways).
- Minimum Height: 15'
- Maximum Height: Height no to exceed 90' (except for mid-rise and towers).
- Corner Zone Conditions: At all intersections along primary streets, build to streetwall at all corners for a distance of 50'. Height of buildings at the corners to be no less than 15'.
- Projections: Architectural projections over a street, alley, park or plaza shall provide a minimum of 8' of vertical clearance over the sidewalk or other surface above which they are situated.

*The application for Planning Code Section 321 (b) determination for development of Blocks 29, 30, 31, and 32 indicates the minimum length of streetwall would be 77.5% along the Third Street frontage, and approximately 99.6% along the 16th Street frontage; the minimum streetwall height would be approximately 60' along Third Street, and the maximum streetwall height to be 152'. The proposed building would also comply with the applicable requirements for Corner Zone Conditions, with an open space with entries that serves retail that exempts from the street wall at the corner of Third and 16<sup>th</sup> Streets.*

#### F. Sunlight Access to Open Space

As the MBS D for D Document indicates, additional shadow analysis will not be required unless, as part of a specific project application, the project applicant seeks a variance from the standards determining the shape and location of buildings.

*No exception is required as part of this application.*

#### G. Wind Analysis

The MBS D for D Document indicates that wind review will be required for all projects that include buildings over 100' in height. The height of the proposed building would be 160'.

*A Pedestrian Wind Study was prepared by RWDI, Consulting Engineers and Scientists for this Site. The Study considered the entire Major Phase of development proposed in the application. The final Report, dated January 11, 2012 concludes that wind conditions at grade, around the development, were predicted to be comfortable for walking year-around.*

*The study indicates that wind speeds and duration of windy conditions would meet the criteria for pedestrian comfort provided in Section 148 of the Planning Code. The report indicated that the large majority of the site has excellent wind comfort and thermal comfort conditions. The report included analysis of landscape design such as tree windbreaks and tree groves, as well as architectural elements, such as canopies and windscreens to improve wind comfort at the Town Square.*

#### H. View Corridors

View corridors follow street alignments and are based on the following principles: to preserve orientation and visual linkages to the Bay, as well as vistas to hills, the Bay Bridge and downtown skyline; to preserve orientation and visual linkages that provide a sense of place within Mission Bay. No building or portion thereof shall block a view corridor.

*The proposed development of Blocks 29-32 does not block any view corridors as defined above. A pedestrian bridge would connect buildings 32 and 31 near 16<sup>th</sup> Street and encroach into the view corridor established by the north-south vara, but because of its location and minimal visibility would still preserve the view corridor. The existing building to the south of the site already blocks this view corridor. The one-story bridge would span the vara at the fourth floor and would be approximately 10' wide.*

#### I. Parking

The number of off-street parking spaces required and/or allowed for uses within MBS, as indicated in the MBS D for D are the following:

- Office: Maximum and minimum, one space for each 1,000 square feet of gross floor area.
- Retail: Maximum, one space for every 500 square feet of gross floor area for up to 20,000 square feet.

- ⦿ Restaurant: maximum 1 Stall per 200 square feet of gross floor area.
- ⦿ Bicycle Parking: One secure bicycle parking space must be provided for every 20 vehicular parking spaces or fraction thereof.

*Based on the gross square footage indicated on the application for Planning Code Section 321 (b) determination for development of Blocks 29- 32, the maximum number of allowable parking spaces required would be: Retail (6,334 square feet) 13 parking spaces; Restaurant (41,836) 208 parking spaces; Office uses (1,173,045 square feet) 1,173 parking spaces, for a total of 1,394 vehicular parking spaces. As proposed, all parking would be screened from view. Based on the above, 70 bicycle parking spaces are required. A total of 260 bicycle parking spaces are proposed.*

#### J. Loading

The number of loading spaces required and/or allowed for uses within MBS, provided per gross square feet, as indicated in the MBS D for D are the following:

- ⦿ Retail: One space for retail uses between 10,001 and 60,000 square feet.
- ⦿ Commercial: Two spaces for commercial uses between 200,001 and 500,000 square feet.
- ⦿ Dimensions: At least 10' wide, 35' long and 14' high.

*Based on those ratios, the total number of loading spaces would be ten: two loading spaces for Block 29; two serving Block 30; three serving block 31; and 2 serving block 32 are provided, However, because of the shared service tunnel access and the ability to share loading spaces it was determined by Agency Staff that the nine spaces provided would satisfy the requirements indicated in the D for D Document.*

#### 4. Mission Bay South Design for Development Design Guidelines

The Applicable Design Guidelines are: **Commercial Industrial Guidelines.**

##### **1. Block Development**

##### A. View Corridors

“View corridors are defined by the Mission Bay street grid. No building or portion thereof shall block a view corridor established by that grid of streets and dedicated right-of-ways”.

*The proposed development of Blocks 29-32 does not block any view corridors as defined above.*

##### **B. OPEN SPACES**

“Encourage the development of publicly-accessible open spaces at ground level. Where feasible, design these open spaces in relation to local-serving retail such as cafes and to the public open space network”.

*The development of Blocks 29-32 contemplates the development of nearly 4 acres of a publicly accessible private open space network which includes two major open spaces at the intersection of the vara easements and a series of smaller, interconnected open spaces and plazas for different activities, with strong relationships to the pedestrian circulation, retail uses, building entrances, sun access, wind and potential views towards the Bay.*

*This is achieved through changes in level, planting of trees (evergreen and deciduous), ground covers, water features, furniture and public art all of which enhance the scale, add visual interest and create vantage points to see the Bay. The Town Square will be at the center of the campus and is intended to be a gathering place for the public as well as Salesforce employees. It will contain seating, farmer's markets, outdoor café space, art work and other programming. The open space organizes the site with respect to views, way-finding, and connections to Mission Bay, the Bay and downtown, breaks the scale of the blocks, and provides a chance for the general public to interact with the site.*

*Several key elements will help define the open space and Town Square. There will be two pavilions that will serve as sculptural elements in the space. The pavilions will include retail, meeting spaces and other uses to help activate the open space. One of the pavilions will be designed by local or international artists to create architectural variety and interest. The second pavilion, located adjacent to the building on Block 31, will be designed by Legorreta + Legorreta in the same architectural vocabulary as the campus and will support an outdoor electronic screen. The screen will provide public programming, such as baseball games or movies, to help activate the central open space. The Redevelopment Successor Agency will establish operational controls and requirements on the electronic screen during later design phases. Retail space is located throughout the open space to help activate the open space.*

*A common thread that runs through the landscaping of the open spaces will include various water features that lead from 3<sup>rd</sup> Street to Terry Francois Blvd, -the visual axis to the Bay – fountains, runnels, a large vernal pool that will expand and contract, depending on the season or use in the center, terminating in a wetlands mazes that celebrate and connect the space to the Bay.*

### **C. Pedestrian Walkways**

*“Walkways are encouraged to enhance the pedestrian experience in the Commercial Industrial area”.  
“Walkways to mid-block open spaces or courtyard are encouraged”.*

*Blocks 29-32 are bisected by two publicly accessible pedestrian easements or varas: the north-south vara running from 16<sup>th</sup> Street to South Street; and an east-west vara, an emergency access and pedestrian easement, running from Terry Francois Boulevard to the Mission Bay UCSF Campus. The pedestrian experience created by these private, pedestrian-oriented streets would be enhanced through their relation to a series of plazas and open spaces that create a variety of uses and sequence of public open spaces. The east-west vara leads from the Third Street Muni stop through the site to the waterfront park. The north-south vara connects Mission Bay to views of downtown.*

## **2. Street Frontage**

### **A. Streetwall**

*“Commercial areas in San Francisco are noted for streets with buildings at the property line where there is little or no space between the buildings. This historical pattern of development gives San Francisco its intense urban quality and should be a model for Mission Bay development. Commercial Industrial Buildings shall be continuous at the property line on streets, except for occasional breaks in the streetwall”.*

*“Setbacks up to 10' from the property line are allowed within a continuous streetwall”.*

“Variations from the streetwall are allowed to create open space, pedestrian circulation space, mid-block lanes and landscaping areas”.

*The majority of the building facades at ground level would be built to the property or setback line. Breaks in the street wall occur where open space is created. Building 29 is set back 72'-6" from Third Street to establish an entry plaza to the Salesforce campus. Building 31 presents a small break at the corner of Third Street and 16<sup>th</sup> Street at ground level that would accentuate the entrances to retail spaces. The solid street wall logically erodes along the building faces at Terry Francois Boulevard where the intent is to expand the public open space to face the Bayfront Park and the Bay. Access to the main building entrances are recessed from the streetwall at multiple points around the perimeter, and are sized proportionally to maintain the intent of holding a strong street wall*

*This approach would be consistent with the traditional development pattern that gives San Francisco an intense urban quality, as sought by the Design Guidelines.*

#### B. Streetwall Height

“Within high density commercial areas of San Francisco such as downtown and South of Market, a typical ratio of street width to streetwall height is approximately 1: 1.25”. “The building-street relationship in Mission Bay Commercial Industrial areas should reflect this city pattern”.

*Along Third Street, the relation of streetwall height to the width of the Street (except for the tower portion) would not exceed the typical ratio found in the high density commercial areas of San Francisco.*

#### C. Pedestrian Scale

“Office and other commercial buildings are encouraged to be active and to incorporate visually interesting details and/or decoration into the design of the building base”.

“Large scale city-serving retail development should attempt to maintain an inviting pedestrian experience on the street. Street level frontage, where feasible, should be primarily devoted to entrances, shop windows, displays and other visually interesting features”. “An attempt should be made to maintain a continuous block façade line consistent with block development throughout Mission Bay”.

*Plans for the development of Block 31 show, along Third Street, approximately 9,740 square feet of retail space and along 16<sup>th</sup> Street.. Along 16<sup>th</sup> Street the plans indicate the intended use to be offices with a publically accessible lobby that allow access through to the central plaza. The scale of ground floor is modulated by a rhythm of columns and glazing and recesses at entries.*

*The ceiling height of the ground floor would be approximately 15', which would establish an inviting pedestrian scale. A large proportion of the Third Street ground floor would be devoted to shop windows and entrances to retail. The 16' high storefront openings are designed as wide, recessed openings with 6' high signage band spandrels above the 10' high clear glazed shop windows and entrances. The signage bands would further accentuate the height of the retail spaces. This treatment would wrap around 16<sup>th</sup> Street to express the corresponding portion of retail. The intended use of the ground floor is offices and a lobby. Contrasting the storefront are narrow vertical sections of curtain wall that uses clear vision glass and colored back panels as shadow boxes at the structural slabs. Landscaping plans indicate that a portion of the setback would accommodate planting areas which with different treatments would add visual interest and enhance the pedestrian experience.*

*Pedestrian scale is also taken into account in the design of all four of the building façades that face the north-south vara, which is unified by stone walls perforated with deep punched recesses and openings with awnings at the ground level.*

#### **D. Curb Cuts**

*“In order to preserve the continuity and quality of the pedestrian environment, curb cuts for parking and service uses are strongly discouraged along Third Street”.*

*No curb cut is proposed along Third Street or 16th Street. The preservation, continuity and quality of the pedestrian environment would be further enhanced with the centralization of all the service operations in the basement and accessed by a service tunnel accessible from South Street.*

### **3. Building Height and Form**

#### **A. Height Locations**

*“The predominant commercial height zone in Mission Bay allows buildings to a maximum of 90’ high. Buildings up to 160’ high may be constructed within a percentage of the developable area of each height zone as indicated in the Design Standards”.*

*The proposed development of Blocks 29-32 consists of four buildings, Building 29 and 31, which will raise to a height of 152’ and which would be within the percentage of developable area for Height Zone 5 (HZ-5), and Buildings 30 and 32 which will raise to 90’. The placement of the different buildings heights within the site takes into account the proximity to parks, the shoreline, views and potential towers in the neighboring blocks.*

#### **B. Skyline Character**

*“Skyline character is a significant component of the overall urban composition that is San Francisco and the guidelines encourage development which will complement the existing city pattern and result in new, attractive view element as seen from vantage points”.*

*The building massing proposed for the development of Block 29-32 is consistent with the existing city pattern of low buildings near the waterfront, which contributes to the gradual tapering of heights from the hilltops to the water that is characteristic of San Francisco and allows views to the Bay. The stepped and generally horizontal massing is punctuated a variety of building heights including towers and tall, slender architectural features, such as the 182’ high campanile and two freestanding pylons that rise to 165’ high. Additionally, the upper two floors of the office building blocks are stepped back and treated with clear glazing, capped with an overhanging roof to further sculpt and de-materialize and their form.*

#### **C. Building Base**

*“For pedestrians, the character of the building base is important in establishing a comfortable scale and environment and should be designed to achieve this”. “Variety at street level for pedestrian scale can be achieved through the use of design features such as stairs, entries, expressed structural elements, arcades, projections, rusticated materials and landscaping”.*

*The base of the four buildings would offer variety at street level. Each building interacts with, and creates variety at the street level using several techniques: recessed entry lobbies, transparent commercial storefronts, transparent ground floor offices, landscaping, terraces and strong sculpted building forms.*

#### **D. Roofscape**

“Recognizing that Mission Bay building roofs may be visible from higher surrounding locations, they should be designed consistent with the distinctive architecture of the building”. “Roofs should use non-reflective, low intensity colors”. “Mechanical equipment should be organized and designed as a component of the roofscape and not appear to be a leftover or add-on element. Mechanical equipment should be screened as provided in the Design Standards”.

*The roofscape of all four buildings are intentionally designed with occupied landscaped terraces, painted metal cabanas, and mechanical equipment enclosures designed to complement the overall exterior expression of each building. The plans for the proposed development indicate that mechanical equipment, stairs, and elevator penthouses would be organized and screened from view within a single louvered screen enclosure which would in turn support photovoltaic panels. The supporting structure for the photovoltaic would be painted with the accent color of each building. The stepback areas of the buildings, which would be visible from other tall buildings, are proposed as green roofs. The roof deck parking in Building 30 will be screened by full height terra cotta screens and a shade canopy. A portion of the roof of Building 30 will include a roof top pool screened by a full story purple lattice structure filled in with clear glazing.*

### **4. Architectural Details**

#### **A. Visual Interest**

“To mitigate the scale of development and create pedestrian friendly environment, building massing should be modulated and articulated to create interest and visual variety”.

*The composition of the buildings comprising the campus were massed to achieve several key goal: first, to strengthen the street walls and present an urban form that reinforces the Mission Bay; second, to moderate the scale of large blocks; third, to add visual interest; fourth, to provide visual points of reference; and fifth to sculpt the massing down to the water.*

*The overall vocabulary of the buildings is a consistent but playful variation of a theme: boldly scaled solid masses that wrap around and past other masses, punctuated by deep fenestration and further articulated by vertical and horizontal glazed curtain walls. The buildings are also accented with vertical masses; deep horizontal roof overhangs and thick walls layered with varied materials. A clear glass curtain wall system on the upper floors- capped by folding roof/wall plane- provides contrast to the solid base of the buildings, and serves as a recurring motif that unifies the variations of building forms and different combinations of colors and materials throughout the campus.*

#### **Block 29, Olive building**

*The Olive building will clearly articulate the role of primary entry to Salesforce headquarters. Located on the corner of 3<sup>rd</sup> and South Street, the building is composed of a 10-story tower that steps down to a 6-story mass that further steps down to a 4-story structure along 3<sup>rd</sup> Street. The 6-story mass is covered by a folded plane*

overhang that is supported by colorful columns. A 165' tall campanile attached to Building 29 will visually mark the center of the town square.

### **Block 30, Purple building**

This building, at South Street and Terry Francois Boulevard, contains six stories of structured parking and office space. In addition to the office and entrance lobby, the ground floor is programmed with a fitness center and retail space which is setback from the street, providing a plaza that faces onto the waterfront park across Terry Francois Boulevard.

The building is strongly articulated into three segments: the parking structure, which is clad with a vertical orange terracotta rainscreen; the office block, which is clad with orange terra cotta and punched window openings; and an amenity wing which is clad with a purple accent material fenestrated with a square lattice grid.

### **Block 31, Pink building**

The Pink building at the corner of 16<sup>th</sup> and 3<sup>rd</sup> St. occupies an important corner of two prominent streets. It is composed of three distinct building masses: a five- to six-story bar along 3<sup>rd</sup> Street that intersects with a ten-story office building as it wraps around the 16<sup>th</sup> street corner, and a six-story building mass in the mid-block of 16<sup>th</sup> that is separated by the office entrance lobby. Ground floor retail along 3<sup>rd</sup> street wraps around 16<sup>th</sup> Street and into the "town center" plaza, and office uses occupy the majority of the remaining sides. The composition is solidly massed blocks punctuated by deeply recessed punched fenestration, contrasted by upper story setbacks and clad with glazed curtain walls, and capped by a flat roof plane with deep overhangs that folds down into a thickened wall.

### **Block 32, Yellow building**

The smallest of the four buildings occupies the corner of Terry Francois Boulevard and 16<sup>th</sup> Street. The building steps down to create a series of terraces that face the waterfront. A delicate glass and steel bridge spans the vara to connect the Yellow building to the Pink building.

The proposed modulation and articulation of the buildings create interest and visual variety, as sought by the Design Guidelines.

## **B. Color and Materials**

"Extreme contrast in materials, colors, shapes and other characteristics which will cause buildings to stand out in excess of their public importance should be avoided".

The building design proposes a palette of rich base of colors and natural materials including limestone, terracotta, and brick accented by bold and distinctive colors. Continuity between buildings is attained by repeated combinations of stone, terracotta, and clear glass used in similar formal themes that would be consistent with the proposed building materials, and avoids extreme contrasts and would reflect the generally light tone character of San Francisco buildings. Variations in the base colors, in addition to the accent colors provide a colorful, yet coordinated play of materials and color.

## DECISION

That based upon the Record, the submissions by the Applicant, the staff of the Department and other interested parties, the oral testimony presented to this Commission at the public hearings, and all other written materials submitted by all parties, the Commission hereby **APPROVES Office Development Application No. 2011.1423B** subject to the conditions attached hereto as Exhibit A, which is incorporated herein by reference as though fully set forth, in general conformance with the plans stamped Exhibit B and dated March 1, 2012, on file in Case Docket No. 2011.1423B.

**APPEAL AND EFFECTIVE DATE OF MOTION:** Any aggrieved person may appeal this Office-Space Allocation to the Board of Appeals within fifteen (15) days after the date of this Motion. The effective date of this Motion shall be the date of adoption of this Motion if not appealed (after the 15-day period has expired) OR the date of the decision of the Board of Appeals if appealed to the Board of Appeals. Any aggrieved person may appeal this active use exception from Planning Code Section 145.1 by appealing the associated Building Permit to the Board of Appeals fifteen (15) days after the issuance of such permit. For further information, please contact the Board of Appeals at (415) 575-6880, 1660 Mission, Room 3036, San Francisco, CA 94103.

I hereby certify that the Planning Commission ADOPTED the foregoing Motion on March 1, 2012.

Linda D. Avery  
Commission Secretary

AYES:

NAYS:

ABSENT:

ADOPTED: January 26, 2012

# EXHIBIT A

## AUTHORIZATION

This authorization herein is for an Office Allocation for the properties located at Third Street between 16<sup>th</sup> and South Streets, on assessors Block 8722, and lot 001, a.k.a Mission Bay South Blocks 29-32, pursuant to Planning Code Section(s) **321, 322, et seq.** and to Motion 14702 for assignment of up to 159,680 square feet of office area and for design approval of four new buildings containing a total of 1,254,551 square feet of office area (including approximately 1.1 million square feet of office area previously allocated under Planning Commission Resolution Number 17709

in general conformance with plans, dated **January 24, 2012**, and stamped "EXHIBIT B" included in the docket for Case No. **2011.1423B** and subject to conditions of approval reviewed and approved by the Commission on **March 1, 2012** under Motion No **XXXXXX**. This authorization and the conditions contained herein run with the property and not with a particular Project Sponsor, business, or operator.

## RECORDATION OF CONDITIONS OF APPROVAL

Prior to the issuance of the building permit or commencement of use for the Project the Zoning Administrator shall approve and order the recordation of a Notice in the Official Records of the Recorder of the City and County of San Francisco for the subject property. This Notice shall state that the project is subject to the conditions of approval contained herein and reviewed and approved by the Planning Commission on **March 1, 2012** under Motion No **XXXXXX**.

## PRINTING OF CONDITIONS OF APPROVAL ON PLANS

The conditions of approval under the 'Exhibit A' of this Planning Commission Motion No. **XXXXXX** shall be reproduced on the Index Sheet of construction plans submitted with the site or building permit application for the Project. The Index Sheet of the construction plans shall reference to the Conditional Use authorization and any subsequent amendments or modifications.

## SEVERABILITY

The Project shall comply with all applicable City codes and requirements. If any clause, sentence, section or any part of these conditions of approval is for any reason held to be invalid, such invalidity shall not affect or impair other remaining clauses, sentences, or sections of these conditions. This decision conveys no right to construct, or to receive a building permit. "Project Sponsor" shall include any subsequent responsible party.

## CHANGES AND MODIFICATIONS

Changes to the approved plans may be approved administratively by the Zoning Administrator. Significant changes and modifications of conditions shall require Planning Commission approval of a new Conditional Use authorization.

## Conditions of Approval, Compliance, Monitoring, and Reporting

### PERFORMANCE

**Validity and Expiration.** The authorization and right vested by virtue of this action is valid for five (5) years from the effective date of the Motion. A building permit from the Department of Building Inspection to construct the project and/or commence the approved use must be issued as this Office Development is only an approval of the proposed project and conveys no independent right to construct the project or to commence the approved use. Owing to the scale of the Office Development and number of properties involved, the Planning Commission acknowledges the likelihood that construction will not commence within the 18 month period typically applicable to office development projects. However, nearly 90 percent of the total office space in the Project was previously authorized as part of the Alexandria Mission Bay Life Sciences and Technology District in which, pursuant to Planning Commission Motion Number 17709, allocations and re-allocations of office space may occur without a proscribed time limit. Accordingly, and in keeping with Planning Commission Motion Number 17846A (in which the Commission reaffirmed its policy to not seek revocations of office allocations for active projects) the Commission has determined that should it wish to seek the revocation of the approvals granted, it will not do so for at least five (5) years from the effective date of the Motion. After such time has elapsed, the Planning Commission may, in a public hearing, consider the revocation of the approvals granted if a site or building permit has not been obtained. Once a site or building permit has been issued, construction must commence within the timeframe required by the Department of Building Inspection and be continued diligently to completion. The Commission may also consider revoking the approvals if a permit for the Project has been issued but is allowed to expire and more than eight (8) years have passed since the Motion was approved.

*For information about compliance, contact Code Enforcement, Planning Department at 415-575-6863, [www.sfplanning.org](http://www.sfplanning.org)*

**Extension.** This authorization may be extended at the discretion of the Zoning Administrator only where failure to issue a permit by the Department of Building Inspection to perform said tenant improvements is caused by a delay by a local, State or Federal agency or by any appeal of the issuance of such permit(s). *For information about compliance, contact Code Enforcement, Planning Department at 415-575-6863, [www.sfplanning.org](http://www.sfplanning.org)*

## OTHER CONDITIONS

The Project Sponsor shall submit to the Zoning Administrator two copies of a written report describing the status of compliance with the conditions of approval contained within this Motion every six months from the date of this approval through the issuance of the first temporary certificate of occupancy. Thereafter, the submittal of the report shall be on an annual basis. This requirement shall lapse when the Zoning Administrator determines that all the conditions of approval have been satisfied or that the report is no longer required for other reasons.

Development of the Site may precede the installation of off-site infrastructure in the area. The Infrastructure for the proposed building as described in Application 2011.1423B shall be reviewed and approved by the City staff.

The project Sponsor shall continue to work with Department and other City staff in refining certain aspects of the architectural design, finishes and detailing.

Public Art: Pursuant to the MBS Redevelopment Plan, 1% of initial construction costs shall be allocated to public art. The project sponsor will work with City staff to define the public art installation, which should (1) be located where public benefit and enjoyment is maximized, (2) have placement that is appropriate to the scale and nature of the artwork being considered and (3) will complement and enhance the architecture or the space where it is located.

## Land Use

The schematic design program for Blocks 29-32 comply with the Mission Bay South Redevelopment Plan (Sec. 302) and D4D Land Use Map. The proposed development will primarily consist of commercial office space and neighborhood serving retail and restaurants. Per the Land Use Map, Blocks 26 (parcel 1), 27 (parcel 1), 33, 34 are identified as COMMERCIAL/ INDUSTRIAL, while Blocks 29-32 are identified as COMMERCIAL/ INDUSTRIAL/RETAIL. Additional development space will consist of public, neighborhood-serving retail businesses and restaurants with provisions for associated structured parking and employee amenities such as childcare centers and fitness centers.

* Denotes That Object Occurs Beyond		

MATERIALS & COLOR

The proposed materials for the new Mission Bay Global Headquarters Complex are a rich mix that will help create the image and identity for the new development. The primary exterior materials are a combination of light colored stone and unglazed terracotta panels in a range of closely related hues: red, orange and yellow. Bolder color accents in stucco or glazed tile will add interest and distinct identity to the buildings, each of which is designated by its accent color:

B29- Olive Building

B30- Purple Building

B31- Pink Building

B32- Yellow Building

The basic approach to use of these materials is that the stone forms the major “folded plane” elements that typically appear as an inverted “L” shape sheltering large glazed areas, the terracotta typically appears with punched openings, and the featured colors highlight special elements such as entries, balconies, and accent walls.

The proposed terracotta skin is a new adaptation of a traditional material. Its application uses rain-screen principles and a pressure equalized airspace and insulation directly behind the façade to reject water and improve thermal performance of the wall.

B29 Materials and Colors

Olive Building at Block 29 has a perforated stone folded plane which rises from the Vara and forms a roof canopy, supported by circular colored columns at the main entry on Third Street. The exterior skin is a composition of curtainwall glazed areas and terracotta with punched openings. The Olive accent color appears in special elements such as entries, balcony walls, and the underside of the roof.

MATERIALS & COLOR

The proposed materials for the new Mission Bay Global Headquarters Complex are a rich mix that will help create the image and identity for the new development. The primary exterior materials are a combination of light colored stone and unglazed terracotta panels in a range of closely related hues: red, orange and yellow. Bolder color accents in stucco or glazed tile will add interest and distinct identity to the buildings, each of which is designated by its accent color:

B29- Olive Building

B30- Purple Building

B31- Pink Building

B32- Yellow Building

The basic approach to use of these materials is that the stone forms the major “folded plane” elements that typically appear as an inverted “L” shape sheltering large glazed areas, the terracotta typically appears with punched openings, and the featured colors highlight special elements such as entries, balconies, and accent walls.

The proposed terracotta skin is a new adaptation of a traditional material. Its application uses rain-screen principles and a pressure equalized airspace and insulation directly behind the façade to reject water and improve thermal performance of the wall.

B30 Materials and Colors

Purple Building at Block 30 has a perforated stone folded plane which rises from the Vara and forms a roof canopy that extends east toward the waterfront. The exterior skin is a composition of curtainwall glazed areas and terracotta with punched openings. The parking garage façades are also made of terracotta. The distinctive Purple accent color is used for the fitness center building at the northeast corner, and also appears in special elements such as entries, balcony walls, and the underside of the roof.

# UCSF, Salesforce in talks for S.F. Mission Bay land deal

University in talks to buy land owned by Salesforce

Stephanie M. Lee Updated 7:27 am, Saturday, March 15, 2014

John Blanchard / The Chronicle

IMAGE 1 OF 2

UCSF has entered "advanced discussions" with Salesforce.com to purchase part of the company's sizable property in Mission Bay, the school says.

The two sides could reach a deal within four months, which would allow the university to add parking and research and administration buildings to its burgeoning campus.

The powerhouse life-sciences institution, which already has extensive biotech operations in the neighborhood, wants to buy Blocks 33 and 34, a nearly 4-acre parcel next to its Mission Bay campus at Third and 16th streets.

ADVERTISING

"We don't know exactly what we're going to do with the site," Lori Yamauchi, UCSF's associate vice chancellor of campus planning, told residents at a Mission Bay Citizens Advisory Committee meeting Thursday.

But, she said, the university tentatively plans to construct, on the north side of the rectangular site, a tower up to 160 feet tall with 275,000 total square feet. On the south side, UCSF would erect another building up to 90 feet tall with 225,000 total square feet. The two structures would be separated by a garage, as high as 90 feet, which could include 500 parking spaces.

### MORE BY STEPHANIE M. LEE

**Whole-genome sequencing falls short, study says**

**Johnson & Johnson, Alector team up on Alzheimer's therapies**

**Arsenic-free water - aided by Bay**

Construction on the north tower could be done in 2017, the parking garage in 2020 and the south building in 2022, Yamauchi said.

UCSF did not disclose a potential sale price for the property. But the nonprofit school,

**Area team's technology**

which is exempt from local taxes, said it will pour \$32 million into funds for affordable housing and public infrastructure to help the city offset the loss of property taxes.

The sale would further cement Mission Bay's reputation as a biotech hub, said Tiffany Bohee, executive director of the city's Office of Community Investment and Infrastructure, which oversees the land. Some 80 biotech companies and incubators have moved into the neighborhood since UCSF Mission Bay broke ground in 1999.

"There was no real biotech community 15 years ago in San Francisco," Bohee said. UCSF "has really been the anchor for the economic development in not just Mission Bay, but the city and the region. I think it's fantastic they are continuing to invest in Mission Bay."

A sale to UCSF would mark the first time Salesforce took action on the 14-acre property it bought for nearly \$250 million in late 2010. The company initially said it wanted to build a corporate campus but dropped the project without explanation two years ago. The property recently surfaced as a possible backup site for the Golden State Warriors should the team's plan to build an 18,000-seat arena on Piers 30-32 fall through.

UCSF wants to reduce costs by consolidating some of its operations into a central space. That could mean moving staff from the university's leased offices in downtown San Francisco and Laurel Heights campus. UCSF has been looking to sell or lease the Laurel Heights buildings.

The consolidation will probably not affect the university's Mission Bay and Parnassus campuses. The school might also build an outpatient clinic on the Salesforce land, but is not actively exploring that option, Yamauchi said.

To close the deal, UCSF must win approvals from the city, the UC Board of Regents and the state, a process that university officials expect to conclude by late June.

Office of Community Investment and Infrastructure ("OCII")  
1 South Van Ness Avenue, 5th Floor  
San Francisco, CA 94103

Re: Event Center and Mixed-Use Development Mission Bay Blocks 29-32

Dear Ms. Bohee:

As the President of GSW Arena LLC ("GSW"), I write to address GSW's perspective as the Project Sponsor regarding the Project Sponsor's objectives and the feasibility of the various alternatives analyzed in the SEIR for the proposed Event Center and Mixed-Use Project at Mission Bay South Blocks 29-32 (the "Proposed Project"). We hope that this letter will assist you in your consideration of the approvals sought in connection with the Proposed Project, including your consideration of alternatives analyzed in the SEIR. My purpose in writing this letter is to provide OCII some further information on our objectives and to share the Project Sponsor's perspective on whether the alternatives are feasible in light of those objectives and the economic and program related needs of the Project Sponsor. Judicial precedents allow your agency to embrace such objectives as your own, if you find them persuasive.<sup>1</sup> I have attached to this letter two memos and a letter that provide substantial evidence on the issues of program demands, industry based standards and expectations, and the economic requirements of the Mission Bay Plan.

The first memo is from Stephen Collins, the Chief Operating Officer of GSW, describing the programming demands and constraints of the business model for the Event Center, drawing upon the expertise he developed working for over twenty-five (25) years at similar venues throughout the United States. The second memo is from Jennifer Cabalquinto, the Chief Financial Officer of GSW, drawing on her financial experience from over 20 years in a variety of business environments, including at Universal Studios Hollywood and NBC Universal, among others. The third attachment is a letter from Mission Bay Development Group (MBDG), the Master Developer of the Mission Bay redevelopment area, addressing

---

<sup>1</sup> See, e.g., *Sierra Club v. County of Napa* (2004) 121 Cal.App.4th 1490, 1498, 1501, 1507.

**GOLDEN STATE WARRIORS • NATIONAL BASKETBALL ASSOCIATION**  
1011 Broadway • Oakland, CA 94607-4019  
510.986.2200 • 1-888-GSW-HOOP • warriors.com

the economic structure of Mission Bay as a whole and the need to generate sufficient tax increment to support the increment bonding capacity.

We understand that some members of the public have raised questions regarding the seat capacity and number of events at the proposed Event Center, and we believe that Mr. Collins' expert opinion on the economic model of similar event venues addresses the Project Sponsor's view that the number of seats and events, as well as the manner in which the events are programmed, are necessary to the success of the proposed Event Center. Ms. Cabalquinto's expert opinion addresses the economic considerations underlying the Event Center, particularly the need to program the Event Center for year-round events in order to generate sufficient revenue to support and amortize GSW's investment of over one billion dollars in the Proposed Project. Finally, the letter from MBDG explains how the tax increment program at Mission Bay depends on the creation of sufficient increment to support the bonding capacity, and how the need to create sufficient increment drives the requirement to fully program the site with both the Event Center and other components such as the office buildings and retail spaces.

The Project Sponsor's objective is to construct and operate an Event Center of 18,500 seats that operates on a year-round basis and to construct the Mixed-Used components of the Proposed Project, including the office buildings and retail components. We believe that the attached memos and letter provide substantial evidence supporting the Project Sponsor's opinion that the Event Center cannot reduce the size of the seating capacity or number of events without rendering the Proposed Project infeasible in light of economic constraints and industry-based program demands. Further, the letter from MBDG provides substantial evidence of the need to fully program the site with office and retail uses in addition to the Event Center.

Regarding the capacity of the proposed Event Center, it should be noted at the outset that at approximately 18,064 seats under a basketball court configuration, the Event Center seating bowl will rank as the fifth smallest venue used for National Basketball Association (NBA) games. It will contain 1,027 fewer seats than the average NBA venue, and 1,532 fewer seats than Oracle Arena, where the Golden State Warriors currently play. The proposed Event Center is therefore already considered small by industry standards and could not be further reduced without impacting the Event Center's ability to hold the same games and events as similarly situated venues in other major U.S. markets.

**GOLDEN STATE WARRIORS • NATIONAL BASKETBALL ASSOCIATION**

**1011 Broadway • Oakland, CA 94607-4019**

**510.986.2200 • 1-888-GSW-HOOP • warriors.com**

Additionally, the proposed Event Center is already sized below current market demand for ticketed seats at Warriors games. The last 134 Golden State Warriors games have been played before a sold-out crowd, and approximately 17,000 fans have been placed on a waitlist for season tickets. Further reducing the Event Center's capacity would result in a failure to serve the significant market demand driving the above statistics, which result would be undesirable to the Project Sponsor and likely to the City of San Francisco as well.

Turning to the Alternatives considered in the SEIR, the Project Sponsor does not believe that any of the Alternatives analyzed meet most of the Project Sponsor's objectives; further, GSW does not believe that the Alternatives are feasible, for the reasons discussed below.

**Piers 30-32:**

Starting with Piers 30-32 and SWL Lot 330, GSW would note that both are under the jurisdiction of the Port of San Francisco. The current height limits (which are unchanged from 2012) for those sites are 40 feet and 65-105 feet, respectively. Proposition B, passed by the voters in 2014, requires that any height increase on property within the Port's jurisdiction from the height limit that existed in June of 2012 must go to the San Francisco voters for approval. Consequently, in order for the proposed project to proceed at those locations, the first step in the entitlement process would be to seek and obtain a height reclassification of the sites at the ballot. Taking a height reclassification to the ballot requires the Project Sponsor wait until the next election, and in advance of that expend significant sums to draft the ballot measure, collect signatures to place it on the ballot, and campaign for its approval.

After completing the height reclassification, the project would then commence seeking project approvals, which would require analysis under the California Environmental Quality Act as well as the National Environmental Policy Act (NEPA) because the Army Corps of Engineers (a federal agency) has certain permitting authority over the piers. The work required to retrofit the existing piers, which are in poor condition, would be extremely expensive, costing an estimated \$200 million and would entail in-water work requiring certain mitigation measures to protect biological resources. Under the Burton Act, a state law, the Port's authority to enter into leases does not permit leases more than 66 years in length; thus, the maximum term the event center could be leased would be 66 years. As a consequence, the extremely high costs of retrofitting the Piers in order to allow the event center to be built on it can only be amortized over a relatively short period of time, making the recovery of the capital costs of the project financially infeasible for the Project Sponsor. In addition, the mitigation measures required to protect biological resources include limiting the months in which construction can occur, particularly in-water work in order to protect the resources. These extensive mitigation requirements would foreseeably increase the construction times and risk.

**GOLDEN STATE WARRIORS • NATIONAL BASKETBALL ASSOCIATION**

**1011 Broadway • Oakland, CA 94607-4019**

**510.986.2200 • 1-888-GSW-HOOP • [warriors.com](http://warriors.com)**

Finally, the time entailed in pursuing the required two-part entitlement process would take significantly longer than at a site not under the jurisdiction of the Port. In addition, Piers 30-32 are also regulated by other state and regional agencies, in addition to the Army Corps of Engineers. The Project Sponsor's lease at its current location at Oracle Arena expires in 2017 and the Project Sponsor must make a definitive decision about the long-term venue for the team as quickly as possible as a result. The additional time, expense and entitlement risk associated with Piers 30-32 make its choice as an alternative infeasible in light of the Project Sponsor's objective to relocate the team.

**The Reduced Intensity Alternative:**

The Reduced Intensity Alternative studied in the SEIR would reduce the Proposed Project by reducing the non-Event Center components; the retail component of the Proposed Project would be reduced from 125,000 square feet to 75,000 and the non-GSW office component from 580,000 to 373,000, for a total reduction of 282,000 square feet. In addition, the on-site parking garage would be reduced from 950 to 750 spaces. As explained in the SEIR, reducing the Event Center component of the Proposed Project would not be considered a feasible alternative since such a reduction (as more fully explained in this letter and its attachments) would not meet most of the Project Sponsor's Objectives. The Reduced Intensity Alternative also fails to meet the Project Sponsor's Objectives, which include, among others, "[p]rovide sufficient complementary mixed-use development, including office and retail uses, to create a lively local and regional visitor-serving destination that is active year-round, promotes visitor activity and interest during times the event center is not in use, provides amenities to visitors of the event center as well as the surrounding neighborhood, and allows for a financially feasible project".

As described in the attached memo from our CFO, Ms. Cabalquinto, the retail programming for the Proposed Project is necessary to provide an active and lively visitor-serving destination, and a sufficiently sized amount of retail will be necessary to ensure the attractiveness of the Event Center to prospective patrons. However, supporting the retail tenants on non-Event days is an important factor in attracting and maintaining a vibrant retail tenant base. As a result, the office components of the Proposed Project will afford the retail proprietors the benefit of an on-site population of potential customers, even on days when the Event Center is not active. Any significant reduction in the office component will necessarily result in a reduced potential customer base, thereby increasing the potential risk of any prospective retail tenant.

Further, a significant reduction in the office or retail program would adversely affect the creation of tax increment in the Mission Bay area as a whole. As described in the MBDG

**GOLDEN STATE WARRIORS • NATIONAL BASKETBALL ASSOCIATION**

**1011 Broadway • Oakland, CA 94607-4019**

letter attached to this letter, OCII and the Master Developer have worked together through the years of the Mission Bay development area to assist the former Redevelopment Agency (now OCII) to issue "hundreds of millions of dollars of tax increment bonds to support the construction of affordable housing, parks and open space and critical utility, water quality and transportation infrastructure." As MBDG notes, the Reduced Intensity Alternative would "generate far less money for OCII to use for these various purposes." MBDG's letter analyzing the difference in projected revenue between the Proposed Project and the Reduced Intensity Alternative concludes, "the reduced density alternative would lead to a reduction over the next 25 years of approximately \$45 million (\$11.7 million to the normal taxing entities, \$9 million to affordable housing and \$24.3 million to parks and open space and infrastructure.

Thank you for your consideration of this letter.

Sincerely,

A handwritten signature in black ink, appearing to read "Rick Welts", is written over a light blue horizontal line.

Re: Relative difference in property tax base and tax increment bonding capacity between the proposed arena project and a lower density alternative

Clarke Miller  
Strada Investment Group  
101 Mission Street, Suite 420  
San Francisco, CA 94105

VIA EMAIL

Dear Clarke:

In our role as master developer at Mission Bay, we routinely evaluate the property tax base and tax increment bonding implications of the various projects being constructed at Mission Bay. Over the last ten years, we have worked with the former redevelopment agency and now OCII to issue hundreds of millions of dollars of tax increment bonds to support the construction of affordable housing, parks and open space and critical utility, water quality and transportation infrastructure.

We understand that an alternative scenario for the proposed Golden State Warriors arena project at Mission Bay is being evaluated, and that you would like to understand the relative impact of that scenario's reduced density on the property tax base and tax increment bonding capacity compared with what would occur under the proposed project. As I explain below, the alternative scenario would generate far less money for OCII to use for these various purposes.

The property tax base, and therefore the tax increment bonding capacity, is driven directly by the construction costs associated with each project, as well as assumptions about whether those buildings are ultimately sold at market value, or remain on the tax rolls at construction value (for conservatism, we will assume all the building remains at construction value).

You have told us that the reduced density scenario would involve a difference/reduction of 207,000 gross square feet of office, 50,000 gross square feet of retail, and 200 parking stalls. Assuming the total cost, excluding land, of building the office and retail is \$500 per square foot (includes warm shell hard construction costs of roughly \$300 psf, tenant improvement hard costs of approximately \$100 psf, and soft costs – architectural, engineering, permits, impact fees, leasing commissions, financing, etc... – equal to approximately 25% of hard costs), and a per stall total cost (excluding land) of parking of \$60,000 per stall, results in a tax base difference/reduction of \$140.5 million ( $257,000 * \$500$  and  $200 * \$60,000$ ).

Tax increment is 1% of \$140.5 million annually, or \$1.405 million per year. This figure grows at approximately 2% per year due to Prop 13. Over the 25 years following the construction of the arena (i.e. the remaining redevelopment plan life of Mission Bay South), this revenue is split between a variety of uses (see the following page):

- Normal Taxing Entities, approximately 25.95% (\$364,598 per annum, growing at 2%/year), comprised primarily of the city and county general fund, the school district, community colleges, transit authorities).
- Affordable Housing, 20% (\$281,000 per annum, growing at 2%/year)
- Parks and Open Space and Infrastructure, 54.05% (\$759,403 per annum, growing at 2%/year)

Collected annually, this means that, compared with the proposed project, the reduced density alternative would lead to a reduction over the next 25 years of approximately \$45 million (\$11.7 million to the normal taxing entities, \$9 million to affordable housing, and \$24.3 million to parks and open space and infrastructure).

Alternatively, it is anticipated that, because of immediate needs and contractual obligations, OCII will issue bonds against certain of these revenues to provide immediately available funds to advance goals around affordable housing and infrastructure, especially important in a growing community like Mission Bay. Using typical bonding assumptions (5% interest rate, 25 year amortization, full utilization of all revenue for debt service because debt service coverage is provided by AB1290 subordination, and reserves and issuance costs of approximately 8%) and applying these assumptions to the revenue from a reduced density scenario would result in net proceeds from tax increment bonds sales being lowered by approximately \$13.49 million (\$3.64 million for affordable housing and \$9.85 million for parks and open space and infrastructure) compared with what would occur under the proposed project. In addition, due to the 2% annual growth (which is not used for debt service), another approximately \$7.3 million of direct increment (\$2 million for affordable housing and \$5.3 million for parks and open space and infrastructure) would also be lost compared with what would occur under the proposed project.

Please note that the above assumptions include some meaningful amounts of conservatism: construction costs are inflating rapidly; tenant improvement add-ons from the tenants themselves (also additive to the tax base) can often be another \$100-200 psf depending on the tenant; the price per stall for subterranean parking in Mission Bay soil conditions appears low at \$60,000/stall; we assume no sales of any of the buildings or parking (sales result in an increase in the tax base from construction value to market value); interest rates are currently lower for bonding than the 5% used (lower interest rates result in larger bond proceeds), and; use of 30 or 33 year amortization would generate greater bond proceeds.

Please let me know if you have any questions regarding the above analysis.

Sincerely,

Seth Hamalian  
Managing Principal  
Mission Bay Development Group, LLC

Appeal of Subsequent Environmental Impact Report for the  
Warriors Arena Project  
Commission on Community Investment and Infrastructure  
Resolutions 69-2015 and 70-2015

Hearing Date: December 8, 2015

## **APPELLANTS' PARTIAL BRIEF**

Re: Project Description, Tiering, AB 900, Greenhouse Gas Emissions, Geology  
and Soils, Hazards and Hazardous Materials, Urban Decay, Wind and Shadow, and  
Recreation

Submitted By:

Attorneys for Appellant Mission Bay Alliance

This office represents the Mission Bay Alliance (“Alliance”), an organization dedicated to preserving the environment in the Mission Bay area of San Francisco, regarding the project known as the Event Center and Mixed Use Development at Mission Bay Blocks 29-32 (“Warriors Arena Project” or “Project”).

The Alliance submits this brief in support of its appeal of Commission on Community Investment and Infrastructure Resolution 69-2015, certifying the Subsequent Environmental Impact Report (“SEIR”, “DSEIR” or “FSEIR” as appropriate) for the Warriors Arena Project, and Resolution 70-2015, adopting CEQA Findings for the Warriors Arena Project, both approved on November 3, 2015.

The grounds for this appeal are set forth in the Alliance’s November 13, 2015, Notice of Appeal, and is based on all of the Alliances’ comments letters and associated exhibits to those comments submitted to date (see References List, attached as **Exhibit 1**) as well as the materials physically attached as exhibits to this brief. (**Exhibits 2–7.**)

The grounds for this appeal are set forth in this brief and the two companion briefs submitted by our co-counsel, Thomas H. Lippe and Susan Brandt-Hawley, in the Alliance’s November 13, 2015, Notice of Appeal, and all previously submitted Alliance comment letters and supporting exhibits. This brief discusses certain of these grounds in more detail.

#### **A. PROJECT DESCRIPTION.**

The SEIR repeatedly presents a shifting and inconsistent project description that thwarts informed decision-making and public participation about the project.

The FSEIR is fundamentally flawed because the project description is internally inconsistent, thereby thwarting intelligent public participation about the Project and its impacts. (*County of Inyo v. City of Los Angeles* (1977) 71 Cal.App.3d 185, 197.) Changing the project description to avoid dealing with a difficult environmental issue appears to have become a recurring strategy employed by the City with respect to its analysis of the Project.

As first noted in the July 26, 2015 letter by Soluri Meserve, the DSEIR took internally inconsistent positions with respect to whether the Project included significantly reduced events at Oracle Arena. (July 26, SM Law, DSEIR.)<sup>1</sup> This strategy was

---

<sup>1</sup> To facilitate review, short form citations are used for the Alliance’s previously submitted materials, and are identified in the References List attached as **Exhibit 1**.

employed in the AB 900 application as well as the DSEIR in order to justify the City's assertion that the Project would be carbon neutral. Although including reduced events at Oracle arena in the project description in the context of GHG emissions, the DSEIR omitted analysis of the consequences from such reduced events including, but not limited to, urban decay in Oakland.

The FSEIR also took inconsistent positions with respect to whether the Project included the two office towers. (Nov 2, SM Law, FSEIR, p. 5.) The Project's AB 900 application as well as the DSEIR took the incredible position that the two massive office towers were not components of the Project for purposes of the GHG analysis because they were somehow "vested." Setting aside the factual and legal deficiency associated with attempting to avoid CEQA review based on so-called "vested rights," it is noted that the FSEIR's energy analysis of the Project included analysis of the energy consumption associated with operation of the towers. The FSEIR attempts to side-step this inherent inconsistency by claiming that the FSEIR never, in fact, analyzed the Project's GHG emissions on a quantitative basis. As demonstrated below, however, that claim is false.

Finally, the FSEIR took internally inconsistent positions on the issue of whether the open space within the Project site was considered publicly available or purely private open space. (Nov 2, SM Law, FSEIR, p. 6.) In order to avoid disclosing a significant wind impact within these onsite open spaces, the FSEIR asserted that they were exempt from analysis because the spaces were "publically [sic] accessible but private recreational areas." (FSEIR, p. 13.15-1.) This characterization, however, was inconsistent with the FSEIR's characterization of this open space as counting towards the Project's requirement to construct 0.46 acres of open space for each 1.0 acre of development area, which the FSEIR characterizes as "directly serv[ing] the project's demand for recreational facilities." (FSEIR, p. 13.16-3.)

By repeatedly shifting the project description to avoid troublesome environmental issues, the City has thwarted informed decision-making about the Project, its impacts and mitigation measures. (See, e.g., *San Joaquin Raptor Rescue Center v. County of Merced* (2007) 149 Cal.App.4th 645, 655-656 ("By giving such conflicting signals to decision makers and the public about the nature and scope of the activity being proposed, the Project description was fundamentally inadequate and misleading").) The City will need to recirculate a revised DSEIR based on a stable and consistent project description.

## **B. TIERING.**

The SEIR attempts to rely on and tier from EIRs prepared in 1990 and 1998 for Mission Bay Redevelopment planning efforts, yet tiering is not permissible because the

Project is different than the project described in the prior EIRs. Under CEQA Guidelines section 15152, “‘Tiering’ refers to using the analysis of general matters contained in a broader EIR (such as one prepared for a general plan or policy statement) with later EIRs and negative declarations on narrower projects; incorporating by reference the general discussions from the broader EIR; and concentrating the later EIR or negative declaration solely on the issues specific to the later project.” Tiering is only appropriate where the prior EIR has adequately addressed environmental effects that would not be substantially different than those related to the proposed project. (See CEQA Guidelines, § 15152, subd. (f).) When a program EIR has been prepared, an agency may determine that a project is within the scope of the previously prepared program EIR. (CEQA Guidelines, § 15168.) But in order to address those effects adequately, the project must be similar, if not the same as, the previously analyzed project.

A subsequent EIR must concentrate on issues specific to the later project that were not previously addressed in the prior EIR. (CEQA Guidelines, § 15152, subd. (a).) Here, reliance on the 1990 and 1998 EIRs for analysis of the impact areas excluded from consideration in the SEIR was impermissible because new information and/or changes in circumstances rendered the prior analyses inapplicable to the currently proposed Project. Contrary to the SEIR, the Project is not consistent with the Mission Bay Redevelopment Plan. (See July 26, Brandt-Hawley, DSEIR, pp. 1-2; Nov 2, Brandt-Hawley, Secondary Use, pp. 2-4.) As explained in the Alliance’s comments, the Project is neither a permitted use, nor a secondary use within Mission Bay South. As a result, the proposed Project is not within the scope of the previously prepared program EIRs, and those EIRs do not disclose the impacts of the Project.

The Record also contains substantial evidence supporting a fair argument that the Project will result in potentially significant impacts associated with the resource areas excluded from consideration in the SEIR or, alternatively, the record demonstrates that supplemental review is required under Public Resources Code section 21166 for those same resource areas. (July 26, MBA, Tiering, pp. 2-3; November 2, SM Law, FSEIR, pp. 1-3.) The SEIR’s approach to environmental review, including relying on environmental documents almost two decades old as well as numerous subsequently prepared reports and other documents prepared outside of the CEQA process fails to provide a cohesive, understandable document meeting CEQA’s mandates for adequacy, completeness, and a good faith effort at full disclosure. (June 30, oral comments by Osha Meserve, FSEIR, Vol. 6, p. PH-45.)

Moreover, the NOP/IS improperly determined that the project would have no new significant or substantially more severe impacts than analyzed in the 1998 SEIR. The determinations in the NOP/IS are not supported by substantial evidence in the Record.

Additional information regarding the inadequacy of the City’s approach to review with respect to analysis of specific resource areas is provided below.

**C. AB 900 AND ADMINISTRATIVE RECORD.**

The City has failed to comply with applicable requirements to compile and maintain a complete and adequately indexed Record, and also failed to timely make the Record made available online at the time of release of the DSEIR. Therefore, the Project may not rely on AB 900 litigation fast tracking.

The City did not post all of the documents comprising the Record at the time of DSEIR release, contrary to Public Resources Code section 21186, subdivision (b). The City failed to include numerous pieces of correspondence that were clearly within the documents comprising the Record under Public Resources Code sections 21186, subdivision (b) and 21167.6, subdivision (e). The City also failed to post references to the 1990 and 1998 EIRs, upon which the FSEIR relies for analysis of about half of the resource topics that are typically analyzed in an EIR. Examples of those missing documents were described in various comments submitted by the Alliance. (See, e.g., July 9, SM Law, pp. 1-2; July 26, MBA, Record, 1-3; see also Nov 2, 2015, SM Law, FSEIR, p. 3.) Moreover, the City admits that the Record is not located on the gsweventcenter.com website as required by Public Resources Code section 21168. The CEQA Findings do not refer to the gsweventcenter.com website as the location of the Record, but rather the Project files at the OCII. (CEQA Findings, p. 18.)

As a result of these and other related failures with respect to the Record, the City is not eligible for AB 900 litigation fast tracking for CEQA claims that may be lodged in the future. In addition, the purely legal argument inappropriately contained in the OCII CEQA Findings (p. 14) that all challenges to the Project—whether related to CEQA or not—would be subject to AB 900 fast tracking, would not be entitled to any deference by a reviewing court simply because it is bootstrapped in a document normally setting forth factual findings that may be entitled to deference. In any event, this legal argument is incorrect and contrary to the plain language of the referenced legal authority. Thus, any future litigation would progress according to normally applicable statutory timelines, not the timelines within AB 900.

**D. THE SEIR IS NOT SUFFICIENT AS AN INFORMATIONAL DOCUMENT WITH RESPECT TO GREENHOUSE GAS EMISSION IMPACTS.**

The DSEIR stated that it “focuses on the project’s contribution to cumulatively significant GHG emissions.” (DSEIR, p. 5.5-9.) The DSEIR points to the certification of

the project as an AB 900 “Leadership Project” to reach its less than significant determination, stating that the proposed project “would not result in any net additional GHG emissions” after purchase of offsets from a “qualified greenhouse gas emissions broker.” (DSEIR, p. 5.5-11 to 5.5-12.) The FSEIR, in an about-face, then claimed that the less than significant determination” is based on finding consistency of the project with the San Francisco Greenhouse reduction Strategy” (FSEIR, p. 13.14-6), explaining that commenters were somehow confused (FSEIR, p. 13-14-5). In yet another about-face, the FSEIR claims that instead of being a quantitative analysis as one would have gathered from the DSEIR, it was actually a *qualitative analysis*. All the while, neither the DSEIR nor the FSEIR clearly describe the GHG implications of the Project. This approach fails in several respects.

As quantitative methods of assessing Project-level GHG emissions are available, the EIR’s lack of quantification of the impact was a failure to proceed in the manner provided by law. The Alliance has demonstrated that ample information was available that allows the City to quantify the Project’s GHG emissions, consistent with regulatory guidance. (Nov 2, SCS, GHG, pp. 2-3.) Thus, while the City might ordinarily have discretion to utilize a qualitative analysis, that discretion is constrained because extensive quantitative data has already been prepared for the Project that was readily available to the City. (*Berkeley Keep Jets Over the Bay Committee v. Board of Board Commissioners of the City of Oakland* (2001) 91 Cal.App.4th 1344, 1371 (agency abused discretion by not quantifying project’s air emissions).)

The FSEIR’s conclusion that GHG emissions from the Project would result in a less than significant impact is not supported by substantial evidence in the Record. In particular, the allegedly quantitative analysis in the AB 900 Leadership application failed to include the entire Project; the 700,000 square feet of retail and office uses in the Project’s towers were inexplicably not counted at all). The application also made unsubstantiated assertions regarding a 76 percent reduction in GHG emissions from Oracle Arena. (July 26, SM Law, DSEIR, pp. 3-6; see also July 20, SCS, pp. 1, 4-6.) The allegedly *qualitative* analysis of the Project’s consistency with the San Francisco GHG Reduction Strategy also fails to meet minimum CEQA standards. CEQA allows lead agencies to consider whether the Project complies with an adopted local plan, for instance, in making a determination as to the significance of the Project’s GHG impact. (CEQA Guidelines, § 15064.4, subd. (b)(3).) Yet here, the EIR fails to provide any meaningful analysis of how the Projects alleged compliance with the SF GHG Reduction strategy actually results in a less than significant impact. (See FSEIR, pp. 13.14-6 (simply listing regulations that the Project would comply with).)

Under CEQA Guidelines section 15088.5, subdivision (a)(4), recirculation is required when meaningful public review is precluded by a fundamentally inadequate EIR. Here, recirculation of the DSEIR was required due to the FSEIR's change in approach to GHG analysis from the quantitative analysis described in the DSEIR that relied on the faulty GHG inventory prepared for AB 900 Leadership Development Project certification concluding there would be "no net emissions" to a "qualitative" analysis stating GHG emissions would be less than significant based on the Project's consistency with the local GHG reduction plan. (Nov 2, SM Law, DSEIR, p. 2.) While the DSEIR initially relied on the faulty AB 900 quantification of GHG emissions to reach a less than significant conclusion; when the FSEIR changed the approach to a "qualitative" approach, recirculation was required.

Even the flawed AB 900 GHG inventory revealed that the Project would result in very large GHG emissions, including: (1) 4,099 metric tons per year of carbon dioxide ("CO2") emissions during project operations; and (2) 10,066 metric tons of CO2 emissions over the two year construction period. (AB 900 Application, p. 8.)<sup>2</sup> According to the U.S. Environmental Protection Agency, a typical passenger car emits 4.7 metric tons of CO2 per year.<sup>3</sup> With the Project emitting almost 200,000 tons of CO2 over the 30-year period considered the life of the Project for purposes of the AB 900 analysis, the Project's GHG emissions are about the same as adding about 42,500 cars to the road for an entire year. Is this really a less than significant impact?

The SEIR also includes wholly inadequate mitigation for these substantial GHG emissions. In addition to allegedly being consistent with the SF GHG Reduction Strategy, the EIR includes an "Improvement Measure" that requires purchase of offset for the nearly 200,000 tons of GHG emissions that the AB 900 application stated the Project would emit. (FSEIR, MMRP-51.) Yet as described in the Alliance's comments, the measure does not specify purchase of any particular type of offsets, such as offsets certified by the California Air Resources Board, to ensure that the offsets are real, additional, quantifiable, permanent, verifiable, and enforceable. (July 20, SCS, p. 2.) Without any specification of offset type, the Project may make the claim that it is "GHG neutral" by purchasing offsets that may cost as little as \$1.00 per ton, with an overall cost to the Project of just \$200,000. Moreover, unlike other projects, there is no requirement that the offsets be purchased

---

<sup>3</sup> USEPA, GHG Emissions from a Typical Passenger Vehicle, p. 2, available at: <http://www3.epa.gov/otaq/climate/documents/420f14040a.pdf>, attached as **Exhibit 2**.

locally, which can create other local environmental benefits in addition to reducing GHG emissions.

The SEIR also impermissibly conflates analysis of the Project's design features (Improvement Measures) and mitigation measures, and thus fails to consider whether other possible mitigation measures would be more effective. The SEIR refers to the GHG reduction measure as an "Improvement Measure" rather than a mitigation measure. (FSEIR, MMRP-51.) To the extent that the City intends to incorporate the purchase of offsets as a "design feature" or otherwise incorporate it into the project description, this strategy violates CEQA's mandate to disclose project impacts and separately address feasible mitigation measures. (*Lotus v. Department of Transportation* (2014) 223 Cal.App.4th 645, 655-56 (incorporating mitigation measures for redwood trees into the project description violated CEQA "[b]y compressing the analysis of impacts and mitigation measures into a single issue . . .").)

Last, the FSEIR fails to adequately respond in good faith to comments about the GHG analysis, including but not limited to explaining why it was proper to exclude the office towers from the GHG emissions inventory. (CEQA Guidelines, § 15088.) In fact, the FSEIR fails to respond at all to comments concerning the legitimacy of excluding GHG emissions from the office towers from the AB 900 Leadership Project calculations. Though the FSEIR now claims that it does not rely on the AB 900 analysis to make its less than significant determination, the DSEIR referenced the AB 900 analysis as support for the determination. As a result of this shifting and unsupported approach to GHG analysis, the FSEIR misled the public and is deficient as an informational document.<sup>4</sup>

**E. THE SEIR IS NOT SUFFICIENT AS AN INFORMATIONAL DOCUMENT WITH RESPECT TO GEOLOGY AND SOILS IMPACTS.**

Geology and Soils is one of the resource areas that the City determined it was unnecessary analyze in the SEIR. Yet, in the City of San Francisco, it is difficult to imagine a more important issue than seismic safety. For instance, it was the seismic upgrades at Candlestick park made before the 1989 Loma Prieta earthquake that undoubtedly saved countless lives. (See July 23, Karp, Loma Prieta, attached as **Exhibit 3.**) Given the complexity of the site, which is located on Bay fill placed after the 1906 Earthquake, as well as the fact that the arena is classified as Risk Category III under the

---

<sup>4</sup> In addition to the materials cited above, the following materials contain additional detail regarding the flawed approach to GHG analysis: July 27, 2015, letter from Susan Vaughn, Sierra Club, FSEIR, Vol. 6, COM-180 - COM 181.

California Building Code (public assembly with more than 300 people), special attention to these impacts is necessary. (July 20, BSK, Geology, p. 4.)

The Record contains substantial evidence supporting a fair argument that the Project will result in potentially significant Geology and Soils impacts or, alternatively, supplemental review is required under Public Resources Code section 21166. Additionally, the failure to include an up to date analysis of Geology and Soils is subject to “de novo review,” as it constitutes a “failure to include required information.” (See *Bakersfield Citizens for Local Control v. City of Bakersfield* (2004) 124 Cal.App.4th 1184, 1207-08.) Evidence in the Record reveals significant concerns with respect to seismic safety, liquefaction, tsunami hazards, and evacuation, among other impacts. (July 26, SM Law, DSEIR, pp. 13-20; Nov 2, SM Law, FSEIR, pp. 9-11; July 21, pp. 1-7; July 20, BSK, Geology, pp. 1-18, Nov 2, BSK, Geology.)

Reliance on the 1998 SEIR analysis of Geology and Soils was impermissible because the Project is much different than the project described in the 1998 FSEIR. For example, the Mission Bay Redevelopment Plan was a land use plan for mixed use development that did not contain any public assembly uses. Such uses have entirely different standards with respect to seismic safety. (July 20, BSK, Geology, p. 4.) Additionally, the 1998 FSEIR relies on outdated data and methodology to analyze impacts, and conditions have changed such that the 1998 FSEIR does not describe the present conditions at the site. (July 26, SM Law, DSEIR, pp. 13-20; July 21, Karp, Geology, pp. 1-5; July 20, BSK, Geology, pp. 5-6,8.)

Rather than include a cohesive discussion of Geology and Soils impacts in the context of the specific Project and today’s standards, the City has presented a hodgepodge of outdated information that is not tailored to the known Project and risks at hand. The FSEIR attempts to excuse the lack of information with the statement that an “EIR must achieve a balance between technical accuracy and public understanding.” (FSEIR, p. 13.20-12.) Yet, the SEIR provides *no analysis at all* of Geology and Soils Impacts, and instead relies on analysis in the outdated and inapplicable 1998 SEIR.

The SEIR also impermissibly defers development of mitigation measures necessary to ensure that Geology and Soils impacts are mitigated to less than significant levels. (July 26, SM Law, DSEIR, pp. 18-20; Nov 2, SM Law, FSEIR, pp. 9-11.) While the FSEIR refers to the importance of mitigation measures and compliance with building codes as means to address these issues (FSEIR, pp. 13.20-13 to 13.20-14), there are *no mitigation measures provided* to reduce Geology and Soils impacts to less than significant levels. (CEQA Findings, pp. 24-25; see also, FSEIR, p. 13.20-17.) With respect to building code, moreover, the Alliance’s expert explained that “Seismic response of

structures located on soft or liquefiable soils is non-linear and requires a site specific seismic response analysis.” (Nov 2, BSK, Geology, p. 2.) Thus, while certain design issues may properly be deferred and developed in accordance with applicable building code, it was necessary in this instance for Geology and Soils impacts to be analyzed in the context of an EIR, rather than a patched together network of new reports and excuses. As a result of the significant new information presented during the course of the review period regarding substantially more severe Geology and Soils impacts, recirculation of the SEIR was required. (CEQA Guidelines, § 15088.5, subd. (a).)

The FSEIR fails to adequately respond in good faith to comments regarding the inadequacy of the Geology and Soils analysis. For instance, the FSEIR does not adequately address comments regarding the interrelationship of liquefaction hazards around the site and the crucial need for attendees at events to be able to effectively evacuate the area. (Nov 2, BSK, Geology, pp. 2, 5.) In particular, expert comments explained that “liquefaction induced sand boils that may develop along the surface streets surrounding the project. Sand boils that may occur during an earthquake could result in significant settlements that would render the roads unusable for evacuation or emergency response. This issue has not been evaluated and considering that 18,000 people may be trying to evacuate from the area into unusable roads, this is a significant impact that has not been addressed.” (Nov 2, BSK, Geology, p. 4.) Instead of addressing this specific concern, the FSEIR simply referred to compliance with building codes. (FSEIR, p. 13.20-12.)

With respect to the adequacy of the SEIR’s analysis of Geology and Soils, the California Supreme Court’s opinion in *Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal. 4th 412, 443 is instructive:

The audience to whom an EIR must communicate is not the reviewing court but the public and the government officials deciding on the project. That a party’s briefs to the court may explain or supplement matters that are obscure or incomplete in the EIR, for example, is irrelevant, because the public and decision makers did not have the briefs available at the time the project was reviewed and approved. The question is therefore not whether the project’s significant environmental effects can be clearly explained, but whether they were.

Here, the analyses in the 1990 and 1998 are no longer pertinent. The City admits that none of the mitigation measures developed during that time even apply now. Subsequent brief descriptions in the IS/NOP also fail to characterize the full nature and extent of the seismic and other hazards that will result from construction of the Project.

Now, the FSEIR includes yet additional analysis and information regarding how impacts related to Geology and Soils will be addressed later through future regulatory processes and building codes. This review process does not clearly explain the effects of the Project to the public, and therefore violates CEQA.

**F. THE SEIR IS NOT SUFFICIENT AS AN INFORMATIONAL DOCUMENT WITH RESPECT TO HAZARDS AND HAZARDOUS MATERIALS IMPACTS.**

Hazards and hazardous materials is one of the resource areas that the City determined it was unnecessary analyze in the SEIR, which is surprising since the Project site as well as the surrounding properties have a long history of extensive soil and groundwater contamination. (July 26, SM Law, DSEIR; July 22, BSK, Hazards.) The SEIR failed to include an analysis of the Project's impacts with respect to Hazards and Hazardous materials because of the flawed determination that there were no new or more significant impacts in this category than addressed in the 1998 FSEIR (NOP/IS, pp. 106-107; DSEIR, p. 1-9.) Although the NOP/IS determined that no additional analysis was required of these issues in the DSEIR, changed circumstances and/or new information following the 1998 SEIR requires recirculation of the DEIR that includes adequate analysis and disclosure of the Project's potentially significant impacts with respect to hazards and hazardous materials.

First, the DSEIR did not previously acknowledge the presence of asbestos on-site. Following release of the DSEIR, the Bay Area Air Quality Management District ("BAAQMD") staff sampled the stockpiles within the Operable Unit identified in the Revised Risk Management Plan (2006) and Risk Management Plan (collectively "RMP") for the site, which identified the presence of asbestos above regulatory limits. (Nov 2, SM Law, FSEIR; Oct 20, SM Law, Health Risk.) According to sampling by the BAAQMD, stockpiles of materials adjacent to the Project site contain more than 3 percent asbestos. (See **Exhibit 5**, BAAQMD Asbestos Results, August 7, 2015.) According to the sampling, stockpiles of materials adjacent to the Project site contain more than 3 percent asbestos, well above the USEPA's historically used upper limit of percent soil as a benchmark for defining hazardous levels of asbestos in soils. (See **Exhibit 6**, USEPA Asbestos Memorandum, dated August 10, 2004.)

In response to this newfound hazard from the presence of asbestos in onsite soils, the applicant prepared an Asbestos Dust Mitigation Plan ("ADMP") in order to mitigate the significant public health risk. This Mitigation Measure, included for the first time in the IS/NOP (HZ 1b, NOP/IS, p. 113), is improper in that it was formulated to address a new potentially significant impact that was not the subject of any EIR. (See NOP/IS, p.

113 (improperly assuming the asbestos is naturally occurring).) The ADMP, dated October 9, 2015, was released to the public just prior to the FSEIR. In any case, the newly-discovered presence of asbestos in soils onsite, not previously disclosed in the DSEIR or the prior EIRs prepared for the Mission Bay Redevelopment Plan, represents a new significant impact of the Project that requires recirculation.

Second, following release of the NOP/IS,<sup>5</sup> the applicant's consult prepared a Phase II report that identified significant additional contamination in soils onsite. (Nov 2, SM Law, FSEIR; July 26, SM Law, DSEIR; July 22, BSK, Hazards.) The Phase II report shows that significant amounts of both previously existing and subsequently-imported hazardous waste remain on the site today. (July 22, BSK, Hazards.) Backfill used in this area contained Class 1 and 2 hazardous materials that were not present before the excavation and partial removal of petroleum contaminated materials. These materials are not addressed in the 1998 RMP or 2006 Revised RMP. The FSEIR now acknowledges the existence of this contaminated backfill (FSEIR, 13.22-20), which was withheld from public disclosure in the NOP/IS and DSEIR.

The presence of newly-revealed contamination, viewed in isolation, represents new information and/or a changed circumstance requiring analysis and disclosure in a recirculated DSEIR.<sup>6</sup> Additionally, the Alliance retained an independent toxicologist to compare the results of the Phase II to the health screening levels in the 1998 RMP (and included in the 2006 RRMP) and current standards. The report prepared by Damian Applied Toxicology, LLC ("DAT"): (1) provides updated screening levels for the constituents at the site; (2) provides newly applicable screening levels that did not exist at the time of the 1998 EIR; (3) compares the new and old screening levels; and (4) compares the updated screening levels to the most recent site investigation data from the Project site. (Nov 2, SM Law, FSEIR; Oct 20, SM Law, Health Risk.)

The DAT Report shows that the prior screening levels are completely outdated and do not protect public health. Using updated screening levels that address a wide range of relevant potential receptors and exposure pathways, the DAT Report concludes that 19 chemicals (18 in soil and 1 in groundwater) that were detected in the 2015 Phase II

---

<sup>5</sup> Hazards and Hazardous Materials is one of the subjects determined by the City to not warrant any analysis in the DSEIR.

<sup>6</sup> Evidence regarding the presence of asbestos within the Operable Unit that contains the site and described in the RMP dates back to at least August 2015, prior to OCII's certification of the SEIR. The asbestos results would alternatively warrant preparation of supplemental review under Public Resources Code section 21166 and CEQA Guidelines section 15162.

investigation at the site exceed at least one screening level. (Oct 20, SM Law, Health Risk.) The DAT Report did not include applicable screening levels for asbestos, as the Alliance had no information pointing to the presence of asbestos on the site until the BAAQMD asbestos sampling results were recently provided pursuant to a Public Records Act request. In any case, contamination documented previously in the Phase II as well as more recently in the BAAQMD asbestos testing, reveals that the Project poses potentially significant hazards due to impacts to the shallow water table, risks to construction workers exposed to site soils, including backfill, risks to commercial workers at the planned development project, and risks from transport and disposal of this hazardous waste, to the extent it may be taken off site. These hazards are not addressed in the RMP/RRMP, and represent new significant impacts that require recirculation of the DSEIR. (Nov 2, SM Law, FSEIR.)

The FSEIR mischaracterizes the record in an attempt to dismiss the significance of this newly-discovered contamination that is well above screening levels. First, the FSEIR suggests that it is contamination is not the result of subsequent activities at the Project site, stating, “The fill unit is . . . likely related to debris from the 1906 earthquake and resulting fire.” (FSEIR, 13.22-21.) This statement is misleading because it conceals from the public the fact, recognized in both the applicant’s Phase II report and the prior BSK report, that this material was deposited onto the Project site in approximately 2005 following excavation to remediate petroleum free-product found onsite. (July 22, BSK, Hazards, p. 3.) Thus, available facts indicate that this contaminated soil was the result of activities that took place following the 1998 SEIR, not the 1906 earthquake.

The City also attempts to dismiss the significance of this contamination by asserting, “[T]he Phase II ESA determined that these concentrations are not considered a health concern to construction workers.” (FSEIR, 13.22-21.) First, it is the function of a health risk assessment, and not a Phase II environmental site assessment, to make a determination of human health risk. Indeed, the completely inappropriate and inadequate nature of this conclusion in the Phase II is demonstrated with clarity in the DAT Report, discussed above, establishing that some of these contaminants are found in this fill material at up to ten times current screening levels. The City’s misstatements on these critical human health issues fall well below its duty of good faith.

Finally, it is noted that the FSEIR repeatedly relies on compliance with the existing 1999 RMP under the San Francisco Bay Regional Water Quality Control Board (“RWQCB”) oversight to ensure that impacts are less than significant. (FSEIR, 13.22-8 – 12.) Notably, compliance with the RMP is not even listed as a mitigation measure in the Mitigation Monitoring and Reporting Program, is and is instead listed as a Regulation. (OCII adopted MMRP-58.) In addition to establishing that the RMP itself is outdated

and no longer adequate to protect human health, the attached correspondence establishes that oversight by the RWQCB is no longer adequate to effectively manage the site for the protection of construction workers and the public. (**Exhibit 7**, RWQCB Email Correspondence, dated November 23, 2015.) In particular, there is no record of required air quality monitoring or tracking of movement of hazardous materials within the Operable Unit that includes the Project site. There has apparently been a complete failure to comply with even the most basic terms of the RMP, which in itself is inadequate to protect public health given the changes in circumstances described above. Whether a regulation or a mitigation, this measure is not functioning effectively to protect the public, including onsite workers, from onsite hazards, and is insufficient to reduce Hazard and Hazardous Materials impacts to less than significant levels.

In summary, the information submitted by the Alliance constitutes substantial evidence of a fair argument that the Project will have a significant adverse effect regarding hazardous materials. In the alternative, per CEQA section 21166 and CEQA Guidelines section 15162, the facts described above constitute a change in circumstances since the 1998 SEIR involving, and significant new information showing, a new significant effect not previously analyzed in the 1998 SEIR. Under either standard, the City must prepare and circulate for public comment an environmental impact report to review the Project's impacts on hazardous materials. Moreover, the identified mitigations/regulations to reduce Hazards and Hazardous Materials impacts have been proven to be ineffective and are therefore inadequate under CEQA.

**G. THE SEIR IS NOT SUFFICIENT AS AN INFORMATIONAL DOCUMENT WITH RESPECT TO URBAN DECAY IMPACTS IN OAKLAND.**

“Under CEQA, a lead agency must address the issue of urban decay in an EIR when a fair argument can be made that the proposed project will adversely affect the physical environment.” (*California Clean Energy Committee v. City of Woodland* (2014) 225 Cal.App.4th 173 (CCEC).) An EIR is to disclose and analyze the direct and the reasonably foreseeable indirect environmental impacts of a proposed project if they are significant. (CEQA Guidelines, §§ 15126.2, 15064, subd. (d)(3).) Economic and social impacts of proposed projects are outside CEQA's purview. (CEQA Guidelines, § 15131.) When there is evidence, however, that economic and social effects caused by a project, could result in a reasonably foreseeable indirect environmental impact, such as urban decay or deterioration, then the CEQA lead agency is obligated to assess this indirect environmental impact. (CCEC, *supra*, 225 Cal.App.4th at 188; *Anderson First Coalition v. City of Anderson* (2005) 130 Cal.App.4th 1173, 1182; *Citizens for Quality Growth v. City of Mt. Shasta* (1988) 198 Cal.App.3d 433, 446 (“The potential economic

problems caused by the proposed project could conceivably result in business closures and physical deterioration of the downtown area”).)

Here, the DSEIR explained that the project includes relocating the Warriors home games from the existing Oracle Arena in Oakland to San Francisco. (DSEIR, p. 1-3.) In addition to relocating all NBA games from Oakland to San Francisco, the project description also includes relocating half of all existing non-NBA games from Oakland to San Francisco. (AB 900 Application; DSEIR, p. 5.5-11.) Thus, a direct economic impact of the project is to reduce Oracle Arena events from 89 to 21 per year. As explained by economist Philip King, this is a severe direct economic impact from the project. (July 22, King, Urban Decay, pp. 6-7.)

Such a dramatic economic impact may reasonably be expected to have indirect impacts. Dr. King explains that revenues from a mere 21 events per year will not likely justify the ongoing operational costs of maintaining such a facility. (July 22, King, Urban Decay, pp. 7-8.) As such, a likely indirect impact is the ultimate shuttering of Oracle Arena. Repurposing such a massive facility is difficult to impossible, and so it is very likely that the facility will likely stand dormant and invite the physical deterioration that is characteristic of urban decay. (July 22, King, Urban Decay, pp. 8-9; *Bakersfield Citizens for Local Control v. City of Bakersfield* (2004) 124 Cal.App.4th 184, 1212 (urban decay characteristic of “long-term vacancies that deteriorate and encourage graffiti and other unsightly conditions”).)

Implicitly acknowledging that the DSEIR impermissibly ignored this issue, the FSEIR included an analysis purporting to explain how there was never any potential for urban decay in the first place. However, as explained by economist Philip King, the FSEIR’s technical report was so riddled with methodological errors and omissions including, for example, its repeated misuse of economic data and its sheer speculation that urban decay can be avoided by another professional sports team moving into Oracle Arena. Properly accounting for the numerous methodological flaws, the information contained in that report actually supports Dr. King’s conclusion of a fair argument that urban decay may result in Oakland. (Nov 2, King, Urban Decay.) Thus, rather than demonstrate that urban decay is a non-issue, the FSEIR’s report constitutes new information of a new potentially significant impact that requires recirculation of the DSEIR.

Rather than prepare the required analysis in good faith and recirculate the RDEIR with this new information as required by CEQA, the City instead hired a consultant to prepare a *post hoc* rationalization for why no analysis was required in the first place. (See FSEIR, Appendix UD.) As explained by Dr. King, the FSEIR’s analysis does not

actually respond to Dr. King's original analysis explaining why it is a potentially significant impact requiring analysis. (Nov 2, King, Urban Decay.)

#### **H. THE SEIR IS NOT SUFFICIENT AS AN INFORMATIONAL DOCUMENT WITH RESPECT TO WIND AND SHADOW IMPACTS.**

According to the DSEIR, a wind impact would be significant if it would alter wind in a manner that would substantially affect public areas. (DSEIR, p. 5.6-6.) However, the wind analysis only addressed offsite areas and not the public spaces within the Project site. (DSEIR, pp. 5.6-10 to -13.) While the DSEIR included a discussion of wind impacts in these areas, it did so only for "informational purposes." (DSEIR, p. 5.6-18.)

The Alliance commented that the DSEIR failed to analyze the Project's impact on on-site open space, which rendered it defective as an informational document. (FSEIR, p. 13.15-1.) The FSEIR's response to this comment was not made in good faith, and instead was intended to conceal a significant impact (and thereby avoid recirculation) and improperly deferred mitigation.

The FSEIR first suggested that the open space provided on-site was somehow exempted from analysis because it consists of "publically [sic] accessible but private recreational areas." (FSEIR, p. 13.15-1.) This characterization, however, is inconsistent with the FSEIR's characterization of this open space as counting towards the Project's requirement to construct 0.46 acres of open space for each 1.0 acre of development area, which the FSEIR characterizes as "directly serv[ing] the project's demand for recreational facilities." (FSEIR, p. 13.16-3.) It is also inconsistent with the project applicant's own application materials, which plainly characterized these areas as public open spaces. (Golden State Warriors Even Center and Mixed-Use Development Combined Basic Concept/Schematic Design Submittal, Blocks 29-32: Open Space, Gatehouse & Parking and Loading, p. 5.)

In other words, the FSEIR characterizes this open space as "private" to avoid a wind analysis, but "public" for purposes of dismissing impacts to recreational facilities. The FSEIR's characterization of this space as "private" is also inconsistent with the project applicant's repeated representations about this space. This type of shifting project description is misleading and thwarts informed decision-making. (*County of Inyo v. City of Los Angeles* (1977) 71 Cal.App.3d 185, 197.)

What is more, the FSEIR's attempt to narrow the scope of the required wind analysis by reference to Planning Code section 148 is misplaced. Indeed, if one were to simply apply the scope of that code section directly, it would not apply at all because the

Project is being developed in a redevelopment area. Here, the 1998 Mitigation Monitoring and Reporting Program did not limit the application of a wind analysis to only those instances where Section 148 would apply on its own terms, but rather much more broadly:

Require a qualified wind consultant to review specific designs for buildings 100 feet or more in height for potential wind effects. The Redevelopment Agency would conduct wind review of high-rise structures above 100 ft. Wind tunnel testing would also be required unless, upon review by a qualified wind consultant, and with concurrence by the Agency, it is determined that the exposure, massing, and orientation of buildings are such that impacts, based on a 26-mile-per-hour hazard for a single hour of the year criterion, will not occur. The purpose of the wind tunnel studies is to determine design-specific impacts based on the above hazard criterion and to provide a basis for design modifications to mitigate these impacts. Projects within Mission Bay, including UCSF, would be required to meet this standard or to mitigate exceedances through building design.

(1998 EIR, p. VI.6, Mitigation Measure D.7.)

Thus, by its own terms this mitigation measure applies to “high-rise structures above 100 ft.” within any land use designation, and the scope of the affected area to review is in no way limited to “public open space” rather than so-called “private open space.” Nor is there any explanation that the scope of affected area is to be limited by Section 148.

The FSEIR also disclosed, for the first time, that the Project would “exceed the wind hazard criterion” at no less than “three test points on the project site,” which constitutes a new significant impact that requires recirculation of the DSEIR. The FSEIR dismisses the significance of those exceedances because “wind effects at these locations are not considered significant impacts on the environment.” (FSEIR, p. 13.15-3.) The FSEIR reaches this strained legal conclusion in order to avoid the factual issue that the de facto mitigation offered for that significant impact is both ineffective and impermissibly deferred under CEQA. This legal analysis is flawed, however and will be offered no deference by a reviewing court. The SEIR must be recirculated based upon these newly-disclosed wind exceedances that constitute new significant impacts from the Project.

**I. THE SEIR IS NOT SUFFICIENT AS AN INFORMATIONAL DOCUMENT WITH RESPECT TO RECREATION IMPACTS.**

The DSEIR improperly failed to include any analysis of impacts to recreation based on the NOP/IS's determination there would be no new or more severe impacts than identified in the 1998 SEIR based on the incorrect assertion that "[t]he increase in demand for recreational facilities generated by the project would generally be consistent with that described in the Mission Bay FSEIR." (NOP/IS, pp. 61-64.) This conclusion is completely unsupported by any citation or factual support whatsoever. Rebutting this statement is the Project description itself: the Project includes a massive arena with a capacity of more than 18,000 seats holding up to 225 events per year.

These huge crowds, in addition to employees associated with the 580,000 square feet of commercial uses, would all be crammed into an 11 acre parcel. These thousands of additional arena visitors are in addition to the people associated with the 580,000 square feet of office space, the 125,000 square feet of retail space, and all other people within the larger Mission Bay area who are anticipated to use Bayfront Park. Since the 1998 SEIR limited its consideration to 50,000 square feet of entertainment uses and not a massive 750,000 square foot arena, the open space needs of these arena crowds were never contemplated in the 1998 SEIR. Accordingly, the Project will result in significantly accelerated physical deterioration of Bayfront Park than disclosed in the 1998 SEIR, which is a significant impact under CEQA. (CEQA Guidelines, Appendix G, section XV(a).)

The Project would also result in undisclosed impacts to recreation by constructing and operating Bayfront Park at a site with existing and historical soil and groundwater contamination. (July 22, BSK, Hazards; see also Exhibit 5, BAAQMD Asbestos Sampling.) While the development of Bayfront Park is considered a separate project for purposes of CEQA, the DSEIR acknowledged the development of the Project triggers development of Bayfront Park and must be completed prior to occupancy of the Project. (DSEIR, p. 3-37-38.) In other words, development of the Project requires construction of Bayfront Park. (See, e.g., CEQA Guidelines, Appendix G, section XV(b).) By failing to comply with the City's duty to analyze construction of Bayfront Park at a project level, serious questions are left unaddressed about whether construction of Bayfront Park along with the Project will result in adverse physical effects on the environment due to the presence of hazardous contamination on that site. (*Ibid.*) The failure to follow the procedures required in the RMP for the Operable Unit, also call into question the effectiveness of any existing requirements to adequately protect the public. (See Exhibit 7, RWQCB Email Correspondence.)

The potentially significant impacts regarding hazardous materials use, transport, disposal and public exposure are exacerbated in the context of Bayfront Park because that will be a ground-level landscaped park. Having failed to disclose that the soil underlying Bayfront Park is contaminated, the NOP/IS also failed to explain whether such contaminated soil will be left in place and thereby expose visitors to hazardous materials. There is no discussion of whether an impermeable cap will be used, for instance, to protect future park visitors from the existing contaminated soil.

The failure to address these critical issues supports a fair argument that the Project will require construction of a recreational facility (i.e., Bayfront Park) that will have an adverse effect on the environment by facilitating the exposure of contaminated soils to humans and the environment. (CEQA Guidelines, Appendix G, section XV(b)).

The FSEIR failed to provide good faith responses to these comments. Rather than actually cite any report or analysis, the FSEIR merely restates its prior unsubstantiated claims. (DSEIR, p. 13.16-2.) Thus, there is no evidence whatsoever supporting the conclusions with respect to Recreation impacts.

In the absence of any meaningful analysis regarding the Project's demand for recreational facilities, the FSEIR claims that the Project will not substantially degrade Bayfront Park in part because of "the inclusion of on-site publically accessible open space proposed by the project that would directly serve the project's demand for recreational facilities." (FSEIR, 13.16-3.) Yet this characterization of the Project's "open space" is inconsistent with the FSEIR's treatment of these areas in its wind analysis, which it characterizes as "publicly accessible but private recreational areas," (FSEIR, 13.15-1.) The FSEIR's inconsistent treatment of this important component of the Project thwarts informed decision-making and public participation.

The FSEIR also failed to respond in good faith to comments about hazardous materials exposure associated with construction and occupancy of Bayfront Park. The City first claimed that Bayfront Park is somehow a separate CEQA project notwithstanding the fact that its existence is triggered by construction of the arena. (FSEIR, 13.16-4.) Setting aside the FSEIR's attempted legal obfuscation, the FSEIR then conclusively asserted that all issues concerning hazardous materials at Bayfront Park are satisfied because a RMP has been approved for the area. (FSEIR, 13.16-5.) This response, however, ignores that the RMP itself is not sufficiently protective of human health because it is: (i) premised on outdated screening levels that are significantly higher than now utilized; (ii) does not address contaminated soil that was subsequently imported onto the Project site; and (iii) does not even address several contaminants that have been recently identified onsite at levels well above current screening levels. (Oct

20, SM Law, Health Risk; July 22, BSK, Hazards.) Moreover, the RMP is not being followed. (See **Exhibit 7**, RWQCB Email Correspondence.) As a result, the SEIR fails to adequately analyze Recreation Impacts, and must be revised and recirculated to correct this deficiency.

For all the reasons described about, the Alliance respectfully requests that the Board of Supervisors grant the Alliance's appeal and reverse OCII's certification of the SEIR and the associated Project approvals.

Respectfully submitted,

# **EXHIBIT 2**

## Greenhouse Gas Emissions from a Typical Passenger Vehicle

**T**he U.S. Environmental Protection Agency (EPA) developed this fact sheet to answer common questions about greenhouse gas emissions from passenger vehicles. This fact sheet provides emission rates and calculations consistent with EPA's regulatory work.

**How much tailpipe carbon dioxide (CO<sub>2</sub>) is created from burning one gallon of fuel?**

The amount of CO<sub>2</sub> created from burning one gallon of fuel depends on the amount of carbon in the fuel. Typically, more than 99% of the carbon in a fuel is emitted as CO<sub>2</sub> when the fuel is burned. Very small amounts are emitted as hydrocarbons and carbon monoxide, which are converted to CO<sub>2</sub> relatively quickly in the atmosphere. Carbon content varies by fuel, and some variation within each type of fuel is normal. The EPA and other agencies use the following average carbon content values to estimate CO<sub>2</sub> emissions:

CO <sub>2</sub> Emissions from a gallon of gasoline:	8,887	grams CO <sub>2</sub> / gallon <sup>1</sup>
CO <sub>2</sub> Emissions from a gallon of diesel:	10,180	grams CO <sub>2</sub> / gallon <sup>2</sup>

Diesel creates about 15% more CO<sub>2</sub> per gallon. However, many vehicles that use diesel fuel achieve higher fuel economy than similar vehicles that use gasoline, which generally offsets the higher carbon content of diesel fuel.

<sup>1</sup> This gasoline factor is from a recent regulation establishing GHG standards for model year 2012-2016 vehicles (75 FR 25324, May 7, 2010).

<sup>2</sup> This diesel factor is from the calculations that vehicle manufacturers use to measure fuel economy (40 C.F.R 600.113).

## How much tailpipe carbon dioxide (CO<sub>2</sub>) is emitted from driving one mile?

The average passenger vehicle emits about 411 grams of CO<sub>2</sub> per mile. This number can vary based on two factors: the fuel economy of the vehicle and the amount of carbon in the vehicle's fuel. Most vehicles on the road in the U.S. today are gasoline vehicles, and they average about 21.6 miles per gallon.<sup>3</sup> Every gallon of gasoline creates about 8,887 grams of CO<sub>2</sub> when burned. Therefore, the average vehicle when driving one mile has tailpipe CO<sub>2</sub> emissions of about:

$$\text{CO}_2 \text{ emissions per mile} = \frac{\text{CO}_2 \text{ per gallon}}{\text{MPG}} = \frac{8,887}{21.6} = 411 \text{ grams}$$

This value will decrease slightly each year as standards become more stringent.

## What are the average annual carbon dioxide (CO<sub>2</sub>) emissions of a typical passenger vehicle?

A typical passenger vehicle emits about 4.7 metric tons of carbon dioxide per year. This number can vary based on a vehicle's fuel, fuel economy, and the number of miles driven per year. The average gasoline vehicle on the road today has a fuel economy of about 21.6 miles per gallon and drives around 11,400 miles per year<sup>4</sup>. Every gallon of gasoline burned creates about 8,887 grams of CO<sub>2</sub>, and there are one million grams per metric ton. Therefore, the average vehicle over a year of driving has tailpipe CO<sub>2</sub> emissions of about<sup>5</sup>:

$$\text{Annual CO}_2 \text{ emissions} = \frac{\text{CO}_2 \text{ per gallon}}{\text{MPG}} \times \text{miles} = \frac{8,887}{21.6} \times 11,400 = 4.7 \text{ metric tons}$$

EPA uses this to compare CO<sub>2</sub> emissions from other sources to emissions from passenger vehicles. For example, an energy efficiency program that reduces greenhouse gas emissions by 4,700 metric tons of CO<sub>2</sub> per year has the same impact as removing 1,000 vehicles from the road.

## Are there other sources of greenhouse gas (GHG) emissions from a vehicle?

In addition to carbon dioxide (CO<sub>2</sub>), automobiles produce methane (CH<sub>4</sub>) and nitrous oxide (N<sub>2</sub>O) from the tailpipe and hydrofluorocarbon (HFC) emissions from leaking air conditioners.

<sup>3</sup> Federal Highway Administration Highway Statistics 2012. This is representative of the light duty passenger vehicle fleet as a whole, including both new and existing vehicles. EPA expects the average passenger vehicle fuel economy to increase over time as a result of new greenhouse gas and fuel economy standards developed in coordination between EPA, DOT and California.

<sup>4</sup> Federal Highway Administration Highway Statistics 2012.

<sup>5</sup> This calculation provides a simple way to determine the average annual CO<sub>2</sub> emissions from a passenger vehicle. Anyone that needs a more detailed approach should use the EPA's [Motor Vehicle Emission Simulator \(MOVES\)](#) model. This model contains detailed data about the light duty fleet and driving patterns in the United States. Although simplified, the calculated annual CO<sub>2</sub> emissions above are consistent with analyses performed by the EPA using MOVES.

The emissions of these gases are small in comparison to CO<sub>2</sub>; however, the impact of these emissions can be important because they have a higher global warming potential (GWP) than CO<sub>2</sub>.

The global warming potential of a gas relates the impact of that gas relative to an equivalent amount of CO<sub>2</sub>. Using global warming potentials, the impact of various GHGs can be directly compared using a common metric. This metric is expressed in units of carbon dioxide equivalent, written as CO<sub>2</sub>e. Multiplying the amount of a GHG times the global warming potential of that GHG results in the amount of GHG in terms of CO<sub>2</sub>e. For automotive-related gases, these global warming potentials are:

Greenhouse Gas	Abbreviation	GWP <sup>6</sup>
Carbon Dioxide	CO <sub>2</sub>	1
Methane	CH <sub>4</sub>	25
Nitrous Oxide	N <sub>2</sub> O	298
Air Conditioning Refrigerant	HFC-134a	1,430

It is more difficult to estimate vehicle emissions of CH<sub>4</sub>, N<sub>2</sub>O, and HFCs than CO<sub>2</sub>. Emissions of CH<sub>4</sub> and N<sub>2</sub>O are dependent on the design of the engine and emission control system, rather than fuel consumption per mile. The amount of HFC leakage from air conditioners is dependent on system design, amount of use, and maintenance. On average, CO<sub>2</sub> emissions are 95-99% of the total greenhouse gas emissions from a passenger vehicle, after accounting for the global warming potential of all GHGs. The remaining 1-5% is CH<sub>4</sub>, N<sub>2</sub>O, and HFC emissions.

**What are the tailpipe emissions from a plug-in hybrid electric vehicle (PHEV) or an electric vehicle (EV)? What about hydrogen fuel cell vehicles?**

A vehicle that operates exclusively on electricity (an EV) will not emit any tailpipe emissions. A fuel cell vehicle operating on hydrogen will emit only water vapor.

Calculating tailpipe emissions for PHEVs is more complicated. PHEVs can operate on electricity only, gasoline only, or some combination of electricity and gasoline. A PHEV operating on electricity only (like an EV) does not generate any tailpipe emissions. When a PHEV is operating on gasoline only, it creates tailpipe emissions based on the PHEV's gasoline fuel economy. Tailpipe emissions for a PHEV operating on both electricity and gasoline cannot be calculated without detailed information about how the PHEV operates. The overall tailpipe emissions for a PHEV can vary significantly based on the PHEV's battery capacity, how it is driven, and how often it is charged.

For more information, see the ["My Plug-In Hybrid"](#) calculator.

<sup>6</sup> These 100-year time horizon GWP values are from the 2007 Intergovernmental Panel on Climate Change (IPCC) Fourth Assessment Report.

**Are there any greenhouse gas emissions associated with the use of my vehicle other than what comes out of the tailpipe?**

Driving most vehicles creates tailpipe greenhouse gas emissions. Producing and distributing the fuel used to power your vehicle also creates greenhouse gasses. Gasoline, for example, requires extracting oil from the ground, transporting it to a refinery, refining the oil into gasoline, and transporting the gasoline to service stations. Each of these steps can produce additional greenhouse gas emissions.

Electric vehicles (EVs) have no tailpipe emissions; however, emissions are created during both the production and distribution of the electricity used to fuel the vehicle. Visit the [Beyond Tailpipe Emissions calculator](#) to estimate GHG emissions for an EV in your region of the country.

**I thought my gasoline was blended with ethanol. Does that change my tailpipe CO<sub>2</sub> emissions?**

Most of the gasoline sold in the U.S. is a mixture of gasoline and up to 10% ethanol (often referred to as E10). The exact formulation of the gasoline in your vehicle will vary depending on season, region in the U.S., and other factors. While your fuel economy when using an ethanol blend in your vehicle will be slightly lower than when using gasoline without ethanol, the CO<sub>2</sub> tailpipe emissions per mile will be similar. This is because ethanol has less carbon per gallon than gasoline.

**How does the EPA measure CO<sub>2</sub> emissions from vehicles?**

The EPA and automobile manufacturers measure vehicle fuel economy and CO<sub>2</sub> emissions using a set of standardized laboratory tests. These tests were designed by the EPA to mimic typical driving patterns. The EPA and the Department of Transportation use these values to ensure that manufacturers meet federal greenhouse gas and corporate average fuel economy (CAFE) standards.

For every new vehicle, the test results are used to determine real world fuel economy and CO<sub>2</sub> emissions. These adjusted results are used on the Fuel Economy and Environment Labels and on [Fueleconomy.gov](#).

For more information, see [Frequent Questions on Fuel Economy Testing and Labeling](#) and [How Vehicles Are Tested](#).

**How can I find and compare CO<sub>2</sub> emission rates for specific vehicle models?**

Visit [Fueleconomy.gov](http://Fueleconomy.gov) and click on “Find a Car.”

When shopping at a dealership, check out tailpipe CO<sub>2</sub> emission rates on vehicle *Fuel Economy and Environment Labels*. The labels also feature a 1-to 10 Fuel Economy and Greenhouse Gas Rating to enable easy comparison shopping.

**Where can I find information on the emissions of the transportation sector as a whole?**

You can find documents on greenhouse gas emissions on the EPA’s [Transportation and Climate](#) website. This website is maintained by the Office of Transportation and Air Quality (OTAQ).

The EPA also publishes industry-wide data in the report, “[Light-Duty Automotive Technology, Carbon Dioxide Emissions, and Fuel Economy Trends](#).” This report analyzes trends in fuel economy and CO<sub>2</sub> emissions for new light duty vehicles from 1975 to the present.

# **EXHIBIT 3**

July 23, 2015

Osha, when writing the review letter concerning an earthquake that would affect the proposed Warriors arena, an experience with another stadium came to mind. In 1985, when I was involved with a study of how Candlestick Park would perform in a serious seismic event, I was at a summary meeting in City Hall with Norm Karasick, the City architect. The discussion was about the cost of rebuilding the deteriorated concrete bleachers to then-current standards. It was recognized that one or more sections could collapse in an earthquake. Karasick pointed out that the City probably would not want to spend the money to strengthen the bleachers saying: "What are the odds there would be an earthquake during a game?" Well, in the end the City decided to do the work and on October 18, 1989 the Loma Prieta earthquake, centered near Santa Cruz, occurred during a World Series game. Nobody was injured at the game. All damages in the Bay Area were from liquefaction of sand (Marina District) and amplification of ground motion in soft ground (Cypress overpass). At the engineering team leader's retirement dinner almost 20 years later a toast to him was made by another engineer who thanked him for pushing the retrofit because his two sons had been at the game sitting below one of the rebuilt overhanging concrete bleachers. ## **Executive Summary**

This report provides both a cash flow analysis of the arena development and a comparison with a plausible alternative. The focus in the report is on the effect of the project on San Francisco's General Fund. It also provides a discussion of some of the assumed revenues associated with the Golden State Warriors (GSW) project. The project is currently expected to result in a small surplus in each year, but that surplus may not materialize. Either cost overruns in ensuring the flow of traffic during events or revenue shortfalls could erase the razor thin margin for benefit.

This report provides an update to a report by the same name originally released on November 2, 2015. Since that time, much has changed regarding the parameters of the agreement. An update of the analysis is provided herein.

### **Fundamental Changes to the Analysis**

1. City's Budget and Legislative Analyst has made it clear that off-site and dedicated and restricted revenues estimated in the fiscal impact report should not be included in stadium revenue calculations. Transit fare and parking revenues resulting from events at the arena, however, should be included. This makes the relevant revenue estimate \$11.6 million rather than \$14.1 million.
2. SFMTA's annual operating costs associated with the arena are now estimated to be \$6.9 million. The previous \$6.1 figure was a cost estimate net of fare and parking revenues associated with transit use by Event Center attendees.
3. It has been estimated that the one-time revenues (\$25.4 million) available to offset one-time transportation infrastructure related expenses (\$55.3 million) will fall short by \$29.9 million. Annual debt service payments associated with this shortfall are estimated to be \$2.1 million.
4. Total City departments' annual ongoing expenditures related to the Event Center are estimated to be \$10.1 million, including debt servicing.
5. Net revenues associated with the GSW are estimated to be \$1.5 million (= \$11.6 million – \$10.1 million), far less than previous estimates.
6. The final sales price on the 12-acre parcel has been established as \$150 million. This has implications for transfer tax revenues.

These changes make it clear that the City's Budget and Legislative Analyst (BLA) is in agreement with our prior conclusion that off-site changes should not be included in anticipated revenues associated with the GSW project. The BLA has also, rightly, focused on revenues and commitments associated with the City's General Fund.

Unfortunately, the Board of Supervisors has failed to adopt this recommendation from the BLA. In the absence of very extensive and sophisticated surveys of the activities of those attending events at the Event Center, and surveys of those who would otherwise have contributed to the off-site economy (a completely unidentifiable set of people), there is no way to accurately estimate *NEW* off-site revenues; off-site revenues that do not merely displace economic activity that would otherwise have occurred. Including highly flawed estimates off-site revenues that represent additions rather than diversions of General Fund revenues will do nothing other than cover up the true costs of the Event Center to the general public. Including off-site revenues represents bad accounting, bad economics, and disingenuous communication with the public on the part of the City.

The BLA has estimated that annual expenditures related to the Arena will be \$10.1 million and that on-site or direct revenues will be approximately \$11.5 million, yielding net revenues of \$1.5 million. A comparison with the biotechnology alternative reveals an annual difference in revenue to the General Fund of \$4.5 million. Annual net revenues associated with the biotechnology alternative are estimated to be \$6.0 million. The difference in one-time net revenues is \$38.5 million in favor of biotechnology.

The City's General Fund is on the hook for revenue short falls and cost overruns in providing transit and traffic support to the arena. Although the ordinance establishing the Mission Bay Transportation Improvement Fund has been amended to require GSW work with the city to reduce overruns associated with the SFMTA, there are other expenses — debt servicing, police presence, and DPW expenses — that remain obligations of the General Fund. These obligations are estimated to be \$3.2 million per year and will come at the expense of other City services.

**Important note:** If it is ever the case that revenues are less than SFMTA expenses, it will necessarily be the case that the General Fund will run a deficit of between \$2.1 and \$3.2 million. The requirement that the Warriors provide transit services in this case does *nothing* to cover these other Event Center related obligations.

There is sufficient uncertainty in future projects to be concerned about this scenario. As was pointed out by Controller Ben Rosenfield in a memo dated October 6, 2015, revenues associated with the project are "highly sensitive to actual attendance and the number of

events at the Event Center, local economic conditions when the Event Center opens, and other cyclical factors." With a slim margin of benefit and sensitive revenues, the likelihood of the City's General Fund running a deficit in any given year is significant.

The bottom line of this report is that an alternative agreement is expected to add to General Fund revenues between \$3.6 and \$7.4 million per year in present discounted value terms, or between \$80 and \$163 million over the first 20 years of arena operations. These figures can be thought of as the amount that San Franciscans are paying to bring the Warriors to town. It is the amount of revenues that the City would forgo with the GSW project, relative to a plausible alternative. This is not to say that the project is a bad idea, but merely to point out what is being given up in order to accommodate the Warriors' move.

## Key Findings

1. A cash flow analysis of the arena through the first twenty years of operation suggests net revenues for San Francisco's General Fund of \$22.1 million. This is after City expenses of approximately \$159 million during this time for transit and traffic mitigation. (Both figures are in present discounted value.)
2. This \$159 million of City spending in support of the Arena represents an implicit subsidy to the project. The City is funding transit infrastructure and the mitigation of traffic and transportation issues related to arena operations.
3. Despite claims to the contrary, the City is heavily subsidizing the Event Center.
4. Although the Arena generates significant revenues for San Francisco, the City's costs will exceed its revenues from the development for at least the first nine years of Arena operation, in the absence of financing.
5. There are elements of the estimates of City revenues that are filled with uncertainty. Numbers of spectators attending, taking mass transit, or parking, the general state of the economy. These all have implications for net revenues.
6. It is forecast that net revenues will be on the order of \$1.5 million per year. The City's contribution to annual arena expenses is capped at 90% of estimated revenues. It is possible that revenues will not be sufficient to cover expenses.
7. If revenues are insufficient to cover expenses, the City's General Fund will be responsible for covering the resulting shortfall of \$3.2 million.
8. If an alternative development, one suited to biotechnology, were pursued, the City's net General Fund revenues would be \$80.2 million higher and possibly as much as \$163.2 million higher over 22 years, or \$7.4 million per year.
9. An alternative development would have considerably larger economic impacts for the rest of the San Francisco economy than would an arena, creating significantly more jobs — more than 2,000 on-site. Oracle Arena currently generates just 494 jobs.
10. An alternative development would generate as much as \$1 billion in direct economic activity on-site.
11. Forgoing the biotechnology development and pursuing the Arena reduces net revenues to the City of San Francisco's General Fund by \$3.6 to \$7.4 million per year - and potentially much more. 6

## 1: Introduction

In 2017, the Golden State Warriors are expected to begin playing in San Francisco. Although this is an exciting development for the City of San Francisco, the economics of the Warriors presence in the City are unclear. There are likely to be significant revenue benefits for the City, but welcoming the Warriors will also involve significant infrastructure investments and ongoing expenses for the City and County of San Francisco. The net effects of these revenues and costs have not been adequately addressed.<sup>1</sup>

It is not clear whether San Francisco is importing a lucrative asset or a financial burden; that is, it is not clear whether the revenues associated with the Warriors play in San Francisco exceed the considerable upfront investments that the City must make. It is also an open question as to what exactly the City might be giving up in order to host the Warriors. The 12-acre parcel on which the arena is to be built is a valuable piece of real estate. In 2010, Salesforce paid \$278 million for a 14-acre site that includes the property in question. The property, located as it is across the street from UCSF and near a variety of biotech companies, seems a likely candidate for a biotech friendly building.<sup>2</sup> Were this to happen, it would yield significant benefits for the City. Whether or not these financial benefits exceed those associated with the Warriors is the subject of this report.

The report proceeds to review the costs and benefits associated with the Warriors, as they have been made public. The focus of the report is on the City's General Fund. The General Fund receives the majority of the revenues associated with the project, and also bears the liability for any shortfalls. This is followed by an estimate of the likely benefits of a biotech development occupying the same space. The benefits of the GSW plan are then examined from a perspective of robustness, whether or not they are likely to come to pass.

This report provides a cash flow analysis of the GSW project's effect on the General Fund and compares that analysis with an alternative development that includes a biotechnology-oriented commercial structure in place of the arena. The GSW project is cash flow positive, but not until at least the *tenth* year of operations. Relative to the alternative development, even after 20 years of operating, the GSW project falls short in terms of net government revenues by at least \$80 million, or \$3.6 million per year over 22 years, but potentially by as much as \$163 million, or \$7.4 million per year over 22 years. The alternative brings about these revenues without the need for heavy subsidization on the part of the City in

---

<sup>1</sup>Accepting the team also results in a significant revenue hole for the City of Oakland in that most events that currently take place at Oracle Arena are projected to move to the new arena.

<sup>2</sup>Its neighbors would include UCSF, Celgene Corporation, National Multiple Sclerosis Society, venBio, Nurix, Clovis Oncology, FibroGen, and Illumina, among others.

the early years. From a purely financial perspective, the GSW project is a significant drain on the City's General Fund revenues potentially on its own, but certainly relative to what alternative developments might yield.<sup>3</sup>

## **2: Benefits and Costs of Hosting the Warriors**

As with any economic activity, there are certainly financial benefits for the City of San Francisco associated with hosting the Warriors. A report has been produced for the City of San Francisco that provides a fiscal analysis of the GSW project.<sup>4</sup> Subsequently, the BLA produced estimates of the effects of the project on the City's General Fund. The General Fund is the primary recipient of revenues directly attributable to the project, and also bears the burden of liabilities. The BLA memo and this report both focus on revenues that are directly attributable to the project as well as those that originate on the site of the project. This is comparable to the assignment of obligations in the agreement between the City and the GSW as outlined in the ordinance establishing the Mission Bay Transportation Improvement Fund.

These benefits are derived from one-time revenues from the purchase of the land and subsequent construction and ongoing benefits associated with the events that the stadium hosts. The ongoing benefits also include revenues from commercial and retail activity built into the project.

### **— Benefits/Revenues**

Table 1 provides a summary of an estimate of those benefits. Annually, stadium, retail, and office operations associated with the development are estimated to provide just over \$11.6 million in revenues to the City of San Francisco's General Fund. Of these revenues, \$9.8 million are a direct result of activities on the project site while \$1.8 million are the result of City transportation use by those attending events at the Event Center.

---

<sup>3</sup>The methodology used in this report is comparable to the methods and assumptions used by EPS in producing its fiscal impact analysis of the GSW arena and used by the City's Budget and Legislative Analyst in its November 9, 2015 memo to the Board of Supervisors Budget and Finance Committee.

<sup>4</sup>Economic Planning Systems, *San Francisco Multi-Purpose Venue Project - Fiscal Impact Analysis: Revenues*, 9/25/15. (EPS)

**Table 1. Summary of San Francisco General Fund Revenues from Ongoing Stadium Operations (Thousands of 2014 dollars)**

<b>Annual Project-Generated Revenues</b>	<b>General Fund Revenues</b>
<b>Revenues From on-Site Businesses</b>	\$9,804 (85%)
<b>Revenues From Transit Fares and Parking</b>	\$1,773 (15%)
<b>Total Annual Project-Generated Revenues</b>	\$11,577 (100%)

Source: San Francisco Budget and Leg. Analyst report for Nov. 9, 2015 Budget and Finance Committee Meeting.

Table 2 provides estimates of detailed categories of revenues directly associated with ongoing economic activity once the development is completed.<sup>5</sup> The largest categories of revenue include the stadium admission tax (\$4.3 million), gross receipts taxes (\$2.4 million), and property taxes (\$1.8 million, including both general fund and in lieu of VLF). These three categories account for the vast majority of revenues (\$9.8 million) associated with the development. Revenues associated with transportation to and from events at the Event Center add an additional \$1.8 million, bringing the total to \$11.6 million.

**Table 2. Details of San Francisco Revenues from Ongoing Stadium Operations (2014 dollars)**

<b>Item</b>	<b>Amount</b>
<b>Annual General Revenue</b>	
Property Tax (General Fund)	\$912,000
Property Tax in Lieu of VLF	\$868,000
Sales Tax	\$521,000
Parking Tax	\$482,000
Stadium Admission Tax	\$4,336,000
Gross Receipts Tax	\$2,431,000
Utility User Tax	\$254,000
<b>Subtotal</b>	<b>\$9,804,000</b>
<b>Annual Transit Related Revenue</b>	
Event Related Fares	\$869,000
Event Related Parking	\$904,000
<b>Subtotal</b>	<b>\$1,773,000</b>
<b>Total Ongoing Revenues</b>	<b>\$11,577,000</b>

Source: BLA Report, 11/9/15, Table 3

<sup>5</sup>Whether or not revenues associated with transit usage are appropriately labeled *direct*, it seems reasonable to include them in the analysis. Their exclusion, however, would eliminate the General Fund surplus that is forecast to result from the project.

As mentioned, there will also be one-time General Fund revenues associated with the construction of the arena and the accompanying office and retail space (Table 3). These benefits amount to just over \$25.4 million, the vast majority of which is associated with the TIDF, or Transportation Impact Development Fee.<sup>6</sup> Another significant source of one-time revenue comes in the form of a Property Transfer Tax, \$3.7 million. Sales taxes and gross receipts taxes collected during construction add another \$5.4 million.

In its analysis, the City's Budget and Legislative Analyst's report indicates just \$25.4 million.<sup>7</sup> This number appears to omit contributions for Child Care and to use an outdated figure for "Sales Taxes During Construction" of \$1.7 million, rather than the \$2.4 million figure included in the table, a practice with which we agree.<sup>8</sup>

**Table 3. Summary of One-Time Revenues from Stadium Construction  
(2014 dollars)**

Item	Difference
<b>City Fees</b> (per gross building sq. ft.)	
Transit Impact Development Fee	\$17,436,000
<b>Other One-Time Revenues</b>	
Transfer Tax and Construction Gross Receipts and Sales Taxes	\$7,956,000
<b>Total One-Time Revenues</b>	<b>\$25,392,000</b>

Source: BLA Report, 11/9/15, Table 2

## — Costs

As with the benefits, there are also one-time and ongoing costs. The one-time costs are primarily those associated with enhancing transportation infrastructure and amount to \$55.3 million.<sup>9</sup> These costs include transit investments (the purchase of light rail vehicles), the installation of crossovers, the construction of a new center boarding platform, power aug-

<sup>6</sup>[http://www.sf-planning.org/ftp/files/legislative\\_changes/new\\_code\\_summaries/120523\\_TIDF\\_Transportation\\_Impact\\_Development\\_Fee\\_Update.pdf](http://www.sf-planning.org/ftp/files/legislative_changes/new_code_summaries/120523_TIDF_Transportation_Impact_Development_Fee_Update.pdf) Medical and Health Services, and Retail/Entertainment economic activity categories was increased to \$13.30 per square foot, except that the rate for museums, a subcategory of CIE, are \$11.05 per square foot, a reduction from the current amount. The rate for the Management, Information and Professional Services (MIPS) and Visitor Services economic activity categories was increased to \$12.64 per square foot, and the rate for the Production/Distribution/Repair (PDR) category was reduced to \$6.80 per square foot.

<sup>7</sup>November 9, 2015 Budget and Finance Committee Meeting memo.

<sup>8</sup>There is a difference of \$200 thousand between the BLA's figure and ours, but we defer to the BLA.

<sup>9</sup>One-time costs are from SFMTA, **Capital and Operating Cost Estimates for the Event Center and Mixed Use Development at Mission Bay Blocks 29-32**, 10/6/2015. Estimates are in 2014 dollars.

ments to idling event trains, traffic/signals engineering investments, and a Mariposa Street restriping study.

These expenses are spread out over a four-year period, with the vast majority of expenses occurring in the 2016-17 MTA fiscal year. A major expenditure on light rail vehicles is slated to take place in the 2017-18 FY, when the Event Center begins operating. The costs to MTA are heavily loaded in the early years of the project, before ongoing revenues have begun. Estimated one-time revenues will be available during this time to cover expenses, but they will fall short of the total by \$29.9 million.<sup>10</sup> This difference will be borrowed and paid back over time.

Table 4 provides the details of the City's estimates of ongoing expenses related to the operation of the Event Center. In the BLA's November report, estimated annual ongoing costs associated with operations at the Event Center amount to \$10.1 million.<sup>11</sup> The vast majority, \$6.9 million, are associated transit costs. Other expenses include nearly \$1 million in additional policing, and \$100 thousand in expenses incurred by DPW. Given that the infrastructure expense shortfall is likely to be financed, the BLA's estimate of debt service payments, \$2.1 million, is also included.

**Table 4. Ongoing Costs of the Arena (millions of 2014 dollars)**

Agency	5/18 Estimates	10/6 Revisions	11/9 Revisions
City Operating Costs			
SFMTA	\$5.5	\$5.1	\$6.9
SFPD	\$0.9	\$0.9	\$1.0
DPW	\$0.2	\$0.2	\$0.1
<b>Sub-Total</b>	\$6.6	\$6.2	\$8.0
Payments for Capital Improvements			\$2.1
<b>Total</b>	\$6.6	\$6.2	\$10.1

Nov. 6, 2015 from Budget and Legislative Analyst report.

## — Net Benefits

The project comes with considerable costs and benefits. Both upfront net costs and ongoing net revenues are considerable. The benefits presented here are significantly less than

<sup>10</sup>This figure is the difference between \$55.3 million, the total estimated capital uses estimate allocated to the project, and the total one-time revenues from the Budget and Legislative Analysts' report (\$25.4).

<sup>11</sup>City Operating Costs in the first two columns are net of revenues from fares and parking from riders going to events at the arena. These revenues amount to approximately \$1.8 million, split roughly evenly between the two sources. They are included in the final column because we support the notion of making both revenues and expenditures clear.

those discussed elsewhere. This is because the analysis here is limited to the direct benefits associated with the project and omits revenues accruing to dedicated and protected accounts. It is our view that the initial fiscal impact study inappropriately included those extra revenues. Their inclusion not only projects a false impression of the overall benefit of the project, but fails to highlight the budget obligations that befall the City's General Fund should costs rise or revenues fall short.

Table 5 summarizes the net benefits associated with the project in terms of net contributions to the City's General Fund. The table illustrates the \$29.9 million hole that the project introduces into the General Fund. It also illustrates how slowly that hole would be filled. Although a surplus of \$1.5 million is projected in each year, that includes debt servicing. Without the debt servicing, the surplus would be \$3.6 million, which would still take in excess of eight years to fill the hole.

**Table 5. Net Benefits of GSW Event Center Project**  
(Millions of 2014 dollars)

	Benefits	Costs	Net Benefits
One-Time	\$25.4	\$55.3	-\$29.9
Ongoing	\$11.6	\$10.1	\$1.5

Source: Calculations by Marin Economic Consulting.

It is important to note that the annual surplus is just \$1.5 million, or 13% of projected General Fund revenues. This is a relatively slim margin. Should one-fourth of the projected spectators fail to materialize, the surplus is likely to evaporate. If spectators fail to materialize, the revenues associated with the project (stadium admissions taxes and transit fares and parking, in particular) decline accordingly. However, the costs associated with managing the events do not. Should the number of events be lower, costs would then also decline.

It is also important to note that any last minute concessions by the City in terms of the Stadium Admissions Tax could eliminate the surplus in its entirety rendering a discussion of inaccuracies in spectator forecasts or economic activity unnecessary with regard to whether or not the General Fund is likely to be in surplus or deficit. The Giants currently enjoy a reduced stadium admissions tax that should the Warriors be granted a similar concession would turn the small surplus into a deficit.

### **A Cash Flow Analysis**

In order to assess the rate at which the hole would be filled, a cash flow analysis is required. It is our view that the original EPS report was incomplete in not considering the implications of the project over time. It failed to provide a comparison of overall costs and benefits

associated with the GSW project. The reviewer, Keyser Marston Associates, appeared to agree with the EPS approach, saying that a "cash flow approach is appropriate to evaluate a multi-phase project, which does not apply to this project." We respectfully disagree. There are two stages to this project: first, the one-time infrastructure investments and revenue implications of construction and parcel purchase, and second, the ongoing costs and revenues. The project's benefits to the City come inherently in two stages. If both stages yielded a net benefit, the need for a cash flow approach would not be nearly as acute. As the first stage is significantly negative, the overall net benefits must be evaluated over time in order to properly evaluate the project.

This has not been publicly done. Here, we consider a 20-year period following the construction of the Event Center. Given that many of these revenues accrue many years in the future, it is necessary to discount them to today's dollars. The bottom line is the present discounted value of the net stream of revenues to the City of San Francisco.

Assumptions crucial to the present value discount calculation:

1. Discount Rate: 4.5%
2. Rate of inflation: 2.5% (2% for property taxes, as per Proposition 13)

Table 6 provides an estimate of the present discounted value of net revenues to the City of San Francisco, using estimates from the EPS report of September 25, 2015 and from documents from the City of San Francisco. Once the facility has been operating for 20 years, net present discounted revenues are expected to be on the order of \$22.1 million, or approximately \$1 million per year over a 22-year period including two years of construction and 20 years of operation.<sup>12</sup> This estimate includes the upfront expenses incurred by the City as well as the ongoing expenses associated with event traffic mitigation.

**Table 6. Net Benefits of GSW Event Center Project over 22 years (Millions of Present Discounted 2014 dollars)**

	Benefits	Costs	Net Benefits
One-Time	\$25.4	\$55.3	-\$29.9
Financed			\$29.9
Ongoing	\$181.4	\$159.4	\$22.1

<sup>12</sup>This differs from the \$1.5 million per year surplus in the Budget Analyst's report because the values are presented in discounted value terms.

The project pencils out as estimated, but with a net benefit over two decades that is unimpressive. Additionally, this calculus begs two important questions:

1. This is a 12-acre plot of land in the middle of a biotechnology hub. Are there better uses for this land from a revenue perspective?
2. Estimating the costs associated with event management is a more certain endeavor than estimating the benefits. How certain is it that the benefits will materialize?

For a project of this magnitude, it is vitally important to evaluate the potential for plausible alternatives to provide more benefits than the project in question. It is also important to consider robustness tests for the revenues in question. Neither of these issues has been publicly addressed. This report will present plausible revenues associated with an alternative development, a space designed with biotech in mind, and will discuss weak points in the revenue estimates presented above.

### **3: On the Economics of Biotech as an Alternative**

When evaluating the benefits of an economic endeavor, an exploration of alternatives is vital to understanding the full implications of an investment. Suppose that instead of building a 750,000-square-foot arena, the amount of commercial space on the property were doubled. In this section, we consider such an investment following as closely as possible the assumptions contained in the EPS estimate of revenues associated with the GSW project.

Important assumptions associated with this analysis include:<sup>13</sup>

1. Instead of a 750,000-square-foot arena, a commercial facility is constructed that provides 522,000 square feet of space. This constitutes an exact doubling of the commercial space in the GSW plan. This alternative development is otherwise comparable to the Warriors plan, including the original commercial, retail, and parking structures.
2. The space is designed with biotechnology in mind, which brings with it significant laboratory space. As such, it has a relatively high amount of space per worker associated with it: 250 square feet per employee.<sup>14</sup>

---

<sup>13</sup>It was previously assumed that a commercial facility would have ancillary benefits in terms of indirect and induced economic activity in San Francisco. Consistent with the BLA memo, we have omitted these benefits from the analysis.

<sup>14</sup>This is an extremely conservative assumption. Some estimates suggest that a ratio of 150 to 11 is possible. This would considerably increase employment and hence output at the site, increasing the resulting income to both City residents and City coffers.

3. The transaction price for the land is \$150 million.<sup>15</sup>
4. It is assumed that just two-thirds of the biotech revenues generated onsite are subject to gross receipts taxation in San Francisco.<sup>16</sup>

With the addition of these assumptions, an exercise similar to that undertaken by EPS is performed for the new development. The new development includes the same retail revenues and costs, the same parking revenues, and essentially double the revenues associated with commercial development. Doubling the office space and maintaining other assets leads to an assessed value of at least \$605.5 million. This is considerably less than the project's assessed value with an arena.

Support for the notion that this construction is feasible comes not only from the 750,000-square-foot arena that the buildings will be replacing, but also from a similar planned development. UCSF was planning to build 500,000 square feet on four acres of blocks 33-34, right next to the site.<sup>17</sup> A new building of the size being considered is clearly feasible on the space currently to be occupied by the arena.

Table 7 presents a comparison of the one-time revenues and expenditures associated with the Event Center versus doubling the commercial space on the 12-acre property. While the Event Center brings with it a need for considerable infrastructure to accommodate the development, it is not clear that a doubling of the commercial space does. Accordingly, the Event Center brings with it a net upfront cost of \$38.5 million, relative to a commercial facility in place of the Center.

Although capital expenditures related to the Event Center are significantly higher than the revenues brought in through the TIDF, such is not expected to be the case for additional commercial space. The TIDF was put in place with developments such as this alternative in mind. Therefore, the transit costs associated with the development are better approximated using the TIDF taxation formula. The TIDF collected from the hypothetical alternative development (including the commercial, retail and parking in the GSW project) will serve as our estimate of related transit costs, \$10,901.

In the analysis above, the sales price for the property on which the event center and accompanying commercial and retail structures will be built is \$150 million. Property transfer tax would result regardless of the purchaser and the end use, but conceivably at a higher price.

---

<sup>15</sup>The actual transaction price has been announced as \$150 million. San Francisco Times, **Warriors buy Mission Bay arena site from Salesforce**, 10/13/2015. This will result in differences in the values presented here and in the EPS report.

<sup>16</sup>There are several avenues through which revenues may be exempt from gross receipts taxes in San Francisco. This analysis is extremely conservative in assuming that this is more likely the case for biotechnology firms (perhaps because of significant revenues accruing through pass-through companies) than for firms in other industries.

<sup>17</sup>UCSF, **Salesforce in talks for S.F. Mission Bay land deal**, SFGate, March 15, 2014.

Source: BLA Report (11/9/15) and calculations by Marin Economic Consulting.

Salesforce originally paid \$278 million dollars for 14 acres (including the space in question) in 2010. The actual sales price was \$150 million for 12 acres. The plot of land in question represents the majority of the plot originally purchased by Salesforce, and is the largest single contiguous piece. Property values have also increased substantially since the original purchase by Salesforce.<sup>18</sup> It seems likely then that the value of the land would have increased significantly over the last five years as San Francisco is currently starved for commercial real estate. In the end, the price that the Warriors have paid for the land is surprisingly low. It represents the bulk of a property that was valued at \$278 million in 2010 and market values have only increased in the intervening years. Therefore, the actual market value of the land may well be higher than the price the Warriors have been offered and have paid, with correspondingly higher transfer taxes resulting from some alternative development.

Table 8 provides an analysis of the annual City revenues and expenses that can be attributed to each of the projects.<sup>19</sup> The first column is for the alternative development which targets the biotechnology industry.<sup>20</sup> The second column reflects estimates regarding the current Golden State Warriors project, and the final column presents the difference in expected revenue between the two.

<sup>18</sup>**Salesforce.com Is Said to Plan Sale of San Francisco Land**, Bloomberg Business, March 11, 2014.

<sup>19</sup>This alternative is chosen because it will allow the use of most of the EPS parameters and assumptions in producing annual revenues for the alternative project. See the Appendix to the first version of this report for a comparison of calculations between this project and the EPS report.

<sup>20</sup>The City seems to have performed its own analysis of a 100% commercial alternative. This can be found on page 1 of **Warriors Handout Sierra Club 11.17.15.pdf**. The estimates presented here are somewhat higher, in particular for sales taxes. This is in part because they eliminated retail in their estimates. Overall, the estimate here is just \$737 thousand more than in the City's estimates.

Source: BLA Report and calculations by Marin Economic Consulting.

In most categories, the annual revenues are greater for the Event Center than for a development with additional commercial space. The exception is in the Gross Receipts Taxes, where a biotech firm occupies the additional commercial space. Taken as a whole, annual revenues from a purely commercial development are \$5.6 million less than for the project under consideration. Accounting for expenses related to the different projects, the commercial development results in \$4.5 million more in General Fund revenues annually than would the arena (last line of Table 8). From a net revenue perspective, a commercial development clearly dominates the construction of the Event Center.

As discussed above, merely calculating the one-time costs and an estimate of the ongoing revenue is insufficient. Were it sufficient, a commercial project focused on biotech would clearly dominate the current project. Table 9 provides an evaluation of the 22-year net benefits of an alternative development with space devoted to biotechnology comparable to the evaluation for the current project.<sup>21</sup>

According to these calculations, an alternative development would provide an extra \$80.2 million in revenues for the City of San Francisco (as in Table 10). Net present discounted

<sup>21</sup>Net one-time benefits for the GSW project are zero, which follows the assumption that the deficit brought on by infrastructure developments will be financed. The debt service payments are incorporated in the ongoing net benefits line.

**Table 9. Net Benefits of Alternative Developments after 22 Years**  
(Millions of Present Discounted 2014 Dollars)

	Biotechnology		Net Benefits		
	Benefits	Costs	Biotech	GSW	Difference
One-Time	\$19.5	\$10.9	\$8.6	\$0.0	\$8.6
Ongoing	\$93.7	\$0.0	\$93.7	\$22.1	\$71.7
<b>Total</b>	\$113.2	\$10.9	\$102.3	\$22.1	\$80.2

Source: Calculations by Marin Economic Consulting

revenues for the project with an Event Center are \$22.1 million, while a project with commercial space devoted to attracting biotechnology firms has a discounted value of net revenues expected to be \$102.3 million, a difference of \$80.2 million dollars, or an additional \$3.6 million each year on average over the 22 years.

From a cash flow perspective, there is a deep hole early on with the Event Center. The first three columns of Table 10 present annual present discounted flows of revenues into San Francisco City coffers. The second set of three columns provide a cash flow, or cumulative contribution to City coffers. The final column indicates the annual cash flow position of the City were it to cover the deficit without financing. Several things are immediately apparent from the table:

1. The Event Center puts an enormous hole in the City's budget in the first year (row 1, last column).
2. It will take *ten* years of operation of the Event Center to dig the City out of the hole (last column).
3. Substituting a commercial development is cash flow positive in the first year (row 3, column 4).
4. Although the gap in annual discounted net revenue closes over time, it remains significant even in year 20 (last row, column 4).
5. In year 20 of Event Center operations, there remains a surplus of revenue in the amount of \$80.2 million for the biotechnology development (last row, column 7), which continues to grow in subsequent years.

A final issue that differentiates a biotechnology-centric development over an arena is one of economic impact. It is clear from the economics literature that sports stadiums and arenas provide little economic boost to the local economy. At the same time, it is clear that these facilities are responsible for generating some local economic activity. The failure to

add to a region's economy is because they tend to displace other entertainment purchases from the broader economy rather than to stimulate new spending. An individual may go to a basketball game instead of to a play, opera, symphony, or rock concert. These facilities are therefore not additive to the economy.

Nonetheless, it has been estimated that economic activity associated with Oracle Arena accounts for \$44.9 million in economic Activity and 494 jobs in Alameda County.<sup>22</sup> It seems likely that the impact of the new arena will be of a similar magnitude.

By comparison, a 522,000 square foot biotechnology facility, with a ratio of space to employee of 250 to 1 can accommodate more than 2,000 employees. That represents four times more employment for biotechnology than for the Event Center. It is also consistent

<sup>22</sup> Memo to Patrick Soluri, Attorney at Law, from Philip King, Ph.D., regarding Urban Decay Analysis of Proposed Relocation of Golden State Warriors from Oakland to San Francisco, page 9.

with an estimate of economic output on the order of \$1 billion, an order of magnitude higher than for the Arena. Accordingly, the biotechnology development can serve as a much more significant engine of economic growth for the region than can the new event center.

#### **4: Questioning the Benefits and Costs of the GSW Project**

There are few guarantees with economic endeavors. Assuming that the conditions that exist today will exist tomorrow, the day after that, or 20 years from now is of dubious merit. Conditions change. The level of success of a basketball team ebbs and flows (though hopefully not for the Warriors), the economy grows and shrinks, and modes of transportation change.

This certainly holds true for the construction of an arena. While it is quite likely that the Warriors will play at the arena for the foreseeable future and experience a high level of success for some time, it is not certain that the estimated revenues will materialize. As a case in point, the EPS study assumes a sales price for the land of \$172,546,000. The actual sales price was \$150,000,000. That represents a reduction in sales price of 13%, with a corresponding reduction in revenues that are tied to the sales price: transfer taxes and ongoing property taxes. Although the long-term implications of a decline in ongoing property taxes is likely small, the transfer tax is reduced from \$4.2 million to \$3.65 million, a reduction in one-time revenues of \$549,000. Granted, this is just one percent of the one-time transit costs associated with the project, but it is more than half a million dollars no longer available for other city needs.

Of the sources of General Fund revenue, only two are relatively secure. Property taxes and utility user taxes are both likely to materialize in the projected amounts, securing only about \$2 million out of \$11.5. The gross receipts taxes are highly dependent on the occupants of the commercial facilities and all of the other sources are dependent on numbers of and the behavior of event attendees.

Most important assumptions regarding both revenues and costs surround the number of event attendees and their mode of transportation. If they drive, walk, or ride bikes more often than is anticipated, transit revenues will fall. If ride sharing or autonomous vehicles take over, parking revenue will fall. If attendees fail to materialize, then both revenues from transit and other sources will fall. Whether or not costs do is an open question. Costs are related to numbers of events, so if there are fewer events, costs may also fall.

The City also has a history of relaxing stadium admissions taxes. From the general City code, tickets to Giants games are granted an exemption. Whereas most tickets to a Giants game would be subject to a stadium admissions tax of \$1.50, they are currently taxed at \$0.25 per ticket. Were such an exemption to be granted to the Warriors, General Fund revenues would decline by \$2 each, or approximately \$1.5 million. Such an act would wipe out the General Fund surplus. Were the exception granted to all events at the Event Center, that would reduce revenues by \$3.6 million.

The point of this discussion is that estimated revenues are suspect, while estimated costs are much more likely accurate. Fixed investments, in particular, are known and not subject to market whims. However in this case, there are unknowns lurking in the cost estimates. It is likely that the revenue implications are biased high, resulting in uncertainty over their future stream with more downside risk than upside. It is already the case that actual one-time revenues have turned out to be less than anticipated (such as the transfer tax, which was lower by \$549,000). Clearly, there is great uncertainty in almost all of these estimates.

## **5: Some Sensitivity Analysis**

The revenue estimates relating to the GSW project and the revenue estimates relating to a biotechnology center are both uncertain. It is therefore worthwhile to experiment with basic assumptions to better understand the implications for City revenues. Table 11 offers some evidence for the implications of particular assumptions. We provide three separate alternatives that relax in different ways the assumptions inherent in the baseline analysis. The top line of the table presents the baseline results of the analysis, the estimates of present discounted net revenues accruing to the City (corresponding to the last row in Table 8). In the case of the biotechnology development net present discounted revenues are \$102.3 million whereas they are just \$22.1 million for the GSW project, a difference of \$80.2 million.

The first alternative assumes a greater density of employment in the new commercial facility, leaving the existing commercial plans constant. If there are 200 square feet per employee, rather than 250, revenues associated with the new facility increase by more than \$8.2 million relative to the baseline. This increase in revenue stems largely from an increase in the output produced by the building's occupants, resulting in increased gross receipts tax revenues. Further reducing the space per employee will have correspondingly larger increases in revenues.

A second alternative assumes a larger facility is constructed, with 722,000 square feet of space rather than 522,000 square feet of space. This increases the number of employees

**Table 11. Summary of Net Present Discounted Value Associated with Alternatives (22 Years, 2015-2036)  
Comparing the Multi-Purpose Venue with a Biotechnology Center (Millions)**

Item	Biotech	GSW	Difference	
			Over 22 Years	Per Year
Baseline	\$102.3	\$22.1	\$80.2	\$3.6
Alternative 1	\$110.6	\$22.1	\$88.4	\$4.0
- Area to employee ratio for Biotech of 200/1		<i>Over Baseline :</i>	\$8.2	
Alternative 2	\$116.5	\$22.1	\$94.3	\$4.3
- Add 200,000 sq ft to New Commercial Space		<i>Over Baseline :</i>	\$14.0	
Alternative 3 (Extreme)	\$185.3	\$22.1	\$163.2	\$7.4
- Area to employee ratio for Biotech of 150/1		<i>Over Baseline :</i>	\$83.0	
- 100% of Biotech revenues are subject to GRT				
- Add 200,000 sq ft to New Commercial Space				

Source: Marin Economic Consulting

working in the space by nearly 40%, maintaining the assumption of 250 square feet per employee. With greater space comes increased employment and increased output. Accordingly, revenues are estimated to increase by \$14.0 million with an expanded space. Under this scenario, the net discounted value of City revenues increases by \$94.3 million relative to the GSW project. Even larger spaces would have a correspondingly larger impact on City revenues.

Finally, an extreme alternative is offered. Alternative 4 allows for a 150 to 1 ratio of square feet to employees, assumes that all of the revenues accruing to the biotech occupants are subject to the GRT, and involves a building with 722,000 square feet. Under this alternative, City revenues increase by \$83.0 million relative to the baseline, with biotechnology revenues exceeding GSW revenues by \$163.2 million over 22 years and \$7.4 million per year.

These alternatives are not put forward to suggest that there is \$163.2 million being left on the table (though there may be), but rather to illustrate the range of differences that underlying assumptions can make. At the same time, even the extreme alternative is plausible.

## 6: Re-Evaluating the Net Benefits of Hosting the Warriors

There are two fundamental points made in this report:

1. Estimates of costs and revenues are highly speculative, and the evidence suggests that there is more downside risk to the GSW project than upside.
2. There is significant revenue that is forgone by the City in order to bring the Warriors to town.

Both of these points raise significant questions about the Warriors arena project from a financial perspective. First, how comfortable are taxpayers in their understanding of the implications of this development? Second, is this the right development?

The respective answers are "not very" and "quite possibly no." There is uncertainty in the information available and replacing the Event Center in the project with additional commercial space has the potential to increase City revenues significantly.

Another way of thinking about the differences in revenues between the GSW project and a biotechnology development is that these differences reflect the price the City is paying in order to bring the Warriors to town. There are certainly other more tangible costs, but these costs are also real.

The above analysis indicates that even with relatively conservative assumptions, in particular those regarding employment in the new development and the size of the new development, a biotechnology center would increase City revenues significantly relative to the Event Center. Under the baseline scenario, the difference is \$80.2 million over 22 years. Under the most extreme, yet plausible, scenario presented, an additional \$163 million could be raised over the 22-year period. This analysis suggests that the citizens of San Francisco, through lower levels of revenue in the City's General Fund, are paying between \$3.6 and \$7.4 million per year to host the Warriors.

Every economic development represents a choice. That choice is between the proposed development and plausible alternatives. The City has chosen to pursue a basketball team without exploring or disclosing the relative merits of the project compared with plausible alternatives. This report is not designed to condemn the choice, but rather to better inform the debate on the implications of this choice.

Aside from foregone revenue, it is quite possible that the GSW project could require additional General Fund expenditures. The ordinance establishing the Mission Bay Transportation Improvement Fund spells out shares of GSW revenues that are to be spent on transportation, including a cap of 90% of estimated revenues directly associated with the project. This would appear to guarantee that the General Fund will be increased by at least 10% of revenues from the project. The ordinance has even been amended to indicate that if SFMTA's expenses exceed the revenues from the Warriors project, "□ [I]f the revenue cap

is insufficient to cover SFMTA's expenditures for transportation services to the Warriors Project, then the Warriors will be responsible to provide additional transportation services to comply with EIR mitigation measures TR-2b and TR-18. (Nov. 9 staff report, p. 10). It is not clear the extent to which this language obligates GSW to do anything other than work with the City to pursue one or more of a list of strategies. This language is not necessarily strong enough to ensure that future shortfalls will not occur.

This provision appears to be a guarantee that the General Fund will at worst be left whole. However, this amendment applies only to the SFMTA expenditures. There are other expenditures, including police, DPW, and debt servicing that are not covered by this amendment. If it does happen that SFMTA's expenses exceed revenues from the Warriors project, the City's General Fund will still be responsible for these expenses, which amount to \$3.2 million. In a year where SFMTA expenses are high and revenues are low, the existence of the Event Center will result in the balance of the General Fund being reduced by \$3.2 million, with correspondingly fewer general services provided by the City to its residents.

**Important note:** If it is ever the case that revenues are less than SFMTA expenses, it will necessarily be the case that the General Fund will run a deficit of between \$2.1 and \$3.2 million. The requirement that the Warriors provide transit services in this case does *nothing* to cover these other Event Center related obligations.<sup>23</sup>

In the ordinance, the City has also made a commitment to ameliorate any remaining congestion issues related to the functioning of the hospital at UCSF. Remaining congestion issues and any sense of their cost are significant unknowns. Should they be significant, this would represent another financial obligation of the City's General Fund.

There has also been language used that indicates that there is no public subsidy of the Arena. In announcing the deal, Warriors COO Rick Welts said:

"We're the only sports team in America doing this all w/ private funds, on private land, with *no public subsidy*." (Italics added.)

This is simply not true. Any economic activity coming to the City will generate revenues. Some of these revenues, from the TIDF, for instance, are expected to support the activity. The remaining revenues are expected to supplement the services provided by the City to its residents. In the case of the GSW project, \$25.4 million in one-time revenues and \$10.1 million in revenues in each subsequent year will be spent to facilitate the Event Center. These funds represent a clear and present public subsidy of the project.

# Bulk Asbestos Material Analysis

(Air Resources Board Method 435, June 6, 1991)

Bay Area Air Quality Mgmt. District  
Project Manager

939 Ellis St  
San Francisco, CA 94109

**Client ID:** 2763  
**Report Number:** N007359  
**Date Received:** 08/06/15  
**Date Analyzed:** 08/07/15  
**Date Printed:** 08/07/15

**Job ID/Site:** Pump Station #5, 16th St. + Terry Francois Blvd.

**FALI Job ID:** 2763

**PLM Report Number:** N/A

**Total Samples Submitted:** 1

**Total Samples Analyzed:** 1

## Sample Preparation and Analysis:

Samples were analyzed by the Air Resources Board's Method 435, Determination of Asbestos Content of Serpentine Aggregate. Samples were ground to 200 particle size in the laboratory. Approximately 1 pint was retained for analysis. Samples were prepared for observation according to the guidelines of Exception I and Exception II as defined by the 435 Method. Samples which contained less than 10% asbestos were prepared for observation according to the point count technique as defined by the 435 Method. This analysis was performed with a standard cross-hair reticle.

Sample ID	Lab Number	Layer Description
1	11671293	Grey/Green Stones

### Point Count Results:

Number of asbestos points counted:	15
Number of non-empty points:	400
Matrix percentage of entire	100
<b>Percent asbestos in matrix:</b>	<b>3.8</b>
Visual estimation percentage:	2.0
Asbestos type(s) detected:	Chrysotile

Comment:

Tad Thrower, Laboratory Supervisor, Hayward Laboratory

Note: Limit of Quantification (LOQ) = 0.25%. Trace denotes the presence of asbestos below the LOQ. ND = None Detected.

Analytical results and reports are generated by Forensic Analytical Laboratories Inc. (FALI) at the request of and for the exclusive use of the person or entity (client) named on such report. Results, reports or copies of same will not be released by FALI to any third party without prior written request from client. This report applies only to the sample(s) tested. Supporting laboratory documentation is available upon request. This report must not be reproduced except in full, unless approved by FALI. The client is solely responsible for the use and interpretation of test results and reports requested from FALI. Forensic Analytical Laboratories Inc. is not able to assess the degree of hazard resulting from materials analyzed. FALI reserves the right to dispose of all samples after a period of thirty (30) days, according to all state and federal guidelines, unless otherwise specified. All samples were received in acceptable condition unless otherwise noted.

# **EXHIBIT 6**

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY  
WASHINGTON, D.C. 20460

AUG 10 2004

OFFICE OF  
SOLID WASTE AND EMERGENCY  
RESPONSE

OSWER 9345.4-05

**MEMORANDUM**

**SUBJECT:** Clarifying Cleanup Goals and Identification of New Assessment Tools for Evaluating Asbestos at Superfund Cleanups

**FROM:** Michael B. Cook, Director  
Office of Superfund Remediation and Technology Innovation

**TO:** Superfund National Policy Managers, Regions 1-10

**Purpose**

The purpose of this memo is twofold. The first purpose is to clarify that Regions should develop risk-based, site-specific action levels to determine if response actions should be taken when materials containing less than 1 percent asbestos (including chrysotile and amphibole asbestos) are found on a site. Regions should not assume that materials containing less than 1 percent asbestos do not pose an unreasonable risk to human health. The second purpose is to outline some activities underway to assist in the evaluation of asbestos risks at Superfund sites.

It is important to note that this memorandum is not a regulation itself, nor does it change or substitute for any regulations. Thus, it does not impose legally binding requirements on EPA, States, or the regulated community. This memorandum does not confer legal rights or impose legal obligations upon any member of the public. Interested parties are free to raise questions and objections about the substance of this memorandum and the appropriateness of the application of this memorandum in a particular situation. EPA and other decision makers retain the discretion to adopt approaches on a case-by-case basis that differ from those described in this memorandum. The use of the word "should" in this document means that something is suggested or recommended, but not required.

**Background**

The 1 percent threshold for asbestos-containing materials was first used in the 1973 National Emissions Standards for Hazardous Air Pollutants (NESHAP), where the intent of the threshold was:

*... to ban the use of materials which contain significant quantities of asbestos, but to allow the use of materials which would: (1) contain trace amounts of asbestos which occur in numerous natural substances, and (2) include very small quantities of asbestos (less than 1 percent) added to enhance the material's effectiveness. (38 FR 8821)*

All subsequent EPA regulations and the Asbestos Hazardous Emergency Response Act Statute included this 1 percent threshold. In the 1990 NESHAP revisions, EPA retained the threshold, stating that it was related to the phase contrast microscopy (PCM) analytical method detection limits. The Occupational Safety and Health Administration (OSHA) Standards also defined an asbestos-containing material as a material containing more than 1 percent of asbestos<sup>1</sup> (29 CFR Part 1910.1001 and 29 CFR Part 910.134). The wide use of the 1 percent threshold in regulations may have caused site managers to assume that levels below the threshold did not pose an unreasonable risk to human health. However, it is important to note that the 1 percent threshold concept was related to the limit of detection for the analytical methods available at the time and also to EPA's prioritization of resources on materials containing higher percentages of asbestos.

### **Issue**

Currently, many site managers continue to employ the use of the 1 percent threshold to determine if response actions for asbestos should be undertaken. However, based upon scientific discussions and findings reported by EPA and ATSDR from the Libby, Montana Superfund site, as well as EPA's "Peer Consultation Workshop on a Proposed Asbestos Cancer Risk Assessment<sup>2</sup>," there may be confusion regarding the appropriate use of the 1 percent threshold at Superfund sites. This concern was discussed at EPA's "Asbestos Site Evaluation, Communication, and Cleanup Workshop<sup>3</sup>," and it was concluded that the 1 percent threshold for asbestos in soil/debris as an action level may not be protective of human health in all instances of site cleanups. The 1 percent threshold is not risk-based and an accurate exposure value could only be determined through site sampling techniques that generate fibers from soil and bulk samples. Therefore, we recommend the development of risk-based, site-specific action levels to determine if response actions for asbestos in soil/debris should be undertaken.

Recent data from the Libby site and other sites provide evidence that soil/debris containing significantly less than 1 percent asbestos can release unacceptable air concentrations of all types of asbestos fibers (i.e., serpentine/chrysotile and amphibole/tremolite). The most critical determining factors in the level of airborne concentrations are the degree of disturbance, which is associated with the level of activity occurring on the site, and the presence of complete exposure pathways. For example, activities such as excavation or plowing generate large amounts of dust that can result in the generation of airborne fibers that can be inhaled even from a complex soil matrix. To address this evolving issue, OSRTI will be hosting a review of methods for determining conversion of soil to air concentrations in 2004.

## **Future Action**

OSRTI has formed three technical working groups to assist in developing guidance and policy relating to risk assessment, field sampling, and analytical methods. These working groups have already contributed to a new toolbox that is located on the EPA Intranet. The location of the tool box is <http://intranet.epa.gov/osrtinet/hottopic.htm>.

The toolbox will be continually updated as products are developed and will eventually contain information on risk assessments, generic site sampling, and analytical approaches for asbestos cleanup projects. In the interim, numerous site reports that discuss specific concerns and issues from current asbestos site actions are contained in the toolbox. Additionally, to facilitate the development of sampling plans, there are examples of approved site sampling plans with data quality objectives, and a list of asbestos analytical laboratories which have passed an EPA audit.

Our goal is to have the majority of the guidance and policy documents prepared by the end of this year. If you have any questions, please consult with Richard Troast of my staff, who is the lead scientist within OSRTI for asbestos. He can be reached at (703) 603-8805 or by e-mail at: [troast.richard@epa.gov](mailto:troast.richard@epa.gov).

Endnotes:

1. Pursuant to industry comments, the 1994 amendments to the OSHA Standards incorporated a definition of asbestos-containing material that included the 1 percent threshold to be consistent with EPA, and noted that the National Institute for

Occupational Safety and Health (NIOSH) had raised questions whether even one percent may be below the accuracy level for certain microscopic methods. However, OSHA's Hazard Communication Standard requires a Material Safety Data Sheet (MSDS) to be prepared by the manufacturer or importer of a chemical substance, mixture, or product containing more than 0.1 percent of any carcinogen, including asbestos. Additionally, OSHA has recently issued several letters stating that some of the requirements in the OSHA Asbestos Construction Standard (29 CFR 1926.1101) do cover materials containing less than one percent asbestos.

2. USEPA's *Peer Consultation Workshop on a Proposed Asbestos Cancer Risk Assessment* was held in San Francisco, California on February 25-27, 2003. The purpose of the workshop was to discuss the scientific merit of the proposed methodology developed for EPA by Dr. Wayne Berman and Dr. Kenny Crump. The proposed methodology distinguishes carcinogenic potency by asbestos fiber size and asbestos fiber type and advocates use of a new exposure index to characterize carcinogenic risk. Proceedings from this conference can be located at:  
<http://www.epa.gov/superfund/programs/risk/asbestos/index.htm>.
3. USEPA's *Asbestos Site Evaluation, Communication and Cleanup Workshop* was held in Keystone, Colorado on September 23-26, 2003. The purpose of the workshop was to provide an opportunity to share lessons learned from working on large sites contaminated with asbestos. The meeting was also used to identify key outstanding technical and policy issues, and to begin to develop a consistent approach to measuring "success", especially short-term impacts and long-term risk reduction. Proceedings from this conference can be located at:  
<http://www.epa.gov/superfund/programs/risk/asbestos/workshop/index.htm>.

**Subject:** RE: Status of Mission Bay Wastes

Osha,

Thank you for your email. We have been looking into the issues that you have raised. Randy Lee is working to get the regular monitoring reports documenting compliance with the Risk Management Plan uploaded to our GeoTracker database. I anticipate that these reports will address the majority of your concerns. We will give you a more detailed answer once these reports are publically available.

Cheryl

**Cc:** Lee, Randy@Waterboards; Hill, Stephen@Waterboards; Pettijohn, Julie@DTSC; Toth, Karen@DTSC  
**Subject:** Status of Mission Bay Wastes

Hi Cheryl,

It has come to my attention that the piles of asbestos containing fill have been moved from the proposed Warrior's arena site, and possibly transported to a landfill or to a property immediately northeast. We respectfully request information regarding the tracking of the staged wastes at, and between, sites (including the Warriors site) within the Mission Bay Development area.

The documented asbestos containing materials are required to have a specific Asbestos Dust Management Plan before it is disturbed (ADMP). It is not clear to us that the development activities have been completing and following these plans. In particular, we further request evidence that this was created and applied to the recent asbestos contaminated soil removal activities.

In addition to the ADMP, we request documentation that a site mitigation plan for the hazardous materials was created and applied to the site for the prior remedial activities, the staged soil management, and the recent removal action. We also request a copy of the Site Specific Health and Safety Plan (SSHSP) that should have been completed for these three same site activities, as well as evidence that this was submitted to DPH. It appears that the SSHSP is only for the excavation of the foundation of the proposed buildings and not for the staged soils.

We also again request that the stormwater Best Management Practices be appropriately applied to, and maintained on, Terry François Boulevard. The stormwater drains remain clogged with soil, and the BMPs damaged, including the 'Protect the Bay' placards, on the western side of the street along the site.

Thank you,  
Osha

Osha R. Meserve

Chris Kern, Case Planner, Environmental Planning

**RE:** File No. 150990 Appeal of Certification of Subsequent  
Environmental Impact Report Event Center and Mixed-use  
Development at Mission Bay Blocks 29-32

**HEARING DATE:** December 8, 2015

In compliance with San Francisco's Administrative Code Section 8.12.5 "Electronic Distribution of Multi-Page Documents," OCII has submitted a multi-page response to the Appeal of Certification of Subsequent Environmental Impact Report in digital format. Hard copies of this response have been provided to the Clerk of the Board for distribution to the appellants and project sponsor by the Clerk of the Board. A hard copy of this response is available from the Clerk of the Board. Additional hard copies may be requested by contacting Chris Kern of the Planning Department at 415-575-9037.

## INTRODUCTION

This memorandum is a response ("Appeal Response") to the letter of appeal ("Appeal Letter") to the Board of Supervisors (the "Board") regarding the proposed Event Center and Mixed-Use Development at Mission Bay Blocks 29-32 (the "proposed project" or "project"), which is under the jurisdiction of the Office of Community Investment and Infrastructure ("OCII").

The Mission Bay Alliance ("Appellant") filed an appeal on November 13, 2015 on two issues:

1. the certification of a Final Subsequent Environmental Impact Report ("Final SEIR") by the Commission on Community Investment and Infrastructure ("OCII Commission") under the California Environmental Quality Act ("CEQA") for the proposed project as set forth in OCII Commission Resolution 69-2015 (Exhibit C of this Appeal Response); and
2. the OCII Commission's adoption of the CEQA Findings on the proposed project as set forth in OCII Commission Resolution 70-2015.

By OCII Commission Resolution No. 33-2015, the OCII Commission provided for a process of appeal of its certification of an Environmental Leadership Project to the Board of Supervisors in its capacity as the governing body of the successor agency to the Redevelopment Agency. Resolution No. 33-2015 provided for the Executive Director of the OCII Commission to determine whether a valid appeal has been filed and if so, to advise the Clerk of the Board of Supervisors to accept the appeal. On November 16, 2015, the Executive Director advised the Clerk that the Mission Bay Alliance had filed a valid appeal on the first issue: the certification of the Final Subsequent Environmental Impact Report for the project. Accordingly, this Appeal Response focuses on the first issue regarding the certification of the Final SEIR.

The second issue listed in the appeal, regarding the CEQA Findings, is not appealable. Under OCII Commission Resolution No. 33-2015, persons or entities that submit comments on an Environmental Leadership project may appeal OCII's certification of the EIR for the project to the Board.<sup>1</sup> The grounds for the appeal under Resolution No. 33-2015 are limited to certification of the EIR; thus, no appeal is available from OCII Commission's approval of Resolution No. 70-2015 adopting CEQA Findings, including adopting a mitigation monitoring and reporting program and a statement of overriding considerations. On November 20, 2015, by letter to the Mission Bay Alliance, the OCII Commission Executive Director advised that she rejected the appeal regarding the CEQA Findings for the reasons stated in that letter.<sup>2</sup> Therefore, this appeal response does not address the appeal of the second issue. The appeal letter states that it was filed pursuant to CEQA Section 21151(c), OCII Resolution No. 33-2015, a memorandum from the Clerk of the Board of Supervisors specifying the procedures for filing an appeal under Resolution No. 33-2015, and the ordinance establishing the OCII Commission (Board Ordinance 215-12 (File 1200898)). To clarify, it is OCII's position that this appeal is authorized only as a result of OCII Resolution No. 33-2015 and is not required by or intended to function as an appeal under CEQA Section

---

<sup>1</sup> Bohee, Tiffany, Executive Director, OCII. Letter to Thomas Lippe, November 20, 2015.

<sup>2</sup> *Ibid.*

21151(c). Further, nothing in Board Ordinance 215-12 provides for such an appeal process or right of appeal.<sup>3</sup>

The decision before the Board is whether to uphold the OCII Commission's decision to certify the Final SEIR and deny the appeal, or to overturn the OCII Commission's decision to certify the Final SEIR and return the project to the OCII staff for further environmental review. While no appeal is available from OCII's approval of Resolution Nos. 70-2015, if the Board — in response to the appeal from OCII Commission Resolution 69-2015 — reverses OCII's certification of the Final SEIR, then "prior project approvals would be rescinded to allow [the OCII Commission] to, if and as necessary, adopt additional findings, revise the F[SEIR], or amend the project approvals."<sup>4</sup>

## PROJECT DESCRIPTION

GSW Arena LLC (GSW), an affiliate of Golden State Warriors, LLC, which owns and operates the Golden State Warriors National Basketball Association (NBA) team, proposes to construct a multi-purpose event center and a variety of mixed uses, including office, retail, open space and structured parking on an approximately 11-acre site on Blocks 29-32 within the Mission Bay South Redevelopment Plan Area of San Francisco. The project site is bounded by South Street on the north, Third Street on the west, 16th Street on the south, and by the future planned realigned Terry A. Francois Boulevard on the east. The proposed event center would host the Golden State Warriors basketball team during the NBA season, as well as provide a year-round venue for a variety of other uses, including concerts, family shows, other sporting events, cultural events, conferences and conventions.

The project site is located within the Mission Bay South Redevelopment Plan Area, subject to the development controls of the Mission Bay South Redevelopment Plan, and Mission Bay South Design for Development, and other related documents. Currently, the site contains paved surface parking lots on the west and north portions of the site, and the remainder of the site consists of undeveloped ruderal areas largely covered in gravel and surrounded by chain link fencing. The site is owned by the Golden State Warriors, LLC.

## ENVIRONMENTAL REVIEW PROCESS FOR THE PROJECT

On November 19, 2014, OCII issued a Notice of Preparation/Initial Study, which analyzed the potential environmental impacts of the proposed project, and OCII conducted a public scoping meeting on December 9, 2014. Based on the analysis in the Initial Study, as well as detailed analyses and reports prepared in support of the analysis, a Draft SEIR was issued on June 5, 2015. Written public comments were received during the public comment period between June 5, 2015 and July 27, 2015, and a public hearing before the OCII Commission was held on the Draft SEIR on June 30, 2015, at which time public testimony was received. OCII staff then prepared the Responses to Comments ("RTC") document, published on October 23, 2015, to address environmental issues raised by comments received during the public comment period and at the public hearing for the Draft SEIR. The RTC document

---

<sup>3</sup> *Ibid.*

<sup>4</sup> *Ibid.*

contained additional analysis and reports that verified and expanded upon the Draft SEIR contents. OCII staff prepared revisions to the text of the SEIR in response to comments received or based on additional information that became available during the public review period, and corrected errors in the Draft SEIR.

The Final SEIR consists of the Draft SEIR together with the RTC document. On November 3, 2015, the OCII Commission certified the Final SEIR. This was based on the determination that the contents of the Final SEIR and the procedures through which it was prepared, publicized, and reviewed, complied with CEQA and the CEQA Guidelines. The OCII Commission found the Final SEIR to be adequate, accurate and objective, that it reflects the independent analysis and judgment of the OCII staff and Commission, and that the RTC document contains no significant revisions to the Draft SEIR.

## **SUMMARY OF APPEAL ISSUES**

The Mission Bay Alliance filed an appeal of the Final SEIR certification on November 13, 2015. Every issue raised by the Appellant is described and responded to in Exhibit A of this Appeal Response, and the appeal materials submitted by the Appellant are presented in Exhibit B. The specific issues raised in the appeal are summarized below, using the same organization and numbering system shown in the appeal, even though many of the issues are redundant.

### **Issues Raised in the Appeal**

- A.1 Public Comment: Noticing and timing of public comment on the RTC document
- B.1 Project Description: Changes in the project description presented in the SEIR
- C.1 Tiering: Reliance of SEIR on 1990 and 1998 Mission Bay EIRs
- D.1 AB900 and Administrative Record: Compliance with requirements for the administrative record under AB 900
- E.1 Alternatives: Analysis of the No Project Alternative
- E.2 Alternatives: Feasibility of the Off-site Alternative
- E.3 Alternatives: Feasibility of an additional site proposed by the appellant
- F.1 Air Quality Impacts
- F.2 Air Quality: Significance thresholds for criteria air pollutants
- F.3 Air Quality: Analysis of construction and operational-related emissions for criteria air pollutants and toxic air contaminants
- F.4 Air Quality: Mitigation measure for construction impacts
- F.5 Air Quality: Mitigation measure requiring purchase of emission offsets
- F.6 Air Quality: Health risk assessment
- F.7 Air Quality: Analysis for construction-related dust pollution
- F.8 Air Quality: Mitigation measures to consider diesel alternatives
- F.9 Air Quality: Operational mitigation measure for electrical outlets
- F.10 Air Quality: Impacts of construction of wastewater improvements
- F.11 Air Quality: Impacts of project refinements

### Issues Raised in the Appeal

- F.12 Air Quality: Mitigation measure requiring purchase of emission offsets, new information
- G.1 Transportation Impacts
- G.2 Transportation: Traffic impacts on the entire affected environment
- G.3 Transportation: Impacts on intersections and freeway ramps
- G.4 Transportation: Impacts on intersections where parking control officers (PCOs) are proposed
- G.5 Transportation: Construction impacts, including cumulative impacts
- G.6 Transportation: Operational traffic and transit impacts
- G.7 Transportation: Cumulative impacts
- G.8 Transportation: Transit impact analysis methodology
- G.9 Transportation: Implementation of mitigation measures
- G.10 Transportation: Effectiveness of mitigation measures
- G.11 Transportation: Project description assumptions for transportation improvements
- G.12 Transportation: Enforceability of mitigation measures
- G.13 Transportation: Specificity of fair-share fee mitigation measure
- G.14 Transportation: Transit analysis baseline data
- G.15 Transportation: Traffic analysis baseline data
- G.16 Transportation: Completeness of transportation impacts
- G.17 Transportation: Interrelated issues
- G.18 Transportation: Impacts of at-grade rail crossings on 16th Street
- G.19 Transportation: Truck loading and staging provisions
- G.20 Transportation: Emergency vehicle access impact to UCSF hospitals
- G.21 Transportation: Responses to comments on impacts to BART
- G.22 Transportation: Traffic impacts of project refinements
- H.1 Hydrology, Water Quality, and Biological Impacts
- H.2 Utilities: Wastewater infrastructure impacts
- H.3 Water Quality: Impacts on San Francisco Bay from wastewater discharges
- H.4 Biological Resources: Impacts on wetlands and wildlife
- H.5 Biological Resources: Wetland impacts
- H.6 Utilities: Cumulative impacts on the capacity of the Mariposa Pump Station
- H.7 Hydrology: Flooding risk and inundation impacts
- I.1 Noise Impacts
- I.2 Noise: Use of San Francisco Noise Ordinance
- I.3 Noise: Significance thresholds based on increase over ambient
- I.4 Noise: Significance thresholds based on human health and welfare
- J.1 Greenhouse Gases Emissions Impacts
- J.2 Greenhouse Gases Emissions. Approach to analysis methodology

### **Issues Raised in the Appeal**

- J.3 Greenhouse Gases Emissions. Qualitative vs. quantitative analysis
- J.4 Greenhouse Gases Emissions: Mitigation
- J.5 Greenhouse Gases Emissions: Improvement vs. mitigation measures
- J.6 Greenhouse Gases Emissions: Inventory of emissions
- K.1 Geology and Soils Impacts
- K.2 Geology and Soils: Use of 1998 Mission Bay FSEIR analysis
- K.3 Geology and Soils: Mitigation
- K.4 Geology and Soils: Impacts
- K.5 Geology and Soils: Impact analysis
- L.1 Hazards and Hazardous Materials: Supplemental review
- L.2 Hazards and Hazardous Materials: Use of 1998 Mission Bay FSEIR analysis
- L.3 Hazards and Hazardous Materials: New information
- L.4 Hazards and Hazardous Materials: Naturally-occurring asbestos
- L.5 Hazards and Hazardous Materials: Impact analysis
- M.1 Urban Decay: Impacts in Oakland
- M.2 Urban Decay: Response to comments
- M.3 Urban Decay: Analysis
- N.1 Wind: Impact to open space within the project site
- N.2 Wind: Response to comments
- N.3 Wind: New wind impact in RTC document
- O.1 Recreation: Impacts on Bayfront Park
- O.2 Recreation: Impacts on Bayfront Park
- O.3 Recreation: Impacts on Bayfront Park
- O.4 Recreation: Impacts on Bayfront Park
- P.1 Utilities: Impacts on water supply infrastructure
- P.2 Utilities: Impacts on water supply infrastructure
- P.3 Utilities: Water supply assessment
- P.4 Utilities: Stormwater treatment facilities impacts
- P.5 Energy: New information in the RTC document
- Q.1 Land Use: Consistency with the Mission Bay South Redevelopment Plan
- Q.2 Land Use: Consistency with the Mission Bay South Redevelopment Plan
- Q.3 Land Use: Community character
- R.1 Cultural Resources Impacts
- S.1 CEQA Findings
- S.2 Statement of Overriding Considerations

The grounds for the appeal are mainly a compilation and reiteration of comments on a wide range of issues that were previously submitted by the Appellant, either on the Draft SEIR, the RTC document, or the Final SEIR. Therefore, the responses in Exhibit A to the issues raised in the appeal include cross references to the detailed responses provided by topic in the RTC document. The responses in Exhibit A also reference more detailed responses contained in Exhibit D where appropriate. As explained in more detail below, Exhibit D contains responses to any comments submitted by Appellant or another party that are not responded to in the RTC document because they were received so late that a response could not be included in that document (referred to in this Appeal Response as “Late Comments”). CEQA does not require published responses to any comments received after the close of the public comment period, which ended on July 27, 2015. However, this Appeal Response includes written responses to all late comments submitted by the Appellant, in order to provide the Board of Supervisors with a comprehensive appeal document.

None of the comments raised in the appeal present new information that affects the analysis or conclusions of the Final SEIR on the project.

## LATE COMMENTS

The RTC document published on October 23, 2015 provides written responses to all comments received during the public review period as well as responses to a number of comments received after the close of the public review period. However, OCII received numerous late comment letters that were received so late that a response could not be included in the RTC document as well as additional comment letters received after the publication of the RTC document. Some of these late comment letters raise comments on the Draft SEIR, while others raise comments on the RTC document or other project-related actions.

OCII staff presented written responses to the OCII Commission to five of those late comment letters at the OCII Commission meeting on November 3, 2015, and also presented oral responses to several of the late comments received immediately prior to or at the meeting. OCII and the City have continued to receive additional late comments since the November 3, 2015 OCII Commission meeting.

Exhibit D of this Appeal Response addresses all of these late comment letters and also contains responses to public testimony received during the public meeting on project approval actions.<sup>5</sup> It reproduces all of the substantive issues raised in these late comments and provides written responses to those comments, using the same format as the RTC document (i.e., comments and responses are organized by topic). Exhibit D includes a verbatim copy of the substantive late comments, with similar comments on the same topic grouped together, followed by a comprehensive response on that topic. Exhibit E of this Appeal Response contains copies of the late comment letters and oral comments from the Appellant presented at the November 3, 2015 OCII Commission (excerpted from the meeting transcript), with coding in the margin that corresponds to the coding shown in the

---

<sup>5</sup> Only public testimony regarding a critique of the SEIR is included in Exhibit D.

responses in Exhibit D. Due to the volume of late comments and because all substantive comments are reproduced verbatim in Exhibit D, Exhibit E is provided on CD.

Although Exhibit D appears voluminous, most of the information within the document is not new. This is because the issues raised in these late comments are reiterations or elaborations of the same comments previously submitted by the Appellant and are already responded to in the RTC document. Staff created Exhibit D in large part for the ease of members of the Board, so that they would not have to flip back and forth between various documents, including the RTC document. The issues addressed in Exhibit D cover a wide range of topic areas, including but not limited to: environmental review process; environmental justice; urban decay; fiscal feasibility; AB 900 process; greenhouse gases emissions; plans and policies; archaeological resources; transportation; noise; air quality; wind and shadow; recreation; utilities; biological resources; geology; hazardous materials; and alternatives. None of these are new issues. The responses provided in Exhibit D summarize and refer to the responses already presented in the RTC document, and where appropriate, elaborate on the response.

As explained in detail in Exhibit D, none of the issues raised in these late comments present new information that affects the analysis or conclusions of the Final SEIR on the project.

## CONCLUSION

OCII staff conducted an in-depth and thorough analysis of the potential physical environmental effects of the proposed project, consistent with CEQA and the CEQA Guidelines. The Appellants have not demonstrated that the Final SEIR is insufficient as an informational document, or that the OCII Commission's findings and conclusions, as set forth in the Final SEIR and certification resolution, are unsupported by substantial evidence. OCII staff conducted all necessary studies and analyses, and provided the OCII Commission with all necessary information and documents in accordance with the Planning Department's environmental checklist and Consultant Guidelines, and pursuant to CEQA and the State CEQA Guidelines. Substantial evidence supports the OCII Commission's findings and conclusions as set forth in the Final SEIR.

For the reasons provided in this Appeals Response, OCII believes that the Final SEIR complies with the requirements of CEQA and the CEQA Guidelines, provides an adequate, accurate, and objective analysis of the potential environmental impacts of the proposed project, is sufficient as an informational document, is correct in its conclusions, and reflects the independent judgment and analysis of the OCII, and that the OCII Commission's certification findings are correct. Therefore, OCII respectfully recommends that the Board uphold the OCII Commission's certification of the Final SEIR.

## Exhibit A

# Responses to Appeal of Certification of Final Subsequent Environmental Impact Report

OCII CASE NO. ER 2014-919-97; PLANNING DEPARTMENT CASE NO. 2014.1441E –  
EVENT CENTER AND MIXED-USE DEVELOPMENT AT MISSION BAY BLOCKS 29-32  
CERTIFIED ON NOVEMBER 3, 2015

### INTRODUCTION

GSW Arena LLC (GSW), an affiliate of Golden State Warriors, LLC, which owns and operates the Golden State Warriors National Basketball Association (NBA) team, proposes to construct a multi-purpose event center and a variety of mixed uses, including office, retail, open space and structured parking on an approximately 11-acre site (Blocks 29-32) within the Mission Bay South Redevelopment Plan Area of San Francisco. The project site is bounded by South Street on the north, Third Street on the west, 16th Street on the south, and by the future planned realigned Terry A. Francois Boulevard on the east. The proposed event center would host the Golden State Warriors basketball team during the NBA season, as well as provide a year-round venue for a variety of other uses, including concerts, family shows, other sporting events, cultural events, conferences and conventions.

The San Francisco Office of Community Investment and Infrastructure (OCII), as lead agency responsible for administering the environmental review for private projects in the Mission Bay North and South Redevelopment Plan Area of San Francisco, published a Notice of Preparation and an Initial Study on the proposed event center and mixed-use development project (proposed project or project) on November 19, 2014, followed by a 30-day scoping period. On June 5, 2015, OCII published the Draft Subsequent Environmental Impact Report (Draft SEIR) on the proposed project, and the 52-day public review period ended on July 27, 2015. On October 23, 2015, OCII published a Responses to Comments (RTC) document that provided written responses to all comments received during the public review period as well as to several late comment letters. The Final SEIR consists of the combined Draft SEIR and RTC document. On November 3, 2015, the Commission on Community Investment and Infrastructure (OCII Commission) certified the Final SEIR as being in compliance with the California Environmental Quality Act (CEQA) and the CEQA Guidelines. On November 13, 2015, the Mission Bay Alliance (Appellant) filed an appeal on the certification of the Final SEIR (see Exhibit B).

In addition to the appeal letter received on November 13, 2015, OCII and other City agencies have received 20 additional late comment letters at the time of and subsequent to the publication of the RTC document regarding the SEIR or the proposed project. Fifteen of the letters were from the Appellant, most of which are referenced in the appeal letter. Four letters were from the following agencies: Bay Area Air Quality Management District (BAAQMD), California Department of Transportation (Caltrans), Metropolitan Transportation Commission (MTC), and University of California, San Francisco (UCSF). One

letter was from an individual, John William Templeton. Responses to all 20 additional late comment letters submitted at the time of and subsequent to publication of the RTC document are presented, by topic, in Exhibit D.

This Exhibit A contains the responses to the issues contained in the appeal letter. The grounds for the appeal include all of the comments previously submitted by the Appellant in numerous comment letters submitted since June 2015, and the appeal letter cites many of those previously submitted comments as the specific grounds for the appeal. As described above, comments submitted by the Appellant on the Draft SEIR from June 29, 2015 through October 12, 2015 have already been responded to in writing in the RTC document. Late comments from the Appellant submitted from October 13, 2015 to November 13, 2015 are responded to in writing in Exhibit D of this appeal response packet. Therefore, to demonstrate that all comments cited in the appeal have been thoroughly addressed, this appeal response cross references the previous comments cited in the appeal letter with the written responses to those same issues already prepared either in the RTC document, Exhibit D, or both. This cross-reference is shown for all references cited by the Appellant in the appeal letter, using the coding system described below.

The appeal responses follow the same sequencing, numbering system, and organization of topics as the appeal letter, which presents topics labeled from A to S, and the "Appeal Code" refers to the labels presented in the appeal letter. For nearly all of the issues raised, the Appellant cites previously submitted comments, and to document that OCII has prepared detailed responses to all previously submitted comments, this appeal response includes tables that cross reference the document cited in the appeal letter with the Comment Code used in the SEIR for all comments. These comment codes are then in turn cross referenced to the Response Code where the detailed written response is provided, showing the document and starting page number of the response.

The Comment Code is the comment numbering system used in the RTC document and Exhibit D that provides a unique identifier for each comment; the comment code consists of the Commenter Code (see Table 1 below) followed by a number that corresponds to a bracketed portion of that letter on a specific topic, which is shown in the margins of each comment letter in Appendix COM and Appendix PH of the RTC document and in Exhibit E of this appeal response. The Response Code refers to the topic which the response falls under, and whether the response can be found in the RTC document (RTC) or in Exhibit D of the late comments (LC). A list of the Commenter Codes for the multiple letters submitted by the Appellant and a description of the topic codes are presented in Tables 1 and 2, respectively.

## TOPIC A: PUBLIC COMMENT

**A.1 Appeal Issue:** Appellant states that OCII thwarted public comment on the SEIR due to conflicting information in public notices, and requests that the Final SEIR be recirculated to allow for public comment on the Final SEIR and RTC document.

**Summary of Appeal Response A.1:** The RTC document and Final SEIR were properly noticed and standard review time was afforded for public comment, consistent with CEQA requirement. Recirculation is not warranted.

Appeal Code	Previous Comment/ Letter Cited	Comment Code	Response Code	Topic
A.1	Nov 2, Lippe FSEIR <sup>a</sup>	O-MBA20L7-2	LC ERP-4 Exh D p. D-89	Public comment on RTC document and recirculation

<sup>a</sup> In the appeal letter, the Appellant references a November 2 letter from Lippe (coded in this appeal response as O-MBA20L7). Please note that the first page of this letter is dated November 2, 2015, however, pages 2 through 16 of this letter are dated November 3, 2015. For consistency, this appeal response refers to this Lippe letter as being dated November 2, 2015.

## TOPIC B: PROJECT DESCRIPTION

**B.1 Appeal Issue:** The SEIR presents a shifting project description that makes it difficult for decisionmakers and the public.

**Summary of Appeal Response B.1:** As required by CEQA, the Draft SEIR provides a project description in sufficient detail to conduct the impact analysis, using the best assumptions available at that stage of project planning and design. The RTC document describes project refinements that could affect the impact analysis presented in the Draft SEIR. None of the project refinements resulted in substantial changes to the conclusions of Draft SEIR impact analysis. Some of the comments claiming inconsistent project description are misinterpretations of the project that conflate the proposed project with other elements of the Mission Bay Redevelopment Plan or with the project assumptions used in the AB 900 process.

Appeal Code	Previous Comment/ Letter Cited	Comment Code	Response Code	Topic
B.1	July 26, Soluri Meserve	O-MBA7S2-34 O-MBA7S2-36 O-MBA7S2-38	RTC PD-2 RTC p. 13.5-12	Project description assumptions
B.1	Nov 2, Soluri Meserve, pp. 5-7	O-MBA16S6-3	LC GHG-1 Exh D p. D-256	Project description assumptions used for AB 900 analysis

## TOPIC C: TIERING

**C.1 Appeal Issue:** Appellant asserts that tiering the SEIR from the 1990 and 1998 Mission Bay EIRs is not permissible because the project is different from the project described in the prior EIRs and because of the following: new information and/or changes in circumstances; certain resource areas were excluded from the SEIR; and reliance on old documents fails to provide a cohesive, understandable document.

**Summary of Appeal Response C.1:** The SEIR was prepared consistent with CEQA Guidelines Sections 15151 and 15152 regarding Standards for Adequacy of an EIR and Tiering, respectively. CEQA provides for tiering where an EIR is completed for a large-scale plan at an early stage, and further analyses will be prepared at later stages. This is the case here, and CEQA tiering principles were properly applied. The SEIR identifies and appropriately analyzes any new information or change in circumstances relevant to the impact analyses. The appellant is erroneous in stating that resources areas were excluded from the SEIR, because all resource areas required under CEQA were analyzed in the SEIR and associated Initial Study, which was included as an appendix to the SEIR.

## TOPIC D: AB900 AND ADMINISTRATIVE RECORD

**D.1 Appeal Issue:** Appellant states that OCII has failed to comply with applicable requirements under the Jobs and Economic Improvement through Environmental Leadership Act (commonly referred to as AB 900) for the administrative record.

**Summary of Appeal Response D.1:** Since certification of the proposed project as an environmental leadership development project by the Governor under AB 900, OCII has complied, and continues to comply, with the procedural requirements of AB 900. OCII published and continues to update the administrative record of proceedings for the project, which is available online, in a downloadable format, at <http://www.gsweventcenter.com>.

## TOPIC E: ALTERNATIVES

**E.1 Appeal Issue:** The Draft and Final SEIR fail to address and respond to comments regarding the adequacy of the analysis of the No Project alternative.

**Summary of Appeal Response E.1:** The SEIR analysis of the No Project Alternative was prepared in full compliance with CEQA Guidelines Section 15126.6(e), and is based on what would reasonably be expected to occur at the project site should the proposed project not be approved. In this case, the No Project Alternative consists of a hypothetical development scenario that would be consistent with the restrictions and controls established for the site in the Mission Bay South Redevelopment Plan and the South Design for Development. The specific issues raised by the appellant in the cited comment letter are based on erroneous assumptions for allowable development under the Design for Development.

Appeal Code	Previous Comment/ Letter Cited	Comment Code	Response Code	Topic
E.1	July 26, Susan Brandt-Hawley	O-MBA6B1-12	RTC ALT-2 RTC p. 13.24-5	No Project Alternative

**E.2 Appeal Issue:** The Draft and Final SEIR fail to address and respond to comments regarding the failure to consider a potentially feasible off-site alternative.

**Summary of Appeal Response E.2:** The SEIR alternatives analysis included screening of 12 alternative sites in San Francisco and selected one site for detailed analysis, the Off-site Alternative at Piers 30-32 and Seawall Lot 330. This alternative meets the CEQA criteria for alternatives per CEQA Guidelines Section 15126.6(c), (f)(2). OCII disagrees with the appellant's opinion that this was an inappropriate off-site alternative, and for the purposes of this SEIR, believes this to be a potentially feasible alternative.

Appeal Code	Previous Comment/ Letter Cited	Comment Code	Response Code	Topic
E.2	July 26, Susan Brandt-Hawley	O-MBA6B1-13	RTC ALT-3 RTC p. 13.24-8	Off-site Alternative at Piers 30-32 and Seawall Lot 330

**E.3 Appeal Issue:** Appellant asserts that the OCII findings regarding the feasibility of alternatives are not supported by substantial evidence, including the findings regarding the off-site alternative near Pier 80 proposed by the appellant.

**Summary of Appeal Response E.3:** OCII and its consultants have examined the off-site alternative proposed by the appellant and have determined it not to be a feasible alternative for numerous reasons, including: the site and associated parcels are not for sale, are currently under active use, and it is unlikely that the project sponsor can reasonably acquire, control, or otherwise have access to the site within a reasonable time period; the site would require rezoning and amending the Planning Code; a portion of the site would require voter approval of a height increase; and the site would not necessarily avoid or lessen any significant environmental impacts compared to the proposed project and would likely result in the same and possibly more severe significant impacts as the proposed project with respect to transportation, air quality, noise, hydrology, and water quality. Furthermore, no appeal is available from OCII's approval of Resolution No. 70-2015 adopting CEQA findings, including adopting a mitigation monitoring and reporting program and a statement of overriding considerations. (Letter, T. Bohee to T. Lippe, at p. 2 (Nov. 20, 2015).) While no appeal is available from OCII's approval of Resolution Nos. 70-2015, if the Board – in response to the Certification Appeal – reverses OCII's certification of the SEIR, then “prior project approvals would be rescinded to allow CCII to, if and as necessary, adopt additional findings, revise the F[S]EIR, or amend the project approvals.” (*Ibid.*)

## TOPIC F: AIR QUALITY

**F.1 Appeal Issue:** Appellant does not describe any specific issues and only lists the documents listed below as the grounds for appeal.

**Summary of Appeal Response F.1:** All comment letters and supporting documentation previously submitted to OCII have been reviewed and substantive comments have been responded to in writing in the Response to Comments document or in Exhibit D of this appeal response. Refer to appeal responses F.2 to F.12 for responses to specific issues.

<sup>a</sup> In the appeal letter, the Appellant references a November 2 letter from Lippe (coded in this appeal response as O-MBA20L7). Please note that the first page of this letter is dated November 2, 2015, however, pages 2 through 16 of this letter are dated November 3, 2015. For consistency, this appeal response refers to this Lippe letter as being dated November 2, 2015.

**F.2 Appeal Issue:** The City cannot use the SEIR's significance thresholds until it formally adopts them.

**Summary of Appeal Response F.2:** The CEQA Guidelines encourage lead agencies to develop and publish thresholds, but the Guidelines do not require the adoption of formal thresholds for individual projects.

**F.3 Appeal Issue:** Appellant questions significance thresholds used for construction and operational air quality impacts.

(a)(b) Air quality thresholds of significance for ozone precursors used in the SEIR are borrowed from another agency and not supported by substantial evidence. These thresholds are based on inapplicable New Source Rule values.

(c) The Draft SEIR's impact assessments for construction-related criteria pollutants and toxic air contaminant (TAC) emissions are invalid. The SEIR underestimates the project's construction-related emissions by incorrectly using a default hauling trip length of 20 miles provided by California Emissions Estimator Model (CalEEMod), rather than actual trip length, to determine the on-road hauling emissions that would occur during construction.

(d) The Draft SEIR's impact assessments for operational criteria pollutants and TAC emissions are invalid. The SEIR fails to include vehicle emissions from Warriors game traffic in its analysis of operational emissions. The impact assessment for operational ozone precursors emissions is also misleading because it omits from its quantitative tally of criteria pollutants the emissions the project will generate in San Francisco and the project area. In addition, to the extent that the significance thresholds are invalid, Mitigation Measure M-AQ-2b fails to reduce ozone precursor emissions to less-than-significant levels and does not consider the feasibility of more robust mitigation strategies.

**Summary of Appeal Response F.3:**

(a)(b) The air quality significance thresholds are supported by substantial evidence that is presented in the SEIR. Significance standards recommended by regulatory agencies, in this case the BAAQMD, are routinely used because their

use cannot be challenged as inappropriate or unsupported. The significance thresholds used to evaluate ozone precursor emissions were developed by the BAAQMD and are based on the federal New Source Review (NSR) requirements. It is the existing practice by most air districts that develop CEQA thresholds of significance to base those thresholds on the NSR emissions limits. The NSR emissions limits represent levels below which new sources of emissions are not anticipated to contribute to an air quality violation or result in a considerable net increase in criteria air pollutants. Monitored ozone concentrations in the San Francisco Bay Area have declined 17 percent over the past 20 years, in large part due to the measures taken by BAAQMD in curtailing emissions from stationary sources. The NSR emissions limits therefore enable BAAQMD to capture a sufficient percentage of projects to effectively reduce ozone precursor emissions within the air basin, and can be appropriately applied to CEQA projects to ensure attainment of air quality standards. The BAAQMD's Revised Draft Options and Justification Report, California Environmental Quality Act Thresholds of Significance provides substantial evidence to support these thresholds, which is summarized in the SEIR.

(c) The use of CalEEMod default values for the estimated haul trip length are appropriate for assessing construction criteria air pollutant and TAC emissions when the location of disposal sites are unknown. Use of the CalEEMod default values provides an appropriately conservative estimate of the project's emissions from haul trips because while some disposal sites may exceed the 20 mile trip length, much of the construction and demolition debris is anticipated to be accepted at the Recology recycling facility, approximately five miles from the project site.

(d) The SEIR's air quality analysis appropriately accounts for emissions from Warriors game traffic and assesses those impacts on both a regional level and a local, site-specific, level. In terms of regional air quality impacts, the SEIR analyzed the vehicle miles travelled (VMT) of season ticket holders and determined that VMT would remain unchanged. Thus, the net ozone precursors added to the air basin as a result of Warriors game traffic would be essentially the same as existing conditions. However, for purposes of localized air quality impacts (health risks) the SEIR includes Warriors game traffic as net new emissions to the local environmental setting.

The SEIR identifies Mitigation Measure M-AQ-2b (Emissions Offsets) to further reduce the project's air quality impact after considering all feasible measures to reduce the project's impact in the first place. The SEIR concludes that because Mitigation Measure M-AQ-2b requires actions by a third party or by an emission offset project yet to be identified, it cannot be stated with certainty that this mitigation measure would reduce impacts to less than significant, and the impact is therefore considered significant and unavoidable, even with mitigation.

However, if an emissions offset project is successfully implemented by the project sponsor and/or the BAAQMD, Mitigation Measure M-AQ-2b could sufficiently reduce ozone precursor emissions to less than significant levels.

**F.4 Appeal Issue:** Mitigation Measure M-AQ-1 does not comply with CEQA requirements.

- (a) This measure would limit offroad equipment used during construction to machinery equipped with at a minimum, Tier 2 engines with verified diesel emission control strategies (VDECS), and at a maximum, Tier 4 or Tier 4 interim engines. However, the SEIR does not demonstrate the feasibility of this measure.
- (b) This measure includes a limit on idling time of two minutes and provides exceptions to this limit as provided in state law, but fails to describe what these exceptions are.
- (c) This measure is unenforceable and places inappropriate reliance on the project sponsor for interpretation and compliance determination.
- (d)(e) The response to comment AQ-6a (availability of Tier 2 and Tier 4 off-road vehicles) is inadequate. The response to comment AQ-6e is inadequate (ability to implement and enforce Mitigation Measure M-AQ-1).

**Summary of Appeal Response F.4:**

(a) Mitigation Measure M-AQ-1 is feasible. The City Planning staff have reviewed the California Air Resources (CARB) database used to determine fleet-wide compliance with the USEPA's off-road vehicle standards and determined that as of 2014, at least 59 percent of all off road equipment are rated USEPA Tier 2 or higher. Further, since 2008 Tier 3 or Tier 4 equipment is the only equipment available for purchase. Although a contractor may have lower Tiered equipment in its fleet, it is expected that the contractor would deploy equipment meeting the requirements of Mitigation Measure M-AQ-1 for use on the project site. If such equipment were not available in the contractor's fleet, the contractor could either obtain the equipment for temporary use from equipment rental companies or purchase new equipment meeting the requirement.

(b) Mitigation Measure M-AQ-1 allows for exceptions to the limits on idling times for certain vehicles as specified in the California Code of Regulations (CCR) Title 13, Division 3 § 2485 (for on-road vehicles) and § 2449(d)(2) (for off-road vehicles). The RTC document includes reference to specific instances where an exception would apply.

(c) The lead agency, OCII, has the authority and ability to monitor and enforce Mitigation Measure M-AQ-1, as specified in the Mitigation Monitoring and Reporting Program (MMRP) that was included as part of the conditions of project approvals.

(d)(e) Responses to Comments AQ-6a and AQ-6e are adequate. Response AQ-6a responds to comments regarding mitigation of construction-related impacts, including availability of Tier 2 and Tier 4 offroad equipment, described in part (a) of this appeal response F.4. Response AQ-6e responds to comments regarding implementation and enforceability of Mitigation Measure M-AQ-1, described in part (c) of this appeal response F.4.

<sup>a</sup> In the appeal letter, the Appellant references a November 2 letter from Lippe (coded in this appeal response as O-MBA20L7). Please note that the first page of this letter is dated November 2, 2015, however, pages 2 through 16 of this letter are dated November 3, 2015. For consistency, this appeal response refers to this Lippe letter as being dated November 2, 2015.

**F.5 Appeal Issue:** Mitigation Measure M-AQ-2b does not comply with CEQA requirements and responses to these concerns are inadequate.

- (a) The per ton charge for emission offsets is too low to achieve complete offset of the project's emissions.
- (b) Mobile-based emission offsets sources are too short-lived to completely offset project-generated emissions.

**Summary of Appeal Response F.5:**

(a) The \$18,030 per weighted ton offset fee specified in Mitigation Measure M-AQ-2b is based on the California Air Resources Board (CARB) cost-effectiveness criteria for emissions offset projects under the state's Carl Moyer Incentive Program. The offset fee amount mirrors the Sacramento Metropolitan Air Quality Management District's offsite construction mitigation fee program, which is also \$18,030 per weighted ton, and is nearly double the San Joaquin Valley Air Pollution Control District Indirect Source Review program fee of \$9,350 per ton. The \$18,030 per weighted ton offset fee meets the *rough proportionality* standard required under CEQA. Mitigation Measure M-AQ-2b has been modified to allow payment of a higher offset fee if required.

(b) Emissions offset programs replace existing high-polluting engines with cleaner more efficient engines and the incremental benefit of these replacements are realized for successive years into the future until the original engine would have reached the end of its useful life or its operation is prohibited by regulation.

**F.6 Appeal Issue:** The SEIR's cancer and health risk assessment for toxic air contaminants is invalid.

- (a) The City's reliance on EPA's judgment of "acceptable" cancer risk is legally flawed. The City relies on a misrepresentation of actual EPA policy. And the Draft SEIR errs by using EPA's judgment of acceptable cancer risk to determine impact significance.

(b) The SEIR does not assess the project's individual excess cancer risk to the BAAQMD's 10 in one million significance threshold.

(c) The Draft SEIR does not use BAAQMD's cumulative PM<sub>2.5</sub> significance threshold of 0.8  $\mu\text{g}/\text{m}^3$  [sic].

(d) The Final SEIR does not provide a project-specific health risk assessment for the project, only a cumulative impact analysis. Project-caused excess TAC cancers are more than four times the threshold used by most California air districts to determine the significance of an individual project's impacts.

(e) The SEIR's assessment of cumulative TACs does not include all sources of related impacts, including foreseeable sources of TAC emissions in its cumulative impact analysis and foreseeable future construction and operation of developments in the project vicinity.

(f) Project health risks are underestimated using older standards. The Final SEIR does not incorporate updated child breathing rates set forth by OEHHA in 2012.

#### **Summary of Appeal Response F.6:**

(a)(b) The SEIR's cancer risk threshold was developed in close coordination with BAAQMD staff and is based not solely on EPA regulations for what constitutes an "acceptable risk" level, but also on regional modeling demonstrating that the threshold of 100 per one million population reflects the air quality in the most pristine portions of the Bay Area (e.g., Point Reyes).

(c) The SEIR does not utilize the BAAQMD's incremental cumulative PM<sub>2.5</sub> contribution threshold of 0.8  $\mu\text{g}/\text{m}^3$ , but rather applies a cumulative analysis that considers existing sources within the project area. The SEIR assesses the PM<sub>2.5</sub> exposure impact relative to a conservative health-based exposure standard based on the ambient air quality standards promulgated by the California Air Resources Board and the U.S. Environmental Protection Agency. This method of assessing cumulative impact incorporates existing ambient PM<sub>2.5</sub> levels, which range from 8.6  $\mu\text{g}/\text{m}^3$  to 9.0  $\mu\text{g}/\text{m}^3$  at the project site and thus addresses the impact relative to health based standards rather than the BAAQMD incremental standard which is not based on a direct link to human health exposure. The SEIR provides substantial evidence to support the PM<sub>2.5</sub> threshold of 10  $\mu\text{g}/\text{m}^3$ , which is based on low-end (i.e., most health protective) USEPA recommendations.

(d) The SEIR provides a project-specific health risk assessment and determines first, whether the health risk to a sensitive receptor would be significant and if so, then whether the project's contribution to that health risk is considerable. Since a person's environmental risk of contracting cancer is based on that

person's cumulative exposure, projects that would result in a cumulative cancer risk exceeding this level are assessed further to determine whether the project's contribution is cumulatively considerable. This additional analysis utilizes the BAAQMD's 10 per one million population threshold, contrary to the Appellant's claim.

(e) The SEIR's health risk analysis accounts for the construction and operation of cumulative projects and concludes that due to the distance of cumulative projects from the project site, construction activities from those projects would not substantially contribute to localized health effects.

(f) In March 2015, the OEHHA adopted revised guidance on recommended breathing rates for health risk analyses. The BAAQMD has not yet implemented the OEHHA guidance into its permitting process and the analysis in the EIR utilizes the methodology currently embraced by the BAAQMD. Air pollution districts may deviate from OEHHA guidance, as the San Joaquin Air Pollution Control District has done.

**F.7 Appeal Issue:** The SEIR's impact assessment for construction-related dust pollution is based on legal errors and is not supported by substantial evidence.

**Summary of Appeal Response F.7:** The project is required to comply with the San Francisco Dust Control Ordinance, which has a mandate for “no visible dust.” The project sponsor would be required to prepare a dust control plan for approval by the San Francisco Department of Public Health. The RTC document includes evidence that application of best management practices at construction sites significantly control fugitive dust emissions and individual measures have been shown to reduce fugitive dust by anywhere between 30 to 90 percent.

F.7	July 26, Lippe, pp. 1-3	O-MBA8L2-2	RTC AQ-2 RTC, p. 13.13-32	Dust Control Plan

**F.8 Appeal Issue:** Construction and operational mitigation options have not been thoroughly reviewed for diesel alternatives.

**Summary of Appeal Response F.8:** Mitigation Measures M-AQ-1 and M-AQ-2a were amended in the RTC document to require the use of renewable diesel (a diesel alternative) for construction and operational emissions if it can be demonstrated that this fuel is compatible with the equipment to be used and the air quality emissions from the transport of renewable diesel to the project site will not offset the emissions reduction achieved through its use.

**F.9 Appeal Issue:** Operational mitigation measure for electrical outlets is vague and unenforceable.

**Summary of Appeal Response F.9:** Mitigation Measure M-AQ-2a requires the project sponsor to provide outlets that can be used to power landscape equipment, and is included in the Mitigation Monitoring and Reporting Program (MMRP). This measure would be enforced by review and approval of the electrical plans to ensure a sufficient number of electrical power outlets are located on the outside of buildings and in locations where landscape maintenance equipment is anticipated to be required.

**F.11 Appeal Issue:** Changes to the project since publication of the Draft SEIR require recirculation of a revised Draft SEIR due to new and more severe air quality significant impacts.

**Summary of Appeal Response F.11:** Changes to the project description since publication of the Draft SEIR were evaluated in the RTC document and would not result in a new significant air quality impact or result in substantially more severe significant impacts. Thus, recirculation is not required. Emissions associated with operation of dewatering generators, operation of a pug mill to treat soil on-site and removal of previously assumed rapid impact compaction activities would increase NOx emissions from 144 pounds per day to

151 pounds per day. This increase in temporary construction emissions would not result in a new significant impact or a substantial increase in the severity of the construction air quality impacts disclosed in the Draft SEIR. Emissions associated with the construction of the project variant combined with the construction changes listed above, would increase NOx emissions from 144 pounds per day to 157 pounds per day. This increase in temporary construction emissions would not result in a new significant impact or a substantial increase in the severity of the construction air quality impacts disclosed in the Draft SEIR because the Draft SEIR identified that the project would increase NOx emissions due to construction activities and the incremental increase in the amount of temporary construction emissions is not substantial. Further, Mitigation Measure M-AQ-2b requires offset of all emissions in excess of the significance thresholds, so with mitigation, the slight increase in temporary construction emissions would be offset, resulting in the same level of emissions after mitigation, as already disclosed in the Draft SEIR.

Appeal Code	Previous Comment/ Letter Cited	Comment Code	Response Code	Topic
F.11	Nov 2, Lippe FSEIR, pp. 6-7 <sup>a</sup>	O-MBA20L7-5	LC AQ-8 Exh. D, p. D-249	Air quality impacts of project refinements and variant

<sup>a</sup> In the appeal letter, the Appellant references a November 2 letter from Lippe (coded in this appeal response as O-MBA20L7). Please note that the first page of this letter is dated November 2, 2015, however, pages 2 through 16 of this letter are dated November 3, 2015. For consistency, this appeal response refers to this Lippe letter as being dated November 2, 2015.

**F.12 Appeal Issue:** New information regarding Mitigation Measure M-AQ-2b since publication of the Draft SEIR requires recirculation of a revised Draft SEIR. The appellant asserts that the BAAQMD would not participate in Mitigation Measure M-AQ-2b offset emissions plan. The City cannot find that Impact 4 is less than significant with mitigation because the City and project sponsor refuse to agree to BAAQMD's offset fees in Mitigation Measure M-AQ-2b. There is no evidence that Option 2 offset within Mitigation Measure M-AQ-2b is feasible. The City cannot find that all feasible mitigation measures have been adopted that would reduce impacts of Impact AQ-1, Impact AQ-2, and Impact C-AQ-1.

**Summary of Appeal Response F.12:** The BAAQMD's November 2, 2015, letter does not establish that the California Air Resources Board cost-effectiveness criteria are inappropriate for determining the offset costs under Mitigation Measure M-AQ-2b. The BAAQMD does have an emissions offset mitigation or Indirect Source Review program. The \$18,030 per weighted ton offset fee specified in Mitigation Measure M-AQ-2b is based on the California Air Resources Board (CARB) cost-effectiveness criteria for emissions offset projects under the state's Carl Moyer Incentive Program. The offset fee amount mirrors the Sacramento Metropolitan Air Quality Management District's offsite

construction mitigation fee program, which is also \$18,030 per weighted ton, and is nearly double the San Joaquin Valley Air Pollution Control District Indirect Source Review program fee of \$9,350 per ton. Mitigation Measure M-AQ-2b has been modified to allow payment of a higher offset fee if required.

Mitigation Measure M-AQ-2b allows the project sponsor to directly implement an emissions offset project as an alternative to entering into an agreement with the BAAQMD. OCII believes this to be a feasible approach because the City successfully implemented an emissions offset project for the 34th America's Cup by installing a shoreside power facility at the Port of San Francisco's Pier 70 dry dock, which has resulted in long-term reduction in criteria air pollutant emissions in the San Francisco Bay Area Air Basin.

Impact AQ-4 relates to the potential for the proposed project to conflict with, or obstruct implementation of, the *2010 Clean Air Plan*. The Final SEIR determined that this impact would be less than significant with mitigation because the project (1) includes mitigation measures that promote attainment of air quality standards and protection of public health in the Bay Area, design measures to minimize greenhouse gases emissions; (2) includes applicable control measures from the air quality plan, including transportation control measures and energy and climate control measures; and (3) would not disrupt or hinder implementation of control measures identified in the Clean Air Plan. The proposed project includes feasible mitigation measures that would contribute towards achieving these goals, including Mitigation Measures M-AQ-1 (Construction Emissions Minimization), M-AQ-2a (Reduce Operational Emissions), and M-AQ-2b (Emissions Offsets). Therefore, this impact is appropriately determined to be less than significant with mitigation.

## TOPIC G: TRANSPORTATION

**G.1 Appeal Issue:** Appellant does not describe any specific issues and only lists the documents listed below as the grounds for appeal.

**Summary of Appeal Response G.1:** It is acknowledged that appellants have already submitted materials that raise the same transportation-related issues, all of which have previously been adequately addressed in the Responses to Comment document. Please refer to the appeal responses G.2 to G.22 for specific responses to specific issues.

Appeal Code	Previous Comment/Letter Cited	Comment Code	Response Code	Topic

<sup>a</sup> In the appeal letter, the Appellant mistakenly references a July 23, 2015 letter from Dan Smith. However, this Appellant is actually referring to a Dan Smith authored letter dated July 26, 2015 (coded in this appeal response as O-MBA10L4).

**G.2 Appeal Issue:** The SEIR fails to assess the project's traffic impacts on the entire affected environment.

**Summary of Appeal Response G.2:** The SEIR's transportation analysis appropriately addresses intersections and freeway ramps in the project vicinity and along approach/departure routes most likely to be affected. The approach suggested by the appellants includes locations considerably far removed from the project site and less likely to be used by those traveling there, where the magnitude of traffic and impacts, if any, are likely to be more dispersed.

<sup>a</sup> In the appeal letter, the Appellant mistakenly references a July 23, 2015 letter from Dan Smith. However, the Appellant is actually referring to a Dan Smith authored letter dated July 26, 2015 (coded in this appeal response as O-MBA10L4).

**G.3 Appeal Issue:** The SEIR fails to disclose the severity of the project's impacts on intersections and freeway ramps which the project will cause to deteriorate to Level of Service (LOS) F.

**Summary of Appeal Response G.3:** The SEIR fully discloses all significant traffic impacts. CEQA does not require identification of degrees of “worseness” beyond identification of significant impacts, and LOS methodologies do not accurately calculate delay beyond LOS F conditions.

G.3	Nov 2, Smith FSEIR pp. 16-18	O-MBA20L7-24	LC TR-6 Exh D p. D-162	Methodology, Traffic LOS

<sup>a</sup> In the appeal letter, the Appellant mistakenly references a July 23, 2015 letter from Dan Smith. However, the Appellant is actually referring to a Dan Smith authored letter dated July 26, 2015 (coded in this appeal response as O-MBA10L4).

**G.4 Appeal Issue:** The SEIR fails to identify the significance and severity of the project's impacts on intersections where the project will use parking control officers (PCOs).

**Summary of Appeal Response G.4:** The SEIR and RTC document details why human interventions by PCOs provide more efficient control for interactions between autos, transit, pedestrians and bicyclists. These enhancements cannot be accurately measured by LOS methodologies that are based on mechanical signal controls that operate with pre-programmed sequential patterns over the period of analysis.

G.4	Nov 2, Smith FSEIR pp. 16-18	O-MBA20L7-24	LC TR-6 Exh D p. D-162	Methodology, Traffic LOS

<sup>a</sup> In the appeal letter, the Appellant mistakenly references a July 23, 2015 letter from Dan Smith. However, the Appellant is actually referring to a Dan Smith authored letter dated July 26, 2015 (coded in this appeal response as O-MBA10L4).

**G.5 Appeal Issue:** The SEIR's analysis of the project's construction-related traffic congestion and delay impacts is legally flawed because it is based on invalid criteria, it fails to assess the project's cumulative construction impacts, and it defers development of mitigation measures.

**Summary of Appeal Response G.5:** Construction-related impacts are identified by provision of details about the duration and intensity of project construction activities, and an assessment of potential impacts on the transportation network. Cumulative construction impacts are adequately addressed by disclosure of details about other projects likely to be under construction at the same time as the project. The construction improvement measure, Improvement Measure I-TR-1: Construction Management Plan and Public Updates, is not deferred mitigation. First, it is an improvement measure that reduces an already less than significant impact and not mitigation. Second, it is specific and includes provision for construction traffic management, a construction worker parking plan, project construction updates for adjacent businesses and residents, and carpool, transit, and non-motorized modes of access for construction workers. Potential impacts of construction activities are addressed by established construction requirements utilized to manage construction projects in San Francisco.

G.5	Nov 2, Smith FSEIR, p. 22	O-MBA20L7-30	LC TR-14 Exh D p. D-189	Construction-related Transportation Impacts

<sup>a</sup> In the appeal letter, the Appellant mistakenly references a July 23, 2015 letter from Dan Smith. However, the Appellant is actually referring to a Dan Smith authored letter dated July 26, 2015 (coded in this appeal response as O-MBA10L4).

**G.6 Appeal Issue:**

- (a) The SEIR understates traffic and transit volumes in the p.m. peak period by using time of arrival at the event center as a proxy measurement for time of travel.
- (b) The Draft SEIR only analyzes impacts of weeknight basketball games that start at 7:30 PM, not at other start times closer to the p.m. peak.

**Summary of Appeal Response G.6:**

(a) Time of travel for the event center events has been accurately identified through appropriate use of data for other comparable sports facilities, such as Oracle Arena in Oakland and other facilities in Houston, Phoenix, Sacramento, and New York. For basketball games in particular, the SEIR's transportation analysis assumed that twice as much travel would occur during the 5 p.m. to 6 p.m. peak hour compared to the average of arrivals obtained from actual data for the existing Barclays Center in Brooklyn, New York, which is located in a similar urban setting.

(b) Normal starting times for weekday basketball games is 7:30 p.m. Contrary to the appellants assertions that nationally televised games are rescheduled to start at 6:00 p.m., nationally televised weekday games typically feature an early game and a late game that does not deviate from the normal 7:30 p.m. start times, aside from exceptional circumstances such as playoff games.

G.6	Nov 2, Smith FSEIR pp. 3-5	O-MBA20L7-20	LC TR-1 Exh D p. D-141	Methodology, Analysis Scenarios

<sup>a</sup> In the appeal letter, the Appellant mistakenly references a July 23, 2015 letter from Dan Smith. However, the Appellant is actually referring to a Dan Smith authored letter dated July 26, 2015 (coded in this appeal response as O-MBA10L4).

**G.7 Appeal Issue:**

- (a) The 5 percent threshold of significance for impacts at intersections and freeway ramps operating at LOS E or F violates CEQA.
- (b) The year 2040 baseline for assessing the significance of the project's cumulative impacts violates CEQA and the SEIR's distant time frame and development assumptions masks significance of project's nearer term cumulative impacts.
- (c) The SEIR's use of projection based approach to the project's cumulative impacts is misleading.
- (d) The SEIR's cumulative analysis fails to consider and analyze the project in the context of the City's proposal to remove the northern portion of I-280 as far south as the Mariposa Street exchange.

**Summary of Appeal Response G.7:**

- (a) CEQA does not decree any specific significance threshold standard for intersections and freeway ramps. The five percent contribution standard used in this SEIR is reasonable as it accounts for daily variations in traffic and is consistent with long-standing practices for environmental documents in San Francisco.
- (b) Assessment of cumulative impacts for year 2040, consistent with the current planning horizon year of regional population and employment forecasts prepared by regional planning agencies such as ABAG and MTC, is an appropriate timeframe that conforms to longstanding practices in San Francisco for major projects. This approach provides a more credible basis for assessing transportation impacts because cumulative horizon year forecasts (currently year 2040) are regularly reviewed and refined by SFCTA and the Planning Department and therefore more accurately reflect sustained development patterns and the effects of variable economic conditions than do near-term forecasts.
- (c) CEQA Guidelines Section 15130(b) explicitly authorizes use of either a projection-based or list-based approach for cumulative impacts. Use of a projection-based approach more appropriately reflects the vagaries of broader business cycles and the evolving dynamics of changes affecting cumulative conditions in San Francisco.
- (d) The concept of removing a portion of I-280 north of Mariposa or 16th Streets, included in the San Francisco Planning Department's Railyard Alternatives and I-280 Boulevard Feasibility Study, is speculative at this time, and any assessment of transportation impacts would rely upon conjecture. This concept is not a sufficiently defined project to undertake a credible analysis reflective of the unknown complexity of associated circulation changes. This ongoing planning study is described in the SEIR.

G.7	July 23, Smith, p. 13 <sup>a</sup>	O-MBA20L7-26	RTC TR-2h RTC p. 13.11-65	

<sup>a</sup> In the appeal letter, the Appellant mistakenly references a July 23, 2015 letter from Dan Smith. However, the Appellant is actually referring to a Dan Smith authored letter dated July 26, 2015 (coded in this appeal response as O-MBA10L4).

**G.8 Appeal Issue:** The SEIR's use of transit screenline and route capacities is misleading and unsupported. The use of a project specific threshold of significant impact of 100 percent of screenline capacity rather than the normal 85 percent of screenline capacity exacerbates overcrowding impacts on the regular user community.

**Summary of Appeal Response G.8:** Transit screenline and route capacities disclose the extent of crowding and identify needs for additional service. This methodology was appropriately used to identify supplemental transit services, is a reasonable basis for determining transit impacts, and is neither legally flawed nor misleading nor unsupported. Use of a 100 percent capacity utilization for the T Third light rail line, the 22 Fillmore bus route, and the Muni Special Event Transit Shuttles routes for a maximum attendance event is consistent with typical design standards for transportation facilities that address normal peaks rather than peak of the peak conditions. The SEIR uses Muni's 85 percent capacity standard for the downtown screenline analysis and as the basis to evaluate all non-event scenarios.

**G.9 Appeal Issue:** The SEIR defers the development of mitigation measures.

**Summary of Appeal Response G.9:** The appellants conflate mitigation measures that fully mitigate identified significant impacts, mitigation measures that necessarily reflect adaptive management to most effectively address actual conditions as they occur, and mitigation measures whose implementation is identified as uncertain because actions would need to be independently undertaken by other agencies and entities outside the City's or the project sponsor's control. Realistic presentation of mitigation measures with different characteristics does not constitute unlawful deferral.

		O-MBA10L4-35	RTC TR-12b RTC p. 13.11-193	Transit Mitigation Measures

<sup>a</sup> In the appeal letter, the Appellant mistakenly references a July 23, 2015 letter from Dan Smith. However, the Appellant is actually referring to a Dan Smith authored letter dated July 26, 2015 (coded in this appeal response as O-MBA10L4).

**G.10 Appeal Issue:** Mitigation measures listed as follows are vague and unresponsive to the impact addressed: Improvement Measure I-TR-1, Mitigation Measure M-TR-2a, Mitigation Measure M-TR-2b, Mitigation Measure M-TR-5a, and Mitigation Measure M-TR-5b.

**Summary of Appeal Response G.10:** Improvement Measure I-TR-1: Construction Management Plan and Public Updates is not presented as a mitigation measure, but rather as an improvement measure, and sets forth established procedures to manage construction impacts. Mitigation Measure M-TR-2a: Additional PCOs during Events sufficiently details how PCOs would be most effectively deployed. Mitigation Measure M-TR-2b: Additional Strategies to Reduce Transportation Impacts specifies a variety of adaptive TDM strategies to reduce traffic congestion in the project vicinity by providing drivers on information on traffic conditions and alternative routes, providing information on on-street and off-street parking conditions, discouraging use of on-street parking through the Residential Permit Parking program, encouraging non-auto modes through parking pricing, and enhancing regional transit access to the area. Mitigation Measures M-TR-5a and M-TR-5b identify specific additional Caltrain and North Bay ferry or bus services needed and sought to mitigate impacts while acknowledging that implementation is uncertain due to reliance on actions by other agencies. None of these measures are vague or insubstantive; each one is responsive to the identified impacts, and Mitigation Measures M-TR-2a: Additional PCOs during Events, M-TR-2b: Additional Strategies to Reduce Transportation Impacts, M-TR-5a: Additional Caltrain Service, and M-TR-5b: Additional North Bay Ferry and/or Bus Service do qualify as lawful and effective mitigation measures, while Improvement Measure I-TR-1: Construction Management Plan and Public Updates is an improvement measure that is not required to reduce significant impacts, but is further not vague as it requires preparation of a construction truck traffic management, a construction worker parking plan, project construction updates for adjacent businesses and residents, and carpool, transit, and non-motorized modes of access for construction workers.

		O-MBA10L4-35	RTC TR-12b RTC p. 13.11-193	Transit Mitigation Measures

<sup>a</sup> In the appeal letter, the Appellant mistakenly references a July 23, 2015 letter from Dan Smith. However, the Appellant is actually referring to a Dan Smith authored letter dated July 26, 2015 (coded in this appeal response as O-MBA10L4).

**G.11 Appeal Issue:** The SEIR characterizes mitigation measures for the project's transportation impacts as elements of the project, thereby failing to analyze and disclose the project's potentially significant impacts separate from the analysis of the feasibility and effectiveness of proposed mitigation measures.

**Summary of Appeal Response G.11:** There is nothing impermissible about incorporating transportation components that are within the sponsor's or the City's control into the definition of a project in order to preemptively reduce or avoid impacts. The project as thus defined cannot be built without implementation of the incorporated transportation components. Appellants appear to be demanding an unnecessary theoretical exercise to identify hypothetical impacts that would not occur based on how the project has been defined and would be implemented. Additional mitigation measures beyond transportation components incorporated into the project definition have also been appropriately identified, consistent with CEQA requirements.

**G.12 Appeal Issue:** By characterizing mitigation measures for the project's transportation impacts as elements or components of the project, the SEIR fails to set forth enforceable mitigation.

**Summary of Appeal Response G.12:** Transportation components incorporated into the project definition would be enforceable by the City because project implementation is dependent upon implementation of everything incorporated into the definition of the project, as required by the Mitigation Monitoring and Reporting Program for the project. Mitigation measures are enforceable as required in the approval actions by the lead agency and other responsible agencies.

**G.13 Appeal Issue:** The SEIR relies on the project's contribution to a fair-share fee program to mitigate the project's transportation impacts without disclosing the required information about such mitigation.

**Summary of Appeal Response G.13:** The fiscal analysis comprehensively identifies funding from several sources to support implementation of transportation mitigation measures, consistent with a fair-share fee program.

G.13	Nov 2, Smith, pp. 2-3 Urban Decay	O-MBA20L7-20	LC TR-1 Exh D p. D-141	Methodology, Analysis Scenarios

**G.14 Appeal Issue:** The transit analysis understates impacts because it relies on stale transit baseline data.

**Summary of Appeal Response G.14:** The Draft SEIR included the most current transit baseline data for the Muni screenlines available at the time of publication, and this data was updated in the Responses to Comments document to include more recent data that became available subsequent to publication. The transit impact analysis in the SEIR included the use of BART's April 2015 data. No changes regarding significant transit impacts were identified based on the updated transit screenline data presented in the Responses to Comments.

G.14	Nov 2, Smith FSEIR pp. 9-13	O-MBA20L7-22	LC TR-3 Exh D p. D-153	Methodology, Baseline Conditions

<sup>a</sup> In the appeal letter, the Appellant mistakenly references a July 23, 2015 letter from Dan Smith. However, the Appellant is actually referring to a Dan Smith authored letter dated July 26, 2015 (coded in this appeal response as O-MBA10L4).

**G.15 Appeal Issue:** The traffic analysis understates impacts because it relies on stale traffic baseline data.

**Summary of Appeal Response G.15:** The existing conditions used for the traffic impact analysis are based on traffic counts conducted in 2013 and 2014, which were adjusted to reflect full occupancy and operation of the UCSF Medical Center Phase 1 and Public Safety Building projects which were under construction when the traffic counts were conducted. Spot-check counts at key intersections were conducted in April 2015 (following opening and operation of these two facilities) and compared to the adjusted volumes used in the analysis. The adjusted volumes used in the analysis were similar to or slightly higher than those collected in the field in April 2015, and therefore adequately reflect baseline conditions.

G.15	Nov 2, Smith FSEIR pp. 9-13	O-MBA20L7-22	LC TR-3 Exh D p. D-153	Methodology, Baseline Conditions

<sup>a</sup> In the appeal letter, the Appellant mistakenly references a July 23, 2015 letter from Dan Smith. However, the Appellant is actually referring to a Dan Smith authored letter dated July 26, 2015 (coded in this appeal response as O-MBA10L4).

**G.16 Appeal Issue:** The SEIR's discussion of transportation impacts is incomplete.

**Summary of Appeal Response G.16:** Appellants' vague assertion that the SEIR's discussion of transportation impacts is incomplete is related to the number of analysis scenarios included in the SEIR. Based on the reference to the Smith letter dated November 2, 2015, the purported deficiency may be related to appellants' speculative presumption that implementation of the Muni Special Event Transit Services Plan would not be maintained despite the fact that the SFMTA Director of Transportation wrote a letter supporting these expenditures, the SFMTA Board of Director approved the expenditure plan for this service, and the reserve fund is pending before the Board of Supervisors. The SEIR also relies on a number of mitigation measures to address the possibility that the transit service plan is not implemented.

**G.17 Appeal Issue:** Complex interrelated issues are not addressed in the SEIR.

**Summary of Appeal Response G.17:** The appellants' claim that "complex interrelated issues" were not addressed in the SEIR are related to the transfers between BART and Muni, and claims that, with implementation of the Central Subway, the transfer would be less attractive than at present, and cause more attendees to use rideshare or taxis, instead of transit. These issues were considered in the transit analysis, and the Responses to Comments document clarifies the transfers between the Union Square/Market Street Central Subway station and the Powell Street BART/Muni station. Additional analysis is not required.

G.17	July 23, Smith, p.12 <sup>a</sup>	O-MBA10L4-25	RTC TR-5a RTC p. 13.11-120	Transit Impacts, Muni

<sup>a</sup> In the appeal letter, the Appellant mistakenly references a July 23, 2015 letter from Dan Smith. However, the Appellant is actually referring to a Dan Smith authored letter dated July 26, 2015 (coded in this appeal response as O-MBA10L4).

**G.18 Appeal Issue:** There is no evidence the Draft SEIR considered the impacts of the at-grade rail crossing of 16th Street on intersection LOS at the intersection of 16th and 3rd and 16th and 7th Streets.

**Summary of Appeal Response G.18:** Assessment of the effects of at-grade rail crossings at the intersection of Seventh/Mississippi/16th was included in the Draft SEIR as well as in the Responses to Comments document. Significant traffic impacts at this intersection were identified for the various existing plus project scenarios and 2040 cumulative conditions.

<sup>a</sup> In the appeal letter, the Appellant mistakenly references a July 23, 2015 letter from Dan Smith. However, the Appellant is actually referring to a Dan Smith authored letter dated July 26, 2015 (coded in this appeal response as O-MBA10L4). The correct date of the letter is presented in the table, above.

**G.19 Appeal Issue:** The project's truck loading and truck staging provisions are inadequate.

**Summary of Appeal Response G.19:** The truck turning templates were prepared for the Major Phase Application that was submitted for project approval to OCII. Due to the large-scale format of the truck turning overlays, they were inadvertently omitted from inclusion in the RTC document. The figures demonstrate that the on-site loading spaces were designed to accommodate trucks of varying size and would be accessible even if the larger spaces are occupied, and do not provide a different assessment than was provided in the SEIR Impact TR-8 on SEIR pp. 5.2-161 – 5.2-166. The figures are included in Exhibit D.

<sup>a</sup> In the appeal letter, the Appellant mistakenly references a July 23, 2015 letter from Dan Smith. However, the Appellant is actually referring to a Dan Smith authored letter dated July 26, 2015 (coded in this appeal response as O-MBA10L4).

**G.20 Appeal Issue:** The SEIR concludes without foundation that the project would not have an adverse impact on emergency access to UCSF hospitals.

**Summary of Appeal Response G.20:** Appellants repeat prior assertions about the inadequacy of emergency vehicle access. Further, Appellant's claims do not recognize the substantial specific enhancements that have been developed since publication of the Draft SEIR; UCSF and other such emergency service providers have found emergency access to be adequate. This issue was adequately analyzed in the Final SEIR.

Appeal Code	Previous Comment/ Letter Cited	Comment Code	Response Code	Topic

G.20	Nov 10, Smith FSEIR Access	O-MBA27S9-7	LC TR-13 Exh D p. D-185	Emergency Vehicle Access

<sup>a</sup> In the appeal letter, the Appellant mistakenly references a July 23, 2015 letter from Dan Smith. However, the Appellant is actually referring to a Dan Smith authored letter dated July 26, 2015 (coded in this appeal response as O-MBA10L4).

**G.21 Appeal Issue:** New information since publication of the Draft SEIR requires recirculation.

**Summary of Appeal Response G.21:** Response TR-5 in the RTC document does not provide a station level analysis for BART stations in San Francisco likely to be used by event attendees, but instead provides information as to why the preparation of a station-level analysis was not necessary and was therefore not conducted as part of the transportation analysis for the SEIR. The response also provides clarification regarding BART ridership information, and does not include any new information or analysis, or result in any change to analysis or conclusions presented in the SEIR. Recirculation of the SEIR is therefore not required pursuant to CEQA Guidelines Section 15088.5.

G.21	Nov 2, Smith FSEIR p. 22	O-MBA20L7-27	LC TR-11 Exh D p. D-174	Transit Impacts, BART

**G.22 Appeal Issue:** Changes to the project since publication of the Draft SEIR require recirculation, including construction on King Street for six months and Third Street for fourteen months, which will exacerbate construction phase impacts on traffic.

**Summary of Appeal Response G.22:** Temporary transportation impacts that could occur during construction of traction power (electrical) upgrades to the Muni T Third and Central Subway light rail lines would not result in new significant impacts or require additional mitigation measures that were not previously disclosed in the Final SEIR and therefore do not require recirculation of the Final SEIR, because: (1) the potential temporary transportation impacts that could occur during construction of the electrical upgrades would not be significant, and (2) the FSEIR includes an assessment of the effects of potential transportation impacts during project construction, including construction of the proposed T Third center platform and other Muni system improvements, and (3) the construction-related impacts from the work on King Street and Third Street would be same kind of impacts as those that the FSEIR already disclosed related to the proposed T Third center platform and other Muni system improvements.

<sup>a</sup> In the appeal letter, the Appellant references a November 2 letter from Lippe (coded in this appeal response as O-MBA20L7). Please note that the first page of this letter is dated November 2, 2015, however, pages 2 through 16 of this letter are dated November 3, 2015. For consistency, this appeal response refers to this Lippe letter as being dated November 2, 2015.

**H.2 Appeal Issue:** Appellant states that the project is not sufficient as an informational document with respect to the project's wastewater treatment infrastructure impacts and the response to Comment UTIL-3 is inadequate.

**Summary of Appeal Response H.2:** Response UTIL-3 is adequate in that it explains information discussed in Impact C-UT-2 of the SEIR. Response UTIL-3 and Impact C-UT-2 explain that the wastewater flow from the project would not cause the Mariposa Pump Station to exceed its pumping capacity and would not require the construction of new or expanded wastewater treatment facilities. These two discussions further explain that when wastewater flow from this project is considered with existing and reasonably foreseeable total future wastewater flows from all identified reasonably foreseeably future development in the area, including the build-out of the Mission Bay Redevelopment Plan and UCSF Long Range Development Plan, and other area development, the SFPUC anticipates that it will need to replace or upgrade the Mariposa Pump Station. However, the SFPUC has not yet identified a timetable for completing these long term improvements, and has not developed specified plans or designs for construction of these yet-to-be-designed improvements. Any improvements that the SFPUC determines in the future to be needed to address these future cumulative wastewater flows are not part of the project and CEQA review will appropriately be addressed by the SFPUC once it determines the timetable for needed improvements and the nature of the improvements. But such improvements are not part of this project. The FSEIR adequately discusses

impacts associated with wastewater flows because it fully discusses the project impacts, the project's contribution to cumulative impacts, and, draws reasoned conclusions about the nature of impacts that could result from whatever future facility improvements the SFPUC ultimately determines are needed.

Response UTIL-3 cites case law that supports the approach to analysis used in Impact C-UT-2.

H.2	Nov 2 Lippe, pp. 8-10 <sup>b</sup>	O-MBA20L7-6	LC UTIL-1 Exh D, p. D-272	Cumulative impacts on wastewater facilities

<sup>a</sup> In the appeal letter, the Appellant mistakenly references a July 26 letter from Lippe. However, this Appellant is actually referring to a Lippe letter dated July 24, 2015 (coded in this appeal response as O-MBA11L5).

<sup>b</sup> In the appeal letter, the Appellant references a November 2 letter from Lippe (coded in this appeal response as O-MBA20L7). Please note that the first page of this letter is dated November 2, 2015, however, pages 2 through 16 of this letter are dated November 3, 2015. For consistency, this appeal response refers to this Lippe letter as being dated November 2, 2015.

**H.3 Appeal Issue:** Appellant states that The DSEIR is not sufficient as an informational document with respect to the Project's contaminated wastewater (i.e. combined sewage and stormwater) impacts on San Francisco Bay water quality or biological resources including from inadequately treated sewage and toxic chemicals (e.g., PCB's and metals), and the FSEIR's Response to these comments (HYD-3 – HYD-6) are inadequate.

**Summary of Appeal Response H.3:** Regarding wastewater, the Southeast Water Pollution Control Plant has sufficient capacity to serve the proposed project. The proposed project would not cause violations of the City's NPDES permit conditions related to combined sewer discharges, therefore the project would not result in significant project-level or cumulative impacts on water quality or biological resources due to combined sewer discharges.

Regarding stormwater, the project would not result in the discharges of contaminated soil from the site in stormwater flows to the Bay during construction because, as discussed in Impact HY-1 of the Initial Study, construction activities would comply with the Construction General Stormwater Permit issued by the State Water Resources Control Board. This permit specifies minimum best management practices (BMPs) to be implemented to ensure that stormwater discharges and authorized nonstormwater discharges do not contain pollutants that could cause or contribute to an exceedance of any applicable water quality objective or water quality standards in the Bay.

The project would not result in discharges of contaminated soil from the site in stormwater flows to the Bay once the project is constructed because the proposed project includes excavation of soil to a minimum depth of 12 feet throughout the project site, and off - site disposal of all excavated soil. Clean engineered backfill would be used where needed. Once the project is constructed, the site would be occupied by buildings or paved. None of the existing soil on the site would be exposed at grade and all landscaped areas on the site would be above structures; clean soil would be brought in for all landscaped areas on the project site. This would preclude stormwater contact with contaminated soil once the site is developed.

Please note that the first page of this letter is dated November 2, 2015, however, pages 2 through 16 of this letter are dated November 3, 2015. For consistency, this appeal response refers to this Lippe letter as being dated November 2, 2015.

<sup>c</sup> In the appeal letter, the Appellant mistakenly references a November 2 letter from Hageman. However, the Appellant is actually referring to a Hageman authored letter dated November 1, 2015 (coded in this appeal response as O-MBA20L7).

**H.4 Appeal Issue:** Appellant states that the DSEIR is not sufficient as an informational document with respect to project impacts on biological resources, including wetlands and wildlife.

**Summary of Appeal Response H.4:** The water-filled depression on the project site was formed as a result of excavation in dry land for site remediation purposes and does not provide any of the physical functions and services associated with functional wetland ecology. The project would have no effect on federally protected wetlands because the excavations subject to ponding on the site are due to construction-related activities and are not jurisdictional under the Clean Water Act. The project is not subject to federal consistency review under the Coastal Zone Management Act because it does not require any federal approvals and because it would not affect coastal resources.

<sup>a</sup> In the appeal letter, the Appellant mistakenly references a July 26 letter from Lippe. However, the Appellant is actually referring to a Lippe letter dated July 24, 2015 (coded in this appeal response as O-MBA11L5).

<sup>b</sup> In the appeal letter, the Appellant references a November 2 letter from Lippe (coded in this appeal response as O-MBA20L7). Please note that the first page of this letter is dated November 2, 2015, however, pages 2 through 16 of this letter are dated November 3, 2015.

**H.5 Appeal Issue:** Appellant states that the SEIR fails to include all feasible mitigation measures to lessen or mitigate impacts to state and/or federal jurisdictional wetland features.

**Summary of Appeal Response H.5:** The project would not result in significant impacts on wetland habitat; therefore no mitigation is required.

H.5	Nov 2 Ringelberg (Exhibit J to Nov 2 Lippe)	This is the same letter as 11/2/15 letter from BSK, above		

- <sup>a</sup> In the appeal letter, the Appellant mistakenly references a July 26 letter from Lippe. However, the Appellant is actually referring to a Lippe letter dated July 24, 2015 (coded in this appeal response as O-MBA11L5).
- <sup>b</sup> In the appeal letter, the Appellant references a November 2 letter from Lippe (coded in this appeal response as O-MBA20L7). Please note that the first page of this letter is dated November 2, 2015, however, pages 2 through 16 of this letter are dated November 3, 2015. For consistency, this appeal response refers to this Lippe letter as being dated November 2, 2015.

**H.6 Appeal Issue:** The SEIR fails to include all feasible mitigation to lessen or mitigate the significant and unavoidable cumulative impact associated with exceeding of the capacity of the Mariposa Pump Station.

**Summary of Appeal Response H.6:** As discussed in Impact UT-5 of the SEIR, the project wastewater flows would not cause the Mariposa Pump Station to exceed its pumping capacity. However, the SFPUC anticipates that it would need to replace or upgrade the Mariposa Pump Station to accommodate future cumulative flows, including those from build-out of the Mission Bay Redevelopment Plan and UCSF Long Range Development Plan. Needed improvements and the timing of these improvements to the pump station will be determined by the SFPUC in the future in consideration of its overall wastewater control system and are outside of the project sponsor's control. Further, because the exact nature of the improvements is not designed, it cannot be said with certainty whether impacts associated with the construction of any such improvements will be less than significant. Thus, there are no feasible mitigation measures within the control of the project sponsor to mitigate the cumulative effects related to exceeding the capacity of the Mariposa Pump Station.

**H.7 Appeal Issue:** Appellant states that the DSEIR is not sufficient as an informational document with respect to the Project's flooding risk and inundation impacts.

**Summary of Appeal Response H.7:** As discussed in Impact HY-7 of the SEIR, the project site is not within the existing 100-year flood zone and would not be subject to future flooding as a result of sea level rise in 2050 based on the projected amount of sea-level rise. Temporary flooding could occur by 2100 as a result of 100-year flooding in combination with sea level rise. However, the project includes flood resilient features consistent with San Francisco's Floodplain Management Ordinance for construction in flood zones. Below grade structures, including the parking garage and practice courts would be vulnerable to temporary inundation, but feasible flood proofing measures, such as installation of sand bags or flood barriers at the parking garage entrances would prevent impacts from flooding under this scenario if necessary. Flooding as a result of stormwater runoff would not occur because, while the storm sewer system is designed to accommodate the five-year storm in accordance with the Mission Bay and San Francisco subdivision regulations, the corridors used to convey overland stormwater flows in excess of the five - year storm are designed to accommodate 100 - year flood flows, also in accordance with the subdivision regulations.

I.1	Nov 2, Hubach	O-MBA20L7-50 to O-MBA20L7-52	LC NOI-1 and LC NOI-2 Exh D, p. D-197	Noise significance thresholds, and Noise impacts of project refinements

<sup>a</sup> In the appeal letter, the Appellant mistakenly references a July 24 letter from Hubach. However, the Appellant is actually referring to a Hubach letter dated July 22, 2015 (coded in this appeal response as O-MBA9L3).

<sup>b</sup> In the appeal letter, the Appellant references a November 2 letter from Lippe (coded in this appeal response as O-MBA20L7). Please note that the first page of this letter is dated November 2, 2015, however, pages 2 through 16 of this letter are dated November 3, 2015. For consistency, this appeal response refers to this Lippe letter as being dated November 2, 2015.

**I.2 Appeal Issue:** The appellant questions use of the San Francisco Noise Ordinance in assessing the significance of project-generated noise. The RTC document responses regarding use of the San Francisco Police Code as thresholds of significance is inconsistent with CEQA.

**Summary of Appeal Response I.2:** The noise analyses of the SEIR apply not only the limitation on construction equipment noise level (80 decibels at 100 feet) in the Police Code as a tool for determining significance but also apply a 10 decibel increase over existing conditions for assessment of construction noise impacts. The SEIR does not rely solely on compliance with regulatory standards in the Police Code to determine whether noise impacts are considered significant, the analysis for construction-related noise impacts also discusses the Mission Bay Good Neighbor Policy. The approach used is consistent with Appendix G of the CEQA Guidelines, which calls for addressing whether the proposed project would result in a substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the

project but leaves the determination of the quantitative threshold to be applied at the discretion of the lead agency. Thus, the approach used is consistent with the CEQA Guidelines in that it considered whether construction activities would increase ambient noise above the 10 decibel level, an increased above which the FSEIR judged to be significant because it would result in a more than doubling of existing noise levels.

<sup>a</sup> In the appeal letter, the Appellant mistakenly references a July 24 letter from Hubach. However, the Appellant is actually referring to a Hubach letter dated July 22, 2015 (coded in this appeal response as O-MBA9L3).

<sup>b</sup> In the appeal letter, the Appellant references a November 2 letter from Lippe (coded in this appeal response as O-MBA20L7). Please note that the first page of this letter is dated November 2, 2015, however, pages 2 through 16 of this letter are dated November 3, 2015. For consistency, this appeal response refers to this Lippe letter as being dated November 2, 2015.

**I.3 Appeal Issue:** The SEIR uses ambient plus increment thresholds of significance for all noise impacts, which the Appellant asserts is a legal error.

**Summary of Appeal Response I.3:** The commenter's disagreement over the methodology used in the SEIR is noted. However a lead agency is vested with discretion to choose the proper significance threshold and does not violate CEQA when it chooses to reject different thresholds proposed by a project opponent. It should be noted that the CEQA Guidelines Appendix G, Section XII (c) calls for determining whether the project causes "A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project" and Section XII (d) calls for determining whether the project causes "A temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project." The noise impact methodology used in the SEIR responds directly to those CEQA Guideline inquiries with respect to identifying whether or not the project would result in a substantial increase over ambient noise levels.

## TOPIC J: GREENHOUSE GASES EMISSIONS

**J.1 Appeal Issue:** The SEIR's conclusion that greenhouse gases (GHG) emissions are less than significant is not supported by substantial evidence.

**Summary of Appeal Response J.1:** The SEIR GHG emissions impact analysis was conducted consistent with *San Francisco's Greenhouse Gas Reduction Strategy*, as approved by the Bay Area Air Quality Management District (BAAQMD) and consistent with CEQA Guidelines Sections 15064.4 and 15183.5. The SEIR GHG emissions analysis determined that the proposed project would be consistent with *San Francisco's Greenhouse Gas Reduction Strategy*, as documented on the Greenhouse Gas Analysis Compliance Checklist, whereby the project would reduce its GHG emissions through compliance with regulations and policies to increase energy efficiency, implement green building strategies, adopt zero waste strategies, incorporate recycling and composting, and more. Because the City's local GHG reduction targets are more aggressive than those of the region or the State, consistency with the City's Greenhouse Gas Reduction Strategy necessarily demonstrates consistency with the State's GHG regulations, the Governor's executive orders, and the Bay Area 2010 Clean Air Plan. Therefore, the project's impacts related to GHG emissions were determined to be less than significant.

The appellant has raised a number of concerns that mistakenly conflates the GHG emissions impact analysis for the SEIR with the GHG analysis required under the AB 900 process. The analysis for the AB 900 process is a separate and distinct requirement for the project to qualify as an environmental leadership project under AB 900 and was not used to support the CEQA analysis in the SEIR.

J.1	Nov 2, Patrick Sullivan and John Henkelman (Exhibit 1 to Nov 2 Soluri Meserve)	O-MBA16S6-11	LC GHG-1 Exh D, p. D-256	Greenhouse gases emissions, approach to analysis

**J.2 Appeal Issue:** The appellant asserts that recirculation is required due to the Final SEIR's change in approach to GHG analysis from the Draft SEIR.

**Summary of Appeal Response J.2:** The appellant is mistaken. There was no change in approach between the Draft and Final SEIR for the GHG emissions impact analysis. The RTC document provided some text revisions to clarify this point. The appellant has raised a number of concerns that mistakenly conflates the GHG emissions impact analysis for the SEIR with the GHG analysis required under the AB 900 process. The analysis for the AB 900 process is a separate and distinct requirement for the project to qualify as an environmental leadership project under AB 900 and was not used to support the CEQA analysis in the SEIR. Recirculation is not warranted on the basis of the appellant's concerns on the approach to the GHG emissions impact analysis.

J.2	Nov 2, Patrick Sullivan and John Henkelman (Exhibit 1 to Nov 2 Soluri Meserve)	O-MBA16S6-11	LC GHG-1 Exh D, p. D-256	Greenhouse gases emissions, approach to analysis

**J.3 Appeal Issue:** The appellant asserts that because quantitative methods of GHG emissions analysis are available, that the SEIR is required to employ them.

**Summary of Appeal Response J.3:** As described above in Summary of Appeal Response J.1, the SEIR GHG impact analysis was conducted consistent with the requirements of CEQA, using methods approved by the BAAQMD. The appellant is erroneous in stating that a quantitative method of analysis is required by law.

J.3	Nov 2, Soluri Meserve, pp. 4-5	O-MBA16S6-3	LC GHG-1 Exh D, p. D-256	Greenhouse gases emissions, approach to analysis

**J.4 Appeal Issue:** The appellant states that the SEIR fails to require all feasible mitigation of the GHG emissions of the project.

**Summary of Appeal Response J.4:** The SEIR GHG emissions impact analysis determined that the project would generate GHG emissions but not at levels that would result in a significant impact on the environment or conflict with any policy, plan, or regulation adopted for the purpose of reducing GHGs. Therefore, this impact would be less than significant and no mitigation is required.

J.4	Nov 2, Soluri Meserve, pp. 3-6	O-MBA16S6-3	LC GHG-1 Exh D, p. D-256	Greenhouse gases emissions, approach to analysis

**J.5 Appeal Issue:** The SEIR conflates analysis of the Project's design features (Improvement Measures) and mitigation measures, and thus fails to consider whether other possible mitigation measures would be more effective.

**Summary of Appeal Response J.5:** As described in Summary of Appeal Response J.4, the project's GHG emissions impact was determined to be less than significant, and therefore no mitigation is required. The appellant's issue regarding mitigation measures is irrelevant. However, in acknowledgment of the proposed project's designation as an environmental leadership project under AB 900 and its associated requirements, the SEIR includes Improvement Measure

I-C-GG-1, Purchase Voluntary Carbon Credits. As with all improvement measures included in the SEIR, Improvement Measure I-C-GG-1 is included in the MMRP to confirm the project sponsor implements the measure.

**J.6 Appeal Issue:** The Final SEIR fails to respond to comments about the GHG analysis and why it was proper to exclude the office towers from the GHG emissions inventory.

**Summary of Appeal Response J.6:** The appellant has mistakenly conflated the GHG emissions impact analysis for the SEIR with the GHG analysis required under the AB 900 process. The quantification of GHG emissions for AB 900 is separate and independent from the determination of significance required for CEQA. Thus, whether or not the AB 900 GHG emissions quantification included the office towers is immaterial to the determination of CEQA significance. For the purposes of the CEQA analysis, the SEIR analyzes potential GHG emission impacts for the entire project, including the office towers, using the City's Greenhouse Gas Reduction Strategy.

## TOPIC K: GEOLOGY AND SOILS

**K.1 Appeal Issue:** Appellant states that the Record contains substantial evidence supporting a fair argument that the Project will result in potentially significant Geology and Soils impacts or, alternatively, supplemental review is required under Public Resources Code section 21166.

**Summary of Appeal Response K.1:** As discussed in Response RTC-GEO-1, FSEIR p. 13.20-8, there is a well-established regulatory framework and permitting process in place, enforced through the San Francisco Department of Building Inspection (DBI) Site Permit process and the San Francisco Building Code, which would require the detailed construction plans for the event center to be designed to current building code requirements for a “public assembly use” occupancy that would withstand seismic and geotechnical hazards as discussed in Impact GE-1 of the Initial Study. The extensive permitting and inspection process also would ensure that the building is constructed in accordance with the approved construction plans. Therefore, the project would not result in significant Geology and Soils impact, and supplemental review is not required. The overall approach to analysis used in the Initial Study has been found to be legally adequate in numerous legal cases as explained in Response RTC-GEO-1.

**K.2 Appeal Issue:** Appellant states that the SEIR should not rely on the 1998 SEIR analysis of Geology and Soils because the Project is different than the project described in the 1998 FSEIR, the 1998 FSEIR relies on outdated data and methodology to analyze impacts and conditions have changed such that the 1998 FSEIR does not describe the present conditions at the site.

**Summary of Appeal Response K.2:** As discussed in Response RTC-GEO-2 (FSEIR p. 13.20-17) and Impact GE-1 of the Initial Study (pp. 86 and 87), the proposed

project would be constructed in accordance with current San Francisco Building Code requirements, implementing the recommendations of a site-specific geotechnical investigation that would be conducted for the proposed project. This would ensure that geologic and seismic impacts of the project are appropriately addressed. While this approach is consistent with the conclusions of the 1998 Mission Bay FSEIR that geologic and seismic impacts would be less than significant with the then current building code, the approach does not rely on the data and methodology used in the 1998 Mission Bay FSEIR. Compliance with current building code requirements results in construction of a more seismically safe building than one that would have been constructed under previous building code versions.

K.2	Nov 2 Soluri Meserve, pp. 9-11	O-MBA16S6-6	LC GEO-1 Exh D, p. D-304	Geology approach to analysis, tiering

**K.3 Appeal Issue:** Appellant states that the EIR defers development of mitigation measures necessary to ensure that Geology and Soils impacts are mitigated to less than significant levels.

**Summary of Appeal Response K.3:** The appellant conflates regulatory requirements with mitigation measures. Under CEQA, impacts related to seismic phenomena such as ground shaking and seismically-induced ground failure (including liquefaction, lateral spread, and seismically-induced settlement) would be significant if the project would expose people or structures to potential substantial adverse effects related to these phenomena. Compliance with current building code requirements that are enforceable through DBI's Site Permit process would ensure that people and structures would not be exposed to such adverse effects. Therefore, the requirements of the building code are not mitigation measures, rather they are enforceable and mandatory regulatory requirements that would ensure that significant adverse geologic and seismic impacts are avoided.

**K.4 Appeal Issue:** Appellant states that Recirculation is required due to new information presented in the FSEIR and within the Record regarding Geology and Soils impacts.

**Summary of Appeal Response K.4:** The information provided in Section 13.20 of the Responses to Comments document provide clarification and legal precedence supporting the analysis used the analysis of geologic and seismic impacts discussed in Section E.14 of the Initial Study. The responses do not provide new information, and recirculation is not required.

<sup>a</sup> In the appeal letter, the Appellant mistakenly references a July 22, 2015 letter from Lawrence Karp. However, the Appellant is actually referring to a Lawrence Karp letter dated July 21, 2015 (coded in this appeal response as O-MBA7S2). The correct date of the letter is presented in the table, above.

**K.5 Appeal Issue:** The FSEIR fails to adequately respond in good faith to comments about Geology and Soils analysis.
